## WEEKLY ILLUSTRATED

Edited by KATHERINE TINGLEY

NEW CENTURY CORPORATION

Point Loma, California, U. S. A.

Entered January 11th, 1907, at Point Loma, California, as second class matter, under Act of Congress of March 3rd, 1879.

Copyright, 1907, by Katherine Tingley.

#### SUBSCRIPTIONS

By the year, postpaid, in the United States, Canada, Cuba, Mexico, Porto Rico, Hawaii, & the Philippines, FOUR DOLLARS; other countries in the Postal Union, FOUR DOLLARS AND FIFTY CENTS, payable in advance; single copy, TEN CENTS.

#### REMITTANCES

All remittances to the New Century Corporation must be made payable to "CLARK THURSTON, Manager," and all remittances by Post-Office Money Order must be made payable at the SAN DIEGO Post-Office, though addressed, as all other communications, to Point Loma, California.

#### Memory and Recollection

AN epigram which has gone the round of the papers runs as follows:

"Who am I?" asked an awakened soul.

"That is the only knowledge that is denied to you here," answered a smiling angel. "This is Heaven."

It comes from a collection of somewhat cynical epigrams, many of which are directed against memory, which the author seems to consider the chief source of misery. But it is a mistake to call this burden of oppressive recollections by the name of memory, thereby condemning along with them everything else that may come under the head of memory and making forgetfulness the greatest good. It is only a particular kind of memory that comes under the ban. And this particular kind of memory is virtually the same thing as is meant by Theosophists when they speak of *personality* as a source of misery to be overcome.

But what a reflection is the above epigram upon the ordinary theory of immortality! For it must be said that most people who think of heaven imagine it as a place in which the personality will be preserved.

#### Eternal Present-Self-ness Unendurable

This is really what renders the idea so intolerable to deep thinkers, who feel that the perpetuity of personality would indeed be intolerable. The waters of Lethe are no idle myth; for, together with their analogs in other mythologies, they stand for the purification at death, by which the Soul is cleansed from the mass of memories accumulated during its previous life on earth, that it may enter into its blissful abode, and, when the hour strikes for reincarnation, may enter a new earth-life free from those memories.

A reflection, too, is this on the talk about "memory of past incarnations." Which of us, so frail before the tyrant memories of our present incarnation, could stand the strain of such a recollection? Ere the human soul can recall those past experiences, it must have gained the power to stand unamazed amid the multitudinous tides and swirls of the thought-world, and to distinguish realities from fancies.

The cynic, feeling the burden of human consciousness, and not seeing anything beyond, talks about returning to animalism, and places happiness in ignorance. But

#### The Path to Self-Consciousness

ignorance is separated from knowledge by a door that swings only one way; having gained self-consciousness, we cannot discard it, but must master it. In his happier moments, the cynic dreams of a heaven wherefrom recollection of sorrow is banished; and realizes that such forgetful-

ness implies forgetfulness even of one's personal identity. Be it the part of Theosophy to convert that dream from a poetic fancy (designed, according to Macaulay's definition of poetry, to "produce an *illusion* upon the imagination") into a gospel of truth; and to declare that such a cleansing need not be postponed until a future state but can take place in our present life. It needs a strong and ever stronger conviction that the Soul is a present reality, not a mere future prospect, and that it stands for a condition of peace attainable in earth-life. The mind, with all its twistings and turnings, can be transcended, and the clash of personal memories, fears, and vanities yield to the bliss of forgetfulness.

#### The Lower Mind Transcended

But this can only be so in proportion as the Soul-life grows stronger and the personal life less intense. The trouble comes when the illusion begins to fade before the light has dawned, when we realize what we have lost but do not see clearly what we have gained. But it behooves a hero to push on through the darkness to the dawn.

The philosophy, science, and history of modern times encourage pessimism, for they paint an utterly false picture of human life. They represent the world as having always failed to solve the problem of life and as having consoled itself with mythologies, religions, and philosophies. Their view of human history comprises only the scanty annals of a few of the latest minor subdivisions of humanity that have appeared, and even these are not understood. But Theosophy opens up a vista of great races that flourished at epochs represented by geological time, and recognizes in the mythologies and symbolologies that have been preserved the fragments of an ancient knowledge that had transcended much that is now mysterious. To this ancient

#### The School of Initiation

knowledge the existence of the immortal Soul, permanent throughout incarnations and beyond the personal consciousness, was a fact. In schools of initiation disciples could be shown the mysteries of their own nature and learn to distinguish the various centers of consciousness and the different functions of that complex entity, Man. I knew how to bid the phantoms of the night vanish, and how to awake from dreamy sorrow to a serene daylight. They studied human nature and found out the cause of affliction and impotence, which they found lie in desire and fear — the twin forces by which man is ever yielding and which they keep him in bondage. So long as we hug our personal pleasures, our sorrows will cling to us; for these two states are complementary.

and inseparable. Ancient philosophy teaches that everything on the terrestrial plane is subject to this duality and that the ordinary human consciousness consists of a continual revolution of states of pleasure and pain, exaltation and dejection, pride and self-reproach, and so on. This was symbolized by the "Wheel of Life," and the way to master it was to find the center where there is no revolution. This was the meaning of the *Svastika*.

But we must not give too narrow a meaning to the word "memory." Some memories are undesirable and to be banished, but memory itself is a comprehensive faculty. There are memories *and* memories. The minute cells of our body have memory, which causes them to repeat their functions, producing "instinct" or "automatism." The animal soul of man has its memory, which preserves the record of sensory pleasures and pains. The *Lower Manas* has its memory, which stores up the recollections of personal life, projects, ambitions, loves and hates. But above all the Soul has its memory, which preserves records of its own blissful existence that cannot be reflected in the mirror of the mind until that is cleansed. Thus, in a sense, we have to bring back memory — the memory of a better state of existence, which the Soul knows.

**The Mystery of Reawakening** What a thought! Supposing that after all, we have not yet waked up! Suppose the solution of the mystery of life consists in waking up — in a recollection of our real identity! Then, instead of girding at God and destiny, we might look forward to the time of such an awakening. The idea of regarding enlightenment, not as a revelation but as a recollection, may be helpful. Where and what we shall be after death is one question; where and what we have been before birth is another, or perhaps the same. At all events the life of the Soul is eternal, having no special relation to the future; it is behind, before, within, without, beyond all the boundaries. It IS, WAS, and EVER SHALL BE — the Eternal Now.

STUDENT

### The Stir of Bohemia

THERE are two tendencies exhibited in national life almost all over the world today, superficially diverse yet deeply identical. Politically fused nations are accentuating their identity, separating themselves, realizing national self-consciousness, claiming the right of self-government, trying to get back to the best of their own past; and at the same time seeking natural unions, uncovering old lines of unity and racial affinity.

The "Sokol" Movement in Bohemia, of which comparatively few Anglo-Saxons or Latins have ever heard, embodies both tendencies. Primarily a national stirring among the Bohemians, it is spreading beyond the country of its origin to her Slav sisters, catching fire in Bulgaria, Moravia, Servia, Montenegro, Poland and Russia. It originated under the inspiration of two men, Tyrs and Fügner, somewhere about 1860, just when the Bohemian people had succeeded in getting their national speech re-established in State and municipal life after a silencing which had endured two hundred years. Its objects, declared or undeclared, were the physical and

moral development of the people, the prevention of the threatened denationalization, and the regainment of national independence. It has grown so thoroughly beyond the possibilities of suppression that the very attempts in that direction have ceased. Congresses are held every five years and are attended by delegates from every town and village in the country and by delegates and visitors from many other nations. A part of their program consists of gymnastic displays on a vast and almost unparalleled scale. At the most recent of these great gatherings there were no fewer than 23,000 participants in the athletic contests and exercises, a number which, considering the visitors and non-gymnastically inclined delegates, must have considerably strained the accommodations of the beautiful city of Prague. There were exhibitions of every variety of ancient and modern feats of warlike skill and strength. Judging by the description of an eyewitness, an English delegate who contributes his impressions to a London paper, the pageant would have been as interesting to the antiquarian as to the athlete, to the student of the old Olympic Games and the tournaments of Chivalry as to the Bohemian historian of his own country.

The new national life finding expression in the Sokol Movement will doubtless inspire a new literature and a new interest in the ancient literary monuments, some of which date back at least to the Ninth century. Much has been lost in the long periods of religious intolerance and obscurantism, but search in the libraries and vaults of the old castles may be rewarded by rich finds. The nation has had its epochs of high culture, producing poetry, mysticism, philosophy, and romance. Much of this literature is still practically unknown beyond the borders, never having been translated from the difficult Czech tongue into the languages of more western Aryan peoples. If the Sokol Movement turns the attention of scholars in that direction and thus opens for us a new storehouse of literary treasures, we shall have abundant reasons for gratitude.

### A Live Universe

A NOTED English seismologist, Mr. R. D. Oldham, writing in the *Quarterly Journal* of the Geological Society of London, on the rate of transmission of earthquake waves in connexion with the origin and nature of the great ocean beds, comes near to some ancient conceptions as to the real character of our planet. He says:

The origin of the great ocean basins has been the subject of many speculations, more or less plausible, but none convincing, for the reason that we have no knowledge whether these depressions are mere surface phenomena, or whether they are accompanied by and related to differences in the constitution of the interior of the earth beneath them.

Of the two great earthquakes in California and Colombia in 1906, which were accurately recorded at all the principal seismological stations in Europe, he notes the fact that the vibrations from these two centers took different routes in their journey eastwards. The wave-paths from San Francisco crossed the continent of North America, ran under the North Atlantic a little south of Iceland and approached the European stations from the north-west, their journey being thus continent-

al and through the shallow waters of the continental shelf. The waves from Colombia, on the other hand, came through the earth's crust through the deepest part of the North Atlantic.

We may conclude therefore, that there is good ground for supposing that the oceanic basins and continental elevations are not merely irregularities of surface-form, but are accompanied by and probably related to differences in the constitution of the substance beneath them, which extends inwards to a distance of about one-quarter of the radius. It is not possible to state the nature of this difference, beyond that it is such as to cause a slowing down of the rate of propagation of second phase waves under the oceans.

The ancients held that the earth was an organic body, the body, as they said, of a great goddess. After all, are we so sure that she is only one great mass of matter, without parts or organs? May there not be ducts, channels, a circulation? A heart perhaps, and currents of life, and chords sympathetic with the rise and fall of nations, and an imagination cognate and concurrent with history, and an intimate close connexion with man. We are in a live Universe, living on a live world, and whatever is around us is alive too.

STUDENT

### The Explorer's Field

FEW people realize how much of our planet's surface yet remains unexplored and unmapped. There are of course the two polar regions, the ends of the great magnet and themselves magnets for successive generations of explorers. Much of Africa is still unknown, even of parts already appropriated, to say nothing of the million square miles over which as yet floats no nation's flag. Even Mexico and Central America contain large unknown or almost unknown areas, and of South America there are still two million square miles altogether unpenetrated. Some of this great tract, the densely forested basin of the Amazon, might almost be called impenetrable. There is of course plenty of scope for the explorer in Asia; if he likes high ground he can try Tibet; if he is not particular about his life he may risk it with profit to geography and archaeology in Southern Arabia. But many other parts of Asia are beckoning. So also are Borneo, New Guinea, and an immense area of Australia. There is every reason to suppose that the islands of the Pacific are not yet all, or nearly all, mapped; and if they were, that ocean has shown a tendency of late to produce some new ones.

So the explorer need not sigh for fresh worlds for, say, a couple of centuries yet.

STUDENT

### Cometary Phenomena

PROFESSOR Bredechin's "mechanical" theory of cometary phenomena is that "the tails and emanations from the nuclei of comets are composed of ponderable matter in a state of molecular or even atomic attenuation, which is attracted or repelled by the sun, with varying degrees of force, according to its chemical nature." But mechanics takes no cognizance of repulsive forces! One recalls H. P. Blavatsky's witty comment on the dilemma of modern science. "Science . . . may be reminded that the 'apple' is a dangerous fruit. For the second time in the history of mankind, it may become the cause of the FALL — this time of 'exact' science. A comet whose tail defies the law of gravity right in the sun's face can hardly be accused of obeying that law." J.

# Some Views on XXth Century Problems

## The *Via Media* in Athletics

A MEDICAL contemporary raises a decided protest against college athletics as they are now practised. The protest is not, mainly, on the ground of waste of time but of health. Figures show that the great college athlete is likely to be a physiological bankrupt and to have a shorter life length than the quiet bookworm, objectionable and unbalanced as the latter's life may also be.

The whole subject of muscular development is thus opened. It is now generally recognized — except in colleges — that big muscles do not mean health and are very likely to be the causes of future ill health. A reaction is beginning and like all reactions will probably go too far. We are already hearing the argument that man is now a brain animal, needing to depend less and less upon his muscles. He has harnessed horses, steam, and electricity: let them be the muscles of the future: away with gymnastics. A correspondent writes to another medical paper, developing the difficulty. How shall he steer between those who tell him that muscular development is a variety of suicide, and those who prescribe gymnastics as the elixir of life?

There is a middle path. Muscles have several other functions besides contraction, and these others — very necessary to health — are but little dependent upon size and very much upon elasticity, resilience, mobility. The exercises should not develop muscles much beyond the point which is necessary for the ordinary day's duties. But every muscle should always be alert and ready for instant call; every joint should be ready to go through all its natural movements to their maximum. Enough time should therefore be given every day to gymnastic exercises to ensure that every joint is ready to flex and extend and rotate with the completest ease and freedom. No man should ever allow himself to be "set" anywhere where nature intended him to be bendable. There is the essence of all the books and rules. And they can be obeyed very well partly by ten minutes' work night and morning; and partly by doing every physical task that comes in one's way with the utmost spring and alertness. If we have to walk a hundred yards, why not walk them well and erect? If a room has to be swept, why not do it crisply? In the vast majority of cases old age need never mean crippleddom. STUDENT

## The Golden Age

SIR WILLIAM RAMSAY, the great English Chemist, has snatched some time from his science to consider the history of religions. He explains in the *Contemporary Review* how, starting with the ordinary belief that religions and the civilizations in which they arise are evolutions from simpler types, types which we think exemplified in present day savagery, he came gradually to an exactly opposite view. The modern method, he says,

Is based on the assumption that there takes place normally a continuous development in religion, in thought, and in civilization, since primitive times; . . . that the primitive in religion is barbarous, savage,

bloodthirsty, and low in the scale of civilization, and that the line of growth normally and usually is toward the milder, the more gracious, and the nobler forms of religion; that the primitive type of religion can be recovered by studying the savage of the present day, and that the lowest savage is the most primitive.

All this he calls in question, now holding the belief that religions and civilizations are degenerations from nobler types; that in fact the total history of man is so far mainly a history of degeneration.

Wherever evidence exists, with the rarest exceptions, the history of religion among men is a history of degeneration; and the development of a few Western nations in inventions and in civilizations during recent centuries should not blind us to the fact that among the vast majority of the nations the history of manners and civilization is a story of degeneration.

The Professor came by his view, partly from a study of the writings of Paul, partly from a survey of the long history of the great nations and civilizations that arose, flourished and decayed, around the basin of the Mediterranean. He finally adopts "the practically universal view in the ancient world" that decay and degeneration is the law of time:

that the Golden Age lay in the beginning, and every subsequent period was a step further down from the primitive period of goodness, happiness, and sympathy with the Divine nature. We are too apt to pooh-pooh this ancient doctrine as merely an old fashion, springing from the natural tendency of mankind to praise the former times and ways. But it was much more than this. It was the reasoned view of the philosophers. It colored almost all Greek and Roman literature. It lay deep in the heart of the pagan world. . . . A feeling like this cannot be safely set aside as false. It must be explained; and the only explanation is that it arose from the universal perception of the fact that the history of the Mediterranean world was a story of degeneration and decay.

This is very nearly the teaching of Theosophy, which however has a much longer view of history than the Mediterranean basin can afford. As civilization succeeded civilization, the line on the whole trending downward, something was being acquired, if much was being temporarily lost. The infinite pain and struggle and bloodshed of the successive epochs can only be thought to have counted for nothing by those who do not believe in Reincarnation, do not believe that it was the same humanity, the same individuals, who from age to age constituted the civilized world. According to Sir William Ramsay the degeneration was at root the separation from or increasing neglect of the Divine; it had also for its cause, and to the same extent — for they go together — the unbrotherhood of man to man, the origin of all evil and all pain.

So it is no eternal degeneration, but only until man has learned its cause through its pain; learned it not with mind only but with his whole consciousness, learned it until the knowing is instinctive. After that there are no heights which the Brotherhood of humanity may not climb. In the new ascent, even the very animal astuteness and cunning which man

has evolved but to best his fellows, will find some legitimate service. If, then, to the picture of degeneration we add the idea of Reincarnation, we find that because of its pain, degeneration must work out its own cure; the idea of brotherhood already in all men's mind may at any moment, and must soon, ripen into an eternal spiritual instinct. Then the Golden Age will have come back.

The history of mankind must look rather foolish and meaningless to those who do not believe in Reincarnation. Indeed the very word becomes somewhat abstract and metaphysical: the aeonic course of a stream whose constituent drops suddenly and involuntarily enter it, stay with it a swift moment, and then leave it forever.

"What," asks H. P. Blavatsky, "was the religion of the Third and Fourth Races?" — those Races which, preceding our Aryan, witnessed the duration and fall of the Golden Age.

In the common acceptance of the term, neither the Lemurians, nor yet their progeny, the Lemuro-Atlanteans, had any; for they knew no dogma, nor had they to believe on faith. No sooner had the mental eye of man been opened to understanding, than the Third Race felt itself one with the ever-present. . . . All, the One Universal Deity. Endowed with divine powers, and feeling in himself his inner God, each felt he was a Man-God in his nature, though an animal in his physical self. The struggle between the two began from the very day they tasted of the fruit of the Tree of Wisdom; the struggle for life between the spiritual and the psychic, the psychic and the physical.

The struggle goes on yet; but the awakening, "in a moment of time," cannot now be far away; and then all the difficulties will vanish from the path to real life, the life for which all has been preparation. STUDENT

## The Human Trinity

ONE of the best definitions of sin ever made appeared in the September *Nineteenth Century and After*, over the signature of a bishop. Sin is given as the deliberate identification of the self with its infinite capacities, with satisfactions that are finite. The "Fall" did not consist in the fact "that the man was infinite and has become finite, but in the fact that, being infinite, he has consciously identified himself with finite satisfactions."

The Bishop may now go further and see that there is a part of man's consciousness which never did descend from its high and proper estate, the Soul, without whose constant promptings and inspiration, man would have no way or possibility of re-ascending. It sent the laborer, the man, into the vineyard to cultivate it, — the vineyard of the world of matter and sensation. But he has forgotten his task.

Man, as Paul said, is triple, a trinity in consciousness. There is the sense consciousness of *body*, in which he has lost himself; there is *himself*, the "soul" of Paul, with the unused power to gain freedom; there is his overshadowing *Soul*, the "spirit" of Paul. And beyond is that state or Presence which is the support and the ultimate reason of all, to which he may ascend through the path and help and intermediation of the Soul-Christos. STUDENT

## Birth and Death of Nations

THE following question and answer appear in the columns of a newspaper:

Why should the greatness of Greece and Rome have passed away and they have fallen into their present decrepitude?

For the same reason that the oldest man you know has passed beyond the years of his greatest power and fallen into decrepitude. Nations are like individuals; they have their infancy, youth, manhood, old age and dissolution. Some die in infancy and others grow to the age of senility.

The answer must have been unsatisfactory to the questioner. It says, "for the same reason as men do," but does not give that reason. It is implied, however, that the mere statement of the general law of birth and death is sufficient. But the questioner had something more in his mind. He felt that the truth is incompletely stated when we simply say of the Greek civilization that it arose, culminated, and perished. He felt that there was a futility, a waste, in the idea of a great civilization being painfully evolved, only to perish and to be succeeded by another equally futile effort on the part of another nation. In short, the intuition contradicted the voice of conventional belief.

The case is of course the same with regard to individual man. If he is born, grows to maturity and dies, and that is all, there is the same purposelessness and sense of failure in his career. But it is only the more external parts of man's nature that are subject to this process of birth and death. Man has a body, which, together with various other components, makes up the temporal and impermanent part of him. This is born, grows up and dies. But the man himself, the dweller in the tabernacle, the user of the instruments, is not touched by death. As there is in man that which survives the changes in his atoms and is permanent throughout a lifetime, so also there is that which, lying still deeper yet, survives the changes in his personality — the Soul or real Man which incarnates again and again.

While for ordinary purposes of reasoning it may answer well enough to reason from the standpoint of terrestrial life, it should be remembered that questions like the one asked above take us into deeper water, and we have to bear in mind that the phenomenal world is only an outer seeming, compared with the real Life of which it is the reflection. The real Life of a nation, as of a man, is something that escapes the senses and finite understanding. The man's personality or the external history of the nation are only the outer manifestation of the real Life. And, as the successive incarnations of a man are but the successive outward phases of his real Life as a Soul, so there

Lomaland Photo. and Engraving Dept.

CARNAC: LES ALIGNEMENTS DE KERMARIO (See CENTURY PATH, x, 5)

is what might be called a Soul dwelling in the nation. If it is permissible to speak of men collectively as constituting a definite entity called a nation, then it is also permissible to do the same thing when speaking of Souls. The glory that was Greece and the grandeur that was Rome have not perished, but have passed on to other races, or are yet waiting to reappear in future races. Everything in the temporal world must obey the law of birth and death, for everything manifested has two ends and a middle. But there is no reason to bewail the fact.

Nevertheless there is something to bewail in the case of many of the races that have passed; for they did not live to a healthy old age and die a natural death. They died prematurely as the result of abuse of their powers and perished violently. Perhaps there are on earth races which did not die prematurely but have lived on into venerable old age. Our race has the chance of passing away prematurely and ingloriously or of passing the danger-point and living to old age. But it must die some time, like all mere forms.

All this is important as helping to counteract the cynicism and pessimism that colors our history books and so much of our thought. As long as we have our eyes fixed on external forms we see only the change and decay and lose sight of the continuous life and undying progress within. Theosophy has a continual war to wage against these cynical views which fill the world with despair and dampen down all hope and effort. It is verily a gospel of renewed Life for humanity. STUDENT

## Recent Maya Discoveries

IT would be well for science if, in the matter of archaeology, it could so far master the spirit of precipitancy and justify its boasted reputation for being "cold-blooded," as to postpone the erection of theories about the origin of humanity until more facts have been collected. When even in Asia and Europe, on sites that have been occupied for millenniums, discoveries are continually made of things

never before suspected, what must be the case as regards America, in places where white man has never set foot? Those localities where the great Maya ruins are found are covered with dense forest, infested by tropical heat and fever, and guarded by hostile tribes; and we have not yet seen all the surface, let alone what is underground. However, explorers are not wholly wanting; and in *Records of the Past* there is a brief account of some recent Maya discoveries by the Count de Périgny. He has discovered four groups of ruins in the southern part of Yucatan, some distance

from the Maya village of Ycaiché, not so well preserved as those of northern Yucatan, but still strong and effective despite their age. The details of these various discoveries are not yet published, but they include several pyramids, buildings with rooms and underground passages, hieroglyphics, chief among which is the serpent's head; and the remains of a city. The architecture had special characteristics, besides its affinities with other Maya architecture; doubtless there was variety of taste in those days as now. STUDENT

## Belittling Rameses the Great

MUCH that has previously been given out as history about Rameses II is now, we are told, discovered to be wrong. But some archaeologists, instead of taking the blame themselves seem inclined to shift it off upon Rameses!

Certain Egyptologists claim to have discovered that Rameses II was a much overrated man and say he was not entitled to the appellation of "great," with which historians have honored him. . . . The more we discover about Rameses, the more convinced we are he was a fraud.

How can Rameses be held responsible for the changing opinions of historians? It is necessary first to prove "intent to deceive." And what did he do that has led to this accusation? He simply did what was a common practice in antiquity, as other instances show — restored old temples that had been suffered to fall into decay. He beautified his country as much as possible by building and restoring. The assumption that in inscribing his own name on buildings originally erected by others, he meant to deceive, is simply guessing. The notice from which we quote goes on to say that "Rameses was not great in any way"; which is quite contrary to what is known about him. Posterity regarded him as one of the greatest kings of Egypt and it is too much to think that all historians were fooled by what is described as "colossal vanity" in writing his name on other people's work and not building anything on his own account. STUDENT

# The Trend of Twentieth Century Science

## Right and Left

DR. LIEPMANN a German physiologist, has taken us one very decided step further towards the solution of the problem of righthandedness. Most people know that we speak by means of a certain convolution in the left brain. With the left brain we also move the right arm and leg; and with the right brain the left arm and leg. But it now turns out that the right brain is considerably less intelligent than the left. If the left be injured or diseased, so that the right half of the body is more or less paralyzed, the unintelligence of the unaided right brain is then very likely to show up clearly. Its unintelligence shows itself in the imperfection of the movements of the left side of the body. In some cases the right brain, unguided by the left, appears almost idiotic.

Loss of the power of speech is commonly called aphasia; but there are several conditions included under that one term. The mechanism of speech may alone be paralyzed, all else being perfect. The mechanism may be perfect, but the memory of how to work it may be gone. The patient knows what word he wants to say, recognizes what is said to him, can read and write; but he cannot connect the word in his mind with the mechanism of speech. Or a misconnexion may be made and a wrong word uttered. And then he may or may not recognize it as the wrong word. There are various degrees up to complete inability to use any words either with lips or pen and to recognize any when he sees or hears them.

Somewhat the same state may come about through injury or disease with regard to objects and movements in general. There may of course be complete motor paralysis. The motor mechanism may be perfect and the patient know what movement he wants to make, yet may make another or an excessive one. Locomotor Ataxia is characterized by misjudged movements. The movement may be wholly wrong, as where the patient behaves with a toothbrush as if it were a cigar, putting it to his mouth, and in that case he may or may not know of the error. In extreme cases, corresponding with extreme cases of aphasia, objects may not be recognized for what they are at all and wholly and constantly irrelevant actions done with them. This of course is idiocy.

It has been found that the right brain, left without guidance from the left, often acts like an idiot, the mind remaining perfectly intelligent. Disease of the left brain sometimes puts it out of court, the right side of the body being consequently paralyzed. The right brain being unaffected, the left side of the body preserves perfect movement. But its movements are likely to be ill-judged, perhaps excessive, perhaps utterly irrelevant and idiotic. The state is called Apraxia. One such patient, says Dr. Liepmann, set his eyeglasses on his protruded tongue instead of his nose; another put a match between his lips as if it were a cigarette—and so on. But when the right brain is diseased and the left half of

the body paralyzed, we never find the healthy *left* brain permitting any such foolishness on *its* half of the body. The inference is therefore that the right brain requires the constant supervision of the left. Without that supervision it does not seem to remember what objects are nor what actions should be made with respect to them. It is therefore natural that the left brain should be alone concerned with speech, a complicated set of actions requiring the constant and swift work of memory and perception.

Why we are better related to the external world by the left brain than the right, remains of course still unsolved. Still, we have learned one more fact. STUDENT

## Direct Power

THERE is another claimant for the honor of delivering us from the necessity of burning coal in order to run our machinery. The medium in this latitude for running the motor, is, we are told, ether; but the inventor thinks that in the tropics water would do. The ether or water is contained in blackened pipes, curled in the bottom of a shallow box exposed to the sun and covered with two layers of glass.

All light rays are in some degree also heat rays. To these, glass is of course transparent. But not all heat rays are light rays; these, glass will not transmit. The glass over the box admits the light-heat rays, which heat the pipes and the ether within. But this heat, being no longer luminous, cannot get out of the box. The heat within, therefore, as long as the sun shines, steadily rises. The inner layer of glass becomes warm, hot; but its heat is additionally retained by the non-conducting layer of air between the two sheets of glass. The pipe is blackened in order to prevent the rays of light-heat from being reflected back whence they came.

If we could see the machine of a century hence, we should perhaps, with our present knowledge, entirely fail to understand its working. Our grand-children may use sun-forces, earth-magnetism and earth-electricity, earth-heat, and probably radiant energy from elements still unknown lying deep in the crust, in ways we cannot imagine. Machines may become much simpler, cleaner, less detrimental to health, and men will not have to sweat in the bowels of the ships. With the advent of real civilization they will still be used, perhaps more than now. But their very use may become one of the fine arts, and a workman may come to love an almost living machine as the violinist his instrument. STUDENT

## Animal and Vegetable Bodies

THE cutting of flowers is probably no more painful or disagreeable to a plant than is the cutting of his hair to a man. Nevertheless there is some evidence that the plant is not purely passive to the operation. Recent experiment has shown that for example an onion taken entire from the ground including its tops, and then cut, suffers a rise of temperature—a "fever" as a New York botanist calls it. But probably the bolometer

would show a minute rise of temperature in the human body after a cutting of the hair.

The body of an animal is more absolutely a unit than that of a plant. Each cell, and each organ of the latter, separated, can, under proper conditions, go on with its life and usually reproduce the whole from itself. But that is not true of any cell or organ of the animal, except very far down the scale. The botanist we have quoted describes a very instructive experiment showing the divisible life of the plant. If into six jars are put respectively, (1) a root, (2) stems, (3) leaves, (4) flowers, (5) germinating seeds, and (6) nothing: we shall find that at the end of twelve hours a lighted candle will burn in the last only. The contents of the other five, going on with their life, have as usual been consuming oxygen and giving out carbonic acid. This is independent of the other and opposite function, seen in growing plants, of *taking in* carbonic acid, fixing its carbon and returning the oxygen; and is much in excess of it. A sufficient number of growing plants, or even of cut flowers, in a room will spoil the air as much as a pair of human lungs. (Which is not to say that a bedroom may not have a pot of geraniums or a vase of cut flowers!)

Weight for weight, some plants use up more oxygen than a living animal body; some very much more. Because a plant, though an organism, is also much more a *set* of separable organisms than an animal, each part of it looks after itself in the task of oxygen getting. In the animal there is of course one general vehicle and apparatus for the supply of oxygen all round—the lungs and blood. But each part of the *plant* goes to the air direct for what it wants. The roots get oxygen from the constantly renewed supply in the soil, and the earth's soil is one huge breather breathing once a day. As the sun warms it, the contained air, charged with the products of the respiration of countless roots, escapes; as it cools by night, it draws in a new supply. So the roots are not neglected in the general scheme. All things work together for life. STUDENT

## Dew Ponds

DR. MARLOTH'S experiments on Table Mountain are interesting, but they hardly bear, so far as one can see, upon the dew-pond problem. Among others, he surrounded a rain-gauge of 5 inches diameter with reeds a foot high. This gauge collected sixteen times the quantity of water that was found in gauges not thus surrounded. It was evident that the reeds attracted and condensed the water not only immediately about their own stems but for some space around.

But most dew ponds, containing a perennial supply of crystal water, have no sort of vegetation in their neighborhood. Granting to plants the power of condensing water from the air—perhaps when or because they are of an electrically different sign—the dew pond difficulty is exactly where it was. Is this problem also, possibly electrical? Indeed the ordinary theory of the formation of dew is thought to need an alterative tonic. STUDENT

**Draining the Ostia Marshes**

THE draining of the Ostia Marshes near Rome is the subject of an article by Professor Rodolfo Lanciani in the *Youth's Companion*. He says that it is difficult to grasp that it has taken the Latin race thirty centuries to find out why thousands of its best sons were carried off by a mysterious scourge in the early fall of each year. In early days the Alban and Sabatine volcanoes were still in full activity and many geysers and hot springs filled the air with disinfecting vapors, so that these "Fields of Fire" were celebrated cure resorts in spite of the swamps in the valley. But even in the days of early Rome the lower levels seem to have been subject to fever, and towards the end of the Republic there were three temples of the *Dea Febris* left standing in Rome. After the fall of the Empire we hear of a chapel in honor of the Madonna della Febre and her image is still to be seen in the crypts of St. Peter's. But not until many centuries did these prayers take effect. In 1874, before the advent of the mosquito theory, was begun the campaign against the marshes, the object being to drain them along the coast from Civit  Vecchia to Porto d'Anzio. In 1882 there came into the neighborhood two powerful bands of workmen, each of six or seven hundred strong, who had obtained from the Government the concession for draining the two great marshes in the midst of which Ostia stands. These workmen were sturdy independent folk from Ravenna, a northern region which did not yet recognize the monarchy. They were organized under their own overseer, who alone was responsible to the Government. This little community worked in the mud for seven years, during which time they loyally persevered with their difficult and disagreeable task. Their rough aloofness was overcome by the courage of the King Umberto, who visited them personally and by his courage and tact succeeded in quite reconciling these ardent anti-monarchists to the person of their sovereign. At the completion of the work they asked his permission to settle on the lands they had reclaimed; and this was granted on payment of a nominal rental of a few francs. Hence the pestilential character of the neighborhood was entirely removed and a new and industrious community established where formerly were malarial swamps. For, even if the mosquito be the sole cause of the fever, at all events his breeding grounds have been taken away. STUDENT

CHAPARRAL AND CLIFFS, LOMALAND: THE "ATLANTEAN'S FACE"

**Soil Inoculation**

THE process of feeding the soil with available nitrogen by introducing into it micro-organisms which gather nitrogen from the atmosphere was mentioned in an article on Kalkstickstoff in No. 25 of this volume. These organisms live in the roots of plants and can effect a combination between the nitrogen in the air and the salts in the soil. Clover, beans, peas, etc., have in their roots certain little nodosities which are colonies of nitrifying microbes.

An English Cambridge Professor pursued some practical investigations into this method in 1906, in 200 different fields throughout Great Britain and Ireland, and declared that the experiments were successful to the extent of 90%. In Scotland results were obtained with clover and vetch; near Sheffield with peas and beans; and in Ireland with flowers.

STUDENT

**Bird-Life Annihilated by Cats**

ON a small island called Mangare, near Pitt Island, New Zealand, some rabbits were introduced and they multiplied considerably; so that when the island was subsequently turned into a sheep run, cats were turned loose with a view to destroying the rabbits. But the result was the destruction of every native bird on the island and the sea-birds no longer visit it. Before this there

were many kinds of birds, but now the desolation of bird-life is total. The same thing has happened on Stephen's Island in Cook Strait, where the lighthouse keepers, who arrived in 1894 brought with them a cat, which escaped when it was about to produce a litter; and in a few years all the bird-life had disappeared.

STUDENT

**Gem Production in the United States**

IT is difficult to obtain an accurate account of the precious stone production in the United States, but from the statistics available a fairly accurate estimate may be made, and such an estimate for the year 1906 shows that the value of precious stones, excluding pearls, was only \$208,000. The kinds found were, in order of their total value, as follows: tourmaline, sapphire, chrysoprase, turquoise, spodumene (kunzite and hiddenite), and beryl; the balance being various gem minerals such as garnets and quartz gems, and a few amethysts and rubies.

The tourmalines come from California, Colorado, Maine and Connecticut; sapphires from Montana, North Carolina and Idaho; chrysoprase from California; turquoise from Arizona and New Mexico; spodumene from California; beryls from California, Colorado, North Carolina, Massachusetts, New Hampshire and Maine; and rubies from North Carolina and Idaho.

### A Lomaland Revival of an Ancient Craft

A RECENT number of a well-known art review published an article on the craft of batik-making, so-called, of especial interest to the students in the Lomaland Department of arts and crafts. The writer describes batik-making to be a method of dyeing practised by the native Javanese, and relates that the craft is a favorite pastime of the noble ladies of Java and that its interesting technique has been passed on from mother to daughter for generations. To see the batik-makers at work is one of the novel sights of the beautiful island of Java. The writer errs, however, when she considers this art-craft undeveloped in America.

Very shortly after Katherine Tingley came to Point Loma, now nearly eight years ago, she established the order of Craftsmen within the Student body which included, besides artists, mechanics and men and women skilled in the industrial processes of the day. From this developed the Lomaland Department of Arts and Crafts which has since done such notable work in all its branches. The objects of the Arts and Crafts Department, as established by Katherine Tingley, was to restore handicraft to its proper dignity in life that it might become an agent of moral regeneration and evolution; and to revive some of the beautiful ancient crafts whose traditions and fragmentary relics speak so eloquently and justly of the love of the beautiful and the joy of work among ancient peoples.

One of the first revivals was of the ancient craft of dyeing by hand, and in the early days—the pioneer times we love to call them—it was no uncommon sight to see women, who had previously taken it for granted that dyeing could be done only in large quantities by the aid of machinery, bending anxiously over a single dye-pot, and using the dye-stick with all the fervor of a witch brewing a magic potion. The first efforts were crude, but soon, very soon indeed, the Woman's Exchange and

### SONNET ON SHAKESPEARE

MATTHEW ARNOLD

OTHERS abide our question. Thou art free.  
We ask and ask—thou smilest and art still,  
Out-topping knowledge. For the loftiest hill,  
Who to the stars uncrowns his majesty,  
Planting his steadfast footsteps in the sea,  
Making the heaven of heavens his dwelling place,  
Spares but the cloudy border of his base  
To the foiled searching of mortality;  
And thou, who didst the stars and sunbeams know,  
Self-schooled, self-scanned, self-honored, self-secure,  
Didst tread on earth unguessed at. Better so!  
All pain the immortal spirit must endure,  
All weakness which impairs, all griefs which bow,  
Find their sole speech in that victorious brow.

Mart began to show, in examples of their handicraft, delicate tints and deep notes of color that visitors from far and near declared could not be found elsewhere. "Where do you get such colors?" was the frequent and even anxious query from artists and artisans as well as from the general public.

Soon the dyers were not satisfied with single-toned fabrics, beautiful as they were in the soft tints that matched the Lomaland sea, sky, and distant mountains, for they were artists as well as craftsmen. They longed to embellish their work with the beauty of line and form. But no machinery fitted with engraved rolls of copper was at hand; only the simple dye-bath and stove. So the artist began to invent means for the execution of design. The results showed the creative impulse. The most undreamed-of effects came to be produced. Window draperies were dyed which, when hung, admitted the sunshine with the luminous glow of stained glass, so that "luminous window draperies" seemed to be the only appropriate name for them; yet even this was but a beginning in the development of the craft. Working in the natural unhampered and self-reliant way, new methods of applying both basic color and design were evolved, original to the creators, since they

were working along strictly empirical lines. Unconsciously to themselves they were unravelling some of the perplexing secrets of ancient craftsmanship; human wit and ingenuity were teaching them to solve the old problems in the ancient way. Incidentally, they were getting close to the heart of the peoples of the past, by working, though all unconsciously, as they had worked.

Among the stages of development of the craft, or better, art, of dyeing, in Lomaland, was this very batik making. It was the result of an original creative impulse to satisfy the demand for larger and more dignified design. This, the process of batik-making, in an artist's hands, fulfils admirably.

The batik-making described in the review, however, stops far short of the Lomaland development of the craft. Ever new and quaint devices have been added for securing unusual and rich color effects and for applying both conventional and naturalistic design, for the impelling force has constantly been the art instinct. Not only have draperies, window hangings, upholstery materials, and floor coverings, in fact, all the manifold accessories of interior decoration, been artistically designed and successfully executed, but the brilliant success of the Woman's Exchange and Mart in their recent costuming of the splendid pageantry of *A Midsummer Night's Dream*, as presented by Katherine Tingley, was due in no small measure to the artistic skill and resource of its corps of artist-dyers. No mere machine-dyed fabrics could have so charmingly and fancifully succeeded in catching the elusive delicacy of the magical moonlight, nor the gorgeous shimmer of the stately robes worn at the ducal palace; and the costumes of that play were the wonder and admiration of press and people alike.

Nowhere else, it is safe to say, and in no other time, have such exquisite webs, exquisite in color and design, come from the dye-bath; for never in historic times have artists

and craftsmen of truer feeling for color devoted attention to the simple craft of applying it to textile fabrics by means of dye-stuffs.

The development of the craft has been of fascinating interest. It has included within it other and still more ancient and primitive methods than batik, indeed, in the Lomaland Department of Arts and Crafts, the whole history of dyeing has repeated itself, and some entirely new effects have been produced. The future promises wonderful things along this line. A LOMALAND CRAFTSWOMAN

### The Woman's View

ONE of England's foremost woman novelists has been bestirring herself recently anent the humiliating position so eagerly accepted by a certain class of titled men, i. e., the indolent and, so to speak, unmoral and impoverished few who marry solely for money. Women who marry for titles have long been berated. The subject, indeed, is well-nigh worn out. This novelist presents a telling picture of the other side of the shield in speaking of

the miserable position voluntarily held by certain noblemen, who, because they have placed themselves in the unnatural and unbecoming condition of owing everything to their wives' money, permit these wives to play fast and loose with their honor and good name and apparently shut their eyes to infidelities which make them a byword of contempt of all self-respecting commoners.

It would be a wholesome and refreshing stimulus to society if such blueblooded lackeys could awake to the fact that manhood is better than money and of their own free will and choice would go out to hard labor in the goldfields or elsewhere and earn their own livelihood bravely and independently instead of lounging and frittering away their days as silent, inactive spectators of their wives' degradation.

Further on she writes:

*It is certain that the true intention of woman's destiny has not yet been carried out. She is fighting towards it, but is using her weapons wildly and in various directions. It is not by opposing herself to man that she can be his real helpmeet, neither by supporting him on her money, whether such money be earned or inherited, and not by adopting his pastimes and aping his manners.*

*It is by cultivating to the utmost every sweet and sacred sentiment of womanhood, every grace of refinement and beauty; by taking her share of the world's intellectual work with force as well as with modesty; by showing a faultless example of gentle reserve and delicate chastity.*

*When man begins to understand that woman is not meant to be a toy or a drudge, but a comrade, the closest, best and truest God has given him, then the clouds will clear and marriage will be a blessing instead of a curse.*

### The Tyranny of Fashion

AN old Quaker's saying runs thus: "All the world is queer but thee and me, Priscilla, and even thou art a little queer." *O tempora! O mores!*

All idiosyncrasies seem queer to us excepting our own, the while we may be serving a fickle goddess and knowing it not, clinging to senseless and injurious customs and discarding sensible and comfortable ones as soon as the mandate goes forth that "Fashion says thus and so." How many women or girls have the courage to take a stand and set up an ideal of their own?

Think of how so many clothe themselves,

and, worse than all, their children. They put befeathered bonnets on tiny tots, furs around their necks, short skirts, short socks and low shoes! this in winter. But in summer it is just as ridiculous; stiffly starched piqués that must not be wrinkled or soiled and small caps that allow the hot sun to burn down upon and injure the eyes. Poor little children! If they had anything to say in the matter would they not rejoice in a gingham apron and a broad-brimmed hat for summer and, for winter, warm stockings and shoes and underwear, light and warm and covering the whole body, so that cumbersome wraps are not so necessary?

Many boys have sensible clothes, but the little girl is handicapped from the start. Low-necked and short-sleeved in baby clothes, later all dressed in white, furry and fuzzy in winter, lacey and starchy in summer; few are the

Lomaland Photo. and Engraving Dept.

RAJA YOGA INSTITUTE AND EUROPEAN HEADQUARTERS OF U. B. & T. S.  
91 AVENUE ROAD, LONDON, N. W.

minutes in which to relax and be "off parade," for at all costs the white clothes must not be soiled!

Thus it has come to be that to appeal to the outer eye, making everything conform to fashion's false standards, is the aim and object of nearly all young girls today. They cannot be blamed, for they have been given no other ideal. They have not been taught that their bodies are sacred, that they should fit themselves for the duties and responsibilities of womanhood by being so exquisitely pure and clean in person and in mind that an impure thought or word, or a senseless, harmful mode of dress, can find no dwelling place in their lives.

It is not the outward eye, for *that* any silly or erratic person may attract, but the inner eye that sees things as they are, that all women really desire to please. Therefore this subject of fashion is an important one from many standpoints. In viewing the styles and ruminating on their many changes one is forced to

acknowledge that very few, if any, seem to be designed with the idea that they are to clothe a form that has a spark of divinity within it, and is really a Temple of God.

### Jottings and Doings

EIGHT English girls have the distinction of being the first ladies' crew to pull a racing sculling eight. Sculling and the craft used for the sport are not the same as rowing and the ordinary racing boat pulled with oars, in which several ladies' crews have distinguished themselves. These English girls have been carefully trained by an enthusiastic oarsman who is justly proud of their success. H. H.

A BELGIAN truck gardener in Kansas City was recently arrested for working his wife and daughter at the plough. He had at the time well-kept horses. He said that "they must do something to earn their living as he could not support them for nothing," when the Humane agent threatened him with arrest, and he further added, "It is the custom in the old country to work the women, why not here? Isn't this country free?" He was informed that such ideals of the status of women were not in high esteem in this country. But what is the real status of women who will submit—as did these, it is stated—to such indignity *without protest*? That is the vital query. STUDENT

EACH year witnesses an increasing number of women from other lands who seek American institutions for training along different lines. While a few of these remain after completing their studies, the majority return to their own countries. Recently a young Syrian woman completed the course in nursing at the Woman's Hospital in connexion with the Philadelphia Training School for Nurses and was graduated with high honors. She had grown to womanhood in America, but knowing the great need for nurses in her native land she determined to return there to practise her profession and left soon after graduation for her ancestral home in Syria. STUDENT

THAT society women now and then use their talents for more worthy ends than slavish conformity to the decrees of the fashionable world, is evidenced by the case of a prominent New York woman who has recently published a hand-book of English parliamentary law. The very gratifying reception which this book received in England shows that it was not the work of a *dilettante*. The London County Council has gone so far as to pass a resolution endorsing it, a most unusual thing, and the book has received the commendation of authorities both in England and America. H. H.

PARIS, Oct. 26—Mme. Jeanne Girard and Professor Pinard of the Paris Academy of Medicine have founded a school for little mothers here which is developing with great success. For, after all, maternity does not of necessity bring knowledge with it, and not only the mothers of the babies of the poor, but often, too, their little sisters have solid need of teaching. We all know how many accidents occur daily to babies, owing to a carelessly adjusted pin, an ill-washed bottle, fruit given for a treat, draughts, dirty sponges, which cause 25 percent of infant blindness, and many other things which education in nursing will prevent. The school for little mothers has been started in the very thick of the working quarter of Paris. Little girls of 10 are taught the care of babies.—*Los Angeles (Cal.) Examiner.*

# OUR YOUNG FOLK

## The Chevalier Bayard

**B**AYARD, "*le chevalier sans peur et sans reproche*"—such was the title that he won in life, and such it has followed him down through centuries of history and romance. The words stir us today with the great things they imply.

In the "pleasant land of France," in the country of Dauphiny he was born, in 1476—Pierre Bayard de Terail. The old chronicles say that "as scarlet surpasses all other dyes, the Dauphinese are called by all who know them (without disparagement of other regions) the scarlet of the French nobility." The little Pierre was born of one of these families, a noble one, whose sons for generations had loved king and country and honor well enough to die for them. At the age of thirteen Pierre chose for himself the profession of arms. During his life, which was not a long one, he served three kings of France—Charles VIII, Louis XII and Francis I—served them with fidelity, courage and honor, and with never an iota of self-seeking.

He began his career as a page to the Duke of Savoy, in whose household he remained for six months, being trained in all knightly exercises and excelling all the other pages in prowess, and winning the love of great and small; for from the first he showed those qualities of courtesy, generosity and valor, which made him so beloved through life. About this time the Duke went to Lyons to pay a visit to King Charles. Here it was that Bayard won the nickname of "Piquet," a spur, the king being so pleased with his fine horsemanship and graceful manners that he asked the Duke of Savoy that Bayard might be transferred to the royal service. He was put in charge of the Count de Ligny for further training for knighthood. Three years Bayard passed thus and at the end of that time the Lord de Ligny dismissed him from pagehood, made him a knight and a gentleman of his household, and from this time he became "*le Chevalier Bayard*."

We love to read in the old French chronicle of Bayard's first feat of knighthood. He was then seventeen years of age, and a passage of arms having been proclaimed by Master Claude de Vaudray, a gentleman of Burgundy and one invincible in the science of arms, Bayard was seized by a desire to touch the shields which were suspended, that all who would display their skill at the tournament, might touch and have their names inscribed by the king-at-arms. When the report ran through Lyons that Bayard had touched Master Claude's shield, all were amazed at his daring, and we are told that the Lord of Ligny would not have taken ten thousand crowns for the news.

Lomaland Photo. and Engraving Dept.

## A PICNIC ON THE HILLSIDE AT POINT LOMA

### From "A POET'S HOPE"

William Ellery Channing

**I** AM not earth-born, though I here delay;  
Hope's child, I summon infiniter powers;  
And laugh to see the mild and sunny day  
Smile on the shrunk and thin autumnal hours;  
I laugh, for hope hath happy place with me—  
If my bark sinks, 'tis to another sea.

Bayard's reason for what he had done is characteristic: "Mountjoy, my friend," he said, "what I do is not from pride or overboldness, but only from a desire to learn the science of arms by degrees from those who can teach me."

The day of the tourney came and the Lord of Vaudray was encountered by many gallant gentlemen of the household of King Charles; but of all who came none did so well, either on horseback or on foot, as Bayard. By the laws of the tourney, as each one finished his bout he was led along the lists, his visor up, that all might know who he was, and Bayard, who was by far the youngest and who was pale and rather delicate looking, was acclaimed victor by all. Next day the Lord de Ligny made Bayard one of his company and sent him to the garrison that he might go in training for the stern service of war. On parting from him the king said, "Piquet, my friend, may God develop in thee that fearless manhood which thy noble youth so graciously promises." Several years he spent thus and we are told that he failed in nothing that was a duty.

I would we had space to tell of the many gallant jousts that he won, and the prizes that he often disclaimed and bestowed upon others, of his generosity and high-mindedness and chivalry, and of his brilliant military campaigns in Italy, France and Spain. Wherever he was in battle, there was courage and hope; his return after imprisonment is said to have been like a re-enforcement of ten thousand men to the army. "A greyhound in attack, a wild boar in defense, and a wolf in retreat," his very name was such a terror to the enemy that whole troops have fallen back before a detach-

ment of French soldiers headed by Bayard.

At the storming of Brescia, when the Venetian commander saw who was leading the assault, he cried to his men, "If this Bayard be but defeated, all the rest will be easy." But Bayard led the charge up to the cannons' mouths and the battle-cry of "France! France!" changed to "Bayard! Bayard!" as he leaped upon the ramparts.

In his dealings with his enemies he was always so honorable, courteous, just and merciful, that they respected and admired him as much as they feared him, and though taken prisoner several times, he always returned unharmed and unransomed because of his wit

and valor. To Pope Julian II, who offered to load him with riches and make him Captain-General of the Church if he would renounce the service of France for that of the Pope, Bayard replied: "I have but one master in heaven—God, and one upon earth—the King of France."

What France owes to him during those disastrous Italian campaigns, cannot be estimated. We like to think of the picture of the youthful king Francis I, kneeling before Bayard to be knighted by him after the battle of Marignano.

When Bayard received his mortal wound and was taken prisoner by the Spaniards, the lamentations among the Spanish soldiers were almost as great as among the French, for "they knew that by his death nobility itself was impaired, and all respect and tenderness were shown him as the whole Spanish army came to see him and honor him.

"He loved his neighbor as himself, and never possessed a crown but it was at the service of the first who needed it . . . graciously did he confer his gifts. He was a sorry flatterer; and never swerved from speaking truth were it to the greatest of princes. He looked with contempt upon this world's wealth, and was at his death no richer than at his birth."

## Carlyle and a Crust

ONE day Carlyle suddenly stopped at a street crossing and, stooping, picked up something out of the mud, even at the risk of being knocked down and run over by passing vehicles. With his bare hands he gently rubbed the mud from it. He then took it to the pavement and laid it down on a clean spot on the curbstone.

"That," said the old man in a tone of tenderness he rarely used, "is only a crust of bread. Yet I was taught by my mother never to waste anything, above all, bread, more precious than gold. I am sure that the little sparrows or a hungry dog will get nourishment from this bit of bread."—*Springfield Republican*

NOTHING great was ever achieved without enthusiasm.—*Emerson*

# THE CHILDREN'S HOUR

## Mokwa's Learning

THE sun shone down hot on the high mesa top. Little Mokwa crept into a shady spot behind a large rock where he could watch the trail which gleamed white between the miles and miles of sage brush of the desert far below him, until it was lost from the keen gaze of the child, miles and miles beyond. Motionless he watched, until the sun, rising higher and higher, stole the cool shadow from the rock and the bare brown body of the little Indian was again exposed to the burning rays. "Watch the trail," his father had commanded, "until I call you." More than an hour had passed and his eyes had not left the spot. He was alone on the bare point of rock and not a living thing had stirred, not a sound had reached him. Was he tired? Did he wonder why he was left to watch the trail? He asked himself no such questions. He was the son of a chief and this was his first command.

Presently a slight sound broke the silence and in the distance he saw his father beckon to him from the adobe house-top. Swift as a deer, he ran, jumping from rock to rock, his lithe little form gleaming in the sun as he sped onward over the mesa until he reached the spot where his father stood beside the door which led to the *kivas*, the sacred chamber underground where the religious ceremonies are performed and where children are taught the history of their people by word of mouth.

Now his time had come to be taught the great truths. Seven summers had passed over his head and the little mind was ready for the teachings. Did the little heart beat faster? Was there a thrill of delight that the wonderful time had come when he was to begin his education? The stolid little face showed no sign and in silence he waited his father's next command.

The old chief moved towards the door, the child following, and together they entered the *kivas* where sat the elders of the tribe. Now his lessons began, and word by word, sentence by sentence, he learned to repeat the history of his nation.

Then he was taught of the wonderful Spirit of the Sun with its great creative power; how it shone down upon the earth and made all things live; of Mother Earth who fed and nourished all things; of the Rain-God who sent the refreshing showers. He was taught the secrets of the life within the plants and flowers and their usefulness to man. He learned much in the strange language which belonged to the time when his tribe was a great nation of heroic men who did great deeds. He was taught that it was his duty to himself as well as others to be truthful and honest, helpful and clean, and grow to be strong and wise, for he was to be a priest when he grew up; it was his right by heredity.

For many hours a day the young boy sat in the sacred chamber, underneath the village, on the grim old mesa top, learning his

Lomaland Photo. and Engraving Dept.

"BROTHER AND I ARE LEARNING RĀJA YOGA TOGETHER."

lessons of life, and after they were over for the day, he would run to his place of watch on the high rock on the mesa and with his eyes fixed on the trail, think of his lessons, how he must learn them well so that when he grew up he might in turn teach his children, and the sacred history of his tribe might never be lost.

It was soon time for the great religious festival, the wonderful snake dance, significant of a prayer for rain to the great Rain-God. He had witnessed it many times but it had meant no more than a great sight; but this time he would understand what it all meant, besides he was to carry the sacred badge.

First, it was proclaimed from the housetops that the great celebration was about to begin. Underground in the sacred chamber the priests prepare the place for the secret snake washing and blessing, build the altar and make the sacred symbols on the floor with four colors of sand, and arrange the bowl and corn which symbolize Nature elements. In two days more the priests begin their snake hunt. Mokwa flies to his guard rock and watches the old priests march along single file over the white trail. A day or two more and they have returned bearing the captured snakes. And now begins the chanting of songs as the snakes are washed, sprinkled with the sacred corn-meal and carried up through the *kivas* just as the sun shines full into the chamber at noon.

The dance begins late in the afternoon. Little Mokwa watches the men in their gay regalia and his head grows dizzy with the rhythmic motion of the dancers and the sound of the chant. He watches his father with the writhing snake between his teeth, but he has no fear; the attendant with the feathered whip will charm and distract the snake so that no harm will come to him.

When the snakes are finally released, Mokwa knows they will carry the prayers of his people to the dead ancestors in the underworld who will deliver the prayers to the great Rain-God to send much rain the coming season. Next, Mokwa sees the priests after having released the snakes, remove their gay garments and drink the bowls of specially prepared

liquid which ensures them against all harm in case of poisoning. Then as they have fasted many days, there comes a great feast and there is a general rejoicing in the village on the mesa top.

Mokwa has run away as the feast ends, to his watch-tower rock. The grim old mountains in the distance are softened by the blue haze of fast coming night. The red glow of the setting sun still shines on the rocky mesa sides, while a chilly wind creeps over the great desert. The great festival is over and now the rains will come and they will have corn for the coming year. He feels himself an older and a wiser child. His tribe, his father, his home are once more sacred to him. Love and loyalty fill his little heart as he crosses the mesa back to his home. E. N.

## Master Tree Toad

DOWN in the calla lily hedge, in one of the tall blooms I found a little white toad.

This little toad knows how to change his color to suit his surroundings. When he is in the lily, he is all white; and when he climbs upon the green leaves, he turns green; and when he hops to the ground he turns his little coat brown. He cannot turn white, brown or green in an instant, but in a very few minutes the color to which he needs to turn, shimmers over him; and then he is very hard to find unless you have very sharp eyes.

He can hop quite a distance and on the ends of all of his toes are little suckers, so that he can cling to anything he hops on, even if it is upside down. He has a very nice musical instrument in his throat, which he makes swell out like a round marble—somewhat as you boys blow up a piece of thin rubber with your mouths—and this is the way he makes his funny little noise.

So you see Master Tree Toad is a fellow with several valuable accomplishments. E. N.

## Facts About Animals

It has been found that dogs can be trained to be of great help on the battlefield when wounded soldiers are lying about, and are often overlooked by the busy ambulance nurses. The dogs can be trained to search well until every suffering soldier has been found and cared for. On one occasion these clever dog scouts found twenty-three soldiers who had been given up for lost.

A TRAIN was wrecked not long ago and fire broke out. A queer fire brigade was soon formed. It consisted of nine elephants of a circus, who were on the train, and who went back and forth from a river near by, filling their trunks with water and at last putting out the fire. One of the elephants rescued the engineer by clearing away with her trunk the heap of wreckage that covered him.

This shows how training helps, especially in times of danger. The elephants had learned to obey orders when they were given them.

## LAST SUNDAY AT ISIS THEATER

Lecture by Mr. C. J. Ryan on "Theosophy the Vital Element in Christianity"

ISIS Theater was well filled last Sunday evening at the regular meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY. The address was delivered by Mr. C. J. Ryan, who selected for his subject, "Theosophy the Vital Element in Christianity."

The musical program was rendered by students of the Isis Conservatory and was much enjoyed by those present. From Mr. Ryan's address, which was listened to with marked interest, we make the following extracts:

"Theosophy includes Christianity in its scope as one of the brotherhood of religions, but there is a real difficulty nowadays, in attaching a definite meaning to the word Christianity, for the distance between the broadest teachings still called by the same name and, say the 'Westminster Confession,' is so great that the strain within the fold must be very severe. A few years ago the literal dogmas of the fall of Adam, the vicarious atonement, the eternity of punishment in hell, the notion that the Israelites were the chosen people, the sudden creation of the universe out of nothing six thousand years ago, the personality of the devil, and many other curious things were actually believed as articles necessary to salvation, for a doubt upon any of them meant a denial of the verbal inspiration of the Scriptures, and all other religions which knew not this system were called by opprobrious names and supposed to be 'abominations before the Lord.'

"Placing on one side the purely moral teachings of Christianity, which are common to all religions, whether they were always obeyed any better than they are today or not, we come to the profound allegories in Christianity, and ask, are not the new advanced thinkers in the churches throwing away, at the bidding of materialistic science, vital truths, which are compelled to take those peculiar allegorical forms from the very nature of the case? Theosophy says they are, for it knows the value of these quaint stories and strange symbols. Time will not permit more than a passing reference to the alleged historical accounts of other saviors in countries far distant from Palestine, and far earlier than the year A. D. 1.

"The science of Comparative Religion tells you that these stories which are sometimes identical with the story of the Cross, are pretty fancies of simple childhood relating to the seasons and the sun's journey through the year; the clergymen tell you very little about them. They are not popular with them, yet what are we to think when we find Krishna, the Hindú name for the Son of God in the early Vedic literature, being represented as the Savior of mankind, of royal descent, born of a virgin, on the 25th of December, at the time his mother and foster-father were on a journey to pay tribute, recognized by shepherds in a cave, being carried away as an infant from the wrath

of a king who sought his life and killed all the infants born the night of his birth, doing the same miracles as Christ, preaching similar doctrines, sometimes in the same words, being crucified, ascending into heaven in three days, and so on through nearly the whole details of the life of Christ?

"The same general account in more or less detail is found in the legends of Osiris of Egypt, Quetzalcoatl in Mexico, Gautama Buddha (who was not executed though), Mithras of Persia, Heracles of Greece, and many more Divine Incarnations of far distant countries.

"St. Augustine, who is surely a man of weight, says in the first volume of his *Opera*: 'That in our times is the Christian religion, which to know and follow is the most sure and certain health, called according to that name, but not according to the thing itself, of which it is the name; for the thing which is now called the Christian religion really was known to the ancients, nor was it wanting at any time from the beginning of the human race until the time when Christ came in the flesh, from whence the true religion, which had previously existed, began to be called Christian; and this in our days is the Christian religion, not as having been wanting in former times, but as having in later times received this name.' (*Opera Augustini*, vol. I, p. 42)

"Nothing could be plainer or more Theosophic, and I do not think any critic of Theosophy will have the hardihood to say that St. Augustine was not a good Christian!

"But to understand the spirit behind the form the truthseeker must give up some cherished personal egotism, must cease to affect contempt for the sages of antiquity and for other faiths which teach other races the same spiritual truths as his own in slightly different ways. Most certainly there is a grand opening for those who feel a great love for humanity to go out as missionaries to help in uplifting the nations; but let them teach the people who profess Christianity, Buddhism, and so forth, to live up to the noble ideals of their own faiths, and let them throw away sectarianism for good and all. This picture is hardly likely to be realized just yet, for such missionaries would have to be Theosophists, holding as sacred the religion they were taught at their mother's knee, but being broad-minded enough to see the real spiritual meaning in that of the people they were seeking to help. The great Bishop Colenso of Natal had this true spirit of sympathy and his dogmatism soon disappeared, but his treatment by the Church to which he belonged is a matter of history.

"Emil Burnouf, in his *Science of Religions*, says:

Every man, priest or layman, Jew or Christian, who desires to understand, without prejudice or passion, the facts which philology and comparative religion show, will recognize that all the Aryan religions, both of the past and the present, are identical in their basis, rest upon the same principles and practise the same forms. . . . Our rites, of which

for the most part we understand nothing, our symbols, which have nearly become a dead letter, our legends, even those which seem the most genuine and local, are found already put forth in the Vedas, almost in the very terms we employ today.

"But though the study of cold materialistic 'Comparative Religion' is not able to destroy true spirituality, the vitalizing breath of Theosophy is needed or the forms of today will disappear before the rising tide of negation, to be replaced perhaps by a creed less expressive of the eternal truths. How have the most advanced minds in the churches defended the early part of the Bible against the assaults of Geology and Biology? Or rather how have they not defended it?—we may ask. But Theosophy has a clear light to throw upon the obscurities of that magnificent epic, that inspired vision, for H. P. Blavatsky has given the key which we can use if we will. Theosophy scientifically explains the meaning of the enigmas and the apparent contradictions in the first and second chapters of Genesis, and is the only agency with power to rescue from contemptuous pity that Book which has rightly claimed the reverence of uncounted millions.

"The Atonement of the Christ is found in most of the ancient faiths, and the Fall of man, instead of being a mere poetical fancy with no basis in fact, is shown by Theosophy to be just a simplified account of the evolution of our complex human nature; yet is it not true that thousands, nay millions, of the brightest young minds of the day are quietly putting aside the old Bible stories as merely suitable, if useful at all, as pegs to hang moral lessons upon for children in Sunday School?

"Theology has not taught salvation from the possibility of temptation by a great reformation of character commencing within, under the Law of Karma or absolute Justice; it has dangled before us a gratuitous pardon for our own and our inherited sin of Adam, so called, made possible by the unmerited suffering of a divine Being in whose power the sinner has placed his trust. This in its nakedness has been denounced over and over again for its unfairness to the millions who never heard of the Savior Jesus, but there is a profound spiritual reality lying just beneath the surface. No man can be saved without faith, but it must be the faith in the still small voice of the Redeemer within, the warrior. The faith that saves is the obedience to the God within, whose voice becomes clearer, and distinct from the mere promptings of expediency as it is recognized and followed."

OBSERVER

## Theosophical Meetings

PUBLIC Theosophical Meetings are conducted every Sunday night in San Diego at 7:30 at the Isis Theater, by students of Lomaland assisted by children of the Râja Yoga School. Theosophical subjects pertaining to all departments of thought and all conditions of life are presented. Excellent music is rendered by students of the Isis Conservatory of Music of Lomaland, and Theosophical literature may be purchased.

# Art Music Literature and the Drama

## The Opinion of One Great Musician About Another

ANTICIPATING many of the deeper thoughts of music lovers, music critics and musicians themselves, Rubinstein, in his *Conversations on Music*, gave utterance to his love and reverence for Beethoven in a way too true and beautiful to be forgotten. Would that our modern writers and players refreshed themselves more often at fonts such as this and less often at the "music and art columns" of some (not all—for which let us be thankful) of our daily papers. Of the whole critique we quote but a part:

Mankind thirsts for a storm—it feels that it may become dry and parched in the eternal Haydn-Mozart sunshine; it wishes to express itself earnestly; it longs for action, it becomes dramatic, the French Revolution breaks forth—Beethoven appears. Not the guillotine, of course, but at all events of that great drama, in nowise history set to music, but tragedy echoing in music which is called "Liberty, Equality, Fraternity!" He is, however, the positive continuation of the Haydn and Mozart period, at least in the works of his first period.

The forms of his period are the forms then reigning, but the line of thought is even in the works of his youth a wholly different one. The last movement in his first Pianoforte Sonata (F minor), more especially in the second theme, is already a new world of emotion, expression, pianoforte effect, and even pianoforte technic. So, too, Adagio, in the second sonata (A major), the Adagio in the first string-quartet (F major), and so on. And already the treatment of the instruments in his first three trios is entirely different from that used until then. In the works of his first period altogether, as I have said, we recognize only the formula of the earlier composers; for although the garb still remains the same for a time, we hear, even in these works, that natural hair will soon take the place of powdered peruke and cue; that boots, instead of buckled shoes, will change the gait of the man (in music, too); that the coat instead of the broad frock with the steel buttons, will give him another bearing, and even these works resound with the loving tone (as in Haydn and Mozart), the soulful tone (not apparent in the former), and very soon after the aesthetic (as in them), the ethic (in them wanting), and we become aware that he supplants the minuet with the scherzo and so stamps his works with a more virile and earnest character, that through him instrumental music will be capable of expressing the dramatic even to the tragic, that humor may rise to irony, that music in general has acquired an entirely new art of expression.

His greatness in the Adagio is astounding, from the innermost lyric to the metaphysical; thus, he attains to the mystical in this art of expression.

But he is entirely unapproached in his scherzos (some of them I would compare with the jester in "King Lear"). Smiling, laughing, merry-making, not seldom bitterness, irony, effervescence, in short, a world of psychological expression is heard in them. Emanating, not from a human being, but as from an invisible Titan, who now rejoices over humanity, now is offended; now makes himself merry over them and again weeps—enough, wholly incommensurable.

And yet I entertain some difference of opinion in regard to him which I cannot refrain from expressing. Thus, for example, I consider "Fidelio" the greatest opera in existence today, because it is the true music-drama in every particular; because, with

all the reality of the musical characteristic, there is always the most beautiful melody; because, notwithstanding all interest in the orchestra, the latter does not speak for itself; because every tone of it comes from the deepest and truest of the soul and must reach the soul of the hearer—and still it is the generally accepted opinion that Beethoven could not be an opera composer. I do not regard his "Missa Solemnis" as one of his greatest creations, and it is generally regarded as such; because, aside from the purely musical in it, with which in many ways I do not sympathize, I hear in the whole composition a being who speaks with God, disputes with Him, but does not pray to Him nor adore Him

AND EUROPEAN HEADQUARTERS OF THE  
UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY,  
91 AVENUE ROAD, LONDON, N. W.

as he has done so beautifully in his "Geistliche Lieder" (spiritual songs).

I do not, either, share the opinion that the use of the vocal in the last movement of the Ninth Symphony was a desire on his part for a culmination of the musical expression in a technical sense for the symphony in general, but on the conmovements he intended to have something utterable, hence the last movement, with the addition of the vocal—(with words). I do not believe that this last movement is intended as the "Ode to Joy," but the "Ode to Freedom." It is said that Schiller was moved by the censure he received to write *Freude*, instead of *Freiheit* (joy instead of freedom), and that Beethoven knew this. I believe it, most decidedly. Joy is not acquired, it comes, and it is there; but freedom must be won—hence the theme begins pianissimo in the bassi, goes through many variations, to ring out finally in a triumphant fortissimo—and Freedom, too, is a very serious thing, hence also the earnest character of the theme, "*Seid umschlungen millionen*" ("Be embraced ye millions") is also not reconcilable with joy, since joy is of a more individual character and cannot embrace all mankind—and in the same way, many other things.

So you do not share the opinion that Beethoven would have written many things differently and others not at all if he had not become deaf? Not in the slightest degree.

That which he calls his third period was the period of his deafness—and what would music be without his third period? The last pianoforte sonatas, the last string quartets, the Ninth Symphony and others were possible only because of his deafness.

This absolute concentration, this being transported into another world, this tone-full soul, this lament never heard before, this Prometheus, this soaring above everything earthly, this tragic not even approximately present in any other opera; all that could only find means to express itself because of his deafness. He had, indeed, written the most beautiful, yes, unrivaled, works before his deafness; for example, what is the "Höllenscene," of Gluck's "Orpheus" in comparison with the second movement of his G major piano concerto? What is any tragedy ("Hamlet" and "King Lear" possibly excepted) in comparison with the second movement of his D major Trio? What is the whole drama in comparison with the "Coriolanus Overture"?

But yet the most exalted, the most wondrous, the most inconceivable, was not written until after his deafness. As the seer may be imagined blind, that is blind to all his surroundings and seeing with the eyes of the soul, so the hearer may be imagined deaf, deaf to all surroundings and hearing with the soul. O deafness of Beethoven, what unspeakable sorrow for himself, and what unspeakable joy for art and for humanity!

(Italics mine)

STUDENT

## King Oscar on the Music of his People

KING OSCAR of Sweden, the leader of his people in a high and spiritual sense and who is in every nation honored also for his patronage of music and art, once said of the music of his own people:

Our folk tunes are characterized by changing rhythm and great richness of harmony, but before all things by the truth and clearness of the manner in which they mirror the peculiar mood of our people. Our folk lays are echoes from the deep forests, the high peaks, the wild fjords and the foaming, torrential cascades of our country. The melodies seem most at home on cold, long winter evenings, heard by the side of crackling fir log fires, or far from the houses of men, in the pale summer nights of the Far North. There is no warmth of the summer sun in this music, but there are deep emotion and unaffected feeling. They spring from the lap of a folk which wins its livelihood by endurance and exposure from the frozen earth; a folk whose large majority is compelled much more than in other lands to live a solitary life; and who, on that account, are predisposed to look on the world in a half melancholy, half mystical spirit.

The Scandinavians have hearts soft and true, but also of their seriousness of mind and noble courage they have given convincing proof. For that reason Norse folk tunes will never fail always and everywhere to make a deep impression.

The music of Scandinavian composers has always held a high place in the musical life of Lomaland. From the simple *O Vermland!* of our Lomaland choir, to the Svendsen Romance, Grieg's orchestra and chamber music, his Violin Sonata, his exquisite *Birdling*, or *Sunshine Song*, we love all Norse music for its earnestness, its purity, its mystical suggestiveness. H.

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

Central Office Point Loma California

The Headquarters of the Organization at Point Loma with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West.

## Katherine Tingley in Europe Clippings from the Press

### Ten Minutes with Katherine Tingley Helsingborg is Lovely

(Translated from *Helsingborgs Dagblad*,  
September 8, 1907)

A GREAT crowd of people waited outside the doors of the "Folkets-hus." It was half past ten o'clock and they were trying to catch another glimpse of Katherine Tingley who had just spoken to them in such a wonderful way.

I met in the scramble Dr. Erik Bogren, one of her friends here in Helsingborg, and he introduced me with the words: "A journalist who asks for ten minutes." And with a beautiful smile she asked me to come up to the Hotel Continental. "We may talk there more undisturbed," she added.

A few minutes later I entered one of her rooms. She stood there in a long flowing white robe kindly bowing her head as a welcome. With a gracious movement of her hand she asked me to take a seat.

"Only ten minutes," I assured her, because I had been informed that she had arranged to attend a private conference. To my question how she had felt meeting the audience in Helsingborg, Mrs. Tingley replied warmly, that here, as in other places in Sweden, where she had previously given lectures, she found a "profound respect," which seemed to be a characteristic feature of the Swedish nation. The earnestness of the work of the Theosophists had certainly interested the people here. There was something of cultured refinement throughout the whole audience; "but," she added, with regretful voice, "so many were standing the whole time, which troubled me much and therefore I made my lecture a little shorter than I had planned."

I then asked her regarding the Râja Yoga School that she is planning for at Visingsö, and which will be a Swedish branch of the great International Theosophical Institute at Point Loma in America. She especially accentuated that it was not to be in any respect a colony but a school for the education and ennobling of youth, and for the study and propaganda of Theosophy.

Mrs. Tingley told me how on her visit to Sweden many years ago, she had jokingly said that she would like to see a Râja Yoga School in Sweden. Now that thought was near its realization and very soon, after she had examined the place and its possibilities, there will be more news on this matter, she added.

We talked a good deal on the objects and methods of Theosophy. But the ten minutes had passed, and I wanted to hear how the celebrated visitor liked Helsingborg.

"Delightful," was the answer. "I love Sweden and I love Helsingborg. This city caressed by the sea attracts me especially. I like to see the port, the steamers, the sailors. It is all beautiful!"

## MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

Unfortunately I had to leave, the ten minutes were becoming eleven. Ten minutes pass very quickly with Katherine Tingley.

### Katherine Tingley in Stockholm Lecture on Theosophy

(Translated from *Svenska Dagbladet*, September 17, 1907)

MRS. TINGLEY'S lecture yesterday evening in the Labor Institute Hall was attended by an interested audience which long before the time announced filled every seat. The meeting was opened by music by one of the ladies who are accompanying Mrs. Tingley on her tour. Then appeared a young Swedish girl in white dress, one of the "Lotus Flowers," who read some of the maxims of Theosophy:—love to humanity, unselfishness, willingness to sacrifice one's self.

Major Cederschiöld announced that the purpose of the meeting was to explain the aims and objects of Theosophy. He introduced to the audience two young ladies who are accompanying Mrs. Tingley and who talked about the happy life which is lived in the Râja Yoga Schools at Point Loma. They declared that only they who had the good fortune of actually being educated there could fully realize it. The Râja Yoga education is practical, and the children are taught to learn by their own observation much that elsewhere is learned only from books. The education at Point Loma aims to give something to live for,—it is not enough to say to the children: "Do not do wrong!" One must say also: "Do right!" Each day there brings a new experience of beauty; the pupils are surrounded by beauty and joy and noble effort. The speakers expressed their joy that the Swedish people would soon have an opportunity at beautiful Visingsö to see what the teachings of Theosophy are when put into practice.

After this appeared Mrs. Tingley. She began her lecture by deploring in a charming way that she had not come earlier to Sweden, where the language was so attractive, she said, that she would try to learn it.

She passed then to a description of the life and work of Mme. Blavatsky and how this woman struggled with unconquerable energy for the object of her life. She was not always understood by the Americans, but her work has nevertheless left ineffaceable traces.

"What has she then given to mankind? A new religion? Certainly not. But she gave the essence of the teachings of all religions and showed how this was

to be put into practice. She stood alone in her contest and her activity was soon cut off. Her work was continued by William Q. Judge, a young lawyer. He gave up his profession in order to devote himself entirely to the propaganda of Theosophy. Then he was assailed by the untrue accusations of some so-called Theosophists, and at a congress in Boston the Theosophical Society eliminated these from their ranks."

The speaker held it as beyond doubt that there are many excellent people who have joined those who had been eliminated from the Society's ranks, yet she regarded it as her duty to accentuate how Theosophy had been misrepresented to them.

"Theosophy teaches the true spirit of Brotherhood—self-sacrifice and brotherly love. The teachings of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY contain nothing illogical or unpractical. Theosophy if studied rightly helps men to find their true place and their duty in life. One is not ready to die before he has found that. It is the duty of every one to develop his spiritual possibilities.

"If we could free humanity from fear of death a great step would be gained. How many even of those who have lived the noblest, fear death! We must learn that death is life. Theosophy teaches that men will live their future life in just the same way as they will live their present life, for the future life is the outcome of this one. When experience has molded our characters then we are ready to begin a new life on this basis.

"The object of Theosophy is to form a brotherhood of all mankind and to arouse in all humanity true brotherly love."

The lecture, which lasted almost an hour, was listened to with the greatest interest.

### Mrs. Tingley's Tour

FURTHER information by newspaper clippings and private letters tells of Mrs. Tingley's visit to Upsala, Gefle, Falun and other Swedish cities, and also to Helsingfors in Finland. At each place she lectured either in the Theater or largest Hall, the meetings being crowded with hundreds turned away. Although the lectures were all given in English the most profound attention was paid to them by the audiences. It was as though they well understood the thought behind the words, the heart tones, the gestures, the inflections of the voice; and many were the requests for further lectures, to which Mrs. Tingley replied that she hoped to make a longer visit to Sweden next year when she expected to start her new Râja Yoga School on the Island of Visingsö. On her visit to Helsingfors Mrs. Tingley was accompanied by Mr. Torsten Hedlund, who throughout her lecture tour acted as interpreter, also by Dr. and Mrs. Erik Bogren. The latest information is that Mrs. Tingley is extending her tour and will be in Europe longer than she at first intended. RECORDER

## KARMA

HO! ye who suffer! know

Ye suffer from yourselves. None else compels,  
None other holds ye that ye live and die,  
And whirl upon the wheel, and hug and kiss  
Its spokes of agony.

\* \* \* \* \*

The Books say well, my Brothers! each man's life  
The outcome of his former living is;  
The bygone wrongs bring forth sorrows and woes,  
The bygone right breeds bliss.

— *Light of Asia*, Book viii

## Seed-Time and Harvest

EACH day is a day of judgment. Each day is a time of harvest. We are sowing and reaping, reaping and sowing continually. What we are today is the result, or part of the result, of what we have done, and said, and thought, during our whole past. It has been said that "We are today the sum of all past yesterdays." In a general way this is true, though not wholly so; for there is always a portion of what we have sown which has not yet come to the time of harvest. There is a certain amount of Karma that has not been exhausted, and which is still latent. This is one reason why it is difficult, or impossible, to perfectly judge any person; for there are always latent springs of action, or latent Karma, which may at any time produce results impossible to foresee or calculate. The general results we may know, we may know in a general way from the kind of harvest which is being reaped what the nature of the sowing was; and we may estimate in a general way what will be the harvest when we see the nature of the seed sown; but beyond this the problem of each human life has questions of intricacy which are practically infinite. The general character of the harvest, however, we can know from the quality of the seed which was sown.

Nature is a great Teacher; and, while she does not intrude her teaching upon us, but presents it ceaselessly and silently, she nevertheless has a way of photographing her lessons on the mind of man which constitutes her the greatest of all teachers. The untutored savage soon learns the best time to sow the seed, and when to expect the harvest. He learns that Nature works with great regularity, and great impartiality. It is one of the earliest generalizations of the human mind that "Summer and winter, seed-time and harvest shall not cease"; or "Whatsoever a man soweth that shall he also reap." Not even the most stupid would expect to reap wheat if he planted potatoes. Man must have found it out early that seed-time and harvest have a fixed relation to each other.

But, strange to say, nations and individuals have not yet thoroughly learned this lesson as applied to the moral world. Mankind, as

a whole, has failed to translate into terms of the moral world, the natural lessons which the rudest savage well knew in the dateless past.

"Each thing after its kind: each thing *having its seed in itself*"; this was the ancient teaching, but men have not yet laid this to heart in their dealings with each other. We know that darkness follows the withdrawal of the sun, but we do not seem able to realize that the sun of truth and love, if withdrawn, must leave us cold, and dark, and loveless. We know that a cloud obscuring the sun produces gloom and chill; we do not transfer this lesson to the moral world and realize that hate, and anger, and insincerity, in like manner, chill our better energies, and enshroud our steps in gloom.

Men and nations are every year, and every day opposing their puny strength against the forces of the universe. They lie, and dissemble; they cheat and steal, and do not realize that these things must come back to them. In a word men have not yet attained a full belief in, and realization of natural law as applied to the moral or spiritual world.

"Whose seed is in itself," is a thing men know to be true in regard to things physical; but they believe that a crooked policy will, somehow, produce straight results; and that the seed of moral thorns and thistles will, somehow, spring up wheat and roses.

There would be no need for fleets and armies, nor even for the policemen, if men *thoroughly* accepted the teaching of nature. There would be no prisons, and very few hospitals. Clergymen could take a very long holiday, and doctors might retire on a pension. The Law of Nature written in the heart of man would be the law of conduct, and the teaching of Scripture, "in honor preferring one another," would be the common courtesy of life.

Why is it the case that men implicitly believe in the fact, "whatsoever a man soweth that shall he also reap," as applied to wheat, or oats, or barley, but do not believe it (*really*) as applied to the moral life? There must be some reason, some explanation for this strange fact. One reason, no doubt, is because the moral seed-sowing and harvest cannot always be so easily connected as we can connect the sowing and harvesting of ordinary grain. We sow an evil thought, or word, or deed, and cannot always connect the evil harvest with the evil seed; hence it is that our lower nature, or our lower mind, is able easily to persuade us that we may and shall escape the evil harvest of the seed we have sown. If we experienced a blow in the face, or a pain in the side every time we did wrong, we should very soon connect the suffering with its cause, and act accordingly. If every time we acted wrongly, or spoke falsely it were followed by a severe headache or the bursting of a vein, we would all very soon be on our good behavior — speaking the truth, and acting rightly.

As the Buddha taught the Law of Karma, "Times are as naught, tomorrow thou shalt reap, or after many days." It is this fact that we do not reap, in some cases, until "after many days," that makes us less ready to believe in the certainty of the law of harvest in the moral world than in the physical world. We have poor memories. But, if we could look back over our whole past, and trace the connexion between the moral harvest and the seed

sown, then, I feel sure, we would all be not simply theoretical but practical believers in the law of harvest, in the certainty of reaping the seed we sow.

There is another reason for the slowness of men to translate natural law into the moral or spiritual world, and that is, the false teaching of orthodoxy — that thing which is *not Christianity*, but its corruption — I had almost said its antithesis. For is not the Sermon on the Mount the very heart and soul of Christ's teaching, and any one can see that a great gulf is fixed between the simple practical teaching of Jesus, and that which is now known as orthodoxy. Jesus teaches that what you sow you reap; that you will not reap something else; and that *you* must reap it, and not someone else *instead* of you. Orthodoxy is just the opposite of this; and one result has been to make men ready to believe that somehow or other they will escape the harvest of the evil seed which they sow.

The wrong-doer is one who has no practical faith in the law of harvest. He thinks he can cheat divine justice and escape the all-seeing eye. It has always been so to some extent. Men have said in their hearts we can do wrong and not suffer; hence it is that the apostle uses the words, "*Be not deceived, God is not mocked*, for whatsoever a man soweth that shall he also reap."

The seed-time is ever now. The time of reaping may be tomorrow, or next year, or a thousand years hence, but it will *certainly* come. There are seasons when the seed we sow will have special help to grow; but no matter when we sow, the seed will always grow to some extent. The springtime of the year may be compared to some special time, such as the last quarter of each century; or it may be likened to the youth-time of life. If we miss the springtime we shall not have such a good harvest, but if we sow good seed at any time there will always be a harvest, though it may not be a very abundant one.

The great friend of humanity whom we know as H. P. Blavatsky, once said that a few grains of seed had been given her to sow, and that it was her duty to sow them on the best soil she could find. And though some of the seeds might only enrich the soil others would spring up and bear fifty-, sixty-, or a hundred-fold.

The old teaching is ever true that while men sleep the enemy comes and sows tares among the good seed. And from what we know of the state of the world today, the number of people sowing tares is very large. It therefore behoves those who love their fellow-men to work all the harder in sowing good seed, for this will help to "*clear the soil*," as we know some crops do. Jesus said it was not wise to try to uproot the tares lest much damage should be done to the wheat; but that when the time of harvest came the reapers would separate the tares from the wheat.

The epoch in which we live is a time of separation, a time of judgment, as well as a seed-time. History is being made very quickly. Nations, peoples, bodies of men are being awakened to what is just and right. Some have already begun to reap a bitter harvest — "and the end is not yet."

But of one thing we may be perfectly sure, the harvest is certain, it is only the date which is unknown to us. (REV.) S. J. NEILL

## OCTOBER WOODS

Ida Whipple Benham

THE frost has opened the chestnut burs,  
And the nuts fall lazily, two and three;  
The squirrel chatters, the partridge whirs,  
And the red-capped woodpecker bores his tree.  
Oh, lightly and lightly the birch leaves float,  
Like golden butterflies loosed in spring;  
And bright as the sails of a fairy boat  
The walnut leaves take wing.

Now come, now come, far down the lane  
The asters beckon, the robins call!  
The shrunken brook grows broad again,  
And leaps in a laughing waterfall.  
Over the style, and over the bridge,  
Adown the path where the meek cows stray,  
By glen and hollow and windy ridge  
Let us follow the woodland way.

See! how the marvelous cloth of gold—  
A Tyrian tapestry woven fine—  
Wide as we wander is still unrolled,  
Rustling under your feet and mine!  
The breath of the woodland is joy to breathe—  
The mingled odors of leaf and flower,  
And clustering fruit where the wild vines wreath  
The oak-tree's mossy tower.—Selected

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** What is really meant by Reincarnation in its fullest and deepest sense as employed in the teachings of Theosophy? Whence comes the soul in each and every child born, and why even in one family group is such a marked difference in qualities, soul attributes and powers possessed by the children; some of them being born with what we call old minds, mature minds, whilst others show simpler, less developed and less pronounced powers?

**Answer** An attempt was made in the last issue to give some idea of the teachings of Theosophy regarding the nature of the ego and its incarnation. It was there stated that in the average humanity that which man recognizes as himself in its higher aspect is a ray from the real Ego—this real higher Ego being as H. P. Blavatsky states, a divine entity, a god. Incarnation consists of this divine entity seeking to gain expression in physical life through a human body and sending down into that human body a ray of its own essence:

In a footnote (*Key to Theosophy*) H. P. Blavatsky says:

It is, according to our philosophy, the *Mānasa-putras*, or "Sons of the Universal Mind," who created, or rather produced, the thinking man, "*manu*," by incarnating in the third Race mankind in our Round. It is Manas, therefore, which is the real incarnating and permanent *Spiritual Ego*, the INDIVIDUALITY and our various and numberless personalities only its external masks. . . . All our "Egos" are thinking and rational entities (*Mānasa-putras*) who had lived, whether under human or other forms, in the precedent life-cycle (*Manvantara*), and whose Karma it was to incarnate in the *man* of this one.

In the same work she also says:

This is the real Individuality, or the divine man. It is this Ego which—having originally incarnated in the senseless human form animated by, but unconscious of, the presence in itself of the dual monad, since it had no consciousness—made of that human-like form a real man. It is this Ego, this "Causal Body," which overshadows every personality into which Karma forces it to incarnate. It is this Ego which is held responsible for all the sins committed through and in every new body or

personality—the evanescent masks which hide the true Individual through the long series of rebirths.

At death all that has been best and highest in human life,

the undying qualities of the personality—such as love, goodness, charity, etc.—attach themselves to the immortal Ego, photographing on it, so to speak, a permanent image of the divine aspect of the man who was. . . . Your spiritual "I" is immortal; but from your present self it can carry away into Eternity that only which has become worthy of immortality—namely, the aroma alone of the flower that has been mown by death. . . .

I have given you once already a familiar illustration by comparing the *Ego*, or the *individuality*, to an actor, and its numerous and various incarnations to the parts it plays. . . . Like that actor, the Ego is forced during the cycle of necessity, up to the very threshold of *paranirvāna*, to play many parts which may be unpleasant to it. But as the bee collects its honey from every flower, leaving the rest as food for the earthly worms, so does our spiritual individuality, whether we call it *sūtrātma* or Ego. Collecting from every terrestrial personality into which Karma forces it to incarnate, the nectar alone of the spiritual qualities and self-consciousness, it unites all these into one whole, and emerges from its chrysalis as the glorified Dhyān Chohan.

At the close of earth life comes a period of rest and then the higher immortal Ego sends forth another ray into earth life through which it reaps new experiences, gathering again the aroma of the flower of terrestrial existence.

Now what does Reincarnation mean? Turning again to the *Key to Theosophy*, H. P. Blavatsky says:

Reincarnation means that the Ego will be furnished with a new body, a new brain and a new memory. . . . To get convinced of the fact of Reincarnation and past lives, one must put oneself *en rapport* with one's real permanent Ego, not with one's evanescent memory.

It is clear then that as the soul or Ego seeks incarnation in the first place for the sake of acquiring experience of earth life and also—it must not be forgotten—because it has a duty to all entities that are below it in evolution, to help to raise them to the same divine state as itself,—re-incarnation is for the furtherance of the same object, and because one earth life is not sufficient to attain this object, the number of earth lives is repeated until it is attained. We do not remember our past existences because we, the personal man, have not identified ourselves completely with the higher Ego, the real man, and the recollection of the past inheres in it.

Thus the soul "in each and every child born" is a ray from this divine Ego, and because this Ego, as was quoted above, is responsible for all acts of past existences there are shown differences of character and differences in the lot that awaits each one.

To explain how it is that there is such a marked difference in qualities, soul attributes, and powers possessed by children, it must be borne in mind that there is not only physical heredity but heredity on all planes, psychic, mental, and spiritual, and each of these to some extent according as environment and other conditions permit reveals itself in the character. Thus it may be that so far as external conditions are concerned they may provide the necessary environment for souls of totally different character. For the soul is attracted to that environment and those conditions

which will be most suitable for its further evolution and also for the reaping of the results of past sowing. But there is another factor that must be considered as regards the character of the egos which are attracted to any family and this in a degree helps us to realize how egos of very varying character may incarnate in the same family. Stop for a moment and consider how varying are the thoughts that pass through the minds even of those whose lives may not exhibit any marked changes. At one time a very different keynote may be struck from that which ordinarily governs the life, and the lives of most people show great variations in purpose and feeling. Thus at different times there might be attracted to a family egos of very different types. It is not a question that can be answered simply, and all that can be done is to state the matter in general terms. We must feel however that relying on the law it will bring to us all things that are just and will bring us into those conditions and circumstances which at that time provide the greatest opportunity because under the law they are the result of past thought and action.

Many people are in the habit of thinking about Reincarnation only in regard to the dark and troublous side of life and the reaping of the results of misdeeds, but it is equally true of the bright side of life and the blessings that come to us as the harvest of good seed sown and good deeds done. If we suffer in this life because of evil done in the past and in order that we may learn through that suffering some of the deeper lessons we need, it is equally true that our good fortune is ours under the same beneficent law. The old Hebrew scripture has it that children are punished for the misdeeds of their parents to the third and fourth generation, but that for good deeds the result is felt to the thousandth generation. This is an old teaching but its real meaning has been forgotten. We are our own children, the children of our own past, and must suffer for our own misdeeds. Our sons and daughters, those whom in this life we call our children suffer also, but not unjustly or solely because we have done wrong; they suffer not merely for that reason but also because in that suffering they are reaping seeds that they have sown and for which they have come into this relation with us. On the other hand the good seed that is sown bears a harvest whose results last to the thousandth generation because by doing good we are working on the side of the higher nature and with the tide of the world's life working with us, and the results are therefore so much the greater and more lasting.

It has been said that the two teachings of Karma and Reincarnation together with that of Brotherhood are those most needed in the world today. Each one supports the other two and not one can be fully understood without the other two. They come as a great light and hope into the confusion of the world's thought, giving man once more a secure anchorage of trust in the justice of unerring law, and holding out to him the certainty that he may build up a glorious future and atone for the past. They are not new teachings, they are to be found in every great religion of the world, but in this our Western world and in the Christian religion they have been forgotten. Reincarnation has been called "The lost chord of Christianity."

STUDENT

### A Forgotten Creed

MR. OLIVER BAINBRIDGE, writing in the *National Geographic Magazine* an interesting article on the Chinese Jews — of whom it appears there are about fifty — quotes a stone inscription describing the arrival of the ancestors of that fifty. But the monument deals with other equally interesting matters, so deals with them as to leave us entirely in the dark about them.

The ancient city of Kaifengfu was once, it appears, the center and capital of the Empire; and it contained a Jewish synagogue. The synagogue is there no more, but in its place is the stone bearing the inscription. The last paragraph of it runs thus:

During the beginning of the Sung dynasty (96 A. D.) there was a missionary named Li, who was accompanied by a crowd of Cenobites, and arrived in China with a lot of Western cloth which they presented to the Emperor of the Sung dynasty and became citizens of the country. Subsequently one of the grandsons of these people . . . was appointed to do the preaching, and another began to build a cenoby. It was destroyed after that and had to be rebuilt in the 16th year of the Yuen dynasty (1280 A. D.)

This "cenoby," the synagogue of the Jews who arrived from somewhere — the "north-west," says the tradition of the fifty descendants remaining — under Li, appears to have been destroyed pretty soon for the second time, for we learn that in 1403 it was rebuilt. It met its fate for the third time in 1642, being now represented by a pool of dirty water and the monument. The "strange inscription" — as Mr. Bainbridge justly calls it — thereon, was consequently cut no earlier than 1642. Reading the first paragraph one becomes very anxious to know more. It runs:

A monument in memory of the Great Ching Ching Cenoby. Oh Wu Lo Hau, the creator of this religion and grandson of the nineteenth generation of Punku, the principal ruler of the Mythical Era, was born in 146th year of the Chow dynasty (976 B. C.) He proved himself to be very wise, prudent and merciful. [What "this religion" was or is, is not stated.] He understood the mysteries of creation and the ideas of creation, and could trace the troubled source of religion. The religious elements were not to believe in any idolatrous representation and *not to flatter the ghost* [italics mine] and fairy, and so many people were at liberty to serve his religion as Cenobites in a manner that was as free as running water. The successor of Oh Wu Lo Hau was called La, and was born in the 613th year of the Chow dynasty. His conscience and benevolence were noted by everyone as he traveled to the Lah-na mountains for the purpose of informing them regarding the Scripture. He restricted himself to fruits and vegetables instead of meat, and bathed and fasted for *forty days and nights*. [italics mine; — this was 600 years B. C.] He attended to his duty with the utmost simplicity and sometimes even forgot to eat or sleep, but never ceased to pray with a sincere heart to his God, for he had obtained a book containing many sections. In this book there were strange things that could not be easily explained — in short, it indicated that the good was affected by those who become good, and the evil, by those who did not bear in mind the warning. The successor of La was called Lo Tze Loh, and received from his predecessor the proper doctrine and explained the four words *ching* (clear), *chew* (pure), *li* (ceremonial), and *pai* (to worship with a bow). The word *ching* means to direct your heart singly to one religion. The word *chew* means not to be confused by any other secular ideas. The word *li* means to stand on ceremony, and the word *pai* to worship

with a bow. With these instructions the Cenobites were to teach one another in future.

Here we have a succession of three Teachers; the first "creating" the religion, the second "obtaining" a profound book which appears to have elaborated the religion's teachings, and the third hinging the doctrine for the public upon four words. What was the doctrine and what the book? The man who cut the inscription about 24 centuries later may or may not have known. But why did he include an account of the coming of the company of Jews? The article throws no light on any of these questions. Must not China at various times in her immense history have received like other nations the Archaic Doctrine, Theosophy? There must be many lost records of these teachings and their Teachers, perhaps some time to come to light. The Chinese know how to keep a secret and hide a manuscript! We cannot suppose that we have more than a few fragments of the writings of Lao-Tse. When China permits herself to be explored as Egypt and Asia Minor and Rome and Greece are being explored, a good deal of history may need re-writing. STUDENT

### Professor Lowell and the Planet Mars

IT must be a source of considerable gratification to Professors Lowell and Landall of the Flagstaff Observatory, Arizona, to have succeeded in finally demonstrating, beyond the possibility of further criticism, the existence of the wonderful system of lines on the planet Mars, discovered by Schiaparelli thirty years ago. This year has been most favorable for the observation of the planet and every advantage has been taken of the opportunity by the above indefatigable astronomers. Their success has been beyond expectation because they have succeeded in photographing not only the general system of "canals" but actually in showing the double nature of one, a claim that has been strenuously resisted by critics. The gradual development of the "canal" system in the antarctic and south temperate zones has also been carefully watched as it spread from the pole towards the equator, to all appearance as if something was really melting under the solar beams as the summer advanced. On the best plates fifty-six "canals" have been counted, and even some of the oases were distinctly shown. The revolution in our ideas in the last few years has been great, since we were taught that the dark markings on Mars were seas and the light buff ones land, for no one formerly suspected that any system of regular and definite lines ran across the so-called seas as well as the land. We are now entirely "at sea" as to the nature of the darker shadings formerly supposed to be oceans, and the latest spectroscopic observations are considered to show that the planet possesses a very thin atmosphere, so thin that human life could not be sustained in bodies of the nature of ours.

Professor Lowell repeats his firm belief that there must be intelligent constructive life of some kind on Mars. In *The Secret Doctrine* H. P. Blavatsky quotes a passage from an ancient commentary upon the Book of Dzyan, to which she attributed great value, saying that Mars was "under obscurity." This does not mean that there is no life there, but that it is not in the blaze of activity. If the Martian

atmosphere is so rare, and the few inhabitants are having all they can do, as some astronomers suggest, to keep body and soul together by means of elaborate irrigation canals, they may well wish the period of obscurity to be over! STUDENT

### The Chakar, a Vanishing Bird Type

SOME particulars about a bird called the chakar or crested screamer are interesting. One has recently died in the United States Zoological Park; it is very rare, though there are a few in the London Zoo. It is from the South American pampas, where it was once abundant, but it is now succumbing to civilization. About the size of a swan, of a pale slaty-blue color, with two spurs on each wing, it is a beautiful bird. Its family is a matter of dispute among the authorities; it seems to have no pedigree, no prototypes, and to be the last survivor of a vanishing type. These birds are chiefly remarkable for their voice. A writer thus describes a concert given by them in their native home:

We were eating supper in a rancho when suddenly the entire multitude of birds, covering the marsh for miles, burst forth into a tremendous evening song. It is impossible to describe the effect of this mighty rush of sound, but let the reader try to imagine half a million voices, each far more powerful than that one which makes itself heard all over Regent's Park, bursting forth on the silent atmosphere of that dark and lonely plain. I was overcome with astonishment, while the air, and even the frail rancho, seemed to be trembling in that transport of sound. T.

### Shakespeare in the Far East

SHAKESPEARE has been shown to have belonged to several different nationalities and two or three religions; now also a Chinese claim is laid for him:

To-night! To-night!  
Dedicated in loving memory of our beloved  
Wm. Shakespeare.

The Opera Indra Permato Company of Selangor will stage the Sensational Tragedy Prince Hamlet, By the best actors and actresses procurable in Java. Our clowns are without rivals!

This is actually the best representation of a European Opera by a Native Company.  
Chow Chong. Proprietor

Such, according to the London *Daily Telegraph*, is an advertisement which recently appeared in a newspaper published in the Straits Settlements.

"Our beloved Wm. Shakespeare," says Chow Chong. Why not indeed? Here is a something, evidently, which Mongol and Saxon can both appreciate, a place where East and West can meet, albeit even in the world of music the two are or seem to be widely apart. This indicates in a way the position which real drama may take as an effective force in the molding of the new humanity. K. M.

### The First Tibetan Newspaper

THE first newspaper ever printed in the Tibetan language has been started at Lhasa. Its title in translation will mean the *Tibet Times*. Since the visit of the English expeditions, the grand lama has been busily engaged in reforms, some of which include lecture and reading rooms, where the people can be educated in the geography, history and industrial conditions of Tibet. The Tibetan government considers that the ignorance of the people constitutes a hindrance to carrying out the reorganization of the administration.—*Exchange*

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES  
IS THROWN OPEN TO ALL

Postage prepaid - - - - - \$10.00

THE THEOSOPHICAL PUBLISHING CO., Point Loma, Cal.

# ISIS UNVEILED

A MASTER-KEY TO THE  
Mysteries of Ancient and Modern Science  
and Theology

By H. P. BLAVATSKY

2 Vols. Royal 8vo., about 1400 pages, indexed; cloth.  
With portrait of the Author

NEW POINT LOMA EDITION, WITH A PREFACE

by H. T. Edge, B.A. (*Cantab.*) an old student under H. P. Blavatsky and now a member of the Staff of Professors at Point Loma, California.

Vol. I treats of Ancient and Modern Science  
Vol. II treats of Ancient and Modern Religion

The reprint of this invaluable work is in answer to a constant demand, which shows that the book is *alive* and is needed by the liberated spirit of the age.

Postage prepaid - - - - - \$7.00

THE THEOSOPHICAL PUBLISHING CO., Point Loma, Cal.

# The Key to Theosophy

A Clear exposition in the form of  
Question and Answer of the

Ethics, Science and Philosophy of Theosophy Exhaustively Indexed. With a Copious Glossary of General Theosophical Terms

by H. P. BLAVATSKY

THE KEY is a remarkable Compendium of Theosophical teaching. It is the book of books for beginners and higher students. The incessant call for this work has exhausted the earlier editions. NEW POINT LOMA EDITION NOW READY

Cloth, 400 pages, Postage prepaid - - - - - \$2.25

Order from THE THEOSOPHICAL PUBLISHING COMPANY, Point Loma, California, U. S. A.

## THEOSOPHICAL MANUALS

ELEMENTARY HANDBOOKS FOR STUDENTS

Price each, cloth bound, (16mo.) - - - - - 35c

NOW READY:

- No. 1. Elementary Theosophy
- No. 2. The Seven Principles of Man
- No. 3. Karma
- No. 4. Reincarnation
- No. 5. Man After Death
- No. 6. Kâmaloka and Devachan
- No. 8. The Doctrine of Cycles
- No. 9. Psychism, Ghostology & the Astral Plane
- No. 10. The Astral Light
- No. 11. Psychometry, Clairvoyance, and Thought Transference
- No. 12. The Angel and the Demon (2 vols. 35c each)

TO BE FOLLOWED IMMEDIATELY BY

- No. 7. Teachers and Their Disciples
- No. 13. The Flame and the Clay
- No. 14. On God and Prayer
- No. 15. Theosophy: The Mother of Religions

TO FOLLOW EARLY IN 1908

- No. 16. From Crypt to Pronaos  
An Essay on the Rise and Fall of Dogma
- No. 17. Earth  
Its Parentage: its Rounds and its Races
- No. 18. Sons of the firmist  
A Study of Man

These Manuals contain some of the latest thought on the above technical subjects. Each Volume is arranged to be complete in itself, though forming a necessary member of the Series. It is intended to add others from time to time, to cover most of the technical aspects of Theosophy in a direct and simple way, thus forming a Theosophical library of inestimable value to inquirers. No one interested in Theosophy can afford to do without them. Order from the

THEOSOPHICAL PUBLISHING Co., Pt. Loma, Cal.

## Fundamental Principles of Morality

"AMERICAN Sunday schools, the public schools, and the homes are failures," declared a school superintendent recently; "they don't inculcate truth, honesty and industry; but they turn out liars, thieves and loafers in astounding numbers. The Sunday school is the greatest disappointment of all. The trouble is that the fundamental principles of morality are neglected in teaching."

This utterance may be intemperate and sweeping, but there is a considerable basis of truth in it. But what are the fundamental principles of morality?

Evidently there is no religious system at the present time which proves effective as an inculcator of morality. The preachers of religion are in doubt as to the authenticity of their religions; and there are too many different sects. Then there is what is called unsectarian religious teaching; which, in practice, amounts to an impossibility. Finally there is the teaching of "morality," *la morale*, civic duty, and so forth.

## Morality the Foundation; Conduct its Result

But good citizenship, honesty, industry, brotherliness, etc., are the *consequences* of morality; and to give them as a definition of morality is to reduce morality to an abstraction. In other words morality is thereby identified with good conduct. But clearly there must be some sanction or reason or incentive for good conduct. This point is what the would-be "moral" teachers are dodging. In practice they find themselves compelled to postulate some such sanction, and sometimes this sanction is simply our old friend *expediency*. Sometimes, as in the case of a writer on *La Morale*, reviewed not long ago in the CENTURY PATH, the existence of some kind of *Être Suprême* and of a life beyond the grave is virtually admitted.

Morality can only be based on a recognition of spiritual Law. Otherwise the laws of man's selfish passionate nature will become paramount. If we deny spiritual Law as defined by the religions, we must simply formulate it over again without the aid of the churches. For

## The Self-existing Law of Right Living

man must have such Law, unless he is to degenerate into animalism and irresponsibility. Experience shows that man cannot remain long in a state of tranquil ignorance or indifference; for there is that in him which hankers after knowledge and higher attainments. This aspiration cannot be kept down or run on straight rails by powers that are inferior to it; it must be directed by powers that are superior to it.

The great questions of life and death, the origin and end of man, the why and wherefore of life, come up, pressing for solution; and what answer is to be given to them? Man finds himself the subject of strong forces that impel him to action, and the center of a maelstrom of desires that lead him nowhere and cannot be satiated. Thus he learns that the following of desire is not the final Law of his nature, and he seeks for a higher Law. He finds that science and all ordinary means of discovery have impassable limitations and open up wider reaches of the unknown with every fresh discovery. Therefore

## Self-Knowledge is alone the Key

he seeks for a knowledge that can solve the great questions that science leaves alone, and that can tell him who he is and whither he is tending. He is not satisfied to know that there are moral instincts in his nature, but he must know why and how they are there; he must have a sanction for his morality.

Thus man cannot get on without Religion — a common recognition of the higher Laws of life, which recognition imposes obligations of duty on those who entertain it.

So we have to learn the higher Laws of life, for these are the basis of morality — that morality which the schools are said to fail in inculcating. And what are these higher Laws? That God sent Jesus Christ into the world to be a sacrifice for sinners, that all believing in him might be washed from their sins and attain eternal bliss in heaven, without which they will suffer eternal torment in hell? That a single earth-life — a bubble in the ocean of time — is the prelude to an infinite life in realms of bliss or torture?

## Not Arbitrary but True Laws of Life

That man is a hopeless sinner but can be pardoned and utterly cleansed of all imperfections by a mere mental act on his death-bed? Shall we offer such puerilities as explanations of the higher laws of life? Shall we imagine that God observes marvelous order and harmony in his lower creations and yet behaves with such fatuity in his higher world? Or shall we imagine another God called "Nature," infinitely superior in capability and wisdom to the other God and yet subservient to him? No; we must be prepared to recognize the same marvelous wisdom and harmony in the higher Laws as in the lower.

There is a Higher Nature in man, a something superior to the mind, a Soul; but it is not what the churches represent to us under that name. The churches represent the Soul as something concerned with the future life alone; with them the Soul is virtually the

personality of man without his body — purified in some sense, perhaps, but still the personality. Whatever this Soul

**True Relation of the Real to the External** is, it is something so far removed from practical life as to be practically useless. The

Soul is in reality something that has to do with our life in the present; it is our real Self, the Master in us. The Soul is that which *knows* and *can*. It is the source of our moral instincts and our aspirations after perfection. It sheds its rays on our minds and illumines our thoughts, but our thoughts obscure its light; so that we get but an imperfect and partial light. Nevertheless the mind can be purified so that it may reflect that light more fully and more clearly.

Man is a spiritual being, a being able to transfer his consciousness from the plane of illusion to planes of true perception. He is not the slave of the laws that dominate the lower orders of life, but is able to dominate them by availing himself of higher Laws, also natural but pertaining to higher Nature. Until we recognize this fact, which the churches have perverted into meaningless dogmas, we shall have no basis for morality.

But let us not imagine that seeking the Higher Life means sitting in circles or trying to develop clairvoyance or dabbling in psychic research or speculating about auras and astral bodies. That is not going to help people to teach their children morality. That is not going to solve the great riddles of human life that have vexed philosophers and sociologists. That is not going to help us in our great trials and comfort us on our death-beds. That is mere child's play, as puerile as any other of the puerilities we are offered under the name of knowledge. The human race cannot stand for that; it will not be put off with such futilities. The very notion of getting something for oneself — powers or knowledge or amusement — which pervades these pursuits, is obnoxious to the man who is seeking a way to escape from the apparently endless chain of personal desires, who is longing to escape from self that he may find Self. The seeking of the Higher Life means that we will endeavor to discover what is the real motive or Law that governs our

life, overruling our petty plans and imagined interests. This we can never do by sitting in circles or indulging in any other practice that merely enhances the sense of personality and increases cupidity. We are tired of realizing the littleness of our personality; let us try to realize the greatness of our Soul. Let us endeavor by a life of disinterestedness and devotion to highest duty, to realize that Soul and make it a living factor in our lives. STUDENT

### The Mission of Japan

WHEN Japan first rose almost suddenly upon the Western horizon, there was a sort of silence of attention, expectancy, and wonderment. Most applauded; the jealous bided their time, the time of reaction. Of that reaction we are already entering the second phase. The orators of the first phase tried to change admiration into fear and shouted *Yellow Peril!* Europe and America were to be over-run by Asiatics. We were to make

a universal Western league against some reincarnate Genghiz Khan.

According to the spokesmen of the second phase, Japan is playing no great role after all. Her advent is only a temporary bonfire of a very limited mass of fuel. The new era of Japanese life will not long endure even at home; still less can it have any significance for us Westerners. The world's future on all lines remains for us.

Some of these people are sincere. Owing to defective eyesight they really do not see that Japan, emerging from the Feudal Period and the Middle Ages into the Twentieth century in fifty years, and even while we were in the Nineteenth, has done anything noteworthy, anything without precedent in recorded history.

The rest have to admit to themselves that facts are facts. It only remains to find causes for reasonably anticipating a collapse as rapid as the growth. How about finance? The war was expensive: may it not be that Japan will sink under the burden? Regardless of the fact that almost every nation after every great war is in similar temporary difficulty, it is predicted that she will, must, sink. Here and there, there are (*vocally*) discontented groups and parties. No other nation, of course, ever showed such a phenomenon: and so she will sink under that unparalleled calamity.

Others again foresee future failure because she has come at least to the level of the Christian nations without Christianity and without any apparent intention of adopting it. This base-line of forecast has been taken by an Englishman who writes two volumes on *The Future of Japan*. Says the writer:

Have we in the sudden and formidable forthcoming of Japan, the appearance of a new idea, of a new interpretation, representing a new beginning of history, the opening of a new adventure of humanity?

The wish fathers the answer — No. Every real new spurt or "beginning" of history, he argues, has been connected with a new religion, or at least a new propaganda of an old one. Japan will not only not accept the religion of the West, and not only enters upon no new period in the life of an old religion, but proposes to do without any. The ground upon which he charges her with having no religion is that her mind has no concept of, or relation with, the universal.

The mind of Europe, it appears, has. Perhaps that is why Europe is a universal armed camp. It appears that the universal is to be somehow conceived as a Personality, to-wit Jesus Christ. Japan therefore, refusing to conceive the universal as a Personality, is without conscious relationship to it, and must go. It seems a very roundabout way of saying that she must go because she will not listen very respectfully to the missionary. But as the *Nation* comments, there is Christianity and Christianity; there is the pulpit conception of Christ, and there is another the chief hindrance to whose spread is the missionary.

The popular agglomerate of dogmatic Christianity, with all the accretions from Greek philosophy masquerading under the name of Christian theology and from Roman Pragmatism and church imperialism, traditionally accepted among us, is not indeed making much progress in Japan, and organized Christianity in statistical expression shows no notable progress. . . . The dogmas that are steadily sinking below the horizon in Europe and America have little relish to the Japanese taste. But to intimate that Japan in-

tends to get along without a religion superior to any that she has thus far tried, is to misread the signs of the times.

The reviewer does not clearly say what will be that religion "superior to any she has thus far tried," but he seems to think it a sort of Christianity.

One may agree, but perhaps not quite as he does. First in the cultured, and then in the general Japanese mind, the figure of Christ will take birth, pure and with no dogmatic defilement, no pulpit atmosphere. The Asiatic mind is familiar with the ideal of great spiritual Teachers, manifestations in human consciousness of the one Divine, giving their labors and when necessary their lives to humanity. Among these it will be ready to include Jesus Christ. And in so doing it will gain a clearer, perhaps much clearer conception, of the universality of the one Truth and its adaptability of expression to every human need in every time and place. Asiatics who look on us as "outcasts," barbarians, will perceive that "even" to us the Light, the World Soul in its compassion, sent a messenger. And so they will not only add one more to their ideals but gain a larger compassion, a fuller toleration, a wider brotherhood.

The possible mission of Japan, though there may be only a few in that country who know it, and the warrant of the permanency and advance of her position, is to intermediate between East and West and be their first link of real acquaintance and brotherhood. She faces both alike, and if she proclaims no new doctrine it is because the forthcoming new one, a blend and synthesis of the old ones, with a vitality equal to the new and urgent needs of East and West, is even now slowly growing in her consciousness, spreading outward among the people from the nucleus in her midst.

STUDENT

### Watching Forty Centuries

THERE are probably a good many trees in the world, all told, that have witnessed the slow downfall of a civilization. But it has not been given to many to witness the origination and flowering of the successor. One of these few is a mighty cypress in a churchyard near the city of Oaxaca, Mexico. It was planted at least 2000 years before the Christian Era, and shows no sign of age. The Aztecs regarded it as sacred, and the Spanish invaders — presumably because it was worth nothing to them — left it untouched. But they mentioned it in their writings. Its forty centuries have conferred on it a diameter of 57 feet and a height of 150. We know that it was planted, partly because the Aztecs said so, and partly because self-planted cypresses grow near streams. The cypress, moreover, is sociable, and this one has not a solitary relative anywhere near with whom to gossip about little chattering man and his flickering civilizations.

What was the nature of the old Mexican civilization at which this tree gazed? As to its records, our wise men have agreed to neglect all that the people said of themselves 500 years ago; and have not agreed very well what to say in substitute for the legends.

Anyhow that civilization vanished; we might say ungrammatically that the Spaniards vanished it. And now there is another whose finish the tree will certainly *not* see. C.

# Some Views on XXth Century Problems

## Alcoholic Dust

LONDON *Science*, summing up the recent deliberations on alcohol of the British Association for the Advancement of Science, remarks that considering the multipolar diversities of opinion then expressed, we now know that we know nothing of the subject. In the dust of controversy we do not know whether alcohol is good or bad for us, whether it promotes civilization or degeneration. What is the average man to do?

Let him come out of the dust and use his commonsense. In an hour or two spent in observing a developing case of drunkenness he can know half what is known about alcohol. In half an hour spent in reading the experimentally ascertained facts, he can know the other half.

He can observe that as the doses of alcohol are repeated, the victim begins to be pared away layer by layer in the inverse order in which the layers have been put on during the ages of evolution. First the spiritual and moral go, the powers of higher ideation and the regard for others. Then the higher mental go, leaving little more than a brutal, half-thinking animal. Then the mental goes altogether, leaving nothing but the animal physiological functions. When these cease, the man is dead, leaving nothing but a mass of decaying vegetation.

Turning to the other side of the case, he learns that a set of young plants, watered with water containing varying proportions of alcohol, grow in the inverse ratio of the alcohol; and that the same turned out to be true in the case of a set of puppies upon whom someone tried the same experiment. He learns from another set of careful experiments that each of the five senses begins to be slightly impaired in accuracy within a minute or two of the taking of a minute dose of alcohol. He learns from the experiments of Parkes, who gave to three soldiers coffee, beef-tea, and alcohol respectively for three days so that each man had each of the three stimulants, that alcohol was unfailingly beaten by the other two as a supporter of walking and of working.

And finally he learns that each of the supposed stimulating effects of alcohol is only properly explicable on the opposite hypothesis. If the brake of a carriage snaps, the carriage will go faster; but not because the horse was stimulated. If alcohol makes the heart quicken, it is not that its force is stimulated, but that the slowing reins — the pneumogastric nerves — are paralysed. And so on.

But all this is no part of the problem presented to a senate or a whole people as such. Granted for the moment that to one man in four alcohol were harmless, and to one in ten beneficial. We have to think of the three and the nine. *Their* life at any rate will be shortened; their duty less well done; their work less efficient, occasionally even disastrous, as to a trainload of people. Among them will arise the quarrels and murders; among them will be the inebriates and moral wrecks. The sum in arithmetic is the balance between the immense and unquestionable evil and peril to

the many and the injury to the whole, and the pleasure to the few and the (questionable) benefit to the *very* few.

It is really a question of humanity and of patriotism. Some of the southern States in this country have been solving it on the right side; others are proposing to do so. Is England going to let herself be kept behind, her eyes be blinded, by the dust of the learned debates? How thick is that dust may be gathered from the contention of one learned advocate . . . . . that unlimited alcohol is good for a nation inasmuch as it eliminates both those who cannot stand it, leaving the physically strong; and those who cannot say no, leaving the morally strong! STUDENT

## The Need of Translators

IF in the centuries, say only of the Christian Era, in which men have sought the Light, they had but sought and won it *for the world*, not only would they have gained all that they did, and much more, but the earth would now be a heaven. Only a few are now beginning to understand this truth; some more, on quite another field, are laying the foundations for the understanding of it in their investigations into the phenomena and scope of thought communicability, called by them telepathy.

The Divine is always present, always enveloping us, always ready for entry. But this "Kingdom" or Light must be taken with effort, by some, ere the world at large can receive it. It is above, beyond, that plane of mind and feeling on which alone the vast majority live. Between it and that common plane is the gulf which necessitates the effort, the "violence." But if, using that effort, mind is raised until it enters and is illumined by the Light, it is forever after, in greater or less degree, an interpreter and transmitter to the world, to the great mass of men who have never learned what is their own birthright. The degree, and the amount of Light received, depend on the selfishness or unselfishness of the motive that accompanied the effort. Mind is open to the Light in proportion as it has *been opened* to the needs of men.

But in all the centuries, the majority of the few who have done this have done it for themselves, that they might have the "grace," the manna. The benediction was sought selfishly, if with a selfishness to which, because so transcendent, we do not give that name. Yet because it was sought at all, because some effort was made and the sensual nature, the animal, offered up in sacrifice, the light was reached. Yet the heart would have been filled far fuller had it been sought but to give, to radiate, if the mind had trained itself into tune with human needs, into perfect love of mankind. The interpretation, the translation downwards, would have been a thousand fold completer; the resulting secret benediction to humanity felt a thousand fold farther. The man who has made his effort in that spirit may have power to write, to speak — or not. It does not matter. His mind, on the plane as it is of the minds of other men, constantly receiving and

transmitting — as even science is now beginning to know that minds do — would have given night and day of the Light it had received. Its consciously and compassionately outsent currents of thought and feeling would have been charged with more than the common energy, and other, as a stream of water may also carry the thrill of an electric current. Such a man is a permanent translator and interpreter to others of the — to them almost unknown — divine tongue. His power to be that, his being as that, depends on the motive with which he sought the Light — for himself or for the rest. Active and perfect brotherhood of feeling is the condition of perfect manhood. STUDENT

## A Myopic Civilization

PROFESSOR SCOTT of the Northwestern University has been collecting some statistics about eyesight whose lessons will have to be learned. He makes a startling quotation from a circular issued by the United States Bureau of Information. Summing up some investigations, it says:

All, without a single exception, prove beyond a doubt that near-sightedness, beginning, perhaps, at nothing in the lower classes in the school and first year of school life, steadily increases from class to class in the school until in the highest grades or the last years of school attendance it has actually developed itself in as many as 60 or 70 per cent of all the pupils.

The researches of Dr. Cohn, who examined the eyes of ten thousand children in Breslau, Germany, tell the same story:

The number of short-sighted scholars rises steadily from the lowest to the highest classes in all institutions. The average degree of myopia increases from class to class, that is, the short-sighted become more so.

Owing to new school methods and the educational pressure brought to bear upon children, "the excessive destruction of the eyes," says Professor Scott, "begins several years earlier than was formerly the case in America, and earlier than is still the case in Germany and other foreign countries." In one room which he examined, where the pupils had been at school but one-and-one half years, 84 per cent had already acquired defective vision! They had also acquired the reading habit, for it turned out that the *average* number of books read at home for their own pleasure during the preceding year was 22 per pupil!

From 70 to 80 per cent of the children, then, leave school with defective sight. Most of the defects can be perfectly remedied with glasses, and so we are content. We forget that a system of education which ends in the half ruin of an important bodily organ is self-stamped as vicious; that the defective eye, thus acquired during years of growth, must be but an obvious manifestation of a permanently strained brain and nervous system; and that the conditions of a civilization which demands that kind of education must be much at fault. We are straining away from nature in every direction and must sometime pay for it. STUDENT

# Archaeology Palaeontology Ethnology

## The Giant Foot-Prints of Nevada

THE fossil footprints of Carson, Nevada, are described in *Sunset Magazine*, California, in connexion with the recent reported find of a new series of such tracks in the prison yard near Carson.

Carson is situated in the Eagle Valley, which is about five miles long and three wide, surrounded by mountains. A peculiar physiological feature is that the river, instead of going down the valley, crosses in front of it and cuts through the mountains; which indicates that the mountains have been recently upheaved, the river maintaining its original course which was determined by the previous conformation of the ground, and cutting gradually down through the mountains as the mountains gradually rose. The same thing occurs in other parts of the earth, as geologists know.

The prison is situated on a small hill of sandstone which has been quarried for building stone. Casts of shells, fragments of bones, and other animal remains have been found in this sandstone. On raising the blocks from their shaly floor, series of unmistakable footprints were found preserved in the shale; and in 1882 these were brought to the attention of scientific men.

Footprints are not among the most frequent fossils; to preserve them, it is necessary that they should have been made on a viscid, quickly drying mud, undisturbed by waves, and then covered with sand. All these conditions do not often occur.

The material in which are the Carson prints is a pale fine-grained silt, such as is brought down from the mountains by rivers; and over the surface sand was washed. Silty and sandy layers alternate all through the stratum, and footprints have been discovered so far in two of the silty layers.

There are much better known footprints in the Connecticut Valley sandstones and other parts of the eastern states, chiefly those of reptiles and amphibians; but these of the West are the best locality for mammal footprints so far known. Ripple marks, rain-prints, and the effect of wind action have been made out near the footprints, showing that the surface was sub-aerial.

One series of tracks is made up of oval impressions, almost circular, about 22 inches in greatest diameter and two to six inches deep. The step is four-and-a-half feet. They are supposed to be those of a mammoth or other elephant. But now mark these facts. *The most careful examination has failed to reveal any toe-marks.* This is supposed to be because

the animal's feet were plastered with mud; but even so, one would have supposed that a most careful examination would reveal *some* trace of toes, had the foot been the bare foot of an animal. Again, *there is only a single set of tracks, as though the mammoth had walked on two feet.* The scientific explanation of this is that the animal always placed his hind feet *exactly* in the track of his fore feet — and did not deviate an inch in a stride of four-and-a-half feet — and it is added that a careful study shows it is occasionally possible to recognize a double impression where the hind foot did not completely cover the fore foot. This explanation however has the air of a deduction from the theory rather than of an independently noted fact, and surely we may allow the walker to have slipped in the mud occasionally and so to have made a blurred

— namely the history of the past evolution of human races — such geological evidence as we have may be taken on its merits and not strained. The coincidence of the toelessness and the singleness of track is too striking to be satisfactorily dismissed by explanations which, in each case, call for considerable stretching; and the presumption, in the absence of bias or preconceived opinion of any sort, would be that the prints are human.

Only the strong conviction that they could not possibly be human would drive people to such extremities to show that they *might* be animal. It is not here denied that they *might* be animal, on the supposition that the animal had his toes so caked up as *never* to leave a single mark of a single toe in all the series, the longest of which contains forty-four prints, and that he as invariably covered his forefoot marks with those of his hind feet. Even with no previous theory at all, the natural inference is that they were made by human shoes; and with a preconception in favor of the existence of gigantic men in the tertiary times, the conclusion is of course much more evident.

Other objections to the human theory are that the impressions are not deepest in front, as they ought to be with a man, who rises on the ball of his foot, but at and a little back of the center; but does not the objection apply equally well to the animal? Again, in these tracks the foot is from 18 to 21 inches long and the stride only

27 to 38, so that it is evident that the walker would have no need to rise on the ball of his foot as he would be merely shuffling cautiously along. But it is not easy to imagine how a mastodon, big enough to have a twenty-inch foot, and taking such very short steps, could place his hind foot in the track of his fore foot! It is easier to imagine a giant man than such an acrobatic elephant. Though, however, this point has been ignored, the question of measurement and proportion is brought up when it suits the case to be made out; for we are told that the straddle is altogether out of proportion for a two-legged being, being sometimes even greater than the stride. One does not quite see how a four-legged animal would straddle more than a two-legged one, at all events when he was obligated to place his hind feet every time on the exact impression of his front feet. Again, if the stride was, as shown, so very short, then the straddle might very well have been equally great without being abnormally great. It is quite easy to imagine that a

DOLMEN DU MANE-CROCK, ET CHAMBRE LATÉRALE: ERDEVEN (MORBIHAN)  
(See CENTURY PATH, vol. x, No. 5)

footprint. Another type of track has been found in several series and much more abundantly. The prints vary from eighteen to twenty-one inches in length and from six to eight or nine in width. They are rounded at each end, the forward end being broader than the back part, and they are curved about with the hollow on the inside as in the human foot. They form single series, as if produced by two legs, and the step varies from twenty-seven to thirty-eight inches. These are supposed to have been made by a gigantic sloth.

Under these circumstances it is not surprising that these steps were believed to be those of giants; nor is it surprising that the opinion of science has frowned down that belief. For think what would result to science from an admission that giants existed. We have not yet that overwhelming evidence for the existence of giants necessary to compel an admission from science in face of their preconceived theories to the opposite effect. But in the teachings of Theosophy, where the existence of giants is already established on other grounds

# ✻ The Trend of Twentieth Century Science ✻

## Our Mental Blind-Spots

IT is now nearly a commonplace in science to say that if you magnify an atom enough you will get the solar system, and if you magnify a cell enough you will get the universe. The ordinary man will agree to that, be even a little pleased with the gentle filip which the idea gives to his imagination. But if you go further and suggest that the atom with its thousands of whirling electrons is inhabited, he will laugh. Why will he laugh? Because the atom is smaller than he! His size is for him the measure of things. But what size is he? Five feet seven? But if he will think, he will perceive that *he* is not of any size; he inhabits a *body* which is of a certain size. Why should he himself not inhabit one which is of some other size? He cannot give you any reason; and yet he will continue to laugh at the inhabitability of the electron. You cannot crack his shell of egotism.

But looking more closely it would appear that even his body is of no size. A planet is bigger; a solar system is bigger yet; a universe is bigger yet; a system of such universes is bigger yet. A molecule is smaller; an atom is smaller yet; an electron smaller yet; the composing elements of an electron smaller yet. So far as we know, both ways the ladder may be endless. If you look up, the human body is a universe of universes; if you look down on it, it is an infinitesimally minute electron. It is of no absolute size.

But, objects the ordinary egotist, any atom behaves exactly as does any other atom of the same substance; how then can there be a free, willing, thinking consciousness inhabiting it?

How do we know that they behave alike? Do all men behave alike because they all eat, sleep, and breathe alike? Three or four such things as that are all that we can appreciate of the life of the atom. An atom may do ten million things differently from any other atom, and science would know nothing about it. They and the electrons may have the most marked peculiarities. They may differ in size as much as men, but we could never perceive it.

When our ordinary man comes to realize that every cell in his body is inhabited by a "little" being of whose life he knows almost nothing; and when he has made himself admit that the "canals" on Mars could not have come to lie as they do without conscious intention—he has two supports for his intellectual legs, can stand upright and look around. As each cell in his body is inhabited, and as they are all of them, in addition, inhabited by himself, may not the universe—in addition to the inhabitation of each of its units, satellites, planets, suns—be inhabited as a whole?

But he may object that his body is an obvious organism, with all its parts related. So is the universe. Its arrangement is extremely definite. It is almost certainly a sphere, peopled with suns at regularly scarcer intervals the farther from the center. The sphere is belted with a serpent—curiously enough so figured in many ancient pictures—the Milky Way, which makes it finally lozenge shaped. It has a center; we are beginning to find that

nebulae and stars of different ages and structures have their assigned places. Stars are giving birth to stars as in the body cells give birth to cells; the very process appears to be the same. Every unit of the (at least) hundreds of millions is in enormous motion. Until recently the motions seemed in a general way casual; we have found that there is as it were a right and a left to the universe and that the two vast and populous halves are approaching and interblending. In fact the more we know the more obvious is arrangement, organization.

It is one of the blind-spots in our minds that makes it possible for us to suppose that there can be anywhere organization that exists blindly, *unensouled* organization. We know that the only way in which we can place a lot of stones absolutely at random about a tennis court is to throw them without looking. If we place them individually we cannot avoid arranging them. But we have not yet learned to reject from our minds the superstition that arrangement can happen fortuitously—any more than we have learned to reject the other, that our size and our arrangement is the only size and arrangement compatible with the indwelling of consciousness and intelligence.

## The Mystery of Voice

DR. MARAGE'S widely discussed researches on voice production seem to make the problem a little harder than ever it was before. Among other pieces of apparatus he used a syren, a revolving drum perforated with holes. These holes presented themselves in succession to the mouth of a tube whence air issued. The rapidity of the passage of the holes before the tube constituted therefore the number of the vibrations of the resulting note. If the holes are uniformly spaced, but very small, the vowel *ee* results; if they are uniform but larger, the vowel *oo* is heard. If the holes are in couples, but small, the sound is *a* of the word *fate*; if larger, the vowel is *o* of the word *note* (but without the momentary *oo* with which the English and Americans close their *o*). If the holes are in triplets the sound is *a* of the word *far*.

In making a syren you could either provide a set of holes to break up a constant stream of air and make it intermittent; or you could have an intermittent stream of air passing through one hole. The result would be the same. Professor Marage argues that the larynx is a syren of the latter type. The interval between the vocal cords provides the hole. The column of air from the chest is not, he thinks, continuous as it seems, but intermittent. According as the intermission is uniform, or is more marked between every *pair* of puffs, or between every *triplet* of puffs; and according to the size of the hole made by the cords—do we get the vowels *ee*, *oo*, *a*, *o*, or *ah*. The *tension* of the cords is ordinarily thought to give the *pitch* of the note. But in the syren, as we can produce the vowels by the groupings of the holes or puffs in ones, twos, or threes, and by the size of the holes: so we can pro-

duce any given pitch by means of the nearness of the holes, or by the rapidity of the drum rotation, or—which is the same thing—by the frequency of the puffs. If then the new researches point to *groupings* of the respiratory puffs as the cause of vowels, they also point to *frequency* of them as the cause of pitch; and the function of the vocal cords is reduced to regulating the size of the hole. But it seems more probable that two elements combine—that we unconsciously regulate the tension of the cords so as to have them in tune with the frequency of the respiratory puffs.

The same remark would apply to the function of the lips and throat in vowel making. If one sings a smooth open column of tone, and then slowly approximates the lips until they are finally in the position for whistling, the vowels *aw*, *o*, *oo*, will be successively produced. If with the same column of tone the back of the tongue is arched, that movement suffices for the alteration of *ah* into *a* and then *ee*. So the lips and tongue appear to show themselves as competent to the production of all the vowels. But according to the new theory the vowels are made by the groupings of air pulses passing through the chink of the cords. The suggestion paralleling the other would therefore be that though either of the two elements is competent to vowel production, in practice they co-operate for a more perfect result. But the whole matter remains decidedly obscure.

It is curious too, that we have so long been content with the ordinary theory of voice production. The little larynx with its minute occluding membranes are so obviously incompetent, on that theory, to the production of bass notes which on piano or organ require wire or pipe of some feet in length.

## Professor See's Earthquakes

HOW much we do not know about geology is revealed by the rapidity of succession of contradictory theories. Just as we have thoroughly learned that the earth is cooling and contracting, and that earthquakes are due to the contractions, we are now assured by Professor See that it is doing neither, and that earthquakes have a quite other cause. Careful study of them shows that none of them originate at a greater depth than twenty miles, at the most forty. This then is the thickness of the crust. Were the kernel, beneath this film, cooling, it would be contracting; earthquakes would therefore originate more deeply, in fact as deeply as the contraction extended. What then maintains the internal heat? Radium, advanced of late as the cause of the maintainance, he will not tolerate. His only method is to shorten our globe's past; it is too young to have cooled much. In fact its incrustated life is but ten million years!

One may predict that all the difficulties will endure until the globe is studied as a living cell, much structured within, and with a correspondingly complex life. No more will its physiology than ours, ever entirely go into mechanical terms and formulae.

## How We Waste our Minerals

A WRITER in *Mines and Minerals*, after summarizing our exploits in destruction among the Indians, the buffaloes, and the forests, turns his attention to the mines; and makes statements (alluded to in the CENTURY PATH, vol. x, No. 45, p. 17) which, if true—as there seems no reason to doubt they are—are alarming, not merely as portents of future poverty but also chiefly as indications of a terribly wasteful and destructive spirit. The career, he tells us, on which we are now launched, is resulting in that which can never be repaired. We are skimming the cream of the mineral riches with which the land is so plentifully endowed. We destroy at least fifty per cent of everything we can lay hands on; nothing but the richest gold mines are worth looking at, and the same applies to jewels and precious minerals. Of iron deposits nothing but the richest ores is shipped away, and the leaner wasted or destroyed for ever. The Geological Survey, he continues, has proved that forty per cent of the magnificent anthracite deposits in Pennsylvania have been lost for ever. Fifty per cent of the bituminous coal area has been wantonly destroyed. The ability of a man as a miner is gaged by the cost at which he can produce a ton of coal, no matter if he destroy ten tons in producing it; and one who tries to conserve the mineral wealth of his country is considered by his fellows to be a fool.

All this is additional proof of the wasting and abuse of Nature due to the forces of rapacity and impatience allowed to run riot. We have a country vast in proportion to its population, yet are on the verge of a famine in lumber and other respects. And we are seeking new countries, presumably as a field for similar exploits. This is what is called "opening up," and "settling" and "industrializing." Is the whole earth nothing but "field for capital"? The only consolation is that Nature guards secrets and bounties which such methods cannot touch and preserves lands for people that know how to use them.

But it is reassuring to see that public attention is becoming aroused to the fact of these

THE "GRIZZLY GIANT"—ONE OF THE GIANT SEQUOIAS OF CALIFORNIA

Lomaland Photo. and Engraving Dept.

abuses, the real cause of which is seen to lie in our collective defects of character. It is of great efficacy to deal by legislation with each particular abuse, but for permanent results we must look to an improvement in character. As long as short-sighted rapacity prevails as a general proclivity, all that legislation can do is to limit its actions; it cannot altogether obviate it.

When we cease to regard the earth as a huge field for plunder, the prey of whomsoever succeeds in grabbing it first, and come to look upon it as a sacred trust which we hold in common for the common benefit, these things will then cease naturally—without suppression.

Hence what is needed is more of the spirit of Theosophy, which emphasises and illustrates the unity of life, promotes brotherhood among men, and teaches reverence for all that lives, human, animal, plant, or mineral. STUDENT

## Underground Fish

REPORTS state that fish have been found in a puddle of water which formed in the excavation for a subway under the Southern Pacific Railway tracks at Fresno. The water is below an impervious layer of hardpan and ten miles from the nearest native running stream. The excavation is twenty feet deep and it extends through about six feet of hardpan which was blasted out. Under the hardpan is a porous layer in which are several springs. The fish come through a hole about a foot in diameter through which the water comes so rapidly that it has to be pumped away. They are of various kinds, but of no ordinarily known species; some are blind and some have eyes, some are large and some small; all are alive and swimming. We little know what extent of underground rivers there may be in arid countries, nor what subterranean life may tenant them. E.

## Diamonds in the United States

A BULLETIN from the Department of the Interior gives the facts about the alleged diamond discovery in Arkansas. The conclusion reached, after careful investigation, is that there are undoubtedly native

diamonds, and that these occur *in situ* and not merely as drifts among the gravel. The stones were found in a small area of peridotite in Pike County, owned by a man who bought the land because he thought it looked likely to contain minerals. He found the first diamond while on his hands and knees searching for copper or lead ores, and at once distinguished its luster from that of the quartz crystals which abound there. It weighed  $4\frac{1}{2}$  carats and was lying among pebbles on the surface. Another was found the same day, and a third some weeks later. Finally a stone was found imbedded in the peridotite in such a way that it had evidently not been inserted, but must have been naturally placed.

Up to date of the bulletin, 130 diamonds had been found, weighing from one thirty-second of a carat up to  $6\frac{1}{2}$  carats. Most of them are white, a large proportion being finer than most of the South African stones. H.

Let this mind be in you, which was also in Christ Jesus.—*Phil. ii: 5*

THE first thing that attracts the attention of the visitor who arrives by steamer at Visingsö is the picturesque ruins, half hidden among the foliage of large trees at a very short distance from the landing-place. The ruins still stand as an imposing memory of Visingsö's last great time, indicating by their dimensions that a huge castle once must have reared its walls and towers at this place. The old accounts we have of the castle *Visingsborg* also bear out this impression. During the XVIIth Century it was the principal residence of the Counts Brahe, who from this place ruled a domain much larger than many of the independent duchies of Germany.

Walking up from the landing-place of the steamer, we shortly enter the castle yard through one of the large old vaults of the basement. On two sides the yard is still confined with the half-ruined walls of the southern and eastern wings of the ancient castle; on the others it is open and partly cultivated as a garden. It is still possible to ascend to the second floor of the southern wing and enter the room which, according to the tradition, was the chosen dwelling place of Count Per Brahe the younger. From here he had a most wonderful view over the bustling port, the shimmering lake and, farther still, over the mainland, where he had built another mighty castle, *Brahelms*, on the heights above the little town of Grenna.

Our illustration brings us back to these old golden times of Visingsö. It gives a view of the castle of Visingsborg in the year 1708 (ten years before its destruction by fire), published in the large topographical work *Suecia Antiqua et Hodierna*, which contains pictures of nearly all the castles and mansions of Sweden, drawn by Count Eric Dahlberg, who was one of the generals of King Carolus XII. In this connexion it must, however, be remembered that Count Dahlberg was led by an exclusive topographical and architectural interest and thus did not think it unsuitable for his purpose

## Visingsborg

to arrange his pictures systematically and to leave out architectural irregularities or even the beauties of the surrounding nature.

The view is taken from the southern side. To the right we see the port, which is filled with barques and ships. As is clearly seen in the picture, the castle formed a square, enclosed by four wings, to which, at least on two sides, were added towers. Although in building it took nearly a century, the same architectural principles seem to have been carried

**WHAT** a mighty change would come over the world if men and women of means and influence would find their strength, their heart, and begin to work conscientiously to kill out vice and in its place plant love. Think of such an influence being brought into the churches! Look at the picture, my friends, of all the churches in the world opening their doors every day in the week to sacredly lead the unfortunate to a sense of righteous living. Think of the splendor of all these churches being illuminated by the spiritual light of Christ, shedding its generous radiance upon those who are despairing!—*Katherine Tingley* in a recent address

through the whole building, the style being a kind of North-German Renaissance, characterized by sharp staircase-gables, tall chimneys and varying kinds of spires.

The castle was begun about 1560 by the first Count of Visingsö, Per Brahe the elder. He obtained permission from the King to use for his building the already hewn stones from the suppressed convent at Alvastra, which is situated on the mainland not far from Grenna. However, only the western wing of the castle was finished at the Count's death in 1590. His son did nothing for the continuation of the building or the improvement of his large domains. Belonging to the Roman Church, his position in Sweden was rather precarious, and

finally in 1611 he fled to Poland, where Sigismund, the Vasa king, ruled. The latter had been deposed in Sweden because of his Romanist faith.

The third Count of Visingsö was Magnus Brahe, a younger brother of Eric. He continued the work on the castle, finishing before his death in 1633 the whole southern wing, and began the eastern—which finally became the most important part of the castle, being the front, which faced the port. But this eastern wing was mainly the work of Count Per Brahe the younger (son of Abraham Brahe, who was the youngest son of Per Brahe the elder), the well known Earl, Governor of Finland and benefactor of Visingsö. He built the front wing, higher and more richly decorated than the older parts of the castle, and finally added the northern wing, so that the whole castle was finished in 1662.

It was of course, according to the time, well fortified, surrounded with moats and walls, on which heavy cannon were placed; but the ground around it was cultivated as an orchard, containing more than 2000 fruit trees.

The main entrances were on the west and the east. The latter, leading to the port, was called the "Sea Gate." The inner courtyard was arranged as a flower-garden and here stood some of the larger astronomical instruments of the Count, among which are mentioned a celestial globe, a terrestrial globe and a picture of the sun. There was also a picture of Christ on the wall and a statue of the same stood in the midst of the outer courtyard. Other statues were placed in the niches of the walls, some of which represented figures from the local *sagas* of Visingsö and from ancient mythology.

We do not know anything especially about the decoration of the numerous large rooms of the castle, but they certainly were furnished in a princely fashion, containing many rare and antique objects from different countries in Europe, which had come into the posses-

sion of the Brahe family during the Thirty-Years War. The Earl kept a stately court, with a large retinue of servants. He had his own musical band, painter, carver and book-printer. Not only the king of Sweden, but also ambassadors of foreign countries paid visits to him at Visingsborg. But still more valuable may have been the many quiet hours he spent in studies with his mathematical instruments, his ancient manuscripts and books.

When the castle was burned, on Christmas Eve, 1718, one of the finest and most memorable mansions of Sweden perished. The fire is said to have been caused by Russian prisoners, who had been incarcerated here by the order of King Carolus XII. O. S.

### The University Education of Women

**S**AYS a writer lately in the *Baltimore American*:

It is significant of the general acceptance of the theory that a woman has as good a right as a man to the so-called higher education, provided she has the necessary preliminary training, that the announcement of the trustees of the Johns Hopkins University concerning the admission of women to the graduate courses in the future was made without explanatory comment. A few years ago—less than a decade ago—when the agitation in regard to the university training of women was at its height, the decision would have created a furore. There would have been storms of protest from the opponents of the idea, and corresponding expressions of triumph from the advocates of the plan. The announcement now comes unheralded by pressure or protest. It is merely the expression of a fact. The experimental stage in the university training of women is over, and it has proved that such training is not a fad. Indeed, it is recognized as a privilege of which women are as well qualified to avail themselves as men. Whether they get the training at one university or another makes little difference.

While the decision of the trustees of the Johns Hopkins marks a distinct departure in the policy of the university proper, as a result of Miss Mary Garrett's gift to the school, women have been admitted to the medical school since that department of the university was established. As a consequence, the trustees have not been obliged to form their opinions from knowledge gleaned from the outside. They have had excellent opportunity for acquiring it at first hand. Both during their professional training and in their subsequent work the women who have studied at the medical school have justified all claims that have been made as to their fitness for the privileges that have been extended to them. They have not only held their own in the natural competition with their masculine classmates, but after graduation, both in research work and in professional careers, they have reflected distinguished credit upon their *alma mater*. With the record their own medical students have made as their criterion, without regard to the achievements of the women who have availed themselves of the opportunities for specialized post-graduate study at other universities, it was inevitable that the trustees of the Johns Hopkins would ultimately open its doors to women in all post-graduate departments.

University education, however, does not yet meet the deeper needs of women nor does it actually fit them to meet life's responsibilities. The Doctrine of the Heart still awaits the recognition of our educators. STUDENT

### Jottings and Doings

IN a praiseworthy endeavor to popularize homespun, that the working-women of the South may be benefited, a prominent American society woman is wearing this old-time fabric almost exclusively. In our grandmothers' days in America, homespun was almost universally used for men, women and children, but is little seen in this country today. Likewise, hand spinning and weaving which formed part of the daily routine of colonial times have become almost lost arts with us. Occasionally in out of the way places, which have been overlooked by the on-rush of civilization, are to be found women who are still making homespun on primitive looms such as were generally used two hundred years ago. It is to help this class of working-women and to encourage the revival of hand spinning and weaving that this wealthy woman has determined to revive the demand for this simple, durable and beautiful home product.

It is hardly to be expected that the fabric will find very general favor as a dress mater-

ACCORDING to the statement of an influential native business man of Tokyo, Japan owes a large per cent of her industrial prosperity to the women of the nation. He estimates that nearly three-fourths of the exports from the island are produced by the labor of women—and of women belonging mainly to the more ignorant classes. Girls who have acquired some education are now employed in business and railway offices, much as are their American and European sisters, and are proving themselves valuable assistants. The silk and tea industries engage most of the women, but mining and other enterprises number them among their employees as well. STUDENT

It is estimated that in Great Britain there are four and a half million women who earn their own living. As in America, they have invaded nearly every profession and are to be found working at almost every trade. The teacher's profession claims the largest number, perhaps, but there are women nurses, physicians, lawyers, ministers (very few, as yet), editors, printers, book-binders, civil service clerks, etc. in ever-growing numbers. Even the blacksmithing trade is represented by women—in fact, nearly four hundred are said to be thus employed in the United Kingdom, certainly an astonishing figure. H.

THAT Egypt is awakening now from her age-long sleep is heralded by many signs. One of the

most certain is the effort toward advancement being made by the native women. A late report shows that there are now seven Government schools for girls, all employing trained women teachers, and that the interest in this work is growing day by day. Now that the tide has turned and, under the Law, Egypt is again on the ascending arc of her long, long cycle of experience, the women of that land of mystery can look back to the mighty days of their ancestors and draw inspiration not only from such women as Hypatia, who lived and taught among them, but still farther back, to the days when the position of woman was an exalted one—when she was priestess and ruler, physician and lawyer, having equal rights with man in all things and walking in the sunlight of true womanhood, honored and respected throughout the land. STUDENT

It is stated that the Filipino girls who are employed as telephone operators in Manila are daughters of the best educated and most aristocratic native families, and that, as there are practically no opportunities there for girls of the better class to earn their living excepting in this way, the position is eagerly sought after and carries with it all the dignity and influence of our highest professions. It is required that these girls become proficient in Spanish, English and Tagalog; and not a few have a fair knowledge of Chinese, Japanese and other Eastern tongues as well. The American woman who is chief operator at Manila praises these handsome, dark-skinned women for their intelligence and industry. M. W.

VISINGSBORG: AR 1708

THE eye surpasses nature, in as much as the works of nature are finite, while the things which can be accomplished by the handiwork at the command of the eye, are infinite.—Leonardo da Vinci

ial, so far have we departed from the simple ideals of old, yet there are many uses for which it is eminently suited, and its production should be encouraged. STUDENT

LACE-MAKING is a very ancient industry in Sweden. As noted in a preceding article, it was introduced by St. Birgitta in the fourteenth century at her convent at Vadstena, where it has always been kept up. Even today the very best of its kind are known as "Vadstena laces." Many of the Swedish national costumes are trimmed with a kind of bobbin-work of a singular originality and exquisiteness. STUDENT

A WRITER in a Chicago paper tells the following characteristic incident: H. H.

The beautiful public library in Amesbury (Mass.) was built from a legacy for the purpose, at the suggestion of Mr. Whittier, by two of his neighbors—an old bachelor and a spinster, brother and sister, who lived together to a very old age and accumulated a large sum of money. When Mr. Whittier remonstrated with them on one occasion for working so hard and for depriving themselves of comforts and luxuries, the frugal sister replied:

"We must lay up something for our last sickness and have enough left to bury us."

"Friend Mary, did thee ever know anyone in her last sickness not to get well for want of funds, or be left unburied?" replied the poet; and he afterwards persuaded them to take life a little easier.

# OUR YOUNG FOLK

## Kettil the Runer

**A**MONG the tales relating to the beautiful island Visingsö in Sweden there is one of a magician, who saved the island from destruction. One of his disciples, opposed to the finer forces located at this spot, began to undermine its cliffs in order to have it submerged, when Kettil the Runer came to its aid.

When a boy he seemed to grow taller, stronger and wiser than other boys. His father was a peasant, and Kettil used to tend the goats in the deep forest. Once, when near a mountain, he perceived two horses coming out from the rock, struggling furiously. The fight was unsettled and the horses disappeared again. Next day the same thing happened. The third day the struggle was still more furious, and one of the horses seemed to be exhausted and ready to fall. The boy had pity upon this weaker one and rolled a wheel between the horses. The unexpected appearance of this caused a moment's interruption in the struggle and gave the weaker time to get more strength. And he at once attacked his enemy forcefully and victoriously.

In acknowledgment of the help the horse presented Kettil with a runic wand from within the rock. The runes were the old northern alphabet, and engraved on a stick in a certain secret way they gave some special power to the owner. This runic wand possessed the power of giving Kettil the victory over all his enemies, and with its help he acquired great fame and was called the Runer.

Another version of the tale is still more interesting. One day when Kettil was tending the goats deep in the big forest south of Lake Vättern and came near a high mountain, a small, bright boy visited him, and they played together and had a merry day. The boy returned day after day and once he persuaded Kettil to follow him into the rock to his father. There in a large hall a majestic old man with long white beard sat slumbering. The boys looked at all the wonderful things in the mountain halls, and Kettil was especially interested when they came to the hall with the different runic wands and the boy told him of the special power of each. When leaving, Kettil took one of them with him. The old man was Odin, the father of the Scandinavian gods and protector of the Swedish people. Through the possession of the runic wand Kettil acquired in some way the same knowledge and power as the god.

Kettil had a disciple, Gilbertil, who usually assisted him in the ceremonies. But Gilbertil had some evil tendencies and was irritated by the finer forces on Visingsö. He therefore decided to submerge the island and began by making a subterranean passage from the south-east corner, which soon reached more than half under the island. Then the king, who resided in Näs Castle, the ruins of which are still to be seen, applied to Kettil for help, and he promised to come within eight days. He arrived, walking on the bottom of the lake to the castle, and told the king he had been much disturbed on his way by big snakes.

## A MYTH

Charles Kingsley

**A** FLOATING, a floating  
Across the sleeping sea,  
All night I heard a singing bird  
Upon a topmast tree.

"Oh, came you from the isles of Greece  
Or from the banks of Seine;  
Or off some tree in forests free,  
Which fringe the western main?"

"I came not off the old world  
Nor yet from off the new—  
But I am one of the birds of God  
Which sing the whole night through."

"Oh sing and wake the dawning  
Oh, whistle for the wind;  
The night is long, the current strong,  
My boat it lags behind."

"The current sweeps the old world,  
The current sweeps the new;  
The wind will blow, the dawn will glow,  
Ere thou hast sailed them through."

Kettil soon went to the place where Gilbertil was working and opened the earth to beg him to give up his doings. When good words, however, did not help, he threw one of his runic wands against Gilbertil who caught it in his hand in order to throw it back—but the hand was fastened to the wand. He sought to disengage it by the other hand, but then this became fastened. "Try with thy feet," Kettil said. Gilbertil tried and then his feet also were fixed. "Thy teeth perhaps can help thee," advised Kettil. Even these were held fast by the runic wand. Then Kettil threw down a bull's skin and said: "From this thou mayst take a hair each hundredth year. When it is all picked off thou mayst begin to dig again." The people will tell you that about a hundred years ago Gilbertil had picked the hair off one of the feet, and then he laughed so that the whole island was shaken.

Two caves at the shore are said to be the entrance to his passage. Now this is collapsed, but as late as a hundred years ago it was possible to enter into it at least forty feet.

In this way Kettil the Runer saved the most beautiful spot in Sweden, and so it comes about that his memory still lives in the minds of its people.

## Companionship of Books

"WILL you go and gossip with your housemaid or your stable boy when you may talk with kings and queens; while this eternal court is open to you, with its society wide as the world, multitudinous as its days, the chosen and the mighty of every place and time? Into that you may enter always, in that you may take fellowship and rank according to your wish. From that, once entered into it, you can never be outcast but by your own fault."—*John Ruskin*

DURING periods of metal scarcity in China, iron, lead, tin, baked earth, grain, silk, and shells have been used as money. One of the earlier Chinese coins still extant is of porcelain, three-quarters of an inch in diameter, bearing the legend "Eternal Prosperity."

## Facts Worth Knowing

THE first of the best known American inventors is Benjamin Franklin who brought electricity from the clouds with a kite and invented the lightning rod which is now going out of use. Then came Eli Whitney whose invention of the cotton gin in 1793 did so much for the development of the Southern States, and Robert Fulton with his steamboat in 1807. Thomas Blanchard invented the first lathe for turning out irregular forms of wood such as gun stocks, hat blocks, etc. In 1831 Cyrus H. McCormick began to make the harvesting machines which are now turned out at the rate of a hundred thousand a year at the Illinois factory. Charles Goodyear discovered a process of preparing rubber and the best rubber on the market now bears his name. Elias Howe invented the sewing machine and needle with an eye, and Samuel F. B. Morse the telegraph. Of modern inventors James B. Eads constructed the great steel bridge over the Mississippi at St. Louis and the jetties below New Orleans, Alexander Graham Bell the telephone, and Thomas A. Edison the incandescent light, magnetic separator for metals, phonograph and other electrical appliances. Only the last two are still living.

MODERN scientists have at last come to regard seriously the possibility of transmuting the baser metals into gold. This was the dream of the medieval alchemists, and many believe that they succeeded in doing it, though the secret of the process seems to have been lost. A legend, found in the chronicles of John of Antioch who lived in the seventh century bears upon this very matter. According to this legend the story of the Golden Fleece is a record of the making of gold by means of chemicals. The directions for the process were said to have been inscribed upon the skin of an animal.

WHEN the Bessemer process of making steel by injecting air blasts into molten iron was discovered, iron makers laughed loud and long and refused to believe it could be done. When steel rails were proposed the railroad directors laughed; but after one road had tried them the mills could not make them fast enough to meet the demand for them.

"THE oldest manuscript on chemistry known at the present time, is a papyrus preserved at the University of Leyden. This papyrus is a book consisting of twenty leaves. Eight of these—that is to say, sixteen pages—are covered with beautiful and most legible writing in uncial characters.

"This papyrus comes from Thebes in Upper Egypt. It consists of a collection of one hundred-and-one precepts, many of these bearing on the chemistry of the metals. It appears to be an abstract made of other works, for it frequently gives several methods for the accomplishment of a given purpose. A Latin translation of this document by Leemans appeared in 1885; a French version of the same was published by Berthelot."—*F. G. Wiechman*

# THE CHILDREN'S HOUR

## A Fairy Tale of Science

WHEN in the leaves of a plant or tree the oxygen fairies are separated by the magic secret of the sunbeam from the carbonic-acid gas group of dancers, and the chlorophyll fairies, they fly off to kingdoms where they are very welcome indeed. The animal and human kingdoms love the oxygen fairies and need their help. We are very grateful indeed to the vegetable kingdom for sending us these sprightly elves.

When we inhale or take the air into our lungs, the oxygen comes in contact with our blood through the thin walls of the arteries and veins which carry it around the body. The oxygen fairies of the air at once hold out eager little hands to the impure particles which the blood has gathered up on its journey around the body, where it has been destroying old tissues and building new ones. These impurities are usually Fairy Carbon in disguise. So two little oxygen fairies catch hold of a carbon fairy and pull her out of the blood. Having joined hands in this way, two oxygen fairies and a carbon fairy, they have again formed the molecule or group of fairy dancers whom we know as carbonic-acid-gas. When the lungs contract or come together, they throw out or exhale this carbonic-acid-gas. For if it stayed in the lungs it would soon poison the whole body. When they expand or inhale, we we take in fresh air which brings in a new supply of oxygen, to burn up the impurities. For burning, fire, or combustion as it is also called, is nothing else than the union of the fairies oxygen and carbon to form carbonic-acid-gas.

The air would soon become too full of carbonic-acid-gas for animals and men to breathe, if it were not for the vegetable kingdom. There is a constant interchange of oxygen and carbonic-acid-gas going on between the kingdoms of nature, so that the air contains always just the right proportion of each, mixed with a large quantity of nitrogen, which dilutes the oxygen and holds back its lively fiery atoms.

From this we learn how much we need fresh air. If we live in rooms with windows and doors tightly shut, we breathe into them so much carbonic-acid-gas that our lungs get filled with it. We soon feel sleepy and dull. The blood that goes to our brain is not pure and bright and so we cannot think pure bright thoughts. The sunbeam fairies that bring to us heat and light, and the sweet fresh air blown from the woods, the garden and the chaparral, is what we need to make our bodies pure and healthy and strong, so that we may have happy thoughts for work and play.

Mother Nature's great bands of fairy helpers make all things ready for us to use. We must become wide awake and wise enough, yes, and pure enough, to learn to be helped by them more ways than we are. UNCLE OSWALD

## A LOTUS BLOSSOM

### THE OAK

Tennyson

LIVE thy life,  
Young and old  
Like yon oak  
Bright in spring,  
Living gold;

Summer-rich  
Then; and then  
Autumn—changed,  
Soberer-hued  
Gold again.

All his leaves  
Fall'n at length,  
Look, he stands,  
Trunk and bough,  
Naked strength.

### The Harvest

"AT last they are coming, and how glad I am!" exclaimed a gnarled old apple-tree, whose branches hung almost to the ground, so heavily weighted were they.

A general cry of rejoicing went through the orchard, as men and boys and girls, with ladders and baskets and pails, entered the orchard, the boys merrily rolling barrels along. The very air was filled with a sense of something about to happen.

"Where shall we begin?" cried the boys and girls. It certainly was hard to tell. Each tree seemed to send forth a silent appeal to be lightened of its precious burden. Among the trees there was a great chatter; but only the

birds and the trees — not the apple-pickers — could understand.

"I hope," cried the Baldwin to a Crab-Apple tree, "they will pick your apples first. I notice, since the last storm, that one of your branches is broken, so great is the weight of its load."

"Yes," answered the Crab-Apple. "I was not trained right when I was a young tree, and that branch grew out of all proportion to my other branches; it had not only its own burden of apples to bear, but protected the other branches as it faced the storms. No wonder that it broke."

"You should do as we do," merrily called a Harvest Apple; "scatter your fruit all through the summer; you will never feel overburdened then."

"Well," said a Pear-Apple, the only one of its kind in the orchard, "it is true that the Harvest Apple and I have been free to toss our branches and play with the breezes all through the summer, but now we look as if we had hardly borne a single apple; while you trees that have borne your burden right through the season have — oh, such a glorious offering now! It almost makes me envious."

"You must not feel that way," spoke up a Northern Spy, whose branches nearly touched the ground, so heavily laden were they with their beautiful red and white apples. "We each bear the burden entrusted to us by Nature, and gladly; for we know that time will surely bring the harvest. Your burden may be light, but it is probably as great as your nature could stand; if ours are heavier, they are never too heavy for us. Nature never puts on us more than we can bear."

Then the apple pickers came along, and soon the weighted branches swung high and free in the air; ready to go to their needed rest during the approaching winter. AUDREY

## A Faithful Puss

TOM was only a family cat in California, but he knew enough about snakes to conclude that most of them are dangerous; so when he saw a snake approaching the baby as she sat playing on the grass near the doorstep, he made ready for battle. He made several brave attempts to kill the snake, and each time prevented it from biting the baby. But the snake drew back and waited its chance to dart at the child again. Hearing her baby laugh at Tom's supposed play, the mother stepped to the door just in time to seize a whip and kill the snake as it darted at her child for the third time. The snake proved to be of a very poisonous kind. Tom's first attempts had saved the life of the baby until the mother could come and protect her. COUSIN EDYTHA

Two thousand years ago little folks were just as fond of animals for playthings as they are today. They had toy donkeys and mules, as well as dogs, monkeys and horses with figures of soldiers riding on their backs.

## LAST SUNDAY AT ISIS THEATER

"The World's Unrest and the Remedy"—An Interesting Address by Miss Elisabeth Bonn

AT the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY at Isis Theater, last Sunday evening, there were two addresses, one by a Râja Yoga boy on "Some of Life's Hindrances," and one by Miss Elisabeth Bonn on "The World's Unrest and the Remedy." The latter paper we give in full.

"The world's unrest, so plainly to be traced in the lives of both individuals and nations, is the inevitable result of the inability on the part of men and nations to recognize the nature of the present age, and their consequent failure to perceive the special opportunities and possibilities for humanity at just such a time as the present. For when a critical situation, a time of special danger, or the inflowing of a tide in the affairs of men has been comprehended by the great minds, and stirs in the great hearts of any age, there are always brave leaders and devoted followers who inspire the multitude to pass over to the new order of things with some measure of confidence and enthusiasm. And in individual experience the same is true. Once awakened to a danger, once having comprehended an impending change in our conditions or situations, the human being girds up his loins, and often passes fearlessly through forests of hidden foes, shows all the selfless heroism of which he is capable, and either dies unconquered, or passes on victorious into a wider field. The recognition of existing conditions, the belief in the godlike being within that survives peril and change, have in every age sustained humanity at critical periods, even when these were in the hearts of but the few enlightened.

"And this is so today, and the world's unrest is because as yet only too few see that the bridge into the unknown future has been securely built; the darkness and the doubt that trouble human hearts and disturb national life, exist because as yet only too few have seen what H. P. Blavatsky brought, this beacon of the future. Until more of the human race do know of the new life about to dawn, until more of them do recognize the beacon of the future, until they find the Leaders who will once more guide the race into the field of new life and opportunity, the present troubled conditions will continue, and the individual and racial turmoils will keep humanity tossing on a swollen sea of doubt and fear and desire. Theosophy is this beacon of the future life, its Teachers are Humanity's faithful guides, — to these must the world turn and find peace.

"These Teachers tell us that in an age of transition such as the present, the opportunities are extraordinary — that things may be done, and things may be begun, at such a time, which we may wait ages and ages for another favorable time to undertake. It is the conscious and determined directing of all our faculties to

taking advantage of these opportunities that will lead us to a spot of peace we may call our own in the midst of the turmoil — a spot where we are free to act nobly, and from which we can behold calmly the breaking of the clay idols of the world that transition always effects.

"A terrible time of testing is the transition period. Men and nations and civilizations are well-tried. They are being so tried at present. Fixed customs, molds of thought, boundaries mental and physical, must yield in order that the new time may come forth. We have ultra-conservative people clinging to shreds of faith and custom from which every vestige of the spirit has flown, and we have extremists of another order yielding to the transition influence with all the lack of reserve and self-control through which inordinate desire lurking somewhere in the nature, seeks to vent itself. Blindly orthodox people are more blindly orthodox than ever, though the light shines plainly on the avenues leading to truth; and those who disregard the sacredness of human ties, find in the relaxing of old ideas and customs, their justification for deserting every unpleasant duty.

"There is a reason for all this failure on the part of humanity; and if men and women understood the situation as Theosophy fully explains it, they might be on guard and triumphant warriors instead of succumbing as they do to the swarms of evil impulses which with a devilish kind of consciousness attack human nature at this time — knowing that if they can not find a soil in human lives now, they may be starved out of existence forever in a new time that holds the promise of a higher realization of Godhood for the human race. The exhibitions of greed and selfishness, of the desertion of every natural duty for the satisfaction of personal enjoyment, the riot of ambition and lust, with reports of which the newspapers teem at present, are the records of the triumph of evils that might be — were knowledge of the purpose of life and the meaning of the time possessed by the actors — splendid victories over evils that would never have strength so powerfully to waylay a human weakling again. This is of course true in any age but in a transition age it is especially true. The unrest, the agitation, the failure, the misery in the world today, result from ignorance of the situation, ignorance of man's power to overcome, ignorance of the mighty issues at stake for all humanity in these years in which the world is passing into a new order of ages.

"And all the time the knowledge is to be had; all the time any human being living a really spiritual, unselfish life has the light within his heart to guide him to that knowledge. All the time, the paths that lead humanity to peace are well guarded from the Destroyers by those who have withstood the temptations of the time, knowing the situation for what it is, and happy in having found the Leaders who have directed their steps to paths of peace.

There is something royal in standing as do these Leaders in the midst of the waves that beat over human life at present, and standing, secure on an island built from self-conquest, with foundation in the heart-life of the world. Standing, light-crowned, until others learn from them, as do their students, to build also on self-conquest, and gain a foothold in real life at last. For real life is that life that can be lived through storm and peace with the knowledge of the great purpose of it all ever present, knowledge of the power of the soul to master lower conditions and to stem the tide of evil whenever and wherever it arises. Real life is the heart-life that dares all in order to uplift humanity, defies all unrest, in the peace of knowledge of the God within.

"To stand on guard, believing in one's own divinity, believing as Theosophy teaches, that the opposing forces of darkness make more powerful onslaught at times of transition and that the servants of Humanity must stand all the firmer, and shoulder to shoulder united, under the Leader of the forces of light — this brings peace. And in the Theosophical Movement, the Universal Brotherhood, such a Leader and her Warriors for the light, may be seen by all the world. And as the world's workers more earnestly seek the cure for their unrest, more sincerely sacrifice the merely personal idea, to the service of humanity, will the World's unrest cease."

From "Some of Life's Hindrances," read by a young Râja Yoga student, we extract the following:

"Humanity is and from historical time has been weighted down with conventionality. The customs, institutions and unwritten laws, whether good or bad, bind the races as by so many chains of their own forging. Better customs, purer religion and more just laws are only to be reached after breaking through these bonds.

"One of the qualities most of us lack is that of initiative. It might be described as the ability to go ahead and do what we know to be right regardless of what others may say or think. Any one who, after he has become convinced, stops to consider what that one will say or the other one will think, might just as well not go any farther in his enterprise, for his motive is personal; and as Mr. Judge says, 'It is not *what* is done, but the spirit in which the *least thing* is done that is counted.'

"Let us all question our own motives a little more and other people's motives a little less. Mme. Blavatsky said, 'Be more charitable toward others than toward yourself,' which strikes at the very root of selfishness. True charity, however, is not mere forbearance nor passive good nature, but actively doing our full duty toward our fellow-men. The surgeon knows that his knife will cause temporary pain, yet the patient must bear it in order to be cured. So it is with our troubles, both mental and moral. We must use the surgeon's knife if we wish to be rid of the hindrances to true progress."

# Art Music Literature and the Drama

## The Language of the Luisano Indians

IN a little adobe building at Rincon, California, a store where Indians come to trade, there has been growing steadily for years a work the value of which to lexicographers and philologists, and through them to the literary world at large, we cannot now correctly estimate. Curiously enough, this work has been brought to public notice through the death of its author, Philip S. Sparkman, whose life had been one of patient study and research, and whose violent death shocked and grieved the few who knew him well and the many among the Indians to whom he had been a friend. However it brought to the attention of the world his work on the Luisano Indian language, which promises to be the most notable and light-bringing treatise extant on the language of the American Indian.

For over twenty years had Mr. Sparkman kept the store at Rincon, and during all that time his honesty and perfect justice in his dealings with the Indians, his patience with them in the store—a patience that came from a deep understanding of the Indian character—won for him their confidence, their affection and their trust. Perhaps it was because it seemed to offer him the best opportunities for pursuing his researches that this scholar and thinker chose a quiet and seemingly humble line of life; this no one can tell. But certain it is that by effort and the aid of circumstances, he learned from the Indians all that they knew of their own language. Evening after evening they came to him, teaching him every word, every syllable, much that could be learned no other way than orally. The old men of the tribe, in addition, taught him the ancient words and their meanings. Mr. Sparkman had a considerable knowledge of ancient and modern languages, and it is said that he “considered the Luisano language one of the highest developments of any tongue.” The same patience which he exercised in dealing with the Indians, he took to the making of order out of the seeming chaos of their language. It was “the all unestimated pains that go to make success the world may see.” It was an undertaking involving years of arduous and unremitting labor. A friend who knew him well says of this:

To illustrate how conscientious he was in the preparation of this work, he told me that at one time he destroyed thirty pounds of manuscript, representing two years of careful study, and started in all over again. In a letter written to me only six days before his foul murder he says: “I now have the language [Luisano] in what I think is tolerably fair shape, though I still occasionally make alterations and additions.” This, after writing and re-writing six or seven times the whole vocabulary of

several thousand words with all their shades of meaning, besides a wonderful grammar by which a child could understand the construction of this language. He has often told me that the Luisano language was the most complete among all those he was familiar with. He placed Chinese at the bottom as a language of roots; English occupies a middle station; then comes Spanish and the

**FOR** body and soul, word and idea, go strangely together here as everywhere. Song: It is the Heroic of Speech! All old poems, Homer's and the rest, are authentically Songs. I would say, in strictness, that all right Poems are; that whatsoever is not sung is properly no Poem but a piece of prose cramped into jingling lines,—to the great injury of the grammar, to the great grief of the reader, for most part!—Thomas Carlyle

### VISINGSÖ: INTERIOR OF BRAHEKYRKAN

THE cut shows an interior from the “New-Church” at Visingsö, built by Count Magnus Brahe. We see a part of the painted vault and the upper part of the richly decorated stone gate in baroque style, which leads down to the sepulchral chamber of the Counts Brahe. The two statues in gray stone represent Count Per Brahe the younger and his wife, life size. The count is dressed in full armor, resting his left hand on the shield and holding in the right a book, symbolic of the promoter of wit and learning.

Of the other objects of interest which are collected in this little church we see only (to the right, behind the countess) the head of the Birgitta statue, which has become famous because she is here represented as receiving her revelations, although the statue was carved at least 15 years after her death. O. S.

Latin tongues, then Latin, and above all the Indian language of Luisano.

The grammar referred to represents the work of eight years, and about it we quote from the same source:

In writing the grammar he studied the French, Spanish and finally the Latin grammars, and the latter gave him the key to the construction of the language, although he considered the Aztec grammar, which he endeavored to secure in Mexico, better fitted to his work. For the better pronunciation of the words he invented an alphabet and system of spelling, so that almost any one can read the language, excepting two or three sounds which can only be taught orally; for no alphabet can spell them.

The languages of the American Indians, generally believed to be a jargon without con-

struction or connexion with one another, have long been a puzzle, but from different quarters light is beginning to break upon this problem as upon many others, and there are already more than surmises that this incongruous mixture may be traced to a common origin.

Professor Kroeber, of the University of California, holds, like Mr. Sparkman, that the Indian languages can be formulated and systematically arranged, that they “possess an elaborate and difficult grammar, though this is entirely unknown to the Indians themselves, and must be extracted by the laborious investigations of scientists.” Professor Kroeber, as recently noticed in an article in the CENTURY PATH, has published a pamphlet on the Yukuts and Yuki languages which are, on the surface, entirely dissimilar, the two tribes being even

geographically distant from one another, but which, after careful investigations, are found to possess the same grammatical construction and to bear marked traces of a common origin.

All this is deeply interesting and instructive, especially when we remember that these discoveries are being made in California, that the number of entirely different Indian languages in California exceeds by far that of any other state, even in proportion to its territory, and that it is from California as a center that H. P. Blavatsky's teachings and explanations of all these problems are being diffused. Years ago she pointed out that languages have their cyclic evolution, their childhood, stages of purity, growth, fall into matter, admixture with other languages, maturity, decay and finally death. It is but another vindication on the part of science of her wisdom, her knowledge, and the truth of her teachings. LOMALAND STUDENT

An English musician writes in a recent paper:

In Mozart's concerted music the quartet headed by Joachim attained an unrivaled position, and conveyed the idea, as no other body of players has managed to do, of youthful exuberance, while no touch of exaggeration could be laid to their charge. As interpreters of Beethoven, the players long ago gained the power of shedding new light upon the difficulties of the last quartets, and even of persuading their hearers that these difficulties did not exist. Joachim also, it has rightly been said, did more for the fame of Brahms in England than any one else, by bringing forward his concerted chamber music and by playing his violin concerto; and there is a sad appropriateness in the fact that Joachim's last appearances in this country should have been in the brilliantly successful series of last autumn's concerts at which the entire chamber works of his great friend were performed.

Joachim's biographer has phrased the secret of his wonderful playing in the words, “He played the violin, not for its own sake, but in the service of an ideal.” STUDENT

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l   O f f i c e   P o i n t   L o m a   C a l i f o r n i a

The Headquarters of the Organization at Point Loma with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West

## Katherine Tingley in Europe

### Clippings from the Press

#### Katherine Tingley at the Opera House

(Translated from *Svenska Dagbladet*,  
Stockholm, September 21, 1907)

IT was an unusual sight to see a stream of people and a long row of carriages on their way to the Opera House on a weekday afternoon at 4 o'clock. It was no ordinary event that attracted this crowd of people and filled the Opera House from the floor to the ceiling with a refined and intelligent audience.

It was the name of Katherine Tingley, the Leader and Head of the world-wide Theosophical Movement, which was the attraction to this meeting, for which the doors of the Royal Theater had been opened, and it was the lecture which she was advertised to give on "The Enlightening Power of Theosophy" which had aroused such great public interest. . . .

Mrs. Tingley spoke in English with dramatic action and an expression of voice and gesture which entirely captivated the audience, and gave life to every thought, every word she uttered. After deploring that she could not express herself in our beautiful language and that the time did not permit any fuller exposition of the Theosophical doctrines, she entered upon her subject.

"If we look around in the world," the speaker began, "we find wherever we fix our eyes only confusion, injustice, discord and criticism, and a negative position towards higher things. But Man has as his inheritance a divine nature, and the problem is to develop this sense of our divine origin by seeking to become one with all humanity. The light will come in the feeling of unity and illumine man regarding his true nature. Man has not yet succeeded in applying the divine laws to his life, though many have been working towards this end.

"Theosophy proclaims the existence of these divine laws, and is itself the essence of all religions. It teaches that God exists in the whole of nature. Before man can come to a knowledge of this he must learn to see the relation between his spiritual life and his material life. At the present time our spiritual life reveals itself mostly in the arts. Look at the great painters who in color and form try to express that which can only be grasped by the intuition.

"Look at the statesman and the scientist bound by fetters which none of them understand. But through their efforts to reach the central heart of life, through the consciousness of this divine power an advance will be made, and painter and statesman will be able to accomplish results of which we cannot now form any conception.

"I bring the message that man in his inner nature is a being with a divine inheritance and with immeasurable possibilities of evolution. Theosophy appeals to the best in us. Its nature is such that once

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

## MEMBERSHIP

having obtained a knowledge of it, one can never again be indifferent towards it."

After touching upon the Theosophical teaching of Reincarnation the speaker ended by declaring that Theosophy shows the path of light to mankind and to every man the way to live aright.

#### Mrs. Katherine Tingley --- The Meeting at the Theater

(Translated from *Norrlands-Posten*, Gefle, September 24, 1907)

EVERY seat in the theater was filled last night when the Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, Mrs. Katherine Tingley, held her public meeting which had been awaited with the greatest interest. The stage had been beautifully decorated with palms and other plants, and with flowers at the footlights.

After some brief notices concerning the purpose of the meeting, and the basic ideas of Theosophy, a violin solo was played by Miss Peggy de Purucker, an amateur musician from Geneva, who played with fine feeling and good technique. Then Miss Nan Herbert and Mrs. W. T. Hanson gave short addresses in English. Mrs. Hanson said that Theosophy could give help in every department of human life; in the education of children as well as in the life of the man of business; all can find something helpful in the teachings of Theosophy. Miss Herbert spoke of the impressions she had had from the Theosophical teachings and of the work Mrs. Tingley had done, and the possibilities of applying Theosophy in practical everyday life.

"The Theosophical Society was founded by Madame Blavatsky and William Q. Judge and, after the death of the latter, Mrs. Tingley took the Leadership. The Headquarters are at Point Loma California. The aim of Theosophy is," she said, "to teach man to know that he is divine and to live his life so that he shall attain to perfection. Theosophy is the inner power and light of all religions."

Then the moment came which the whole audience had awaited with such expectancy, when Mrs. Tingley came forward and spoke to them, also in English, speaking with warm enthusiasm, powerful and convincing. After having expressed regret that she could not speak the Swedish language she spoke of the purpose of Theosophy and accentuated that the Society of which she was the Leader was not a religious sect but an international unsectarian institution, with the purpose of helping to evolve a race of men and women spiritually powerful, with the highest attributes. "No one can deny," she said,

"that there is in the world a long-ling after something, that there is terrible suffering without results, and this condition arises from lack of knowledge of the laws governing human life. We all stand before unsolved riddles, in politics, in science, and religion, and although we may see great possibilities in every department of human life we still stand without power to help. One reason for this is that the civilization of

today is so negative to higher things. The criticizing intellectualism of the brain mind has been long in the ascendant. But now comes Theosophy as a saving power. The Theosophical teachings are as old as the truth itself. A child can understand the meaning of Theosophy because it is as simple as Truth itself. In the degree that man begins to understand what life means all the negative results disappear. Man must learn to know himself. Without this knowledge he cannot solve the problems of life. The higher faculties of the mind must be cultivated so that he will find a balance in his whole being. Then will come a time when a light will shine and he will never fall back into doubt or vice. Theosophy is logical and simple in its nature as everyone who studies it without prejudice will find."

Mrs. Tingley then spoke about marriage, which was, she said, "when rightly understood a holy institution, and no one can divorce those who had entered into the sacred bond of true marriage. There is in the world a great ignorance as to what true marriage is. In this question also Theosophy can help humanity. When marriage is entered upon by enlightened men and women with a true understanding of their responsibility and duty, then a new and higher race without the gross passions we see in the world today will begin its life upon earth.

"Theosophy with its teaching of Reincarnation takes away the fear of death and gives hope and strength to poor humanity and points the way to an enlightened spiritual life. Then will be realized a universal brotherhood, the only thing that can bring peace on earth."

#### Mrs. Katherine Tingley at Gefle

(Translated from *Gefle Dagblad*, September 24, 1907)

LAST evening the theater was crowded, not one seat vacant, when the Leader of the Theosophical Movement and her companions lectured there. . . .

Mrs. Tingley spoke for three quarters of an hour, vividly and dramatically. She accentuated the unrest and longing in the hearts of men, their drifting in all directions, and their worship of the intellect. "Theosophy," she said, "seeks to give to humanity a guiding unity, harmony, balance, and to let the heart speak. Men must feel their divinity within themselves and live in harmony with their higher natures and with all the universe."

The speaker specially dwelt upon the subject of

marriage as being a sacred institution, and also on Reincarnation, which was taught by Christ.

She also spoke of her splendid Point Loma Institution, and ended by pointing out that through a Universal Brotherhood of humanity was the only way to find happiness and peace. . . .

Although a great number yesterday who could not obtain admission applied to Mrs. Tingley for a second lecture, she could not now arrange to give one, but she expressed her thanks to the audience for the sympathy with which they had received her and promised to give Gefle another and a longer visit next year, when she hoped to establish her Râja Yoga School at Visingsö.

#### Katherine Tingley at the Falu Theater

(Translated from the *Falu Kuriren*, September 25, 1907)

“THEOSOPHY is conquering the whole world,” said Katherine Tingley yesterday in her lecture. The great demand for tickets to hear her certainly seemed to be in evidence of her statement. The tickets were all gone fifteen minutes after the ticket office was open, and many hundreds of people who had wished to be present were unable to gain admission.

The theater was charmingly decorated with flowers and green and the Swedish and American flags. The scene on the stage was a temple with a garden.

After a music number from behind the scenes Herr Direktor Torsten Hedlund from Gothenburg announced the program for the evening. Miss Peggy de Purucker from Geneva played a violin solo, and then Mrs. Hanson, who like the rest of the ladies wore a white Greek gown, told of Mrs. Tingley's work and said that letters were coming in from every part of the world asking her to come and start new Râja Yoga schools. Mrs. Hanson also spoke regarding Theosophical literature and expressed her conviction that anyone who investigates Theosophy will find a new light shed over his life.

Miss Nan Herbert spoke regarding Mrs. Tingley's work in Cuba for the suffering people there during and after the war, and of her establishing Râja Yoga Schools in Cuba. Lastly she spoke of the intended Râja Yoga School in Sweden on the island of Visingsö.

Finally Mrs. Tingley herself came forward. She possesses rare oratorical ability. Her lecture was a dramatic masterpiece, and since we have listened to her we do not wonder at her great success among people who understand her language.

“Theosophy,” said Mrs. Tingley, “will give humanity a higher and broader conception of what life really is, and will bring real happiness to all.” According to Mrs. Tingley the twentieth century has nothing but suffering to offer humanity. The happiness which it offers is not the true happiness which Theosophy can give. Theosophy teaches that man is his own savior. Jesus said the same, and was a living example of how far a human being can progress on the road to perfection.

“The teachings of Jesus,” said Mrs. Tingley, “were nothing but Theosophy. He taught that man should strive after greater perfection and live in his higher nature. But his teachings have been taken according to the letter and not according to the spirit, so that instead of uniting people they have separated them, and thus we see all these sects springing up and fighting merely about words.

“The basic truths which Jesus taught were not given by him for the first time. The foundation of all the great religions of the world is Theosophy. Theosophy is divine Wisdom. It is in all religions which are striving towards the light, and all these have had their origin in Theosophy.

“Theosophy teaches that man is divine, and therefore that he can adjust and change all the wrong conditions that are in the world, which have resulted because he has turned away from the divine light in his heart and followed the promptings of his lower nature. All divisions, enmity, envy and selfishness, Theosophy can take away from humanity, because it can awake that consciousness of great unity which exists deep in the heart of every man.” . . .

### ONE'S CHIEFEST DUTY

Matthew Hunt

ONE'S chiefest duty here below

Is not the seeming great to do,  
That the vain world may pause to see,  
But in steadfast humility  
To walk the common walk, and bear  
The thousand things, the trifling care,  
In love, with wisdom, patiently.  
Thus each one in his narrow groove  
The great world nearer God may move.

— Selected

### Theosophy to the Inquirer

THOREAU says in one of the *Familiar Letters*: “Be not simply good, be good for something.” Again: “If you would convince a man that he does wrong, do right; but do not care to convince him. Men will believe what they see. Let them see.”

Because of the marvelous results the Leaders of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY have achieved, and the elevating example their lives of heroic self-sacrifice have been to the world, the public has had an opportunity to see the practical results of Theosophical teachings at Point Loma—results best shown by the pupils of the Râja Yoga Academy, as compared to those obtained by the ordinary methods of education. On this basis the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY can challenge observation and serenely maintain its high calling in the eyes of the world. So to those who have a thirst for knowledge and who are seeking a wider understanding than any found under the familiar classifications of Science, Religion or Philosophy, the path can be confidently indicated as in Theosophy, that true Gnosis, the all-embracing Wisdom-Religion.

The one, great, fundamental law of Theosophy is brotherhood, universal brotherhood. All the great Saviors and Teachers of history, coming centuries apart as they did, and to many different races, have taught this great law. Jesus the Nazarene put it in the form most familiar to us: “Do unto others as ye would that they should do unto you”; a teaching well known all over Christendom.

We may be taught, commanded, and compelled, but until we have the knowledge ourselves, until we, through experience, have made it a part of us, it is of no value to us. “A man who desires to live must eat his food himself.” So it is with this “Golden Rule” as regards the higher life. Until we seize it, and make it a vital part of our lives its true meaning will escape us.

For ages man has been trying to avoid the penalties of his weaknesses and win happiness at any cost. Happiness he must and would have; it was his birthright, and if he failed to possess whatever seemed to him to be his heart's-desire, he was apt to consider himself a martyr to circumstance, the helpless victim of fate. The mighty stream of buffeted, storm-

tossed humanity, now joyful, now despairing, which if we accept the words of the English poet Pope, “Never is but always to be blest,” considered as a whole, as well as each of its individual units, might have found the key to all its problems and the way to the “Gates of the Path of Peace,” in this “Golden Rule” of the Master, which has been in their careless possession so long.

“Step out from Sunlight into shade to make more room for others,” is the same teaching, given to hoary India before the days of Buddha, long before the rise of this highly esteemed civilization of ours. The requirements of this law are so opposed to all the habits of our bodies, and the brain-mind in its present development, that until we have reached the stage of the really heart-hungry seeker, the strivings of the Spiritual Will to impress this great truth upon our stubborn earth-bound minds are unavailing.

Theosophy teaches that man is one with nature, and that Brotherhood is a fact in nature.

One example of this may be seen in this continual, concealed urging from within outward toward manifestation. By persistent struggle, continued through immense periods of time, man has at last a body, high enough in the scale of being to become a fit tabernacle for the soul. Unconsciously he has been urged forward by the process of evolution, until he has reached the state wherein he may become fully conscious, if he *will*, of that divine possession.

Neither man nor nature can stand still, they must both progress, or decline. They are governed by the same laws and are both subject to the one expressed in the phrase “the survival of the fittest,” but only that which is of use to the soul, for its development, is allowed by the Great Architect ultimately to survive.

The whole impulse of the Universe is toward progress for the soul. One way or another, by one path or another we are impelled forward and upward by this cosmic will energizing ceaselessly for that end.

Deafened by the clamor of our bodily appetites, misled by the sophistries of our brain-minds as we are, it is not surprising that we do not realize this, or that the voice of the soul is not more clearly or more often heard.

The purpose of life, with all its varied manifestations is to force it upon our attention.

This soul is the most precious possession we have, as actual as our eyes and ears. It is indeed our very self and only seems different from ourselves because we prefer to follow the passions and desires of the lower nature. It is that through which we may “Journey with duty” and bridge the gulf, only seemingly impassable, between life and death. Its life and vitality, and that means *our* true life and vitality, are dependent upon allowing this “Golden Rule,” the law of brotherhood, to become more and more completely the law of our lives.

He who has felt within his heart the strivings of this soul, his true “Father in secret,” is ready for the gradual unfolding of the beautiful, inspiring truths of Theosophy. He will find that “Theosophy is more than a name, more than a theory; it is a living transforming power that shall lift the whole world and fill all life with light and joy.”

M. G.

## FRAGMENT

BUT still for Summer dost thou grieve?  
 Then read our poets---they shall weave  
 A garden of green fancies still,  
 Where thy wish may rove at will.  
 They have kept for after treats  
 The essences of summer sweets,  
 And echoes of its songs that wind  
 In endless music through the mind:  
 They have stamp'd in visible traces  
 The "thoughts that breathe," in words that shine---  
 The flights of soul in sunny places---  
 To greet and company with thine.  
 These shall wing thee on to flow'rs---  
 The past or future, that shall seem  
 All the brighter in thy dream  
 For blowing in such desert hours.  
 The summer never shines so bright  
 As thought of in a winter's night;  
 And the sweetest, loveliest rose  
 Is in the bud before it blows.—Thomas Hood

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** Man a creature of Nature dependent on her laws, or man the lord and master of creation—which of these two views each supported by many arguments and authorities is correct? What light can Theosophy give on the subject?

**Answer** Presumably the meaning attached to the term creation in the question is the same as that given to Nature, and it is easy to see that an answer to the question will depend upon the meaning attached to the terms Nature and man. It is not necessary more than to merely mention the prevailing materialistic and modern scientific view, that man is held to be the product of natural evolution, the offspring as it were, or development, of lower forms—though how the lower can give birth to the higher has never been explained.

In the recent issues of the CENTURY PATH, in the Theosophical Forum, an attempt was made to give some idea of the nature of man as taught by Theosophy; that he is a dual being; that while his outer nature may be said to be the product of natural evolution, the unfolding from below upwards, though always under the guidance of high Intelligences, his higher nature—himself in fact—has a very different origin, coming in fact from above and not from below. This higher nature, which is himself as said, is divine.

We may make a much fuller analysis of man's being and show that he is related to the seven great planes of Nature, the physical being the lowest and outermost. Within or beyond this are the astral, psychic, mental, and spiritual planes, and from each of these he derives some part of his complex nature. It should be clear then that each part of his nature must be subject to the laws of that plane from which it is derived, understanding however, that in no case do the laws of one plane conflict with those of another. His physical outer nature, then, is subject to the laws of the physical material world; in his outer nature he is affected by the law of gravitation, by heat and cold, pleasure and pain, hunger and thirst, and if man were no more than this outer nature of his it would indeed be right to call him a creature of Nature, one of her subjects. But in the "creation" of man Nature

unaided failed, the lower Hierarchies could build up only the outer form. As H. P. Blavatsky in her great work, *The Secret Doctrine*, says:

Thus physical nature, when left to herself in the creation of animal and man is shown to have failed. She can produce the first two and the lower animal kingdoms, but when it comes to the turn of man, spiritual, independent and intelligent powers are required for his creation, besides the "coats of skin" and the "breath of animal life."

And in the same work we read, quoting from the archaic stanzas of the *Book of Dzyan*, which are the basis of the whole work:

The Breath (*human Monad*) needed a form; the Fathers gave it. The Breath needed a gross body; the earth moulded it. The Breath needed the Spirit of Life; the Solar Lhas breathed it into its form. The Breath needed a mirror of its body (astral shadow); "We gave it our own," said the Dhyanis. The Breath needed a vehicle of desires (*Kama Rûpa*); "It has it," said the Drainer of the Waters (*Suchi, the fire of passion and animal instinct*). The Breath needs a mind to embrace the universe; "We cannot give that," said the Fathers. "I never had it," said the Spirit of the Earth. "The form would be consumed were I to give it mine," said the Great (*solar*) Fire. . . . (*nascent*) Man remained an empty, senseless Bhuta.

Then it was that the Manasa-putras, as stated in the last issue of the CENTURY PATH, gave of their essences and made of the human form a man—these Manasa-putras, or Sons of Mind, being our own higher egos, and as Theosophy teaches, gods divine in their origin.

Up to the time of the incarnation of these egos in the human form the latter was subject entirely to the laws of Nature, its development being solely according to those laws and to the impulse working through Nature as a whole. But with the incarnation of the ego, self-consciousness began and responsibility, and consequently the power to continue working with the laws of Nature, or against them. That there is so much suffering and wretchedness in the world is due solely to the fact that man did not co-operate with the laws of Nature but transgressed them, and consequently in his outer nature he must suffer just as, also, in his inner nature he must suffer for the violation of the laws of his inner being. Hereafter man's development is no longer dependent solely upon the forces of Nature but upon his own efforts, or as said in *The Secret Doctrine*: "By self-induced and self-devised efforts"; and, by recognizing the laws of Nature and also realizing his own divine powers, it is man's destiny to become in very truth the "lord of creation."

In one of the old world scriptures as quoted in *The Book of the Golden Precepts* it is said: "Help Nature and work on with her and nature will regard thee as one of her creators and make obeisance."

Man is indeed subject to Nature because he has put himself under her power by transgressing her laws and not realizing his own divine attributes, and he must continue subject to her so long as he neglects to take the position which is rightfully his. To take this position requires more than the assertion that we are divine; it requires that we should act in conformity with our divine nature, and the very first step in this direction is, as also said in *The Book of the Golden Precepts*, to work for the salvation of the whole human race. "To

live to benefit mankind is the first step. To practice the six glorious virtues is the second." Man has traveled a long road, and the road to the heights that he must reach before he attains his destiny is steep and rugged. He has made himself a slave of his passions, and a long and bitter fight must be fought before he can once more stand divinely free. The denial of the existence of evil will not bring back to him his birthright, for such a denial is a misstatement, a falsity. Only the recognition of his dual nature, and the facing and conquest of the evil which he has permitted to gain such mastery over him will suffice to give him again his true position, to stand not as a servant but as master in his own kingdom, and become one with his own higher, divine Ego. STUDENT

## On Individuality and Personality

**INQUIRER.** But what is the difference between the two? I confess that I am still in the dark.

**THEOSOPHIST.** I have long tried to impress the distinction between the individuality and personality on people's minds; but alas! it is harder with some of them than to make them feel a reverence for childish impossibilities, only because they are orthodox, and because orthodoxy is respectable. To understand the idea well, you have first to study the dual sets of "principles": the *spiritual*, or those which belong to the imperishable Ego; and the *material*, or those principles which make up the ever-changing bodies or the series of personalities of that Ego. Let us fix permanent names to these, and say that:

- I. *Âtmâ*, the "*Higher Self*," is neither your Spirit nor mine, but, like sunlight, shines on all. It is the universally diffused *Divine Principle*, and is inseparable from its one and absolute *Meta-Spirit*, as the sunbeam is inseparable from sunlight.
- II. *Buddhi*, the spiritual soul, is only its vehicle. Neither *Âtmâ* nor *Buddhi* separately, nor the two collectively, are of any more use to the body of man than sunlight and its beams are for a mass of granite buried in the earth, *unless the divine Duad is assimilated by, and reflected in, some consciousness*. Neither *Âtmâ* nor *Buddhi* is ever reached by Karma, because the former is the highest aspect of Karma, *the working agent of ITSELF in one aspect*, and the other is unconscious *on this plane*. This consciousness or mind is
- III. *Manas*, the derivation or product, in a reflected form, of *ahamkâra*, "the conception of I" or "Ego-SHIP." It is, therefore, when inseparably united to the first two, called the *SPIRITUAL EGO*, and *Taijasa* (the radiant). This is the real Individuality, or the divine man. It is this Ego which—having originally incarnated in the *senseless* human form animated by, but unconscious of, the presence in itself of the dual monad, since it had no consciousness—made of that human-like form a *real man*. It is this Ego, this "*Causal Body*," which overshadows every personality into which Karma forces it to incarnate. It is this Ego which is held responsible for all the sins committed through and in every new body or personality—the evanescent masks which hide the true Individual through the long series of rebirths.—*The Key to Theosophy*

## The Giant Foot-Prints of Nevada

(CONCLUDED FROM PAGE 5)

man walking in the mud and taking steps less than twice the length of his own feet, might straddle even further than he stepped. Let any one try it, even on the floor, let alone in mud.

It is easy to see that the alleged objections may be nothing more than a trumped up case, in which points are stretched and others ignored. H. P. Blavatsky, in *The Secret Doctrine*, states that the footprints are genuinely those of giants; and those familiar with the reliability of her statements and the ways in which they are so constantly being vindicated, will not believe that she would make such a statement in a work destined to survive, without good reason. To quote:

If the fossil footprints from Carson are human, they indicate gigantic men. Of their genuineness there can remain no doubt. It is to be deplored that the modern and scientific evidence for gigantic men should rest on footprints alone. Over and over again the skeletons of hypothetical giants have been identified with those of elephants and mastodons.

There is not space to enter here into the evidence for the existence of these gigantic races, but *The Secret Doctrine* marshals it in overwhelming force; and the fact forms an integral part of the general plan of human and cosmic history outlined in that work. Indeed, if man existed at all in such times, as is claimed by Theosophy, then he would need to have been a giant to cope with the animals of those days. Since then he has shared in the general diminution of stature, though even now cases of "reversion" (dignified by the giant name of "acromegaly") sometimes occur. Undoubtedly, when we come to dig more widely and systematically, we shall discover more proofs of the validity of the claims made by Theosophy in this and other respects. Until then let us refrain from doing violence to the facts we have by postulating acrobatic mastodons with feet 20 inches long and a stride 30 inches long, placing their hind foot in the track of their forefoot. STUDENT

## The Imitation of Christ

AN article on Thomas à Kempis and his famous book, appearing in an important English Quarterly, is not likely to set many people astir to read the *Imitation*. Secluded mysticism is not a marked characteristic of the age. The writer enumerates some of the many noted persons who have expressed their appreciation of the little manual and, in adding the names of two or three who have been critical or disapprobative, probably exhausts the unfriendly list.

Nevertheless the *Imitation* leaves a good deal to be desired, and might even be said to be unworthy of its title. The real imitator of Christ would not be a secluded hermit, culturing "interior sweetness," but a very active world-worker. Why is Deity so usually conceived as loving with especial love the world-withdrawn and contemplative votary? Deity itself is not world-withdrawn, but an actor without a second's intermission, and an actor for man's good. The poem—it was so written—puts words and whole chapters into the mouth of Deity. A great Hindû sacred poem does the same, and some of the words are these:

"Moreover, for the upholding of thy kind,  
Action thou shouldst embrace. What the wise choose

The unwise people take; what best men do  
The multitude will follow. Look on me,  
Thou Son of Pritha! In the three wide worlds  
I am not bound to any toil, no height  
Awaits to scale, no gift remains to gain,  
Yet I act here! and, if I acted not—  
Earnest and watchful—those that look to me  
For guidance, sinking back to sloth again  
Because I slumbered, would decline from good,  
And I should break earth's order and commit  
Her offspring unto ruin, Bharata!  
Even as the unknowing toil, wedded to sense,  
So let the enlightened toil, sense-freed, but set  
To bring the world deliverance, and its bliss; . . ."

Nevertheless there are some fine and suggestive things in the *Imitation*. Here is one of them:

When a certain person in anxiety of mind, was often wavering between fear and hope, and, on a time, being overwhelmed with grief, had prostrated himself in prayer; he revolved these things within himself, saying,—*If I did but know that I should persevere!* He then presently heard, within him, this answer from God: *If thou didst know this, what wouldst thou do? Do now what thou wouldst then do, and thou shalt be very secure.* STUDENT

## Afghanistan

A CONSULAR REPORT gives some interesting particulars about Afghanistan. It seems the Afghans claim to be the Lost Ten Tribes of Israel (?); and it is said that many of them have Jewish features and that Jewish names are very common; which is however by no means conclusive evidence. They adopted the Mohammedan religion enthusiastically, but belong to the Sunni sect, which is hostile to the Shias sect to which the Persians belong. The Shias sect holds to the supremacy of Ali among the four companions of the Prophet, while the Sunnis believe that all four companions were of equal status.

Afghanistan is called the Switzerland of Asia, being nearly all mountains and valleys. The people, numbering somewhere from five to ten millions, are hardy, warlike and independent, tall, bearded, fierce-looking, and well set-up. The language is Pushto and the people are called Pathans. The country receives an annual subsidy from Great Britain, in return for which it undertakes to have no foreign relations with any power except the Government of India.

The Emir of Kabul, Abdurrahman, a man of great force of character, succeeded in uniting the whole country under his sole rule and reducing it to order. He made each district responsible for the safety of travelers in it, and enforced obedience with great severity. He also cautiously introduced a few Western improvements, such as machinery and manufactures, a policy which his successor Habibullah is continuing. The policy of the dynasty seems to be all in favor of developing the country as fast as practicable, while tenaciously safeguarding its independence. For this latter reason the Emir refuses to allow railroads within his boundaries until such time as he shall have a standing army adequate to protect it.

The mass of the people are agricultural and pastoral, and horse-raising is an important industry. But the land abounds in precious stones and metals which have not been touched. It is known to have mines of ruby, topaz, lapis lazuli, marble, iron, lead, copper, antimony, sulphur, and coal. Its trade with India has lately much increased, largely owing to the Emir's recent tour in India. T.

## The Chislehurst Labyrinth

THE great Chislehurst Caves are the subject of some illustrations in the *Illustrated London News*. There are about seventy of these subterranean passages. The entrance was by deep shafts and the descent made by notched poles or footholes in the rock. No one has fully explored them, and they are said to extend to the Thames. Recently a new twin-chamber dene-hole has been discovered in connexion with them. There is not a particle of documentary evidence available which would show the secret of these many miles of galleries.

The comment accompanying the illustrations refers them to the Celts and also to the Druids, admitting that subsequent races also used them. Perhaps if archaeology went back any further than the Celts and Druids, it might say that they too were only tenants and not builders. "Neolithic" flints have been found in them. The pictures show a dene-hole, which is a circular shaft in the earth, leading down to the galleries; a plan of the passages, like the map of a city; and drawings of interior views showing well cut galleries with many openings to crossways.

In speculating as to the use of these catacombs, the usual resources of imagination are called upon. "They were for refuge, or for storage."

We find extensive subterranean galleries in many parts of the world. There are, for instance, the rock-cut temples of India, with unexplored passages beneath them leading no one knows whither. One use of such passages was as secret means of communication with sacred places, otherwise inaccessible. Another use was as places of initiation into or celebration of the sacred Mysteries in times of unrest and persecution. There are often galleries in connexion with temples, as for instance those under the pyramids. The use of underground places for the purposes of arcane mysteries is natural in view of their secrecy, quietude, and isolation from the world. STUDENT

## New Zealand Experiments

THEY do some things differently in New Zealand. In certain districts there are central creameries, fitted with every possible improvement, the expense being defrayed by all the neighboring farmers in common. Each farmer sends his milk thither every morning and is credited with the amount. It is at once put through a separator and in a little while the owner can drive away with the skim, leaving the cream for further operation. On certain days the whole of this is taken to a central factory. Having become butter it goes to the port, is tested by the Government, labelled as of first or second quality, and shipped to England. In due time each contributing farmer gets his proportional share of the check. The advantages of the whole scheme are obvious.

In some districts the Government sells land by a peculiar method. The idea is that it shall not necessarily get into the hands of the big capitalist. Since he can outbid poorer competitors, under ordinary procedure he would certainly do so. The area to be sold is divided into plots and to each an appropriate price is fixed. At that price it is sold, however many the applicants. If there is more than one they simply draw lots and the long-pursed man takes his chance with the rest. C.

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES

Its Parentage; its Rounds and its Races
- No. 18. Sons of the Firemist  
A Study of Man

These Manuals contain some of the latest thought on the above technical subjects. Each Volume is arranged to be complete in itself, though forming a necessary member of the Series. It is intended to add others from time to time, to cover most of the technical aspects of Theosophy in a direct and simple way, thus forming a Theosophical library of inestimable value to inquirers. No one interested in Theosophy can afford to do without them. Order from the

## Helmholtz and Materialism

which the extracts below are quoted:

He was an expert in psychology — the science that deals with the facts of so-called consciousness, which he traced always to their physical sources, to their foundation in the facts of energy, and which, he claimed, could be demonstrated ultimately by mathematical methods.

The use of the phrase "so-called" in connexion with consciousness seems to imply that consciousness is wrongly so-called; that is, that it is not consciousness but something else. The meaning is, as one gathers from other parts of the paper, that because Helmholtz traced out in the material body the mechanical accompaniments of consciousness, therefore these mechanical accompaniments are the cause of consciousness. And the theory supposed to be contravened by this argument is the theory that consciousness is something in itself, separable from the body, and acting on the body.

## Consciousness Something Apart

One must be allowed to infer that if consciousness really were something apart, then Helmholtz would not have been able to trace any mechanical accompaniments of it in the body; for, the fact of his having traced these is given as proof that consciousness is not something apart. But one may also be pardoned for failing to follow the reasoning. It seems evident that even if the consciousness is something apart, then still it would cause mechanical effects corresponding with it. Hence we maintain that Helmholtz, in tracing these accompaniments did not prove whether they were the cause or the effect of consciousness; he only showed that they were the invariable (so far as his observations extended) accompaniments of consciousness (that is, the kind of consciousness he was studying).

In the times of Helmholtz . . . some held that [the reason why] the body was alive [was] because it was inhabited by a spirit—a soul. But physiologists did not push this view, because this view, from the physiological side, would necessitate the

## The Logic of Soul- Existence

further one that all living things had in them spirits, or souls, which, by their departure elsewhere would cause death. Likewise that souls or spirits could be driven out of living bodies by poisons, violence, and other known causes, and by other causes of which nothing was known. Again, if life was caused by a spirit inhabiting the body, numerous embarrassing questions would arise. For example: How many souls can one body possess? How many has an apple

tree? Has each apple on the tree a separate soul of its own? And then the tree itself? Or does the apple acquire a soul on being severed from the tree? for the apple lives and produces a new tree with myriad other apples. Does a microscopic cell possess a soul? Or the nucleus of a cell? Or both?

The physiologists of that day appreciated the awkwardness of these difficulties and therefore, instead of a soul, they postulated what they called a "vital principle" to account for life.

Note the reasoning here. The theory led to the conclusion that every living thing has a soul, and that some may have many souls or a soul that is divisible and whose divisions can be communicated to the severed parts of the living thing; also that cells and atoms have souls. But the physiologists had decided that all living things did not have souls and that souls cannot be divided, and that atoms and cells have no souls. Therefore they gave up the theory because it led to conclusions contrary to their opinions. It is needless to say that Theosophy accepts the conclusions, and admits that all living things have souls (in various senses of the word), even the cells and atoms, even the apple-tree and its seeds; but it has studied the question of souls with as much penetration as Helmholtz studied the physical question, and it realizes that there are as many kinds of souls as there are kinds of bodies, and that the whole question of souls is complex like everything else in Nature, and requires careful study.

The resource of these physiologists was peculiar; for, having rejected the soul, they accepted it over again under another name. As the writer continues:

## "Soul" Rejected and yet Accepted

As to the nature of this vital principle, they were naturally not very clear; no clearer perhaps than if they had retained the older and infinitely more respectable soul theory. This vital principle, was it singular or plural? Did each living soul contain a vital principle of its own, or were all living bodies bathed, so to speak, and permeated by some universal vital principle which was quite independent of particular individuals—reminding one of Plato and others? These good savants did not know, nor did they seem to care.

It is implied subsequently that Helmholtz solved these questions by proving that living matter is only matter in a more complex form. But this is only a question of terms; for he did not deny the existence of vital phenomena; he merely included them all under the definition of "matter," thus raising matter to the level of a category that would include the things which the older physiologists had

grouped under the category "vital force." The older physiologists had said that there were two things—matter and vital force—

**Very Limited  
Philosophy**

each having special properties of its own, and producing by their interaction the phenomena of life. Helmholtz said there were not two things but only one, and this one he called "matter." It is evident that materialism is a philosophy which regards matter as the One-All, the ultimate radical, the fundamental basis of everything, and which regards all forms and modes as derivatives of this rudiment, in just the same way as other philosophers derive everything from the Universal Mind, or from Fire, or from the Unknowable.

There is, however, one great mistake that such philosophers make: they rush too quickly at finality. This One-All of theirs is only one of many One-Alls. Theosophy recognizes what may be called a life-m Monad or atom, a fundamental rudiment of physical matter; but that in its turn is but a derivative of other things still more fundamental. Helmholtz, with his principle of the "Conservation of Energy" and his theory of "Matter" as the ultimate rudiment, appears to us to have formulated a kind of "geocentric system" of life. It is of course possible to pick a given center—say the earth—and represent the whole stellar

**Only a True  
Theory  
Explains  
All Facts**

universe as revolving around it, as some astronomers have done, either for convenience or because they really thought the earth was the center. It is even possible to get along fairly well on the theory that the earth is concave or that it is flat. Some, too, have represented the heavenly bodies as stationary, while the earth gives them an apparent motion by oscillating about in the middle with a complicated top-like motion. Each of these theories is capable of explaining more or less of the facts. But there are always some facts which are not explicable by a wrong theory; and so it is with this material theory of life.

As H. P. Blavatsky has so well explained—with frequent quotations from well known writers—there are certain facts of consciousness that cannot be represented by any possible mechanical formula. For example she quotes as follows from Professor G. T. Ladd of Yale:

**No  
Materialistic  
Hypothesis  
Sufficient**

If the question is pressed as to the physical basis for the activities of self-consciousness, no answer can be given or suggested. . . . From its very nature, that marvelous verifying *actus* of mind in which it recognizes the states as its own, can have no analogous or corresponding material substratum. It is impossible to specify any physiological process representing this unifying *actus*; it is even impossible to imagine how the description of any such process could be brought into intelligible relation with this unique mental power.

So, though there may be dynamical formulae corresponding with some of the lower manifestations of mind (though not *causing* them), there are other manifestations which cannot even be so represented. This quotation is brought forward by H. P. Blavatsky in connexion with the distinction between *psychic* mind and *noetic* mind.

It would take too long here to go into the question of memory as being unaccountable on the materialistic theory, since the persist-

ence of memory beyond the life of the cells demands for its explanation the postulation of something that outlives the cells. That question has elsewhere been discussed. Also there are the cases where consciousness has been shown to be separable from the body; but these belong to a department of research of which Helmholtz probably did not recognize the legitimacy. The writer asks:

**Something  
Must Lie  
Behind  
Matter**

Whence this tendency—this necessity—of the living body to rebuild its breaking-down molecule? The question is not specifically applicable to this chemical-physical view of life. We may as pertinently ask: Whence the tendency of water to flow down hill, or the tendency of unsatisfied compounds in general to unite with other unsatisfied compounds?

Here is indeed the real question. Reduce all life to mathematical formulae and a primordial substance—and you are just where you were before. You must presuppose something and that something is everything. But the writer continues:

The answer to this, and other questions of a similar kind, seems to be forthcoming in the new theory of the disintegration of the atom.

**The Problem  
Once More  
Begged**

But will science, when that new theory has been mastered, again try to construct a complete and final system, or will it await still further explanation in theories yet to come?

All philosophy tries to reduce life and manifestation to modes of some ultimate principle—tries to generalize from some fundamental axiom. Theosophy may be regarded as a similar process applied to philosophies themselves—a generalization of philosophies. Not Fire, Air, Water, nor Earth is the ultimate, in its teachings; each of these stands at the head of a category, but above all are other principles. The whole teaching cannot be given here. But it may be said that Theosophy does not either try to express the whole universe in terms of the physical body, nor does it lump together under the term "soul" all that cannot be so expressed. It recognizes in ultra-physical worlds a complexity as great at least as that observable in the physical world. Beyond the physical body it recognizes the fluidic body (*linga śarira*), and beyond this again the instinctual mind. And so on with still higher principles.

**Logic Requires  
Entities  
instead of  
Abstractions**

All these have to be studied. They are not abstractions—mere results of physical motion—and if they were, some reality would have to be postulated as a cause for those motions. They are actual entities.

One word more remains to be said, and that is that there are some people who, under the name of occultism and even of Theosophy, are floundering about as hopelessly in their way as the materialists are in theirs; for they are engaging in desultory study of the lower principles of Man's nature, aided only by their own misguided proclivities and by scraps of misunderstood oriental writings. With such people Theosophists have nothing in common, for their investigations lead them into channels injurious to the cause of human progress. The study of interior nature demands a purity of motive and of living far greater than that considered necessary by the ordinary scientist;

**Theosophy  
Demands  
Purity  
of Life**

and without this safeguard the study becomes quackery, and harmful quackery. Therefore, though H. P. Blavatsky, the Founder of the Theosophical Society, gave out many teachings and pointed the way to many more, she was always most careful to insist on a pure and lofty altruistic motive as the essential condition for the student of Occultism. By observing this condition, knowledge comes in such a way as not to lead the inquirer into the paths of "psychism," "astralism," or any other of the deleterious forms which we hear of. Materialism is to be controverted; but not on the condition of falling into dangers that are greater. *And materialism of motive is worse than mere intellectual materialism.* So long as there remains this materialism of motive, a knowledge of the lower planes of invisible Nature can only add to the dangers and temptations to which we are liable, and supply new weapons to the armory of human selfishness and lust. The first step which the Theosophist has to take is towards making that great generalization which leads him to cease regarding his own self as the center of the universe and to live as if he were (as he is) a humble satellite. With that

**Personality  
the Great  
Deluder**

safeguard he is able to encounter the dangers of an extended knowledge of the lower planes of invisible Nature without succumbing to them as so many do who seek that knowledge from selfish motives.

And finally be it said that this is no criticism of Helmholtz as a great discoverer, inventor, scientist, etc. It is merely a criticism of certain views put forth under the name of materialism, and the article on Helmholtz (for which he himself is, by the way, not responsible) served as a text. If it is true, however, that, as the writer says:

The main motive of Helmholtz was to show that all facts could be expressed in physical formulae. His entire life, every demonstration he undertook, every theory he devised, was aimed at the destruction of such beliefs as are commonly expressed in the terms "soul," "immortality," "revealed truth," "God," etc.:

then we shall be doing him no injustice. For, as the editor adds in a note:

Now, as always, when science enters the domain of the supernatural, the Eternal, its announcements amount to no more than the spluttering of a damp fire-cracker.

But is it true that Helmholtz' life was thus earnestly devoted to iconoclasm of human faiths and hopes? Often great men are sadly misinterpreted by their followers, so that it becomes necessary apparently to condemn the great men while it is really the mass of opinions which others have accumulated around their names, that should be controverted. Often they merely fought against superstition and aimed for clarity of ideas, having nothing in common with the materialists—*i. e., animalistic*—opinions attributed to them by their "appreciators," who seek to use them as stalking-horses. But the real question is, Do the theories of great physicists justify animalism in conduct? Do they dethrone duty, charity, purity and the amenities of human life? Do they excuse us from our responsibilities as self-conscious beings and justify us in behaving as if we had no responsibilities to fulfil, but only privileges to abuse? STUDENT

# Some Views on XXth Century Problems

## Heredity and Education

THE new science of Eugenics bids fair to form an admirable advertisement of the Râja Yoga system of education. For that latter is the solution of the problem which the new science unveils.

Unless we do something radical, says the Eugenicist — and he appears to prove his point — society, our Western society, must go down hill, perhaps to extinction. The reasoning consists of few links.

What is the potency of inheritance? How much of the parent does the child inherit? What is the amount of resemblance?

Suppose the resemblance complete; that the child is mentally and physically an exact copy of the parent. Let us indicate this by the figure 100; and let us indicate no resemblance whatever by the figure 0. By what figure shall we indicate the ordinary work of heredity? This is one of the problems of Eugenics. According to the tables prepared in the Eugenics laboratory of the University of London, and published by Professor Pearson, the average resemblance lies between 42 and 50 — for physical characteristics; for mental characteristics it is 6 or 8 points higher. That is, the resemblance of child to parent lies about half way between nothing and completeness. How if the parent presents indications of degeneracy, physical or mental; are these transmitted in the same proportion? Figures for three manifestations of degeneracy have been published — Deaf-mutism, Insanity, and Pulmonary Tuberculosis. It is assumed, we should say legitimately, that other manifestations of degeneracy would have about the same hereditability. The figures show that the hereditability of these stigmata is also near 50, a little over.

The case so standing, we want to know about the size of the families of degenerates and normals respectively. If the family of the degenerate tends to be habitually larger than that of the normal, and of the cultured and intellectual, it would seem that society must go down hill, must become more and more tinctured with degeneracy. Professor Pearson publishes a table, too long here to reproduce; but we can give his summary. He says:

In table IX I have placed the fertility of deaf-mute, tuberculous, criminal and insane stocks, and below them the fertility of more normal classes in the community. It is at once obvious that degenerate stocks under present social conditions are not short-lived, they tend to have more than the normal size of family. Natural selection is largely suspended, but not the inheritance of degeneracy nor the fertility of the unfit. On the contrary there is more than a suspicion of the suspension of the fertility of the fit.

As to remedy. Professor Pearson complains that we have stayed the hand of nature; we will not let her apply her remedy. She would kill the physical and mental cripples. We bring to bear upon them the resources of medicine and surgery, house them, train their feeble faculties as far as possible, protect them; and so they grow up and become parents. He says:

Today we feed our criminals up, and we feed up

the insane, we let both out of the asylum "reformed," or "cured" as the case may be, only after a few months to return to state supervision, leaving behind them the germs of a new generation of deteriorants. . . . We cannot reform the criminal, nor cure the insane from the standpoint of heredity; the taint varies not with their moral or mental conduct. These are the product of the somatic [general body] cells; the disease [as a hereditary line of transmission] lies deeper in their germinal constitution. Education for the criminal, fresh air for the tuberculous, rest and food for the neurotic — these are excellent, they may bring control, sound lungs, and sanity to the individual; but they will not save the offspring from the need of like treatment, nor from the danger of collapse when the time of strain comes. (Italics and the words in brackets mine.)

He thinks, in fine, that the hereditability of the marks of degeneration shows that the stigma is of the continuous germ line of which the individual is a flower; that our methods of treatment can go no deeper than the individual, cannot cure the radical evil and deficiency in that of which he is the efflorescence and the transmitter to a number of successors who must exhibit like taint.

If he is right, society is in a hard case; may even be doomed.

How did the germinal line or thread come to be diseased, degenerate? It is not the teaching of science that it cannot be at all affected by the conduct of the individual; but that the effect is extremely slight; that an individual thus predisposed for example to tubercle, yet leading so perfect a life as to gain for himself perfect health — would still transmit the tuberculous tendency, but in somewhat less degree. That is science, and it would be the answer to Professor Pearson's problem: in a certain number of generations of right living, and right training of children, all the taint of physical and moral degeneracy could be wiped out.

Theosophy goes farther and asserts that when in a child the consciousness of itself as a soul is awakened and kept awake, when it is trained to lead all its life, even its play-life, in that consciousness — this soul-life begins to animate, cleanse, and perfect the very root of physical being. The soul-consciousness comes to take possession more and more fully, not only of the mental and emotional consciousness — which alone is trained in ordinary education — but of the physical vehicle of these. This training of the whole nature in the light of its highest part is Râja Yoga. It supplements all that is good in the child's heredity, and from the very first reduces from the root that which is evil.

## Calling up the Reserves

IN the columns of a popular contemporary, Professor James, returning to the question of our unused reserves of energy, inquires why we do not always keep them in action, and what is the trick of getting them into action. But he does not at all fully answer the first of his questions.

Man is a double being, each with its tendencies. The material part of him tends downward, the spiritual upward. But what does

"downward" mean? Matter always tends to assume simple forms, simple compounds with little motion, compounds and states that are content to stay as they are. Every complex and unstable compound, such as protoplasm, tends to settle down into two or three simple and stable ones, carbonic acid, water, nitrogen. A molecule of wood tries to become simple molecules of water and carbonic acid. This is the way of matter, left to itself. Obviously it is the death way, death for the complex, the elaborated. To sustain that in the complex form, will has to play within it, will of nature, or, if the tenant is a self-conscious being, his will in addition. That man has will, marks him as spiritual. Will has to countervail the downward tendency of matter, the tendency of matter to settle.

This downward tendency, which naturally objects to the use of will, shows itself very plainly in our consciousness. It is a desire to do the easy thing. The simplest manifestation would be the desire to stay lolling in bed. This is matter trying to become — so far as we are concerned — dead. We say desire to "do" the easy thing. It is not really a doing at all; it is a being done to. When a man decides to take a pleasant walk instead of doing his duty, he is yielding to the same tendency. His walk may cost him great effort; but it is the easier of two lines of conduct; and was therefore prompted by matter, by the death-tendency.

The man who would be really alive must train himself to resent, object to, feel degraded by, the tendency to take the line of least effort for its own sake. It is only when he is free from that tendency, the downward matter-tendency, or has quite dominated it, that he is fully a man, is in full possession of the will which as distinct from desire constitutes the mark of humanity proper.

According to Theosophy, will possesses the power, or is the power — and in that case we can say man possesses it — of calling in energy from without. A tired organ, on whatever plane is beginning to break down. Will can call in energy for it, so that it not only does not break down but actually builds while it works. That is why, when we press through the first tired line, we feel actually the better, both then and after, the less fatigued. This power of will increases with practice; whether it has any limit we do not know. If it has, we can be quite sure that it will take us a long time to get anywhere within sight of such a line! In fact we can go on practising without thinking of that at all. There will never be any need to think of it.

We can say, as far as mental and physical work are concerned, that the new energy is called in "from without," though there are of course inner reserves; but in higher matter, for example the energy required to say No, we should better say of the new energy that it was called down — from the purely spiritual focus of human consciousness. The inner man is an embodied portion of that essence; and hence his power to will, his immortality, his limitless spiritual reserves. STUDENT

## The New History of Greece

FROM an account of the latest discoveries at Knossos, written in the *London Times* by the explorer himself, Arthur J. Evans, the following particulars are taken.

About a mile to the north of the "House of Minos" a series of Cyclopean blocks had come to light; they were removed from their original vicinity, but below them were found two beehive tombs, cut out of the soft rock, belonging to a period about 800 B. C., when the Dorian settlement of the island was under way. These contained swords of the mainland type, iron succeeding the earlier bronze, and cinerary urns replacing the corpse burial; but the workmanship indicated a survival of the old indigenous Minoan art. A new and elaborate geometrical design and a novel form of polychrome decoration were found.

Postponing further research in this field and returning to the old Palace area, where supplementary trenches had been begun, the explorers found, beneath the pavement of the West Court as remodeled in the latest Palace period, a circular walled area some 20 feet in diameter descending about 12 feet to a cement floor. It was filled with a homogeneous mass of pottery and other debris belonging to the first period of the later Palace, the close of which seems to correspond with the XVth Egyptian dynasty. This period was one of depression in Egypt, due to the Hyksos domination; but in Crete it represents the high-water mark of Minoan civilization. Its close cannot be brought later than the 18th century B. C., and the art "attains a naturalism never again achieved in the ancient world." What was at first thought to be a fossil crab proved to be a hand-molded relief; and later there came out a *pecten* shell indistinguishable from the original, and other moldings of marine animals. Portions of movable plaster hearths were found, similar to those found in the Palace; and on them was a wave-pattern which is also found on hearths at Mykenae, thus showing that the Mykenae hearths were descended from the Minoan designs.

In one of the chambers of the Palace were discovered the early Temple Repositories, containing the faience figures of a snake goddess and her votaries, and — a marble cross.

The supposed outer wall of the Palace has proved to be only the inner wall of an exterior spacious corridor, and a new group of buildings has been discovered. A deep cavity was found, which widened as it descended; and after going down 25 feet the explorers had to suspend work for the season. It is supposed to be a beehive tomb dating from a period beyond that of the Cretan palaces. The net result is that an area of some 3000 square yards

Lomaland Photo. and Engraving Dept.

CARNAC (MORBIHAN) — LE GEANT DU MENEC. (SEE VOL. X, NO. 5)

must be added to the great Palace, and that there is still much left to be discovered.

It is always gratifying to find men of science engaged in the collection of facts, for facts cannot lie, and Theosophy relies on them for the vindication of its teachings about the human races. The next edition of the ancient histories will have to remodel some of their statements about Grecian origins; for it is evident that the times hitherto supposed to be barbarous and ignorant were filled in with a great civilization.

There can no longer be any excuse for the flippancy with which some compilers of history books treat the history of the past, the littleness of their own minds and their great lack of education being shown in every paragraph. Each new day fresh facts give their utterances the lie, and prove that while there might have been barbarians, as indeed there are in all times, there were also great civilizations of men possessed of common sense, brains, and other faculties to which we ourselves lay claim. Also, in view of the number of times that tradition has triumphed over the grudging opinions of scientific history, we need to pay greater respect to what the Greeks claimed about their own descent and history. STUDENT

## Hidden Manuscripts

THE following newspaper item is given as it appears — without authority or comment:

Il existe, à Fez, une bibliothèque des plus riches en manuscrits. Parmi ces documents précieux se trouvent des manuscrits inédits de Tacite.

Comment se trouvent-ils ainsi au centre du Maroc? Proviennent-ils, comme on le croit, du pillage de Rome? Mystère!

Toujours est-il qu'il serait intéressant, une fois l'ordre rétabli au Maroc, de pouvoir vérifier ces faits, et permettre à nos savants d'aller faire là-bas une ample moisson des documents curieux.

It is not stated what is the writer's authority for his statement as to the existence of this library and its unpublished Tacitus manuscripts. But that matters not; that there are such secret repositories of manuscripts in many places, perhaps including Morocco, is indubitable. From time to time hints are gleaned from travelers' accounts tending to confirm the fact. The "Great Souls of Compassion" (see *Mysteries of the Heart Doctrine*, chapter on "World Teachers") watch over the valuable literature of the world, including records more valuable than Tacitus' Annals, keeping it through ages of darkness until it is needed. This kind of literature comprises teachings of Archaic Wisdom, withdrawn during periods when such Mysteries were liable to perversion and corruption, or perchance "destroyed" by some bigot chieftain; but of which copies are secretly preserved to this day in subterranean crypts or out-of-the-way monasteries,

and known only to those who, bound by obligations they dare not disobey, guard the treasures whose real value they perhaps do not guess.

As to the necessity for withdrawing arcane teachings, read some such work as the *Last Days of Pompeii*, which, however crudely and ignorantly, yet gives some idea of the intense sensualism and destructive violence that at one time ruled in the centers of civilization, when rites of ancient Egypt, Greece and Asia were degraded into means of debauchery; read of the bigotry of the early Church, destroying all that did not come within the narrow compass of its understanding; and it will be apparent that sacred knowledge was not for such a world. Equally certain is it that such records could not be allowed to perish, but must be kept until the world had won a new right to have them and a power to profit by them.

Valuable and startling information about the origins of Christianity, that will confute the claims of churches and vindicate Theosophy, are among the things that will come to light.

There are great gaps in the history even of comparatively recent times; as, for instance, that of the empires that flourished in Asia in the now arid sand-buried wastes. STUDENT

# ✻ The Trend of Twentieth Century Science ✻

## A New Era in Anaesthetics

THE new method of suspending physiological consciousness, general or local, by means of electricity, promises to be little less of a boon than the introduction of chloroform. Scientific investigation of its possibilities is now being made in connexion with the medical wing of Columbia University. The pioneer was Professor Leduc of the College of Medicine, Nantes, France, and he had the courage to be at once experimenter and subject. His work soon attracted attention in his own country, since the current as used by him appeared to be perfectly safe and, free from nearly all the drawbacks of chloroform and its brethren. As far as the Columbia experiments have gone, they corroborate the assertions of Professor Leduc.

The current employed is uni-directional, not alternating; it is of low voltage, and it is interrupted from 4000 to more than 6000 times per second. Unconsciousness supervenes in a minute or two; or, if the current is only led over a small area, as the arm or hand, there is immediate local anaesthesia. Consciousness returns perfectly and immediately with the cessation of the flow, and there are no unpleasant after-symptoms.

So far it has been found that the current, while leaving the heart unaffected, is apt to slow the breathing too much. A second current of another sort is employed to meet this difficulty. This only means that the administering hands must be those of an expert, just as with chloroform.

What may be the final range of employment of this apparently almost ideal method, remains to be seen. Besides its application to operative surgery, it seems to promise the dethronement of morphine. If it performed that second feat only, it would blot out more evil than any of us can conceive. STUDENT

## Gaslight and Electric Light

RECENT experiments show that for several reasons a room may be more hygienically lighted by gas than by electricity. When the latter method was introduced, it was thought that as the incandescent lamp consumes no oxygen and therefore produces no carbonic acid gas, it must necessarily be superior — from the health point of view — to the gas flame. But this, as Professor Lewes has pointed out in an address to the British Association of Gas Engineers, rested on an error since exploded. Analysis of the air of inhabited rooms showed it to be unhealthy in proportion to the amount of carbonic acid which was present. In fresh country air this proportion is about 3 in 10,000; in town air perhaps 4; in rooms it may rise to 6 or more. It has been shown that up to 20, an amount which would never be found in a living room, it is perfectly harmless. Nevertheless it serves as an *index* to the poisonousness of the air of living rooms, though not very accurately. That proportion of it which comes from a gas-burner, burning good gas, is relatively harmless; that proportion which comes from the lungs of people

is poisonous because mixed with very injurious organic matters. Anyone who will look at the air of a room in which there are two or three tobacco smokers hard at "work" will see that the smoke is at the top of the room, provided that the illumination is gas. If the smoke is thick enough he will see that over each gas flame is a sort of ascending vortex drawing in air from below, largely consuming the smoke therein and sending up the column relatively clear. The smoke may here be considered as a way of making the products of respiration visible. They ascend; in large proportion are caught in the flame current, and the organic matters and bacteria consumed and therefore rendered harmless. The minute particles of carbon resulting from this burning, as well as the organic matters remaining unconsumed, are deposited on the ceiling and high up the walls. But this slight film of carbon, and also the similarly deposited sulphur products — no gas is absolutely free from sulphur — are detergent and antiseptic, together rendering the organic matters inodorous and harmless. In any case there will be a certain amount of diffusion of the hot air through the walls; if there be ceiling ventilators the whole of it escapes and more is drawn in from below, under the door and elsewhere.

Obviously, however, this destructive action of the flames on organic poisons is *nil* when the lighting is electric, and is far less when the lamp is on the table, at or below the level of the heads of those present. The air they breathe out may rise at once beyond the action of the flame. The room may in that case "become as foul as when unlit or lighted by electric light." STUDENT

## The Experiment of Cities

THE modern city-builders exhibit a quiet reliance upon the stability of the earth's crust which we hope may be justified. But they should at any rate understand that they are trying an experiment. The buildings are getting higher and higher. Care of course is taken that they rest on solid rock even if the caissons have to go down through 70 or 80 feet of softer matter to reach it. But what does the rock ultimately rest on? Possibly on an imprisoned mass of water to which some earthquake may one day afford a distant outlet. Possibly it may be the roof of some great cave. Every earthquake and every volcanic outpour means a re-adjustment of the sub-crust somewhere, and no one knows how far that re-adjustment may spread. The total weight of a modern great city is incalculable and increasing, increasing too out of proportion to its increasing area. The last great building in New York city is 47 stories in height, and, without furniture or occupants, weighs 18,000 tons bearing down upon a few square feet of foundation. The crust seems to be rather an irritable and shaky structure and a recent observation from Japan suggests that it objects to additional weight. Professor Omori reports that during the passage of a cyclone near Tokyo there was a tilting of the surface in one

direction as the storm approached and in the other as it departed. The sinking occurred where the atmospheric pressure was *lowest*, a phenomenon explained by the additional weight of sea accumulated under the cyclone by its enormous suction.

It may turn out that the sky-scraping cities are safe enough. Still, it is well to recognize that they are experiments which the crust may resent. STUDENT

## Integration and Solution

A FRENCH physicist, Gustave Lebon, has worked out to their logical finish the recently reborn theories of matter. Matter, he says, arose from ether as a set of integrations; by disintegration it continually returns to ether. The great disintegrator is light. Within the atom the electrons are revolving, rotating, and pulsating, held within the sphere by a force which on the great scale we call gravity. When a ray of light falls upon an atom, it so accentuates the motion of any electrons whose vibratory rate is the same as its own that they escape the holding force of the sphere and fly free. Hence under the influence of light *all* matter is radio-active, that is to say, disintegrating, though very slowly. But as the electron is not ether, it too is compound; and in the same way its component elements are slowly escaping under the impact of light. Finally, through the disintegrations, the primitive ether results.

This is very well, and no doubt true, for the disintegration of the atom into ether; but what *integrated* it *from* the ether? What locked up the sub-electrons into the electron, and the electrons into the atom? Of course we are at once and necessarily in the region of metaphysics; we have to say Life and Cosmic Will. Science will be very reluctant for some time yet, but ultimately there will be no choice. It is the same purposive force which upholds the complex molecule of protoplasm; and then, when the work of that has been done, withdraws and lets it run down hill into the relative stability of mere albumen. STUDENT

## An Ancient Prescription

IT would appear that in ancient India the sufferers from dropsy were treated with no inconsiderable skill. Here is the prescription for the abdominal variety of that symptom, given in the *Charaka-Samhita*, a work at least 3000 years old.

Tapping must first be performed. When the water has been withdrawn, the treatment becomes purely dietetic and is strict enough. After the operation

the patient must fast and then take a thin water-gruel of corn or rice, particularly avoiding fats and salt. For the next six months he should live on milk only. For the next three months he should live on the aforesaid gruel mixed with milk. For the final three months he should live on boiled rice and milk, still carefully avoiding salt. . . . Conducting himself thus for one year, one may conquer abdominal dropsy even when very pronounced.

It is interesting to notice, in this prescription, the insistence on abstinence from salt. C.

## Plant Roots need Air

"THE Breathing of Plants" is the title of a paper in the *Scientific American Supplement*. The writer points out that respiration, in its scientific sense, is common to all living things, whether plant or animal; and, in a more general sense, to the whole earth. For respiration means the taking in of gases, generally oxygen, and the giving out of other gases, generally carbon dioxide; and every cell does this. Lungs, gills, and other organs connected with breathing, are merely adjuncts to the process; and it is convenient to restrict the term "breathing" to the process of inhaling and exhaling through the lungs. The real process of respiration consists in an aeration of the bodily cells and an evolution of used-up gas by them. This process takes place in animals that have no lungs, in plants, and in bacteria.

All parts of plants respire, not the leaves only; in fact the leaves might more aptly be called the stomach than the lungs of a plant, since digestion is a more characteristic function of them. This is shown by placing leaves, stems, roots, flowers and seeds in separate glass jars and covering them up for twelve hours; at the end of the time each jar will be found to contain carbon dioxide.

Thus there is no distinction between animals and plants as to respiration; nor even as to the amount of respiration, for in some circumstances the amount of respiration in proportion to the bulk of the organism may be greater in the plant kingdom. In every case heat is produced, as may be shown thermometrically. In plants, as well as in animals, respiration is increased by increased rapidity of growth and by physiological excitement caused by injury.

The bearing of these facts upon agriculture is very important. As plants breathe through their roots, as well as their leaves, it is necessary that the soil should be aerated. Though Nature provides for this in a way, yet we aim in agriculture to improve upon wild Nature. Hence we hoe the crops and plough the ground. *The soil around garden and pot plants is loosened—a process at least as important as deluging the soil with water.* Some may not have thought that a glazed vase is not the same as a porous flower-pot; but let them dress in rubber clothes and glazed shoes and they will be better able to sympathize with the plant.

In Nature the aeration of the soil is accomplished in various ways. One is by the movements of water. In all regions where the soil has a depth of fifty feet or more the ground at a certain level below the surface is soaked with water. This level is known as the "water-table"; when it falls, air is drawn from above into the soil, and when it rises, used-up gas is driven out. The daily heating and cooling of the soil also causes a similar inspiration and expiration, and so does wind. When there is

Lomaland Photo. and Engraving Dept.

## A SHADY CORNER AMONG THE EUCALYPTUS, LOMALAND

no respiration, the vegetable matter in the soil putrefies and the soil becomes sour; for then certain microbes, called anaerobes, which respire without air and get their oxygen from the decomposition of other organisms, get to work.

Flowers in a sick room usually give off more carbon dioxide than oxygen, but the amount is so small that it does not matter; while the enlivening effect of flowers far more than offsets this insignificant disadvantage.

Not only do organic cells respire, but the entire soil of the globe is constantly absorbing gases and giving off gases. The nitrogen of the air thus becomes a supporter of respiration for the soil.

STUDENT

## Live Crab Imbedded in Sandstone

FROM Nottingham a remarkable discovery is reported. A workman employed in laying foundations, when getting off a lump of sandstone with his crowbar, saw something move. It was a live crab, the shell measuring three inches by two; when moving the crab covered six inches by four. It was an ordinary sea-crab, and as it was found imbedded in rock ten feet below the surface, it is thought to be three or four thousand years old.

E.

## A Giant Oak

THE Cowthorpe Oak, in Yorkshire, is the largest in England. Said to be over 1600 years old, its branches cover half an acre. At the close of the seventeenth century it was seventy-eight feet in circumference at the base of the trunk. Since then a quantity of earth

has been placed round it as a support. It is estimated to contain at the present time seventy-three tons of timber.

On one occasion ninety-five school children got inside the tree at once, hoisted a flag, and sang the National Anthem.

T.

## A Well with Two Waters

RECENTLY in these Notes was mentioned a well that gives both salt water and fresh; here is an instance of one that gives fresh water and sulphur water. It is in Riverside Park, Logansport, Ind., and was drilled by the city two years ago. An 8-inch pipe was sunk to a depth of 80 feet, and inside it was placed a 5-inch casing. Fresh water from a bed of limestone comes up between the two pipes, and sulphuretted hydrogen water through the 5-inch pipe from a lower stratum in the limestone.

STUDENT

## Swamp Lands in the United States

JUST as the national government has had to pass an act for the irrigation of arid land in the West, so it may some day have to undertake the problem of draining land that has too much water. For, according to a Geological Survey report, there are 60,000,000 acres of swamps and submerged lands in the United States. Of these Florida has the largest area, 29,000 square miles or 18,560,000 acres; Louisiana comes next with 15,000 square miles; and Arkansas and Mississippi have each 9000. So far the work of draining these submerged lands has been done only by private or state enterprise.

STUDENT

## MAUD POWELL!

As pen is put to paper the mind floats outward and onward, upborne in rhythmic rise and fall, upon a sea of musical sound, golden, etherealized, magic — not sound, but rather the rhythmic and airy something born of the sound that was. For the music heard last night set the heart strangely glowing. The very atmosphere, the spiritual factors in environment, were permeated, not with music in the ordinary sense, but with the sublimated essence of it, diamond-clear, liquid, chaste as the sunrise sea, now tragic in pathos and lament, again joyous as some tiny elfin troop, mystical, tender, gay, fiery, virile with the virility of the stainless man, trusting and true as the very fragrance of the higher womanliness, crystalline pure, — ay, and at the center of it a comely, royally-dignified mature woman, wielding the bow as a magician's wand, now caressing, now commanding the fairy thing poised 'twixt wrist and shoulder, that singing and throbbing bit of wood *yclept* — a violin. So many players are there, so many technicians, so many who come and say nothing the while they speak on, who go and leave no trace in mind or memory, who work but do not create, who build something (to be sure), but who cannot breathe into it the Breath of Life, because in them is not the fountain of that Breath. Then, as last night, comes one who touches the heart-deeps as with fire and the heights of consciousness as with light — the light that never was on sea nor land, yet that is, alway and alway, sun of that world in which the poet, the mystic, the true artist, the true musician, live. Words in such case are as but the touch of hand upon latch — for the golden gates swing ajar for each one, for each one, and each must enter of his own chastity and his own strength and in no other way.

The writer well recalls a certain afternoon — just twice seven years ago — when a slender womanly woman stepped out upon the

## The Heart Touch in Music

platform of the Musical Congress at the Chicago World's Fair, and gave an address on "Woman and the Violin." It was dignified and scholarly. The speaker was enthusiastic over the opportunities that lay before the young women violin-students of today, but she plead with them — a rare high note in this age of unrest — to increase their talents, not merely that Fame's roster should become plethoric of names, but for the joy of others, for the enrichment of all life. She played, also, and swept her audience into the realm of the magically beautiful and the indescribably true.

**A**T Point Loma music is a part of life itself, and one of those subtle forces of nature which, rightly applied, calls into activity the divine powers of the Soul. There is a Science of Consciousness and into that science music enters more largely than is generally supposed. A knowledge of the laws of life can be neither profound nor wide which neglects one of the most effective of all forces.

— KATHERINE TINGLEY in *The Life at Point Loma*

Seven years later the writer saw her again as she stood in the immense Chicago Auditorium, with America's greatest orchestra behind her, and played with masculine breadth, with the fervor of a devotee, with that magically, sure lightness of touch that violinists so well know covers iron training along lines of sternest technique, the *Tschaikovsky Concerto*. How clear is the picture of that night and how eager were all listeners to hear this glorious but incredibly difficult work which Maud Powell was the first to play successfully in America — and which even so great an artist as Leopold Auer, violinist to the Czar and Professor of Violin in the St. Petersburg Conservatory, to whom the work had been dedicated, had at first declared could not be played!

Maud Powell played it — and more; she interpreted it.

Last evening, seven years later still, Maud Powell appeared before an immense audience in the lovely city which Katherine Tingley has christened "Port Orient." The young violin students of the Râja Yoga Academy had heard of her coming and had sent her a scroll of greeting and an invitation to attend a reception given by them in Lomaland during her stay in the city. Unfortunately Miss Powell, on account of other engagements, was obliged to leave the city that night immediately after the concert. She sent, however, in response, an autograph portrait with a little note of regret, a small reproduction of which we give herewith, as it seems to bear so much of the Râja Yoga spirit — in the little crest with her motto, *Esse quam videri*, the poise, concentration and uprightness of the figure, and the heart touch in the lines.

At the concert one could feel that the artist was both pleased and inspired by the large group of Point Loma students in the pit, and, filling the boxes on the left, the enthusiastic glowing faces of the younger violin pupils of Lomaland. Say what you will, there is a certain Freemasonry among *sincere* students of the same art the world over, be they travelers well on toward the end of the path or little aspiring candidates at its beginning. There were in those groups tiny tots, little flower-wreathed girls and dignified laddies of six, just entering upon the mysteries of quarter-size violins; and there were also grave, violinistic veterans of sixteen and eighteen, to whom *Gavini's* is as a city under siege, *Fiorillo* one well-nigh taken, *Kreutzer* an honored milestone passed and *Rode* the inspiring ensign of battles to come; and there were also the teachers of these young learners, mature men and women who had seen and learned the best the Schools of the world have to offer and who, because of this, are able to appreciate the opportunity afforded by Katherine Tingley to

unify, alchemize, as it were, all that is best in the world's methods of violin study, and from this alchemical substance create something newer and better in method than the world has ever seen.

These students were not announced, but something of the quality of their tense interest, their musicianly appreciation, must have reached Maud Powell as she played. She looked up and smiled again and again as those young enthusiasts applauded, and then—which proved that she knew that they knew—she came out and played a Fiorillo *Etude* (the simple and golden 35th, the first part), something never heard outside of a classroom and her playing of which proved the wisdom of the contention made long ago in these columns, that among the *Etudes* of the master-writers are many which are more musical, more beautiful, more worthy of public performance, than loads of the stuff that somehow does find its way upon ordinary concert programs. But that is a digression. Maud Powell played it—and how we sat and listened! And back of the smile upon her lips, as she looked up at the boxes at the close, was a merry smile in the eye which said plainly, "Sh-h! This is our secret!" On the wings of music floated into the mind these words of Browning, himself so noble a musician,

The rest may reason and welcome—  
'Tis we musicians know!

One scarcely wishes to speak of her work in music critic fashion; of her bow technique, the *spiccato* that was ethereal in its softness and purity, the *staccato volante* that seemed not to have been created but born spontaneously from sheer, winged joy in life; the *legato* of which no one could say of a single tone, "This is its beginning and this its ending," so golden was the fashioning of it, so tender and indefinable the leaving of each tone, so perfect was the mastery of the bow at those critical places which mark the beginning and the leaving off of the noble, sustained stroke; so classic and simple in poise and sweep was the bow arm, so complete was her mastery of all left-hand technique. One did not need to ask, "Who was her teacher?" There was that in her work, individual as it was, which proclaimed the touch of the greatest of modern masters.

A pupil of Schradieck and Dancla, finishing her study under Josef Joachim, one would expect Maud Powell to reach the outermost confines of the technically possible. Yet it was not the technical side that most appealed to

our students. It was the absolute chastity of Maud Powell's work. It was wholly devoid of the sensuous element, that element so striking in the musicianship of some who have great audiences at their feet but who are, nevertheless, because of this, Ishmaels, their hand against their brothers, soiling to just that extent the heart-life of those who hear them.

Were ever works interpreted more sympathetically than the seemingly simple things she played in response to encores, the ever-loved

technique" (!) to waste it on a little thing like that, no octave passages, no *con fuoco* runs in thirds, no prodigious G string lamentings, no ocean-storm of chords, nothing but—ah, that's just the point—nothing but pure singing, nothing but the soul-content that only the exceptional player is great enough to recognize as such, and translate. Some day what so many call "technique" will be recognized as not the real thing at all but only a means—one means—by which the soul of music may speak unto the hearts of men, one of the garments, merely, that music—the real thing—wears. Perfect it must be, but alas! it is not all.

And it was not all last night. Every tone in the whole emotional content of Maud Powell's work sung its way upward toward the heart, never downward toward the senses. Paraphrasing the old gladiatorial cry one would say, "We who are ourselves about to sing, that all life may become a song of joy, *te salutamus*."

A LOMALAND TEACHER

### Jottings and Doings

NEW HAMPSHIRE is one of the States where the husband not only has the sole legal control of the children during his life, but can will them away from their mother at his death, says a writer. This law is still in force in Tennessee, South Carolina, and some other places. H.

FOLLOWING the old Spanish custom, which the Filipinos have adopted, of not permitting unmarried women to go alone in the streets, a young woman clerk is often accompanied by her servant to and from work. It would seem that Occidental mothers might learn a profitable lesson as to the guardianship of young girls from these supposedly less civilized people who live across the ocean. STUDENT

A NOTEWORTHY example of youthful accomplishment is the record of a young girl

who will receive her degree as physician and surgeon from Cornell University next spring. Although but 23 years old, she has already been graduated from the university proper and nearly finished the medical course. A short time ago, when candidates were to be examined for the position of surgeon in one of the large eastern hospitals, this enterprising undergraduate appeared among them, to the surprise of the examining board, the only woman among thirty-six men. After the strenuous written and oral examination was over, the examining physicians agreed she had surpassed them all and should have the position. II.

*Traumerei*, its cadences sung with a simplicity that touched the heart and almost rebuked the brain, Drdla's *Souvenir*, played at the request of one of the Lomaland students, Hubay's *Zephyr*. And what a debt does the musical world owe to her for reviving the works of the old masters of violin art, the old composers who lived before modern emotionalism began to experiment in tone. Tartini, Le Clair, Corelli, and the rest! And did ever sermon, song or poem bring more of loveliness and light in its train than Maud Powell's rendering of that immortal Mozart *Minuet*? Our budding virtuosi so rarely play it. Why acquire "tech-

# OUR YOUNG FOLK

## The Story of Corn-Giving

**T**HIS legend of the corn-giving, a record of the old days in North America, was recently printed in a New York daily paper.

STUDENT

Our colonial forefathers discovered a most beautiful religious rite that was practised among the North American Indians.

In the early springtime the father of a boy who was approaching adolescence would cause the lad to be taken several times to the sweating lodge and bath, where ablutions and purifying rites were gone through. Then the boy was conducted to a small, new lodge at some distance from the village that the young man might be removed from the noises, strife and merriment of the world.

The little lodge, and also the few things it contained, were built for the purpose, for that boy, and for that occasion, and they might never be used again.

During the fast, which lasted from seven to twelve days, according to the magnitude of the request the boy or his father had to make of the Great Spirit, the young man might not speak a single word to anyone except his father, who came every morning to cheer and encourage his son. The Great Spirit would reveal to the boy, in visions, what pathway in life he would do well to follow, and would also show the young man his guardian spirit. This brief foreword is necessary in order to understand how and when it was the Great Spirit gave his people, the red men, the Indian corn and taught them to prepare the delicious roasting ears.

Wunzeh, the youth, who was to make the fast, lived with his father and mother and his many brothers and sisters in a humble lodge on the outskirts of a small Indian village. The family was so wretchedly poor that many times they were all hungry, for Wunzeh's father was not a skilful hunter. When the little birds would fly over his lodge he would hold up his hands and bless them for their bright plumage and sweet song. He never seemed once to wish they were in his pot stewing for his dinner.

As gentle and kind as the father was, so was the boy Wunzeh, and when he went to his lodge to make the great fast in which his guardian spirit should appear to him and his visions point out his life's work, Wunzeh made up his mind that he would ask the Great Spirit to show him some way by which he could maintain his own life without the sacrifice of sentient life.

The youth resolved to fix his mind upon love for all—for every living thing, man and beast.

For the first few days of his fast Wunzeh wandered through the quiet woods and studied the growth of the plants, wondering the while that some of them were good to eat, while others were poisonous or medicinal.

Being absolutely without food, poor Wunzeh's strength soon failed him, and he was obliged to remain almost all of the time in his lodge, lying on the new straw mat his mother had woven for him. The boy's gentle nature was manifest even in his pain and he wished he could think of something he could do to lighten the load of care his dear parents bore so uncomplainingly.

It was just at the going down of the sun when Wunzeh had his first vision. At that moment a beautiful angel appeared to him; whether it came down from the skies or just floated in at the lodge door he could not say. But there it was of creamy white. His clothing seemed of various shades of green and yellow; while out of the silken hair of his head arose a plume of soft cream white, which waved and rustled in the gentle breeze with a grace and melody impossible to describe.

Every movement of the bright spirit encouraged the boy. Imagine, then, his joy when the angel spoke to him, saying:

"The Great Spirit, who loves you and your kind father, has sent me from the sky to teach you how you may help your fellow man. But to get to this, to become the one whom all the succeeding generations shall arise and call blessed, you must prove yourself. Get up now and wrestle with me. And you must overcome me, for that is the only condition upon which your prayer can be granted."

Poor Wunzeh! He was so weakened from his fast that he feared his chances were very poor with that bright, fresh young man. But the reward promised put courage in his heart and he resolved to conquer or die in the attempt.

The angel seemed to read the young man's thoughts, for he said:—"Brave Wunzeh! It is such resolutions as yours that win in the end."

Then the struggle began; and just at the moment when it seemed that he could not wrestle another second the angel said:—"You have done well at this trial. I will come again tomorrow at the same hour."

So saying, the angel floated away and was lost to the boy's sight. But he left in Wunzeh's heart that sweet peace which contact with the angels always gives when those messengers from Heaven visit mortals and wrestle with them. The following evening, when the bright spirit came again to the lodge, Wunzeh was even weaker than the day before, but he said to himself:—

"If my struggles can benefit the poor any, how gladly will I wrestle, even if I die. No, I must not die. I must conquer."

Again the angel knew the boy's thoughts and again he said:—

"Brave good boy! It is such as you that the Great Spirit loves. Put your whole heart in your efforts when you struggle for others. That is what brings a blessing."

Then the angel and the boy wrestled again and they wrestled for a long time. But at last the angel said:—"That will do for today. To-morrow will be your last trial, as it will also be the seventh day of your fast. Your father will come to you in the morning and will want you to eat and drink, fearing that you may lose too much strength. But do not do so until you shall have conquered me."

Again the angel vanished; leaving Wunzeh hungry and tired, but happy.

The next morning the boy's father brought food and drink to his son, whom he implored to eat. But the boy asked to be allowed to wait until after the sun went down, telling his father that the Great Spirit had promised a blessing which would be worth all his efforts to get it.

That evening, just as the sun was going down, Wunzeh again wrestled with the angel, who, at last, confessing himself conquered, fell dead at the boy's feet.

In accordance with previous instructions Wunzeh stripped off the angel's clothes, which, in the last moment of that bright spirit's life, had turned from shades of green to cream and gold.

Taking care to remove every weed and stone from the ground, Wunzeh buried the angel. For some time thereafter, every day, Wunzeh watered the grave of his lost friend; he watered it many times with his own tears, and he never allowed a weed to grow upon the sod. But the youth would permit no one to follow him to the grave, nor did he tell anyone his secret hope—his hope founded upon what the angel had told him. Wunzeh watched and waited and prayed.

In course of time little green blades just the

color of the garments the angel had worn on that first day when he came to wrestle with Wunzeh, shot out of the ground. With what loving solicitude did the boy watch and water and care for those little green blades!

By and by that same silken, silvery hair, like what had adorned the head of his angel, came out, and last of all the fluffy plumes, while all around the stiff stalks there were green bunches.

Then the boy ran to the lodge and brought his father and mother, his brothers and sisters to the grove in which he had buried his friend and from which such a miracle of new life had sprung up. There Wunzeh told his father how the Merciful Master had granted his great wish, when he was making his long fast, by giving to man a food upon which he could sustain life without taking the life of another.

Wunzeh stripped the husks off the ears of green corn, which he roasted before the bright coals of fire, as the angel had told him to do. The entire family ate and thanked the Great Spirit for this, his last and best gift to the red man—for the gift of green roasting ears of Indian corn.

INNOCENCE apprehends the approach of evil by the instinctive tact of contrast.—*F. II. Robertson*

If there is any great or good thing in store for you, it will not come at the first or second call.—*Emerson*

WHEN others speak all manner of evil things against thee, return not evil for evil, but rather reflect that thou wast not more faithful in the discharge of thy duties.—*Ogawa*

ONE secret act of self-denial, one sacrifice of inclination to duty, is worth all the mere good thoughts, warm feelings, passionate prayers, in which idle people indulge themselves.—*J. H. Newman*

I LOVE best to have each thing in its season, doing without it at all other times. I have never got over my surprise that I should have been born into the most estimable place in all the world, and in the very nick of time, too.—*H. D. Thoreau*

A STATESMAN who is ignorant of the way in which events have originated, and who cannot tell from what circumstances they have arisen, may be compared to a physician who fails to make himself acquainted with the causes of those diseases which he is called in to cure. They are both equally useless and worthless.—*Polybius*

HIGH hearts are never long without hearing some new call, some distant clarion of God, even in their dreams; and soon they are observed to break up the camp of ease, and start on some fresh march of faithful service. And, looking higher still, we find those who never wait till their moral work accumulates, and who reward resolution with no rest; with whom, therefore, the alternation is instantaneous and constant; who do the good only to see the better, and see the better only to achieve it; who are too meek for transport, too faithful for remorse, too earnest for repose; whose worship is action, and whose action ceaseless aspiration.—*J. Martineau*

# THE CHILDREN'S HOUR

## A New Thanksgiving

"FOR the benefit of the people of the earth and all creatures," sang the East. "For the benefit of the people of the earth and all creatures," sang the West, the North, and South. The Cave Man listened. A smile passed over his face like sunshine and vibrated over the harpstrings. "The time is drawing near," he said. "I hear the signals! I will summon the dumb waiting ones for Thanksgiving."

He passed his fingers over the strings and in a moment the two fairies in sea-gull shapes flew to his feet.

"Foamwing and Stormrider, my swift messengers!" said the Cave Man, "fly out over earth and herald the waiting ones for Thanksgiving. The signal is heard. Hasten! Lend to each a fairy guise that he may speed hither before the sun leaves the dial rock."

Musing on his harp the Cave Man sat. "Long dark years have crept slowly past, like evil shadows. Man, who was to be the flower of all creatures disobeyed his angel. His birth-gift, the Heart-Light, which had to be daily fed with love—he neglected and it died out—woe! woe to us, it died out."

"All the creatures of earth then had to suffer. Alas! The good fairies of air, sea, and land had to leave. With tears of sorrow they hid from the eyes of man; but whenever a human being stepped over a spot where a fairy tear had fallen, a sadness and longing came to him. A longing to win the fairy friends back, but how, they did not know; woe! woe!"

The harp wailed forth the sorrow of ages as the Cave Man's fingers gripped the strings.

"For the benefit of the people of the earth and all creatures," again. The tones from the harp grew softer; a little note of joy sparkled here and there like a sunbeam. Again the Cave Man mused.

"The Wise Ones lived and worked all the time to bring the Heart Light back, and to teach man how to keep it burning. Whenever a child did this, I could hear the bell-tones of joy vibrating even through the stones, each little plant and creeping thing. A measure of suffering was taken away from the animals and a good fairy became free to help man.

"How long and faithfully they have worked! Thanks to the guardians of the Heart Light!

"Hark! The guests are coming. My harp! sing them the glad welcome." As the music was floating out a strange crowd was assembling in the Cave Man's great hall.

Yellow eyes were gleaming, white teeth glistening; coats of smoothest fur and softest velvet were seen; feather robes were shining in all the colors of the rainbow; scaled armor glittering in silver and gold. Heavy hoofs were stamping the ground, soft paws treading silently along; great wings beating the air, little wings fluttering. There were big horns rising like branches of trees; long ears and short ears pricked up for listening.

"Is he here?" came the cry from beast and bird. "Is he here—the real man, our king, that he may hear us?"

Lomaland Photo. and Engraving Dept.

## "FOR ALL I LIVE"

"Where is the real Man? that I may lay my crown at his feet," roared King Lion.

A hush of awe fell over the crowd. Among them stood a child with clear gentle eyes, whose voice in musical tones repeated the magic words on which his young life had been molded: "For the benefit of the people of the earth and all creatures."

Not a wing moved, not a paw lifted; there was silence with a thousand hearts throbbing together. The barriers of long enmity fell, and tears, unshed through ages, flowed from animal eyes—the spell was broken.

"Hail! Hail, to our king! Thanks for the coming of man!" roared like thunder over the waves, echoed and re-echoed between the hills and against the domes of the great school, wherein hundreds of little children were learning to live "For the benefit of the people of the earth and all creatures."

"Our saviors have come," twittered a chorus of birds. "They will save us from false man," joined in others.

"The man-animal, down with him!" growled the masses. "The destroyer of our peace; the robber of our homes; the slayer of our children; the cruel tormentor! We will rid the earth of him!" Such fearful howls, snarls and roars went up from the crowd that the rocks were trembling, and a giant wave dashed in fury against the shore.

"I will gather an army of my kind that no one can withstand," roared the lion. "So will I." "And I." "And I," cried the bear, the tiger, the bull, the eagle. Yellow eyes flashed fire; white teeth gnashed. The child lifted

his hand in command: "Peace!" All was still, like the foaming wave just sinking back in the sea. "Not so will your freedom be gained," spoke the clear voice of the child. "See in each man a future helper of your kind. Rejoice! There are schools spreading over earth to teach the children of man to live for all, and to obey the Great Law even as you obey the laws of nature."

"We are longing for a human king," came from the crowd in animal tongues. "We long to take our places, and do our parts in unity with man. We have felt him coming. See the gifts we bring!"

"I give the lion heart," said the lion. "I will give the graceful poise," said the leopard; "I the patience to endure," said the horse. "I give my strength," said the bear; "and I keen sight," said the eagle.

So they all bore their tribute. They gave their vigilance, their keen smell and hearing, their obedience to nature. The nightingale gave his voice; the beaver would help to build the houses; the birds gave their wings. Now the flowers joined in; the trees gave anew their fruit, and the fields the golden grain. The old faithful rocks gave anew their diamonds and gems, and the sea sent corals and pearls.

Music filled the air. The joy from all creatures found expression on the Cave Man's harp; the birds joined in a jubilant chorus with the deep undertone of Neptune's organ; and all nature sang glad thanks for the children who were living "For the benefit of the people of the earth and all creatures." Y.

S a n D i e g o C a l i f o r n i a

## LAST SUNDAY AT ISIS THEATER

Address by Mr. Cranstone Woodhead

**M**R. CRANSTONE WOODHEAD of Point Loma spoke at the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY at Isis Theater last Sunday evening, his subject being: "The Purpose of the Universal Brotherhood and Theosophical Society." In part he said:

"There is a passage in the writings of the eminent French historian and statesman M. Guizot which shows his profound knowledge of human nature and his wide acquaintance with the facts of history. He says:

"It often happens that popular emotions, however deep and general, remain barren, just as in the vegetable world many sprouts come to the surface of the ground, and then die, without growing any more or bearing any fruit. It is not sufficient for the bringing about of great events and practical results, that popular aspirations should be merely manifested; it is necessary further, that some great soul, some powerful will, should make itself the organ and agent of the public sentiment, and bring it to fecundity by becoming its type, its personification."

.... "No better description was ever penned of the work and purpose of H. P. Blavatsky. Foreseeing the needs both of her own times and of those to follow, she resolved to become the 'organ and agent' of the popular unrest and aspiration and to 'bring it to fecundity by becoming its type, its personification.'

"Sure of her ground from her deep study and her marvelous knowledge of ancient wisdom, she saw only too plainly the need of some one who would proclaim the Truth with that persistence which would bring inquiry and recognition. Her teachings were no new-fangled ideas founded upon mere speculation. By absolute demonstration she proved the existence of the long forgotten knowledge, and made plain the source from which it sprang.

"But H. P. Blavatsky knew well that along with the regenerative and life-giving forces of a measure of true knowledge, humanity is burdened with the conservatism of the ages, with supineness, with intellectual inertia, with a lack of quick perception of the true lines of action to adopt. She knew that nothing short of a life of martyrdom would avail to make any impression of her message upon the intelligence of the age. Her foreknowledge of this was, as we know, amply justified, but she was buoyed up with a deep conviction that once the human soul has obtained a glimpse of a possible perfection, however remote, *it will not rest* until the goal is attained. She knew that the very idea of imperfection is only the product of that which knows of perfection. She knew that the truths which she revealed must, at first, slowly work their way into the thought evolution of the age. But she had a boundless confidence that sooner or later they would attain their full development. Her mission, then, was to arouse, to do all in her power to break

up the mental molds of the age, to call the attention of seekers after Truth and to point out the way which all might follow.

"In the final chapter of the *Key to Theosophy* H. P. Blavatsky thus describes the future progress of the work which she inaugurated:

"It will gradually leaven and permeate the great mass of thinking and intelligent people with its large minded and noble ideas of Religion, Duty, and Philanthropy. Slowly but surely it will burst asunder the iron fetters of creeds and dogmas, of social and caste prejudices; it will break down racial and national antipathies and barriers, and will open the way to the practical realization of the Brotherhood of all men."

"The purpose of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY will now be evident. It is a positive purpose, a promise of work, an effort to attain an object. Established by H. P. Blavatsky in 1875 it was intended to collect together under its banner, as many of those who became interested in her work as were willing to join their forces with hers in a widespread movement of reform."

"Following in her footsteps, it has always been recognized by William Q. Judge and Katherine Tingley who successively followed H. P. Blavatsky in the Leadership of the Movement, that it "was not sufficient," in the words of M. Guizot, "that popular aspirations should be merely manifested"; but it was also necessary that some active means should be taken to initiate and carry out plans of reform based upon a love of altruistic efforts for the relief of those who needed help.

"It has been well remarked that the objects of the International Brotherhood League, one of the departments of the UNIVERSAL BROTHERHOOD, cover every known ground of philanthropic work. Organized efforts have been set on foot to cover all of these objects, and as time goes on, these efforts will increase, in proportion as the growing sympathy of mankind leads others to join in the joyful service for the good of their fellows. The world will wake up from its dream of complaining toleration of evil, when effectual remedies are more generally recognized."

"In carrying forward into the new era the work of H. P. Blavatsky, the present Leader of the Movement, Katherine Tingley, is actuated by the same positive purpose and high motive and is in touch with the same center of inspiration and knowledge as her predecessors. She also has suffered from the opposition of malignant misunderstanding and cruel calumny, and she also has pursued her work unmoved."

"Although her efforts are extended in countless different directions on the lines already explained, yet the work by which she is best known is the institution of the now famous Râja Yoga schools throughout many countries of the world, which are founded upon the knowledge that by this means she could most economically concentrate a part of the ener-

gies of the movement upon the formation of a nucleus of humanity of a higher order and thus carry on the effort into the future. This is explained in her own words as follows:

"The world seeks for and requires a practical illustration of the possibility of developing a higher type of humanity, and an opportunity for this now presents itself. All who have the welfare of the world's children truly at heart can hasten the day of better things eagerly sought for by so many. . . . The co-operation of all who undertake the work of teaching children will bring about greater results than are now conceivable. . . . Only by wise teaching, by training and self-reliance, self-discipline, concentration, and a recognition of the power of silence, can the lower qualities of the nature be overcome, and the highest be developed, so that the children who are brought in touch with this Movement shall in their turn become practical workers for humanity."

"The members of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY are a body of men and women who have recognized that popular aspirations for new and better social and political ideals need organized efforts, directed by some great soul and some powerful will to overcome the inertia of pessimistic and materialistic thought, in order to bring those aspirations to fecundity. Most of them have searched far and wide for some system of knowledge which would give a key to the riddle of life, and they have found it in Theosophy, the ancient wisdom of mankind. They are now sure of their ground. They perceive that there are higher aims in life than the satisfaction of mere personal ambition or a love of ease and self-indulgence. They have devoted their lives to carry on now, and to push forward into the future, the great purpose of H. P. Blavatsky and her successors. They have taken this to their hearts and are doing all they can by positive effort for the benefit of the human race. They have unbounded confidence love and reverence for Katherine Tingley, recognizing her as a great soul of powerful will, a wise and sympathetic administrator of their energies, and a Leader of marvelous genius who is inspired by a boundless compassion for human ignorance and suffering wherever it exists."

"The purpose of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY is of a very clear and definite character. It is removed from the ordinary energies of a worldly career inasmuch as the welfare of the work is of greater moment than personal aims, personal recognition or personal comfort. It is outside and beyond the man or woman who is looking for a life of wealth or fame. But as it goes forward into the future, and its present members pass away, it will still grow by new accessions from within and from without, and it will carry on into future centuries an ever-increasing tide of life-giving knowledge. It will come to be universally recognized as founded on the Eternal Truth of the Ages, and it will prove a well-spring of Wisdom, Help and Encouragement to mankind. OBSERVER

## Our Student Traveler in and around Naples

THOUSANDS of travelers to Europe gain their first impression of the continent from the city of Naples and its surrounding country, and a more fitting introduction to the Old World could not be had than through Naples and the neighboring towns of Pozzuoli, Baiae, Misenum, Cumae, Paestum, Herculaneum, etc. This was the first scene of Hellenic civilization in Italy and the poems of Homer and Virgil have invested these coasts with an imperishable interest to the student from all lands. All traces of the Greek, save only the names, have long since vanished—except at Paestum, where stand three majestic temples. Many of these places were favorite resorts of the Roman Emperors and nobility, but their palatial villas and amphitheaters have also been converted into hopeless ruin by repeated convulsions of earthquake and war, and the towns have been depopulated by malaria; but though their glory has departed, they still possess the charm of unrivaled natural beauty.

Driving from town to town around the Bays of Naples and Salerno, and stopping at night at such charming places as Sorrento, with its lemon and orange gardens, or Castellamare and Amalfi of medieval glory, is an exquisite experience never to be forgotten; as is also an excursion to the islands of Procida, Ischia and Capri in the Bay of Naples. On Capri are the ruins of the Villa of Tiberius, and the enchanting Blue Grotto—which is visited by 30,000 tourists annually.

Shell-tinted Naples, rising in the form of an amphitheater from the brilliant waters of the bay, is one of the most glorious sights imaginable. Goethe has said that "a man can never be utterly miserable who retains the recollection of Naples."

Though the city has had a varied history, having been successively under Greek, Roman, Gothic, Byzantine, Norman, German and Spanish rule, and being today the largest city in the Italian kingdom, it has never been prominent in politics, art, literature, commerce or any of the things that have made other Italian cities world-famous; and yet the old saying, "Vedi Napoli e poi mori," has become proverbial.

The Museum is of course the greatest attraction to strangers in the city, for Pompeii and Herculaneum have poured their treasures into it and made it one of the richest art collections in Europe.

The illustration shows the Riviera di Chiaia and, on the left, the Villa Nazionale, which is a public garden overhanging the bay, with fountains and palm-shaded walks where the band plays every afternoon. It contains small

temples in honor of Virgil and Tasso, and perhaps the finest Aquarium in the world.

The street scenes of Naples are a source of constant astonishment to the American, and if recounted would be beyond belief to any who had not spent some time in Naples. Even on the best streets one is besieged by swarms of street-vendors, street-musicians, guides, beggars, macaroni-eaters, and persistent cab-drivers. Driven to desperation one is forced finally to accept a cabbie from the dozens that are screaming, whistling and cracking their whips to attract your attention, and drive away from the exasperating swarm amidst muttered imprecations directed at your chosen driver and perhaps at yourself. An expedition on the streets of Naples can be likened to an ex-

## Art and the Churches

THE Bishop of Birmingham, England, recently gave an address on Art and Democracy of which the following report appeared in the *London Times*:

They could not, he said, fail to recognize that art in democracy was an ideal which was very far off. In the furnishing of rooms we were very far from anything except mechanical uniformity of ugliness. Corporations spent incredibly little upon the encouragement of the artist, but he was afraid that almost the greatest sinner in this respect at the present moment was the Church. They of the Church were at an exceedingly low level in their instincts. If art meant the use of some material so as to mold it into forms of beauty, and at the same time to express some individuality of idea, the profusion of brass-work in their churches was something quite the opposite of art. Perhaps there had been some perceptible improvement in the matter of painted glass, but the fine examples were very exceptional. The first requisite in art was that one should not be satisfied to have a copy of something else. What an awful thing it was if the democracy was to be suffered to discard as ridiculous the idea that it was the duty of the common life to be beautiful, and yet, unless he was mistaken, that appalling loss had actually occurred to us. We had got our minds possessed with the notion that it was our obvious and unmistakable duty to be as rich as we possibly could. If they were to reform that monstrous heresy, the first change involved was the primary and particular duty of being clean, not in our persons only, but in our air. To prefer to be rather richer at the expense of being vastly dirtier was to repudiate at the very root the precept of realizing the duty of being beautiful. Art grew out of the condition of life dignified, and beautiful buildings should be set where they could be seen. If they were to have consecration of the common life in beauty, they must begin with common household objects.

We appreciate the Bishop's candor, and it is in no spirit of carping criticism that we wish to suggest that there is reason for these things, and that the Church is the "greatest sinner" in a deeper sense than the Bishop means. Men have innate ideals and aspirations after the beautiful, which can best be given their quietus by the promise that they shall have their fruition in some future state, *can* only have their fruition in such a future state, and hence the conviction that there is no need to bother about them now. To convince a race that its aspirations after beauty can come to anything only *after death*, is to go a long way towards setting the whole field of those aspirations dormant as far as this present life is concerned. The remedy is obvious, and is to be found only in Theosophy. It is a matter of whether the "Kingdom" is to come on earth or not, or whether Jesus spoke truth or something else when he taught that the "Kingdom of Heaven" was within the human heart. STUDENT

## RIVIERA DI CHIAIA: NAPOLI

### A WATCH IN THE NIGHT

A Fragment

WARRIOR, what of the night?—

Whether it be not or be

Night, is as one thing to me.

I for one, at the least,

Ask not of dews if they blight,

Ask not of flames if they slay,

Ask not of prince or of priest

How long ere we put them away.

Master, what of the night?—

Child, night is not at all

Anywhere, fallen or to fall,

Save in our star-stricken eyes.

Forth of our eyes it takes flight,

Look in but once nor before

Nor behind us, but straight on the skies

Night is not then any more.—*Swinburne*

perience common to us all—that of spending a glorious day on the seashore, reveling in the great waves, the salt breeze, the brilliant sunshine and the freedom—when up springs a land breeze bringing millions of mosquitos and stinging gnats to torment the pleasure-seeker. Looking back on such a day, most of us forget the annoyance and remember only the happiness; yet a few, perhaps, remember only the stings. It must have been one of those souls that forget neither good nor evil, who declared, "Naples is a paradise inhabited by devils."

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

Central Office Point Loma California

The Headquarters of the Organization at Point Loma with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West.

## Katherine Tingley in Europe Clippings from the Press

The Rāja Yoga School at Visingsö  
(Translated from *Göteborgs Handels- och Sjöfarts-Tidning*, Sept. 11, 1907)

ON Sunday afternoon there arrived at Jönköping from Helsingborg the Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, Mrs. Katherine Tingley, accompanied by Hon. Miss Nan Herbert, Directress of the Rāja Yoga School, Santiago de Cuba, Mrs. Walter Hanson, Directress of the Rāja Yoga Day School, San Diego, near Point Loma, Miss Margaret Hanson, who is a bright little Rāja Yoga girl twelve years old, Miss Peggy de Purucker from Geneva, and Mr. Vredenburg Minot from Boston, Mass.

In the evening a meeting was held in the college hall. Mrs. Tingley spoke on Theosophy as a regenerating power in the life of discouraged humanity, and showed how its simple teachings and noble ethics have the power to elevate human life.

Her speech bore the stamp of strong power and convincing warmth. Especially when touching upon how to help and elevate the discouraged and the unsatisfied, there is plainly discerned an undercurrent from a great and loving heart, and this is doubtless the reason why everyone who comes in contact with Mrs. Tingley is influenced by her in such a high degree.

Miss Herbert and Mrs. Hanson made short speeches regarding the different departments of the work of Mrs. Tingley and of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY.

Monday morning Mrs. Tingley went to Visingsö. Her party now numbered some thirty persons, among them being Dr. Gustaf Zander, president of the Swedish branch of the Organization, also directors of several of the Swedish centers. A visit was made to the property secured by Mrs. Tingley, who communicated her intention to establish a Rāja Yoga School at this spot.

In the evening of the same day an international congress of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY was held at the Hotel with Mr. Torsten Hedlund in the chair. Many speeches were delivered, all most enthusiastic as to the great importance of the Rāja Yoga Academy about to be established on Visingsö. Reports from prominent educators show the wonderful results of the work at Point Loma, and it is therefore welcome here. It is a sign of the great advance

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

### KATHERINE TINGLEY AND HER PARTY AND SWEDISH DELEGATES

To the immediate right of the Leader is our veteran Comrade, Dr. Gustaf Zander, director of the Theosophical work in Sweden; Mr. Torsten Hedlund of Göteborg, Dr. Erik Bogren of Helsingborg, Mr. J. Karling of Jönköping, Capt. Hageus of Karlskrona, Miss Karling, Mr. Gyllenberg of Malmö, Mr. O. Ljungström; and to the left Mrs. A. Cederschiöld, Miss Ellen Bergman, Mrs. Karling, Mr. M. F. Nyström, member of the Swedish Parliament, and others.

being made in the work of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY. Today was spent by the party in visiting the historical spots on the Island.

### The Theosophical Leader in Falun (Translated from *Falu Dagbladet*)

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY have had public meetings in Upsala and Gefle, and the head of the Movement, Mrs. Katherine Tingley, is now in our city to promulgate the teachings of Theosophy and to give the key to the problems of life.

The theater was filled to its last seat. The stage was decorated with flowers and green. The meeting opened with music and after short addresses given by some young ladies who are accompanying Mrs. Tingley, and a violin number by Miss de Purucker, Mrs. Tingley came on the stage. Eloquent and clearly she explained the meaning of the Wisdom-Religion. She said:

"Theosophy will teach man to understand life in the right way and give to him the knowledge that life is divine. It teaches that man is his own savior. This was also said by Jesus of Nazareth, who through the experiences of life after life had reached a state of perfection and who was a grand example to all humanity. The inner meaning of the teachings of Christ is Theosophy, but for ages they have been taken according to the letter and not according to the spirit, and thus the human race has become separated instead of united.

"Theosophy is the inner life in every religion. It is no new religion, but is as old as Truth itself. Every man has the divine right to develop his latent possibilities for perfection, and to seek to realize his highest ideals because he is a member of the great family of God. The Theosophical teaching of Reincarnation eliminates the fear of death. It shows us that perfect justice rules everywhere in the universe. Just as trees and flowers every spring blossom out into new life, so there is that in our divine Ego which endures through the ages, and whose destiny it is to attain to greater and greater perfection from life to life.

"If man accepts Theosophy as his guide through life then his life will be changed and that of the whole world. Theosophy gives a new view-point in life, and points out the way to the sunlit royal road to true happiness. When Theosophy shall have conquered the world, there will be

sunlight in every home; there will be no more prisons, no drunkards, no fallen women, and then we shall find that 'Heaven is near.'

The lecture throughout gave a most interesting view of the Wisdom-Religion, and Mrs. Tingley built up a very fine structure of thought.

#### A Theosophical Meeting—Mrs. Tingley Speaks (Translated from *Upsala Nya Tidning*, September 23, 1907)

IT had been advertised that the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY would hold a meeting in the great Guild-Hall on Sunday evening. When we arrived shortly after the appointed time (because the "Academical 15 minutes grace" is not to be neglected in this city) and tried to enter the Guild-Hall, this seemed to be absolutely impossible. It was so crowded that we rarely have seen anything like it at any of the meetings which have been held in the old well-known Hall. Astonished at this unexpected fervent interest in Theosophy in our academical and sceptical community, we finally succeeded in conquering a square foot of space in the gallery. . . .

Miss Herbert accentuated that the three Theosophical Leaders Mme. Blavatsky, William Q. Judge, and Katherine Tingley decidedly opposed all kinds of psychical experiments, showing the danger of such to the spiritual and moral life of man. Theosophy aims to establish a perfect balance between all our faculties of body mind and soul. It is the essential of all religions. It teaches the laws of evolution, those governing physical as well as intellectual and moral life. The truth can only be one. Theosophy aims to create a sound mind in a healthy body. It is not anything fantastic, but simple and natural and by gradual steps it points the way to the upbuilding of the human temple to become a fit habitation of the soul within.

Mrs. Hanson said that Theosophy alone can bring real happiness to mankind. She spoke of Karma as a doctrine of justice, and also of Reincarnation. There is no chance according to Theosophy. The Universe is ruled by absolute law. When men come to understand that their suffering is the result of wrong-doing in the past it will be easier for them to carry their burdens with serenity. We must awake in our hearts sympathy for the whole of mankind, for all that lives.

Mrs. Tingley possesses a real and undeniable talent as a speaker. She began with a beautiful compliment to Sweden and the Swedes. She had observed, she said, many signs of a mighty national awakening, which gave rich promise for the future.

"Theosophy," she said, "is based on the laws which regulate the order of the whole Universe. But the heart plays an important part in a true understanding of Theosophy. To be a Theosophist one must be an optimist. Theosophy puts forth a new picture of the world. There will come a revolution in the realm of thought which will bring justice and full scope to the development of man's inner nature. Man must learn to recognize the divine everywhere, and especially in his own heart. For this divinity that seeks its expression in his life is his own higher nature. Men must learn to live in conformity with the true object of human life, mastering their lower natures, ceasing to break the laws of the Universe. The doctrine that man is powerless to control his lower nature is a terrible mistake which, during so many centuries, has produced disastrous results. Did not Christ say to his disciples: 'Ye are Gods'?"

"Theosophy has been misunderstood; some have tried to express it merely intellectually, but that is not the right way. The simple, innermost life in all religions and systems of philosophy is Theosophy. The doctrines of Karma and Reincarnation solve every problem. Christ also taught Reincarnation. Theosophy is optimistic, it can never accept materialism. It sheds a new light over the whole of existence and advises us to look out upon the problems of life with our own eyes."

Mme. Blavatsky was praised by the speaker as the "lonely, heroic Truth-bringer."

Mrs. Tingley's speech was loudly applauded.

Path

#### The Potency in Beginnings

ONLY the ignorant, the foolish, the careless, the unreflecting, think lightly of beginnings. The wise and compassionate stand in awe before the power locked up in that which is seemingly so small.

In the sacred book of our land it is written: "In the beginning was the Word." The "Word" is something beyond the power of finite minds to conceive; but it was the initial impulse which started into being this whole planet and all the life belonging to it. Until the dissolution of this earth, no energy, however small, can ever appear, which is not a part of that first and mighty Word. It must be directed by the same infinite power which gave it birth; but, far as it is beyond our conception, all analogy teaches us that potentially the universe *was*, from that moment.

In the same way the power of the giant of the forest was once concealed within a tiny seed. The forceful genius of a Charlemagne once lay behind something so small as a human cell. Who could imagine that the power which could conquer a nation lay sleeping there unseen? or that the gigantic branches in the forest, towering toward the sky, were crowded within a tiny speck in space? Only the wise, surely, whose minds penetrate the outer coverings, and search within the realm of nature's mystic laboratories.

We say that these celestial potencies lie sleeping in their early stirrings, but it is only a form of speech. Closer thought will show that it is rather we who sleep. The beings about to enter earth through these tiny forms are already in the full splendor of life, though elsewhere, and under the urge to enter the full force is concentrated, as it were, at the entering gate. In touching them at that moment, we touch them in their wholeness; never again can we so easily affect them for good or for evil. The paths we form towards their gates as we go to meet them, they, in their early gropings in a strange world will inevitably use.

How pitifully little, among ordinary human beings, is the realization of the significance of these initial stages! It would seem that in times long passed there was a deeper sense of their importance, for there is a wealth of legendary lore associated with them, and even in this matter of fact century of ours inaugural ceremonies of many sorts accord recognition of the fact that there is a potency in the beginnings of things. Who that has held in his arms a new-born child can fail to sense the infinite promise that the human being (the picture in little of the whole great universe) holds, even in its first days of helplessness and dependence on the good offices of others? But though we feel the presence of the "trail of glory" lingering about the child, our conception of human life and its possibilities is so limited that after a passing recognition of the

sweet promise of babyhood, the majority of people settle back into their accustomed grooves of thought and action, and resignedly behold the wonder-light fade from the little one's eyes — that wonder-light that was the soul searching on earth for the mystic sign in its new environment, that here are to be found soil and nourishment for the infinite potencies locked up in the human ego.

For the-soil in which the seed is planted affects the whole tree. The food we offer our babes affects their bodies in a greater degree than does the food we offer them when grown, and the conditions we surround them with in their beginnings make the marks which are still visible after seventy years of service in the battle of life have left their strength and their scars.

This principle is in fact fully recognized in dealing with the children in the Râja Yoga Schools. And it is also dwelt and acted upon by the Leaders of the Theosophical Movement in every undertaking. Everything which exists in this finite world has its birth and death. It is in the starting of things that these Leaders expend the most exquisite care. No detail is too trivial to be noticed; no mistake so small that it may be passed over. Those whose work is to last after them, must have the power to see the end from the beginning. It takes a master-mind to start large enterprises in the right way. A lesser one might make of them what would be recognized as a success for a time; but only one who understands the ultimate needs of man and the means by which these can be reached can so direct initial forces as to ensure their harmony with the Higher Law, without which nothing can serve any real purpose.

These greater undertakings, such as, for instance, the Theosophical Movement, have their natural agents; but all have some beginnings for which they are responsible. The study and practice of the Theosophical teachings leads to an ever-growing conscious recognition of the potency in these beginnings. The wider the view taken of life and destiny, the more keen the feeling of the unity of all life, the more intensely do students of Theosophy realize that each moment is a beginning, and that the initial moments of our future in this and other lives to come are colored by the efforts we make now to bring to the beginning possible each moment the divine self-restraint, the high purpose, the masterful inclusiveness that marks the first outward and onward movement of any great creative impulse. We cannot alter the past; the beginnings we made once bring their color to the false and low whisperings that often now impel us in the wrong direction; but each moment offers the glorious opportunity to begin so to deal with these ghosts of the past that they may find in our hearts and in our lives nothing that gives soil and nourishment for their evil potencies.

We may so modify our natures, make them such good soil for the noble impulses, and such poor soil for the ignoble, that the soul when it escapes from this present garment of flesh may speed more gladly than ever before towards the next birth into earth-life, confident that more closely have our powers been brought into harmony with the higher law, and exist no longer a menace to the soul's purposes, but as strength gained in overcoming. Life may be a golden chain of these beginnings. STUDENT

## DAWN

Samuel Taylor Coleridge

THE night was dark, though sometimes a faint star  
A little while a little space made bright.  
Dark was the night, and like an iron bar  
Lay heavy on the land; till o'er the sea  
Slowly, within the East, there grew a light  
Which half was starlight, and half seemed to be  
The herald of a greater. The pale white  
Turned slowly to pale rose, and up the height  
Of heaven slowly climbed. The gray sea grew  
Rose-colored like the sky. A white gull flew  
Straight toward the utmost boundary of the East,  
Where slowly the rose gathered and increased.  
It was as on the opening of a door  
By one who in his hand a lamp doth hold  
(Its flame yet hidden by the garment's fold)—  
The still air moves, the wide room is less dim.

More bright the East became, the ocean turned  
Dark and more dark against the brightening sky—  
Sharper against the sky the long sea line.  
The hollows of the breakers on the shore  
Were green-like leaves whereon no sun doth shine,  
Though white the outer branches of the tree.  
From rose to red the level heaven burned;  
And tell the stars, and tell yon rising sun,  
Earth, with her thousand voices, praises God.

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

## Question

How can you call the Christian religion a religion of love when Christ himself inculcated the doctrine of hate in the following words: "If any man come to me and hate not his father and mother, and wife and children, and brethren and sisters, yea, and his own life also, he cannot be my disciple." (Luke xiv. 26.)

## Answer

The above passage presents an apparent difficulty. The difficulty is, that it seems to make Jesus speak in a way utterly antagonistic to all his life and the spirit of his teaching. In such a case as this one of two things must be certain; either Jesus did not say these words, or, if he did, they must have a meaning *not antagonistic* to the rest of his teaching and his whole spirit.

The passage as it stands in the Greek is rendered correctly with the exception, perhaps, of the word *miseo* (hate). Generally this word means to hate, but some Greek lexicons say that in New Testament usage, when contrasted with *agapao* (love), it has a comparative meaning: "to love less, or to postpone in love and esteem." The usage in the Old Testament of a corresponding word seems to bear this out (see Genesis xxix. 31; Deuteronomy xxi. 15, etc) and as Jesus probably spoke, not in Greek but in Aramaic, this should be taken into account.

In this case the meaning would be plain enough. No earthly things must be *preferred* to or stand in the way of the highest good. Even things which are natural and right in their place must not be *preferred* to the Divine. Or in other words, the whole is greater than a part. On this passage Canon Farrar says:

It is not so much the true explanation to say that *hate* here means to *love less* (as in Genesis xxix. 31), as to say that when our nearest and dearest relationships prove to be positive obstacles in coming to Christ, then all natural affection must be flung aside.

A similar passage in Matthew x. 37, gives this idea of comparison: "He that loveth father and mother more than me is not worthy

of me," etc.; and in one of our poets we find the words:

I could not love thee, dear, so much  
Loved I not honor *more*.

Of one thing we may be sure: Jesus, who taught the holiness of the Law, which said: "Honor thy father and thy mother"; who taught men to "love their enemies" even, and who was himself "subject unto his parents," could not have so stultified himself as to say anything contradictory to the spirit of his own teaching and his own life. But while the words have this obvious meaning, their deeper, inner significance has no reference to any external relationships, but to the various qualities of the personal man symbolized by these relationships. We see that this is the real meaning of Jesus, and is also the teaching of other parts of Scripture. Here it is said that a man must "hate his own life (*psuche*) also"; and in Matthew x. 39 we read: "He that findeth his life shall lose it; and he that loseth his life shall find it." In Revelation xii. 11, those who overcame were those who "loved not their lives unto the death." The "sword," the "holy war" of which Jesus speaks in Matthew x. 34, is *internal* not external. It is the "Great War" of all the ages, between the higher and the lower self.

If we live for the lower self we lose life; "for whosoever will save his life shall lose it; and whosoever will lose his life for my sake shall find it." And when it is said: "a man's foes shall be they of his own household," it refers to this inner strife between the lower nature in its various passions and desires, and the higher nature.

The strongly symbolical language of the Oriental needs to be understood in its own spirit; and this is often difficult to our minds. But we should be familiar with such ideas as, "Give up thy life if thou wouldst live" (*Voice of the Silence*); or the "dying daily," of St. Paul. The whole of *Light on the Path* refers to this victory gained over the lower man and the perfect peace, the great atonement, which nothing can disturb or shake. Then the disciple has become one with the Christos, and "Lives now not in the world, but with it; his horizon has extended itself to the width of the whole universe." (Rev.) S. J. NEILL

## Question

How does Theosophy help men and women to realize the nobility of their calling and their true position in life (the 1st object of the International Brotherhood League)?

## Answer

Theosophy helps men and women to realize the nobility of their calling and their true position in life by giving through its teachings a knowledge of the truths concerning the laws governing their being. They learn through these teachings that they are souls, parts of the great soul that is the real motive power back of all manifested life. They also learn that they live life after life in physical bodies for the purpose of gaining experience. They learn further that all that lives is subject to the great law called Karma, the law of cause and effect, or as it is stated in the Bible: "As ye sow, so shall ye also reap."

The knowledge of these truths would enable all men to realize that brotherhood is a fact in nature. They would see the fallacy of working for and thinking of themselves as separate

from the great mass of humanity, thereby shutting themselves off from the source of all being, which gives freely to all alike, demanding in return that all shall serve the whole. We see this coming from and returning to the source illustrated by the way in which the moisture gathered by the sun from the lakes and rivers fall to the earth as rain, thereby swelling the rivers to be again drawn up by the sun, and so the process is repeated over and over again.

The lower kingdoms work in harmony with nature; but man, representing the highest form of life on this earth, having attained to self-consciousness has the power of choosing whether he will act in harmony with the law or not; and woe to him who chooses to act contrary to the law, for he has to take the consequences of every act, good or bad. Not only this but all that lives whether above or below him in the process of evolution is helped or hindered as he retards or advances in his evolution.

Surely a knowledge of these truths would help men and women to realize that their calling in life will be noble, if, regarding themselves as a part of the whole they constantly do whatever they have to do as an act of service for the whole. Doing this they will soon realize that their true position in life is to be a conscious part of the great whole and a helper of all that lives. B. F. V.

INQUIRER. Can you tell me, then, what has caused this system of Theosophy which you support to arouse so much interest and so much animosity at the same time?

THEOSOPHIST. There are several reasons for it, I believe. Among other causes that may be mentioned are: (1) The great reaction from the crassly materialistic theories now prevalent among scientific teachers. (2) General dissatisfaction with the artificial theology of the various Christian Churches and the number of daily increasing and conflicting sects. (3) An ever-growing perception of the fact that the creeds which are so obviously self- and mutually contradictory *can not be true*, and that claims which are unverified *can not be real*. This natural distrust of conventional religions is only strengthened by their complete failure to preserve morals and to purify society and the masses. (4) A conviction on the part of many, and *knowledge* by a few, that there must be somewhere a philosophical and religious system which shall be scientific and not merely speculative. (5) Finally, perhaps, a belief that such a system must be sought for in teachings far antedating any modern faith.

INQ. But how did this system come to be put forward just now?

THEO. Just because the time was found to be ripe—a fact shown by the determined effort of so many earnest students to reach *the truth*, at whatever cost and wherever it may be concealed. Seeing this, its custodians permitted that some portions at least of that truth should be proclaimed. Had the formation of the Theosophical Society been postponed a few years longer, one half of the civilized nations would have become by this time rank materialists, and the other half anthropomorphists and phenomenalists.—H. P. Blavatsky

### Plato and Lomaland

THE young citizens must not be allowed to grow up among images of evil, lest their souls assimilate the ugliness of their surroundings. Rather, they should be like men living in a beautiful and healthy place; from everything that they see and hear, loveliness like a breeze, should pass into their souls, and teach them, without their knowing it, the truth, of which beauty is a manifestation. — Plato

Some people say that children so brought up will become hothouse plants and the more easily succumb to the evil of the world when they do encounter it; and that children should therefore be inured by exposure to the evil. But evidently Plato did not think so. Take care of a tree when it is young and give it plenty of water, and when it is older it will be strong enough to care for itself and do without irrigation. Of course, however, it is possible to pamper the nursling; and that kind of treatment is probably what the people who make the above remark about hothouse plants have in mind. But that occurs only when the outer man is protected without the inner being strengthened. Plato's ideas involved the strengthening of the inner fiber and his isolation of the child from evil was only one of the means to that end. So with the Rāja Yoga education of Lomaland. The young are indeed kept amid harmonious and beautiful surroundings, harmonious not only in externals but in internals; but they are in no sense coddled or pampered. And the strengthening of character which they thus acquire at the beginning will fortify them against any subsequent exposure far more effectually than a process of "inuring" by exposure to evil at a tender age. "Indurating" would be a better name for that latter kind of process.

What the great Teacher says about loveliness passing into their souls without their knowing it, from everything that they see and hear, is very important. This kind of learning is surely better than trying to learn the same thing out of books. As the country-bred person always has something that the town-bred one cannot acquire, so, in greater degree, will the man or woman brought up under the beautiful and harmonious circumstances of Lomaland have a something undefinable that will ever after beautify and protect his life and shed a blessing on those he contacts.

The trouble with most of the world is that it does not know there is such a thing as beauty and harmony; and how is it ever to know? By bringing up new generations in an atmosphere of music and sunshine, both without in the surroundings and within in the associations of a brotherly life. STUDENT

### A Cyclopaedia always Level with this Morning

A NEW YORK publishing firm is issuing a cyclopaedia on a new and very admirable plan. If the firm got the idea from Assyrian research, it does not say so. Anyhow an idea so old as that may be honorably regarded as new. An Assyrian gentleman living 20,000 years ago in the Tigris valley who issued a cyclopaedia would have written it on clay tiles, and it would have been delivered to the purchaser in large wagons and perhaps charged for by the ton. But it could have been kept up to date. For when some branch of science had advanced, or

a King had perpetrated some new military exploit, the old tiles relating to that science or King could have been stacked on some wagons, taken round to the author's house and exchanged for others containing the new lore.

The New York cyclopaedia, which will be in 12 volumes, will be bound in such a way that on the release of a clip the pages come apart. A staff of writers will be continually at work upon such articles as tend to go out of date. Their writings will be printed uniformly with the pages of the cyclopaedia. Any purchaser will have the privilege, without cost, of returning the old articles in his volumes and receiving the new ones. His cyclopaedia will be therefore always timely.

We will suppose that some such work was issued 25 years ago, and that we then chanced to look up Reincarnation. We should perhaps have read something like this:

Reincarnation: metempsychosis. An idea current among the ancients, and even today among semi-civilized peoples, that the soul of man reappeared a succession of times upon earth, either as an animal or in another human form. Though now of course entirely discredited, this fantastic conception nevertheless — etc., etc.

Twenty-five years pass. During that time the staff of writers on our imaginary cyclopaedia have been re-writing this and that. At last it occurs to one of them that the Reincarnation article has a somewhat archaic flavor. So he amends:

Reincarnation: This curious idea, once universal throughout the world, is once more attracting the attention of thinking minds. If the reader will carefully avoid confounding reincarnation with metempsychosis, he will find that much that is plausible may be urged in favor of the former. Thus for instance — etc., etc.

Twenty-five years more go by. The imaginary volumes have been largely recast several times. But the article, Reincarnation, stands. At last its turn comes again, and it appears in this form:

Reincarnation: For some curious reason, the once universal belief in this great truth was in abeyance — so far as the West is concerned — for several centuries, that is to say during the Middle Ages. Whilst there are still many cultured minds to whom it does not appeal, just as there are some still dubious of, or even antagonistic to, the theory of evolution — etc., etc.

STUDENT

### Wide-Open Eyes

"IF thou wouldst know the invisible," says an old proverb, "open thine eyes wide upon the visible." One kind of genius at any rate, consists solely in the power of opening the eyes wide. When Newton saw an apple fall, he opened his eyes wide and saw the law of gravitation. Some day another Newton in another orchard will open his eyes wider yet and see that gravitation is cosmic consciousness in action and can only be understood by those who understand their own consciousness.

Another kind of genius consists in the power to see instantly the genius of the ideas of men who have opened their eyes wide upon something. The world, including the world of science, is conspicuously lacking in this. Some great men owe the whole, and some a part, of their success to this power. A recent book tells the story of Napoleon's adventure

with the steamship. Robert Fulton, having a new idea as to the best way to drive ships through the water, tried to get his idea into the British mind. He failed entirely. Then he tried the French mind. He wrote to Napoleon, suggesting that the invasion of England would be easy if the invading ships ran by steam. Napoleon caught the idea of the mercenary unpatriotic genius instantly, but, for once, distrusting his judgment, ordered it to be quickly submitted to a committee of experts. These acted exactly as the English ones had, and reported that the idea was vain and empty. So there was no invasion. The sequel, long after, is pathetic:

As the vanquished of Waterloo sat on the deck of the British ship Northumberland on October 17, 1815, and scanned the horizon to discern the rocks of St. Helena, he saw suddenly a long trail of dense smoke pouring out of a sort of "huge chimney." "What is that?" he asked, fixing his spyglass on the object. "It is a steamboat," replied the British Naval Lieutenant. "A steamboat!" exclaimed Napoleon, filled with agitation. "Yes, the Fulton," replied the officer, looking through his glasses.

Let us open our eyes wide upon the world, and also upon ideas that are "obviously" absurd and impossible. H.

### Incompetence of Some Scientists

A REPORT informs us that "cold-blooded science" in the person of a geological survey expert, has "exposed" the divining rod and proved its action to be due to involuntary muscular twitches, the diviners being acute people who know when and where the muscular twitches ought to be given.

In the first place the belief in the divining rod is far too general and persistent to allow a balanced judgment to suppose that humanity in general would be perpetually deceived by a trick that does not deceive a geological surveyor. In the next place the divining rod has been used by capitalists as a successful and profitable means; a proof which, in these days of dollar-worship, amounts to almost a divine sanction. In the third place the stick tugs at the hands of the diviner, often bending with the stress caused by his attempt to hold it still.

Although we do not expect science to go to work with leaping pulses and boiling blood, there is no reason for it to be "cold-blooded" — a condition as likely to impair the judgment as the other. The strong desire to prove that there is no force involved except those in which the surveyor is an expert, must be held to have biased his judgment to the extent of causing him to infer his data from his theory. The absurdity of such a procedure in days when we have the wireless telegraph — that marvel of marvels — is obvious. What is there more inexplicable about divining than about wireless messages? STUDENT

### Evidences of Intelligence on Mars

A MATHEMATICIAN has shown that if two hundred be about the number of spots averaging fifty miles in diameter on the surface of Mars, connected by radiating lines fifteen miles wide, and averaging as they do about six from each spot, the chance that these spots would be interconnected fortuitously by such radial lines would be as one to sixteen with 259 ciphers after it. Reversely, this enormous number to one is the chance that the lines are the outcome of a definite underlying plan. J.

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

## Horrors of Overcrowding in Cities

MR. GEORGE R. SIMS, the well known author, journalist, and philanthropist, has been contributing to the London *Tribune* a series of articles entitled "The Black Stain," which have aroused much feeling. They consist of a plain unvarnished presentation of a few facts about slum-life in London, from notes in the author's pocket-book, taken during a pilgrimage through some of these streets. The horrors arising from overcrowding and hopeless vice and intemperance make a story incredible and for the most part unspeakable.

In one of these articles he takes two typical streets, one in Mansion Land, the other in Villa Land. The long rows of four-storied houses, once used by well-to-do people, have now become human rabbit-warrens. Each room holds a family. The horrors, catalogued plainly and without exaggeration, are unbelievable. Sometimes there is only one bed for the whole family, and people of all ages and relationships and both sexes herd together like wild animals. One room had two families, including four parents and eleven children. In many cases the mother is a hopeless drunkard, spending everything in drink, though relieved by several different charities, and leaving babies entirely neglected for months together. They have children by the score, few of whom ever reach their first year. The various results of such a mode of life can be imagined. Mr. Sims darkly hints at a few; readers can fill in the rest. Sufficient to say that the cruelty involved to children, especially girls, equals if not surpasses the worst horrors of history and far exceeds anything that savagery can produce. And this has to be multiplied enormously. In twelve years the National Society (England) for the Prevention of Cruelty to Children records:

## Hopeless Situations

935,543	Neglected and starved
129,366	Assaulted and ill-treated
32,696	Wretched little beggars and hawkers
23,192	Morally outraged
14,652	Sufferers in other ways

Making over one million children in England alone, and these only the cases that were found out.

## The Price of Selfishness

It is as well to be reminded now and again of what exists in our midst. For refined men and gentle women live day after day within a stone's throw of these conditions without the smallest heed. Such is our wonderful civilization. When the fact is brought home to them by some compassionate and unflinching

pen, they cry out; but the remedy seems so hopeless that they too readily succumb to the ostrich policy and seek to forget what they do not see their way to mend.

But let us at least be candid and refrain, while these things exist, from criticising any nation or society, past or present; for we cannot afford to do it, the responsibility rests on all.

Think now of a great Teacher of Compassion, like H. P. Blavatsky, coming to this civilization to help it; all these horrors which other people shut out from themselves, open to her seeing eyes; and being asked to form an academy of magic and mystic instruction for the benefit of a coterie of well-dressed people.

## The Work of Selfish Knowledge

Some papers are saying that these conditions are due to the "heathenism" prevalent, and propose more religion. But it is well to remember that these things have grown up under the aegis of State religion and of the numerous other churches. The Church of England has the most powerful and influential machinery for the propagation of its teachings that it is possible to conceive: a land strewn with churches, innumerable pastors, rich endowments, social prestige, everything. And yet these things are so. Is it then any use to increase still further the output of church religion? Any balanced judgment would infer that the conditions are the corollary of ecclesiasticism; the most warped judgment must admit that ecclesiasticism has failed to cope with them.

In truth we cannot look to any of the ordinary powers for salvation; for all these powers have proved alike helpless. Whether it is church religion, or science, or economics, or charity, the evil still grows unchecked.

## The Failure of the Churches

Are these horrors necessary accompaniments of civilization as civilization is understood today? The fact is undeniable; out of civilization they have grown, and from civilization they are reproduced as fast as ameliorated. Our life is a sham and preserves a respectable front by keeping its shame hidden away. This is the inevitable obverse to the side of life which we turn to public view.

Suppose we search out the roots of this evil whose branches it is so useless to keep lopping. Where will our search take us? It will take us down to two causes that exist as rankly among the well-to-do as among the outcast. *License* and *Ignorance*. Ignorance of the laws of life, and license to follow instinct and passion without restraint from the Higher Law.

Can the churches teach the laws of life?

Can Secularism, Agnosticism, Science, teach the laws of life? Will stale platitudes about salvation and the love of Jesus avail? Will the wild and ever-varying guesses of science or the negations and queryings of agnosticism do it?

Wherever we go, if we still continue to cherish the same ideals of life, to live after the same fashion, there we shall always have the slum with its attendant horrors. So long as there are respectable criminals, hiding their crimes, and many other people innocent in act but negligent, heedless, burying their heads in the sand and turning away from painful subjects; so long shall we have these conditions.

The continued existence of these outcasts seems inevitable in such a civilization as ours; and it is positively to the interest of some that there should be such a class. For one thing there is the drink interest with subtle ramifications throughout the whole of society; again there is a still more nefarious traffic, the particulars of which belong, as Mr. Sims says, to pages of the book of life which he is obliged to turn quickly.

Theosophists have urged the danger of learning unaccompanied by moral improvement, and of publishing new teachings without exacting as a condition pledges of purity of heart and life. Do they exaggerate when they say this? These facts are answer enough.

Our civilization has gained a knowledge that makes a commensurate moral reform absolutely necessary. We cannot live in careless indifference as people can who have not such knowledge. All these evils are the result of knowledge and selfishness acting together. There are many excellent people who live apparently blameless lives and who feel perfectly good; yet see the obverse side! This is because they are neglecting their responsibilities, while readily enjoying their privileges. They are negatively good, and about as useful as a praying saint to a man in a bog.

In view of all the above, the Theosophical program finds ample justification. Shall Theosophists teach the well-to-do interesting particulars about the astral planes, or how to develop psychic powers? Shall they tell people to be good and offer them reward in a future life, like the churches? The right thing to do is to urge people to study the Higher Laws of life, that they may discover how life may be lived under conditions which shall be at least tolerable and decent. The great extremes of riches and poverty, or one part of the community robbing the other of wealth do not solve the question. The parents described are of a kind that will always neglect their children. In some of the cases reported they were well enough off to provide amply for their children. But they are reckless, indolent, extravagant. The fault lies in their lack of education—education in character.

Theosophy aims to renovate the whole basis of human life by instilling its noble ideas of human life and destiny in place of the animalism of science and the cold platitudes of theology. The best place to begin at is the children; and so H. P. Blavatsky's plan of bringing

them up to recognize their Higher Nature and their duties to their kind is carried out by Theosophists. And by the time the evils of our civilization have brought about their inevitable consequences, the knowledge of Theosophy will be so diffused that there will be a surer basis on which to reconstruct.

**Thus the Basis for Reconstruction** Let everyone remember that the best thing he can do to-

wards bettering conditions is to make his own life as true as possible. If his efforts are restricted to a small circle, he can make that circle sacred; and it will widen. If he desires wide influence, let him remember that there is a road to boundless influence, if he will but take it. It consists in the modest, patient fulfilment of the small duties; for, as these are achieved, larger ones open out. By persisting in such a course, he will find his sphere of influence enlarging faster than he can keep up with it. And he will have the satisfaction of feeling that each moment of his life is lessening the amount of suffering, and that his silent influence is inspiring many others to place themselves comrades at his side.

Compassion should inspire to action, but not to useless feverish struggling, nor to a policy of turning away the eyes. It should inspire us to the fulfilment of duty and the observance of every divine instinct.

STUDENT

### Leaving Children to Their Impulses

WHEN people are driven to the theory that it is better to leave a child as much as possible to its own impulses than to interfere by advice, it is a sure sign that parental advice must have arrived at a rather helpless state. If we are so incapable of guiding a child that leaving it alone is the better of two evils, then is it not time we began to reform ourselves?

Have we, at this stage of progress, arrived at such a point that we can afford to set aside the experience of the whole past, declaring that it was mistaken and that we have found a new plan that is better? Judging from the heterogeneous opinions expressed in current literature, one would infer that we are not so very wise or so very certain about things after all.

It seems trite to point out that anyone brought up to follow his impulses will become impulsive; and that, no matter whether the impulses are good or bad. There are many excellent people who can do a great deal of work provided they are allowed to do it when they like and how they like, or who are amiable when uncontradicted, but who cannot fulfil an obligation or work in association with others. They are impulsive people and have never learned to regulate their impulses. The trouble with many badly brought up children is that they will do anything but their duty; they are clever, perhaps, but cannot direct their abilities to anything that has the look of an obligation; they may be industrious, but only when the whim seizes them. The life of an impulsive person is not happy; he does things by fits and starts and is continually switched off by some fresh impulse.

Unquestioning obedience is one extreme; entire unrestraint is the other. Of course it is bad to reduce a child to a state of automatic obedience to arbitrary rules, but this does not mean that we are to rush to the opposite ex-

treme. How are impulses to be controlled? Not by arbitrary authority but by arousing the child's judgment and firmness, so that he may restrain himself. This means wisdom and pains on the part of the parent or teacher, and these are qualities too often lacking.

There is that in the childish nature which resists control and yet asks for it. The child is too young to control himself and asks for our assistance in guiding him. If we withhold it, we are traitorous to the call of the child's better nature and cowards before his lower nature. All children are happy when kept busy, yet they resist the control. Should we yield to the resistance or control it? In the one case we make the child restless and discontented; in the other we make him contented and healthy.

Because some people do not see how to control and advise children wisely, they are preaching the doctrine of not attempting to do it at all. Perhaps they are asked questions which they cannot answer, and so conclude that their children are wiser than they, which in some respects may be true. The need is for a proper understanding of human nature and all the mysteries of life which religion and science leave unsolved. A school for parents, to teach them what children are and how to deal with them, would be a great boon! An understanding of the dual nature, as taught by Theosophy, solves the problem.

E.

### Crime and Physical Defects

ASCIENTIST has been investigating to find out whether there is any connexion between eyestrain and criminal tendencies, and has come to the conclusion that there is. In one reformatory he found the eyes of 108 inmates out of 400 very defective, and reports that on the correction of these defects a notable improvement in conduct ensued. In the same way one hears from time to time of investigations on the effects of brain-pressure due to malformation of the skull, and of various other bodily infirmities, on crime. There is truth in all these things; but, owing to personal assertion and lack of co-operation in science, each investigator makes too much of his own special observations.

Crime and degeneracy are states which include general unbalance and defect, bodily, mental, and moral. Treatment on any one of these three planes will give some relief. But none of the treatments is specific. Indeed it is not too much to say that treatment applied to one plane alone would speedily be neutralized by the continuance of the evil on the other two planes. It is absurd for reformers to divide themselves into conflicting schools on the issue as to whether treatment should be moral, mental, or physical. Clearly the cure should be applied where the disease was generated—that is, on all three planes simultaneously. Hygiene and work for the physical, education for the mental,—but what for the moral? That last is the difficult question for the world. Many measures might be suggested, as, for instance, to stop the reproduction of degenerates, by keeping the sexes in separate reformatories, would do much. But no government is competent to do it. Thus we get back, as usual, to the only radical remedy, education of the whole community in the true Science of Life—Theosophy.

STUDENT

## Some Views on XXth Century Problems

### Psychology and Crime

IN the pages of a popular contemporary Professor Münsterberg describes what he calls "The Third Degree," the measurement of reaction intervals in suspected criminals. A large number of words are recited to the suspect, some dealing with the crime, some not. To each he replies by the first word aroused in his mind by association. The interval preceding the reply is accurately measured. If he is guilty, the interval is lengthened after words related to his crime, this interval being due to the mind's rejection of incriminating words and endeavor to find innocent ones. Its attempt may however be a failure. A lengthened interval followed by an incriminating word, is therefore regarded as very strong evidence of guilt. Thus if the crime be theft, and, after the recitation of a number of innocent words with rapid replies, say at the interval of eight-tenths of a second, the word *cash* is introduced, a natural reply would be *box*. This, the mind, inspired by the sense of guilt, rejects, substituting perhaps *key*—which is worse; perhaps *brass*—which might be worse; perhaps *wood* which, having no natural place after *cash*, is very suspicious. Moreover, the rejection of the first word and the substitution of another has taken time, perhaps doubled the interval.

But is it not obvious that once the purpose of the examination is known, the nervous innocent man or woman would behave exactly as the guilty? Such a person is, moreover, likely to be in an extremely suggestible condition, and, confronted with a strong cool examining mind perhaps prepossessed by—or quickly acquiring—a clear-cut opinion, might readily receive and utter the thoughts and respond to the expectations of the examiner.

Consequently whatever the value of this method for the detection of crime for the first few months of its introduction, until its purpose was generally known, we should say that thereafter it would be worse than valueless.

STUDENT

### Lost Perspective

ACCORDING to a well-known writer ("J. B.") in the *London Christian World*, altruism made its first appearance with Christianity. Speaking of man's sympathy for the sufferings and weaknesses of others, this writer says:

It is at this point we note the marvelous work of Christianity in the soul's development. Paganism has no such conception of vicarious endurance as the Gospel offers.

Quoting a few lines from Euripides, he goes on:

When we compare with this the feeling of Jesus and of Paul, the sacrificial temper which could be "never elated while one man's oppressed," and which, working in the modern consciousness, makes it impossible for us to be satisfied with our luxury while our brother is in want, we see the advance that humanity has made.

He evidently knows nothing of the ethical teachings of Buddhism, nor can he ever have

read the Egyptian so-called *Book of the Dead*. From other of his articles we know that he has read the *Bhagavad Gītā*; so he must have forgotten the description of "the man of purified heart" in the fifth chapter, "living"—as Burnouf translates the passage—"the life of all that lives," (*vivant de la vie de tous les vivants*); or, in a better known version, "for whom the only self is the Self of all creatures."

Whilst revising his conceptions of "Paganism" he might also look around and ask himself whether the social conditions of modern peoples does really suggest to him a "sacrificial temper" as pervading everywhere, "making it impossible for us to be satisfied with our luxury while our brother is in want."! Whether, in fact, in order to make his point, he has not found a double misrepresentation to be necessary.

But if he is right about the modern world, a considerable difficulty comes in view. Christian students are supposed to cultivate a becoming admiration for "the marvelous works of God." We should think they would be overwhelmed with a more than equivalent astonishment at the marvelous fact that God did not awaken altruism in the human heart, or inspire its utterance, until 2000 years ago. And this astonishment would have led to a little study outside the official curriculum, a study in the course of which they would have discovered the truth of Saint Augustine's assertion—that the Christian religion, under other names, *has never not been* on earth: and of Christ's assertion: *Before Abraham was, I am*.

But perhaps the real fault is at the door of science, which, despite the traditions of every great nation and the obvious lessons of archaeological research, still regards 2000 years as covering a very considerable fraction—say a fifth—of human civilized history. Following Theosophy, she will presently add a few ciphers to the denominator of that fraction.

STUDENT

### Self-Expression

IN the current *Hibbert Journal*, Professor Seth tries to deal with a difficulty which seems to be arising in the minds of Christians who read Nietzsche. Nietzsche preached what he called *self-expression* at any cost—to others. Christianity preaches *self-abnegation*, *self-suppression*, and the like virtues. Which is right? The answer turns, of course, upon the meaning of the word *self*. It can be used for the self of common life, which, unchecked, is absolutely selfish, absolutely regardless of the world of men, thinks only of its own interests and, either of its own sensual enjoyment or—on a higher scale, and for that purpose suppressing sensuality—of its own power.

It can be used for that other self which, in its initial manifestations as conscience, appears to the ordinary man to be, if *within* himself, *other* than himself. As conscience it manifests as controller of the selfish self. To follow its bidding leads to the line of conduct called *self-abnegation* and so on. The other

line, in its lower aspect, that of sensuality, leads as everyone knows, to disease, dimming of consciousness, and death. In its higher aspect, the pursuit of personal power, it leads to estrangement from others and the estrangement of others; and, as everyone knows who is not hypnotized by the glowing delirium of Nietzsche, to a fierce, hard, narrowing consciousness which, before finally ceasing to be altogether, ceases to be properly human.

But on the other path, according to the whole-heartedness and wisdom of its pursuit, another self, self actual, gradually awakes and one day spreads wide wings in a sunlight which has never been seen or suspected by the first self, though it shines over all the earth. The Christians have thought of this awakening as only occurable at death and so have given it an unreality and remoteness that has weakened all their teaching. Or in other cases they have confused it with the phenomenon known as conversion, with which it has nothing to do. Had they not made these mistakes the world would be a thousand years in advance of where it is, and we should have had no Nietzsche.

*Give up thy life if thou wouldst live*, has in every age been the burden of humanity's teachers. In modern terms, service, sacrifice, is the way to freedom.

### Pulpit Autobiography

IT is an old saying that no man can talk at all without giving us more or less autobiography; but this is so extremely true that one wonders it has not been noted in the frequent discussions about the failing power of the pulpits, lessening congregations, and increasing emptiness of the training colleges. A preacher can inspire others to do and believe no more than he himself is doing and believing.

But his words must not outrun belief by an inch, even unconsciously; or there will be the enfeebling and repellant note of insincerity. A congregation will gather to listen about hell, to be told they are going there, if the preacher's words are weighted to the very full with his belief in that awful doctrine. It will gather to listen about God if the words are weighted with the speaker's actual consciousness of the *Presence*. But the weight of that tremendous theme is lacking. Unconsciously to the preacher and to the audience, the words ring somewhat hollow, are therefore dull, and the audience diminishes.

If the preacher is urging the act of prayer, the bringing the consciousness into the presence of God; or the daily act of realizing the injunction to love thy neighbor as thyself—the act, done at some part of the day, of so expanding the heart, that *manifest* action *must* follow—if he is not daily achieving both, with a power begotten of long practice, his words will prevail with no one, interest no one. They will only prevail and interest in the exact proportion of the sincerity behind them; and their failure is the measure of the insincerity. For people would as fully like to be compellingly stimulated to prayer and to compassion as to read a powerful novel or see a thrilling play. The history of religion proves that. STUDENT

## Geology in Legend

**G**EOLGY might perhaps occasionally soften its austerities by the study of legends—in this country, of Indian legends. There are one or two legends of the Yosemite Valley Indians which are at least suggestive of a land link once uniting our Western strip with India. These people believe that their forefathers formerly lived far away in the West, wandering thence for some immeasurable period of time until they at last found themselves in the valley which still bears one of the names they have given to it. So far as the living are concerned, return to that happy land is impossible, *for the sea now rolls between*. But the Great Spirit which guided the Eastward wanderings permits the dead to go back to the primal home. The dead were burned and the funeral ceremonies were designed to aid them in their long journey, to point out the direction and as it would seem, to indicate the exact spot to which they were to orient themselves. The mourners, circling around the burning pile, used to stop at the northwest corner; and then, pointing to the West, to chant the word "*Him-i-la-ya*"! Have we not here the very name of the most prominent feature of that "land in the West" from which they think they came?

There is another legend that belongs to the whole picture. It reports that two little boys once went down to the river to swim. After they had swum they were tired and slept. And whilst they slept, the rock on which they lay gradually began to lift until at last it was nearly as high as the moon. With this we remember that while Lemuria was sinking, California was rising.

So putting the legends together, they suggest that this people began to wander Eastward from India, Northern India, while as yet Lemurian remnants bridged the Pacific. Their wanderings naturally covered a long time because they covered a long space; but finally they reached California. And by that time the *sea* was behind them instead of the lands they had crossed. The legend of the boys who swam and slept appears to be a memory of the changes still under way in their new home after their arrival.

## The Seven Cities of Cibola

**I**N Lincoln County, New Mexico, thirty miles north of White Oaks, are the ruins of Gran Quivira. Their extent proves that they were once the center of a large population, as does the fact that they are surrounded by many other ruins. There is evidence, moreover, that a large number of towns have been buried under volcanic lava and ashes. The unex-

pected nature of the catastrophe is shown by the heaps of corn and the skeletons found in the ruins. A great river of lava, called the Mal-Pais, extends for forty miles through Otero, Socorro and Lincoln Counties, and contains ruins filled with volcanic ash or partly submerged with lava.

Coronado in 1540 went in search of the "Seven Cities of Gold," and heard of the grand city of Quivira, where there were princely palaces, three or four stories high built of stone, decorated with jewels, and the roofs covered with gold; the streets broad and shaded with trees, gardens resplendent and women wondrously beautiful. But when he arrived all this had vanished and he found nothing but an ordinary pueblo town.

Coronado was hunting something that had long ceased to be an actual existence on earth and was now only a symbolic record; for, as

Lomaland Photo. and Engraving Dept.

LA PIERRE TREMBLANTE, BRECH, MORBIHAN. (SEE CENTURY PATH, VOL. X, NO. 5)

H. P. Blavatsky says, "these seven caves, seven cities, etc., etc., stand in every case for the seven centers or zones upon which the seven primitive groups of the first Root-Race were born." Nevertheless here had been a people who were aware of the history of the Root-Races and had preserved its records. How much more is there lying burnt and buried beneath the lava and ashes than what has so far been found? And how long is it since the volcanic overflow took place?

Here is surely the proper line along which to search for the antiquity of America, not among the pots and bones of the savages and outcasts. We have Indian tribes in varying degrees of culture, the better classes of which show by their character and traditions that they are escaped descendants of the peoples who were in bulk exterminated by the cataclysm. Everything points to the conclusion that America has been the home of great prehistoric civilizations with wonderful knowledge; and that cataclysms brought their race-cycle to an end; all in accordance with the teachings of the Secret Doctrine and with the conclusions deducible from the facts obtained

by archaeology as a whole. Students of Indian lore have amassed a treasury of symbol and legend proving the former general acquaintance with the universal Wisdom-Religion and its symbols. Yet, in face of all this cumulative evidence, other students are still endeavoring to trace a history of mankind based on the old evolutionist ideas, and to show that this continent has been peopled only by successive races of primitive savages. It looks as if science were largely an occupation disconnected from actual life and dealing with a class of ideas that do not affect the real beliefs of people; since different and contrary theories can exist side by side, even in the same book, without arousing any sense of inconsistency. It is also clear that there are two chief strains of influence in speculation, the one tending to foster the animalistic views of human nature and the other tending to represent man as the

heir of long ages of glorious achievement. These two strains of thought are everywhere apparent, causing everywhere conflict. They stand for the influences that are respectively against and for the progress of the race.

STUDENT

## Copyright in Indian Music

**O**NE reason why we have so little of the Red Man's music is that the Red Men are very conservative of it. A song is regarded as the property of the composer and is usually restricted to his family, no Indian venturing to sing a song that does not belong to his family. This at least is

the case with many of the tribes, and was a more general custom among them before the advent of white civilization broke down some of the barriers of their customs.

A writer in the *Craftsman*, who is trying to collect Indian music in order to preserve it, states that it is often very difficult to obtain a song because the Indian who sang it yesterday will refuse to repeat it today on the ground that it is another man's song and must not be given to the white man. One Indian said that their songs were the only things the white man had left them, and now the white man wanted to take them away too. The writer says it took him many months to persuade this man and his neighbors that what was taken away was also left; which seems like sophistry, as what the Indian meant was the exclusive right to the song. Song and incantation mean the same thing to many ancient peoples, and that thing differs from what either of them means with us today. As one of the most potent external aids to the evocation of higher potencies in man and in nature, music and song had their place in the ancient Sacred Mysteries.

## Physical Immortality

THERE is a small but very important corner of the field of physiology which, when the right kind of attention is directed to it, may start us on a promising search for methods of prolonging life. As most people know, we begin physical life as a small mass of uniform cells. As the organs appear, the cells of which they are composed, very complex, enlarged and differentiated, are products of the small, simple, primitive cells. But not all of these thus disappear. They are to be found throughout life entangled among the higher cells to which their brethren gave rise. It is their duty, as the higher cells wear out, to evolve in the same way and replace them. Each higher cell, such as that of muscle, gland, or nerve, has practically foregone all functions save the one which is especially wanted of it. But especially has it foregone the function of multiplication. It lives its life, does its work, and dies without producing any successor. The successor has to be provided by one of the entangled primitive cells. In the early years of life they are very well equal to their task. And each of them is moreover extremely ready to become two, and those two, four; so as to be capable of supplying any number of gaps in the ranks of their highly differentiated brethren. Now and then they take—in the superfluous exuberance of their vitality—to multiplying without reason or warrant; and then a cancer results.

In the later years of life, as the frequent cancers show, these cells retain vitality enough to multiply, but not enough to undertake the more exacting work of passing into higher forms. As the older and complexer cells, which also show diminished vitality, wear out and cease to function, they are not replaced.

We have many pieces of apparatus in the body which work well enough to show what they are intended for and might do, but which yet work ineffectively. One of these is the very elaborate machinery for repelling bacterial invasion and dealing with it when it has happened. This is of course always at work, or we should all be dead tomorrow; but it does not work well, or we should never have any bacterial disease.

Another piece of apparatus, with which we have just dealt, is apparently intended to enable us to live for ever, or an immense length of time. It fails because the primitive cells, everywhere present, fail in vitality necessary to enable them to replace worn out complex cells. Why they do so is partly the problem of the physiologist, more that of the philosopher and moralist. A bacterium, given reasonably good conditions about him, is relatively immortal. When he feels his system getting weak, he concentrates his whole living material, himself, into one point. He becomes as it were a pillow where the feathers have all gathered at one end. Around himself, the new point, he fashions a new wall and escapes through the old one. Then the free point becomes a new bacterium, really the same as the old one but with a perfectly renewed lease of life. The mystery of that curious rejuvena-

tion we have never understood. But a bacterium is only a cell, and what one cell can do cannot be totally beyond the possibilities of another.

Humanity's problem is not how to discover a new serum. It is to discover how to live, instead of wasting vitality. The vitality spent in digesting a meal proper in quantity and quality, is more than replaced. It may be that in ideal life the vitality spent in all work and feeling would be fully replaced in the very act. We habitually spend a great deal that brings no return whatever. The problem is therefore the philosophical problem of how to live, how to work, how to feel, how to spend productively. It is a problem in philosophical ethics and morals. STUDENT

## A Yard of Soil

AN industrious statistician, perhaps desirous to measure the total aliveness of the earth, selected two average plots, 4 feet by 4, of meadow and forest floor. Everything on these two surfaces, and to a depth of about an inch, was removed and examined for life. The forest patch gave 112 living animal items, including coleoptera, hemiptera, hymenoptera, spiders, other arthropods, annelids, gasteropods, cocoons and eggs. There were also 194 seeds or fruits. Multiplying these numbers for an acre, we get nearly a million and a half of animals and more than two million seeds and fruits. For the meadow acre, however, the animal life rises to nearly 14 million animals and 34 million seeds.

But the investigator, who contributes his figures to *Science*, should have also counted the many thousands of fungi spores to the cubic inch and carried that amount out into terms of an acre. And then he might have examined the same inch for its millions of bacteria. That is as much as he could have done. But we know that there are bacteria beyond the limit of microscopic visibility. If he could have counted these, every fragment or speck of dead stick would have become for him a thronging universe. STUDENT

## Bats and Darwinism

ACCORDING to the doctrine of development as taught by Darwin all the different species of mammalia have branched out from a few root-types and have become persistent through some chance peculiarity of structure which has given them the advantage over their competitors less fortunate. Thus the giraffe is said to be derived from some remote, ancestral, long-necked deer whose accidental abnormality enabled him to browse upon the leaves of trees, while his short-necked relations starved to death leaving no issue.

The case of bats presents a problem not so easily explained. The common bat is simply an insectivorous mouse whose power of flight is due to the possession of enormously elongated fingers webbed with a membrane delicate but strong. If we endeavor to imagine the primeval mouse which made the first approach to the cheiropterous (or hand-winged) type, we see at once that any change in the direc-

tion of a bat's wing must be distinctly to his disadvantage in progression on the ground. Long before flight could have become possible the long-fingered mouse would have been squeezed out of existence in the fierce struggle where the fit alone survive. According to Theosophy, the drastic alteration of the paw of general mammalian type to the bat's wing, took place in the astral period of evolution long before the physical plane was reached, so that the missing link will never be discovered as a fossil in the rocks. Ages before the bat emerged upon the plane of physical existence with its strife and competition for the means of life, the shadowy forms designed to be the future bats already had been perfected into the shapes familiar to us as they flutter in the summer evening air. And the same is true of many another undiscovered (and physically undiscoverable) root type whose divergent representatives we study today. STUDENT

## The Cure of the Morphine Habit

FOR some time the papers have been publishing paragraphs concerning the virtues of the plant *Combretum Sundaicum* as a cure for the morphine and opium habits. The rumors gained ground and at last an experimental inquiry was undertaken at the Meda Lodge Sanatorium for Inebriates, London. Dr. McBride, the Superintendent, has issued a preliminary report of a set of cases, and this has been furnished by the secretary to the English medical papers. The powers of the plant in removing the craving appear to be real and marked, and no ill effects have been noticed. It is given as an infusion, one-and-a-half ounces of leaves and young shoots being boiled for four hours in water, more water being added from time to time to keep the product at the quantity of a quart. This is placed in two pint bottles, carefully corked and in the dark. They are marked A and B, and into A is mixed the victim's ordinary day's dose of his narcotic. From that bottle he takes about an ounce at intervals of two hours, each time refilling it from B. When B is empty A is finished without further replenishment. The next quart is treated in the same way, save that decidedly less of the narcotic is put into A. After a short time none is put there.

It is recommended that in severe cases the patient should be under medical supervision. In mild cases a trustworthy friend or attendant should be constantly present. The days of treatment should also be free from business work or cares. In all the reported cases the patients have expressed surprise and gratification at the ease with which the loss of their narcotic was borne. It should always be explained to the victims of a narcotic that unless the habit has gone very far indeed, the craving, unsatisfied, dies easily and quickly.

Independently of this, the action of the *Combretum Sundaicum* has not been ascertained. It seems possible that the American indigen, *Combretum Coccineum* or *Purpureum* would serve the purpose as well. M. D.

## Buccal Incubation in Fishes

**A**N article on fishes that hatch their eggs in their mouths appears in the *Scientific American Supplement*. Fish have various ways of incubating their eggs, and this way will be novel to many readers. With most fish the female lays hundreds of thousands or millions of eggs a year and abandons them; the greater number of the eggs and of the small fish hatched from them become the prey of numerous enemies. Some fish are ovoviviparous and hatch the eggs within the body. In some the eggs remain attached to the body until they are hatched. Other fish again build a species of nest and watch over the eggs. Buccal incubation, it appears, is not very uncommon; the eggs, after being laid and fertilized, are placed in the mouth of either the male or the female. As they are in a compact mass which fills and even distends that mouth, it is supposed that the parent has to fast during incubation.

STUDENT

## Relative Levels of Land and Sea

**T**HE relative levels of land and sea change as time goes on. Is this due to an absolute change in the level of the land or to an absolute change in the level of the sea? Both. The changes in land-level can be proven in other ways than by comparison with the sea-level; geologists know this. Also it is proven by levelling and bench-marks that the absolute level of the sea changes. Hence it is of no use to estimate the one by the other, unless we

know one of the two accurately and independently.

But great errors have been made in the past by assuming that the sea-level is constant. A writer in the London *Geological Magazine*, however, shows that the sea-level must fluctuate.

It seems that Playfair many years ago enunciated a law to the effect that:

By the principle of hydrostatic level, it is clearly impossible that the ocean should rise or fall *permanently* at one place without being similarly affected everywhere. It is certain, therefore, that the changes being in different directions in different places, must be due to movements of the solid crust.

In the above syllogism, the word "permanently" is obviously used in the sense of a fairly long time, say a few years; otherwise the conclusion does not follow from the premiss. But Playfair's law was untrue. The hydrostatic principle asserts that water will keep its level if unacted on by forces other than gravitation, and if quiescent. The very same principle which declares that still water will be level, also declares that moving water cannot be level. For the currents are caused either by an external force, such as wind, which piles the water up, or else by the very effort to regain level. But there are currents in the ocean; therefore the ocean is not level.

A capital example of a syllogism built on a mere assumption as premiss:

The sea must be level.

But the relative levels of sea and land change.

Therefore it must be the land that moves.

But, as we have seen, the first premiss is false. The effect of currents is to pile up the water; and, when we consider that the ocean is about a thousand times as broad as it is deep, we shall hardly be satisfied to compare it with water in a pot. It is in fact, more like a film. It is easy to see how a very slight difference of air-pressure in different places would cause a difference of level, which, though relatively small, might amount absolutely to many feet. It is known that the water at one end of Lake Michigan is higher than it is at the other, on account of the wind. Again, water that is flowing under the influence of gravity must necessarily be higher towards its source. Hence, what with wind and barometric differences and currents, it is evident that the surface of the ocean is not level. The writer referred to maintains that secular changes in the direction of currents produce correspond-

ing secular changes in the sea-level adjacent to various coasts; and gives data showing how these changes have been proven by surveying.

STUDENT

## The Sequoia Gigantea

**T**HE Californian "big tree" is the largest tree known, in a general sense, but is outrivalled in height by the *Eucalyptus amygdalina* or "messmate gum" of Australia, one of which has been felled measuring 470 feet, and in girth by the *Adansonia*, which is really a plant and not a tree.

It has been estimated that the largest are at least 5000 years old, says *The Rural Californian*, and that they survived the glacial period which devastated so much of the continent—the *latest* glacial period, a Theosophist would say. The petrified forests of Arizona are supposed to be remains of Sequoia forests which "went down to the primeval sea, were covered with sandstone, and rose again." A large number of fossil species are known, showing that the genus was widely distributed in Europe, Asia, and North America. The name is said to come from a Cherokee chief called Sequoya.

The only other species in this genus is the Redwood (*S. sempervirens*), which does not attain the girth of the other species, though taller and much more abundant. The Sequoias are conifers, forming one of several surviving links connecting the two families of the firs and the cypresses.

STUDENT

I used to hold by the instructed brain.

The heart leads surer.—Robert Browning

A VISITOR to Visingsö in the spring or in early summer when the fruit trees are blossoming and Nature has put on her fresh green dress, will surely never forget the beauty of the island. He will get the impression that the whole water-girt hill is one great garden with all its different kinds of trees and flowers. This refers especially to that part of it where the Royal Forest is located, but all over the island you will scarcely find a single cottage that does not lie as if embedded in green, some of them having beautiful gardens and orchards. The cottages are usually painted red and white, have tiled roofs and look very homelike and inviting when you step inside the gate of the yard.

The people at Visingsö are friendly and hospitable when you get acquainted with them, and this seems nowadays to be easier than formerly, for tourists and summer guests have changed the conditions during late years. In former days the islanders are said to have been very reserved and vigilant in their dealings with strangers. More than the people in other parts of Sweden they avoided all intercourse with outsiders. They very seldom married people from the mainland, and did not like to have newcomers move to Visingsö to live. Because of this the islanders have retained many characteristics of the olden time. Among themselves they are talkative, lively and good-humored and hold so strongly together that it is said that if one of them becomes your enemy you will find them all against you; while, on the contrary, if one of them becomes your friend you will soon have friends all over the island.

In general the inhabitants of Visingsö are cautious in business, and as they have very few needs a certain air of plenty and content prevails throughout the whole community. Most of them are farmers, and gardening and bee-keeping provide many with an extra income. The women take part in all kinds of farming and gardening, and, like the men, they are ex-

## At Beautiful Visingsö

perts at handling the oar. As islanders they often have to brave the dangers of restless and violent Lake Vattern, but they have learned to know it so well that accidents seldom happen.

The old national dress formerly used at Visingsö is described as follows: for the men, gray military-looking coats made of homespun, hooked, not buttoned; buckskin breeches; blue stockings with black leather straps and brass buckles; shoes with high wooden heels. They also used black broad-brimmed hats or fur caps.

### MIDNIGHT

**HUSHED** are the fretful noises of the day,  
Shadows and mystery their vigils keep,  
While through the darkness earth pursues her way,  
Enwrapped in silence deep;

So still, so still, that when the night-wind stirs,  
And like a stealthy footstep rustles by,  
A murmurous whisper moves the pines and firs  
With deep, low-breathing sigh.

All nature vibrates with a noiseless beat,  
The ceaseless pulsing of the ocean's breast,  
And countless mystic throbbings that repeat  
Humanity's unrest.—Clara Boise Bush in *New Orleans Times-Democrat*

The women wore homespun jackets, hooked together and with long coat-tails, short skirts of striped stuff; white stockings and black shoes. On their heads the married women wore white starched linen head-dresses, arranged so that they fitted closely around the forehead and tied at the neck into a knot with large corners standing out on both sides. The unmarried women wore caps.

This dress has gradually disappeared, and so have also many of the old-fashioned cottages built of logs, and with turf roofs.

About the origin of the beautiful Royal For-

est at Visingsö is told a little story. In 1832 some inspectors visited the royal domain at Visingsö in order to evict some poor people who had no right to live on its grounds. When the inspectors came to the gate between the fields and the forest they found a small cottage there, in which an old woman was living. Around the cottage was a little garden-plot and in this they saw three oaks, one of them stunted, but the other two unusually fine trees. When asked about the oaks the old woman said that she had, over forty years before, planted them herself and had ever since carefully guarded them; but it had not been possible for her to prevent some mischievous person from stunting the growth of one of them. The inspectors ordered the stunted oak to be cut down, and pieces of it were sent to Stockholm for examination. It was found to be of first rate quality and then and there it was decided to use the royal domain for oak plantations on a large scale. The old woman was permitted to keep her little cottage during her lifetime as a reward for her care of the oak trees, a care which had such unforeseen result. Thus originated the noble Royal Forest at Visingsö; and it is now, with its oaks, beeches, firs, pines and larch-trees, one of the most beautiful and well-conserved forests in the world. The straight rows of arching trees, the soft turf, the pure air, the fragrance of the firs, the singing of thousands of birds, almost convince you that you have come to a paradise when you spend the early summer days at beautiful Visingsö.

Those who know something about the militant, on-sweeping, compassionate and ever-victorious methods of Katherine Tingley in making Theosophy an actual living power in human life, with practical, not theoretical results, can easily see in the Visingsö of today the heart-center of a new life for Sweden—nay, for all Europe. The opportunities of Saint Birgitta's day have returned and to grasp them a Leader is at hand. STUDENT

### A Life Theosophical

SOME years ago the life and work of Mistress Dorothy Wadham was referred to in these columns. The following, from *Unity*, is of special interest at this time when woman is doing so much along educational lines, and when the greatest and most far-reaching educational work known in centuries is now being inaugurated in England by a woman, Katherine Tingley, Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY throughout the world.

A curious account has recently been published of the work of a woman who was contemporary with Queen Elizabeth, and to whose strong hand, clear head and warm heart the University of Oxford owes one of its noble colleges.

Dorothy Wadham was the daughter of Sir William Petre and was born in 1534. Before she was twenty she married Nicholas Wadham. They lived a long, quiet country life. On his death she was seventy-five years old, and his will left her residuary legatee, "upon special trust reposed in her that she will bestow such sums as come to her to such uses as I have requested her, and she hath assented thereunto."

Within six weeks of her husband's death Dorothy Wadham began the task they had together planned. At seventy-five years of age she set herself to found, build and govern a new college for the University of Oxford.

Land was bought for six hundred pounds. The buildings consisted of chambers, hall, library and chapel. Four years sufficed to complete them, and Wadham College remains today one of the most beautiful groups of buildings in beautiful Oxford.

The residents in the college and recipients of the bounty of the foundress were a warden, fifteen fellows, fifteen scholars, two chaplains and two clerks. By way of servants there were two cooks, two butlers, a manciple, a janitor, and a barber who bore the dignified title of the "Barbitonsor." Every one of these men was appointed to his place by Dorothy Wadham. She turned over to their support her whole fortune, reserving only an annuity of two hundred pounds.

The constitution of the college was written by her. She claimed and used the right to fill all vacancies. Her knowledge of every detail of the life of the place was marvelous, although she apparently never visited it. She decreed the length of the "disputations" and the hour for "supping," selected the cook and determined who should succeed him on his death. Long absences from the college were forbidden by her, and even the quarters which were to be occupied by the chaplains—"the two chambers on the right side of the gate that hath but one study a peece"—she personally selected.

Only nine years of life remained to Dorothy Wadham after her husband's death. She died in 1618 and was buried in Ilminster church. Her faithful servant ordered "mourning gowns for all the Fellowes and Scollers of the Colledge," and contributed twenty pounds for the better enlarging of the funeral feast. So, rich in years and in honors, Dorothy Wadham sleeps, having accomplished in the nine years before she was eighty-four a work of beneficence which shall last as long as English scholarship endures.

After reading this let no woman hereafter say "I am old; therefore my duties to humanity no longer claim me. I would live selfishly, quenching, not feeding, my soul's light." Nay—the sunset time might be the golden time of every life.

STUDENT

### Woman and the Stage

IN a recent number of the *Theater Magazine* Archie Bell writes as follows. H. H.

Woman has done more for the theater than any other single force. The theater has done more for woman than any other institution.

These are broad statements; but a glance at the facts in the case will prove them to be sound. . . . One forgets that four centuries ago woman had no connexion with the theater, on the stage or in the audience; today, after a short period, as time moves, she is the predominant factor in the playhouse, and without her the institution would suddenly crumble to decay.

Woman found the theater a house for coarse jesting and a rendezvous for men who today go to the bar-room for a similar purpose. She lifted it to its rightful place and established or re-established acting as an art beside painting, sculpture and poesy. She cleansed it and, unwilling to let it go its own way, thereafter she cast her own fortune with it and became the chief factor in its evolution.

It is but a little time since Shakespeare lived and

Lomaland Photo. and Engraving Dept.

TYPICAL DWELLING OF THE COUNTRYSIDE  
NOT FAR FROM KATHERINE TINGLEY'S NEW RĀJA YOGA CENTER  
AT VISINGSÖ IN SWEDEN

wrote his immortal dramas, yet the bard never saw one of his female characters enacted by a woman. The Portias, Juliets, Desdemonas and Ophelias of his time were boys—some of them forty years of age—and one old chronicler tells us that real kings were sometimes kept waiting for the performance to begin because the stage queens were delayed in shaving. Shakespeare wrote for an audience of men, hence the plausibility of the contention that Shylock and Hamlet were conceived and first executed as characters of broad comedy, quite bereft of all the philosophical and psychological grandeur with which time has encompassed them.

The rôle of Juliet, for instance, is full of coarse retorts and vulgarities that might have been highly diverting to the wine-flushed crowd that heard her (him) talking from the balcony. Woman became Juliet and the world saw reflected in her character all the beautiful and sacred traits of feminine grace and modesty. This evolution of the Italian maiden is fairly typical of what has resulted from the appearance of woman on the stage and her keener perceptions at work in the audience.

There has been a full compensation for her mission, however, and if she has raised the status of the playhouses to its present high plane, she has derived equal benefit for her labors. Today the author (if he chance to be a man) thinks first of the woman in his audience and aims to please her. His second thought is of the female characters in his play. . . .

On the stage the question of "woman's rights" is *passé* and seldom mentioned. It is generally conceded that she has attained a full sway and a crusade for "men's rights" in the plays of the day would

be as apropos as the crusades that are now conducted with vigor by the opposite sex in other channels of life. The reigning favorites of the day could be counted on the ten fingers, if only male actors were to be named. Woman is predominant in influence and far in the majority in numbers.

### Jottings and Doings

THE harp that belonged to the lovely Empress Josephine is chief among the many objects of interest in the valuable historical collection gathered at Malmaison, Josephine's château near Paris. It is surmounted by a gilt imperial eagle, bears on its mahogany sides three bronze bas-reliefs representing Apollo, Minerva, and Harmony. Minerva holds a shield bearing the letter "J" for Josephine.

Beautiful Malmaison is owned by the French people who cherish it for Josephine's sake. It has been restored almost to its original appearance and is the museum for a rare collection of beautiful objects of great historical interest.

The Empress Josephine is one of those noble characters in history who live in the heart; whose memory is perennially fresh, not alone in France but the world over. Courage, loyalty, womanly dignity and sweetness were combined in her, and the great injustice which she bore with truly saintlike patience lifts her above the level even of great ones and thrones her as Empress in a higher sense than did the title which she bore. H.

PATRIOTIC Americans in Paris are interesting themselves in the purchase of a celebrated house recently offered for sale there. On account of its association with the early history of the United States, through one of Columbia's most splendid sons, it is hoped to procure the property and perpetuate it as a museum or American Club. The house was built by Benjamin Franklin and occupied by him during part of his residence in Paris. It is situated near the Champs Elysées and is marked by a medallion bearing the portrait and name of its original illustrious owner.

Another interesting association and one which links this house to France as well as to America is the fact that it was for a time the home of Napoleon and Josephine in those happier days before the "Little General" had become the mighty emperor. STUDENT

Nearly three hundred delegates present at the recent convention of the Illinois Federation of Women's Clubs heard from Mrs. Adlai Stevenson, wife of the ex-vice-president, the "humane" side of the race suicide argument.

"There is no thoughtful woman in America," said Mrs. Stevenson, "who has not been more than startled by the appeal for larger families. While this appeal has been most urgent, I do not recall that there has been one word in reference to the health or life of the mother, nor has the ability of the mother, physically, mentally, morally, spiritually, or financially, to rear children, been touched upon.

The question should not be how many children, but their condition and what kind of children they will make. This plea for the little ones, that some thought should be given to prolonging the life of the mother and thus protect the babes, should occupy first place in the work of mother's clubs. The size of the family is of less importance."—*Exchange*

# OUR YOUNG FOLK

## Sweden in Old Times

**S**WEDEN may be studied with interest for many reasons. We find there a small people, living in the same place for at least six thousand years according to modern historians; many signs pointing to a time far beyond this. It has never lost its independence during this time, though for centuries in almost constant conflict with most of its mightier neighbors. More remarkable still, there are no signs of decay, so usual among old nations; always in time of danger there has appeared a man being a born leader, who has carried his people through their trials, leaving them with fresh courage, enthusiasm and energy for new tasks. It has its unique place among the European nations. Surely there must be a great, strong soul behind the people, guarding it through the centuries for some special task in the future. May it be that this is the time when its soul will be able to manifest itself in order to show the true light of the ages to European nations?

Old traditions speak of Svithjod—its old name—as the home for the people from time immemorial, when the Gods still appeared among them always when required. The common belief up to the Viking period was, it seems, that Odin reincarnated as king at critical times. In one of these incarnations he came from the East at the head of a fresh tribe and settled in the midst of the country, where at Upsala, which means literally “the high halls,” he established a seat of worship. The old tribes recognized him as chief priest and king, and he ruled for a long time and brought new life to the whole people.

The fully known history of Sweden begins unusually late. The recorders among the Scandinavians were the Icelanders, who stood in closer relations to Norwegians and Danes than to the Swedes.

We know there existed a trade in amber with the countries south of the Baltic and down to the Mediterranean, two thousand years B. C. The tools and weapons of stone, and later of bronze are of high artistic skill, and many mounds and stone-works prove that a high degree of culture existed.

Not until 700 A. D., however, can we trace events and persons with certainty. It was a time of expansion. The inhabitants of the North were roaming over the seas and countries of Europe and even America as Vikings. We find the Swedes in Russia, establishing a new culture and gathering the tribes together under the Swedish Rurik dynasty. In Byzantium we find them as the bodyguard of the emperor, and in all Mediterranean countries are many traces of their expeditions. In Finland a numerous Swedish population had been settled for some thousands of years, and their communication with their native country was now very lively.

In this way the Swedes came in contact with Christianity and brought home its new influences. Christian monks began their work in the country. It was a transition period of great interest, lasting four hundred years, until in

A SWEDISH GIRL

## THREE OLD SAWS

Lucy Larcom

**I**F the world seems cold to you,  
Kindle fires to warm it!  
Let their comfort hide from view  
Winters that deform it.  
Hearts as frozen as your own  
To that radiance gather:  
You will soon forget to moan  
“Ah! the cheerless weather!”

If the world's a wilderness,  
Go, build houses in it!  
Will it help your loneliness  
On the winds to din it?  
Raise a hut, however, slight;  
Weeds and brambles smother;  
And to roof and meal invite  
Some forlorn brother.

If the world's a vale of tears,  
Smile, till rainbows span it!  
Breathe the love that life endears,  
Clear of clouds to fan it!  
Of your gladness lend a gleam  
Unto souls that shiver;  
Show them how dark Sorrow's stream  
Blends with Hope's bright river!

1248 Christianity and the Roman Church were fully recognized.

What struck most foreign people, when meeting the sons of the North, was their vigor and abundant vitality, their royal stature and beauty, their openness of mind, perfect honesty and reliability, their disregard of comfort, pain and death. Like healthy children they shrank from all that was dishonest or false. When fighting for something they considered just, never did they hesitate for a moment to count the enemies or their own host; they began at once under the spell of song and in the conviction that their true purpose must make their strength irresistible.

This state of mind was the result of their belief in the Gods as human ideals, more as wise leaders and comrades than as Gods in our conception of the word. And they considered themselves as descendants of these Gods, with inherent godlike qualities.

In a strict sense there was only one class

of people, the free, independent “odal” peasants, who elected kings and enacted laws on the yearly meetings at Upsala in connexion with the great sacrifices to Odin. Each of these peasants was considered king of his domain and family, and his tribute to the common king was for many, many years a voluntary gift.

In reality there were also slaves, mostly captives from the Viking expeditions. They did all the harder work, but were generally well treated. Sometimes we find them taken in as free members of the family. And the law was, that if either father or mother of a child was free, then the child was free. The high-minded Swedes could not allow the usual kind of slavery in these times; and it was prohibited entirely by the law in 1335, without any sign of resistance.

A nobility was also formed in time and consisted of the royal families, all who served under the king, and some of the mightiest peasant families. For a long time it was, however, considered more honorable to belong to one of the independent, original families.

Woman had a high and free position. Her counsel was always asked at important crises, and even her full-grown sons listened with deep respect to her words. She acted as physician. Sometimes we find the women fighting in battles with the same spirit as the men. The children had a thorough physical training and their minds were nourished by the songs of the skalds.

And now that Râja Yoga has been brought to Sweden, all the seeds of greatness that lie in young Swedish hearts will be quickened, and the glory and strength that was hers in the past will again be put forth, this time even more nobly, in behalf of Humanity. STUDENT

## Facts Worth Knowing

THERE is a project in hand in Louisiana to give lumber some chemical treatment that will make the wood used in building last much longer. The Forest Service is going to undertake to devise what the treatment shall be.

THE mountain sheep's hoofs have thick rubber-like cushions, very elastic, and it is upon these cushions that these sheep alight when they make a jump of six or eight feet over a precipice. They have been known to leap twenty feet, jumping up and running off at once, and easily escaping the hunter's dogs who cannot jump as do the sheep, without injury.

THERE is but one bird choir in the world that has been trained to sing as are boys and girls. It is in Florence, Italy, and this is what is said about it:

The birds—300 in number—are all in separate cages, which are arranged in rows on both sides of the altar. The leader is a girl who has had the birds under her own personal training for over two years. The whole of the musical part of the service is most exquisitely rendered by them. The leader starts each hymn by whistling the first few notes, and then the birds take it up, in obedience to the movement of the instructor's hand.

# THE CHILDREN'S HOUR

## Franz Liszt

### DEAR CHILDREN:

Franz Liszt has been called the King of Pianists and he was one of the most wonderful players who ever lived. By the magic of his touch upon the keyboard he held his listeners spell-bound and made them feel the deep joy of beautiful music.

He was born in the land of the Gypsies, that wild and beautiful country, Hungary, in 1811. His father was an officer in the service of his country and his mother was a kind and good woman. Little Franz spent his childhood in the beautiful village of Raiding surrounded by most wonderful scenery. His heart was always filled with love for his parents and the wild strange country about him. There were rugged mountains covered with gloomy forests, and from the country round about the Gypsies would come to the village and play their weird music and go through their strange dances.

The love for music early showed itself in this gifted boy. Whenever he heard music he stopped to listen and then tried to imitate it. Father Liszt did not at first wish his little son to study music so early, but the determined child was so anxious to learn that he could not be held back; so his father wisely decided to teach him as best he could. Franz must have been an unusually good boy, for his mother said he had none of the faults which so many children have and that he was always cheerful, loving, and obedient—very obedient. When Franz Liszt was grown up he said, in speaking of his childhood:

"How could I help being a good son when I had such a faithful and self-sacrificing mother." Yet in spite of this, the boy Franz must have had certain weaknesses in his nature which his mother did not realize, for they developed as he grew older and affected his life as a man.

Little Franz was soon given school lessons also, but before he could spell he was trying to compose music. Upon the wall in his home there was a picture of the great Beethoven and the child musician said he wished to become a man like him. Franz was so fond of practising on the piano that he did not spend as much time playing games as most boys do. He gave a public concert when only nine years old and played so marvelously well that some Hungarian noblemen offered to pay the expenses of his musical education.

Then his parents decided to take their wonderful boy to Vienna to study. Every one who knew Franz felt sure that he would succeed because he had so much determination and will-power. He would never give up when he felt it his duty to perform some task, and once when he was suddenly taken very ill with a fever at a concert, he played in spite of it, and most beautifully, to the astonishment of his friends. He showed his resolute nature when he was very little by playing with his *nose* some of the notes which he could not reach with his small hands!

It is interesting to know, dear children, that when young Franz went to Vienna he took

## THE WINDOW

Alfred Tennyson

THE frost is here,  
And fuel is dear,  
And woods are sear,  
And fires burn clear,  
And frost is here  
And has bitten the heel of the going year.

Bite, frost, bite,  
You roll away from the light  
The blue wood-louse and the plump dormouse,  
And the bees are stilled and the flies are killed  
And you bite far into the heart of the house,  
But not into mine.

Bite, frost, bite,  
The woods are all the searer,  
The fuel is all the dearer,  
The fires are all the clearer,  
My spring is all the nearer,  
You have bitten into the heart of the earth,  
But not into mine.

lessons of Czerny, and Czerny was a pupil of Beethoven. Later on Franz Liszt taught many of our great pianists who are now living, so you see right down to the present day we have the influence of Beethoven's teaching.

It is said that once when Franz played at a concert Beethoven was in the audience, and was so carried away with the tiny lad's masterful performance that he went on the stage and kissed him. Although this little genius was very much praised and honored by many great people he did not become spoiled as a child. He proved to be a dutiful son, for when his father died, although Franz was only sixteen, he lovingly cared for his mother, and he provided for her as long as she lived. He sold his dearly loved piano to pay his father's debts and was ever ready to sacrifice his own interests for the good of others.

Once some people collected some money to build a monument of Franz Liszt in honor of his genius, but what do you suppose this noble musician did when he heard of it? He insisted that the money should be given to a poor young sculptor instead. At another time, however, he himself caused a monument to be erected to Beethoven and gave a large share of the money towards it himself. Do you not think, dear children, this showed a real Brotherhood spirit, and that Franz Liszt did not always think of himself first and his own honors but loved best to help others?

He accepted the position of director of the Court Theater at Weimar in order to help young composers who were then unknown, by bringing out their works. One of those whom he greatly aided was Richard Wagner, and it is said that Wagner could never have succeeded in producing his grand music if it had not been for Franz Liszt's untiring service for him. A true and lasting friendship grew up between these two great men.

Franz always put his whole heart and soul into his work and inspired the musicians under his direction to bring out the true meaning and beauty of the music. He was great not only as a player, teacher, conductor, and composer, but he was also a fine writer.

When he was quite a young man he realized that his general education outside of music had been neglected, so he worked very hard to improve in other studies. On this account he was able, later on, to write useful books about music and other subjects. As a writer of transcriptions he was rarely gifted, and some of his best musical work was done in this way.

Now how many children who read the CENTURY PATH know what a *transcription* is? When one musician takes a song or other composition written by another and arranges it for another instrument than that it was first intended for, it becomes a *transcription*. This was what Franz Liszt often did. Some of the gypsy songs he wrote again as piano pieces called rhapsodies, and many of the great songs of Schubert and other composers he arranged for the piano in the most beautiful and masterly way.

Franz Liszt seemed to have been born under a bright star for he was always successful in everything that he undertook. On his concert tours he met with almost unheard-of enthusiasm and honors, and won all hearts by his superb playing. His fame as a pianist has never been equaled, but he did not care for fame and in his later years devoted himself to composing and teaching. The money which he earned he gave to those who needed help.

He was always giving. His life is filled with many beautiful, noble deeds of service for his fellow-men; yet he could have done much *more* for Humanity if he had not failed in *some* ways to live up to the best that was in him. You must remember, dear children, in studying the lives of great musicians, that although they had wonderful talents and many fine qualities, few of them had rounded-out characters. They did not have the advantage of Rāja Yoga training, and were not taught to overcome their faults when they were little children.

Franz Liszt was one who had not learned *self-control* in all things; but we will not dwell on his failings for he had many noble traits and did the best he knew how for music and to help others. For the good work which he accomplished he deserves our gratitude.

A RĀJA YOGA MUSIC TEACHER

## Devoted Mrs. Robin

NOT long ago a car was side-tracked on one of the railroads near a big city in Connecticut, and something very unusual happened there. A family of robins made their home in a cosy corner of the unused car and had a fine family of birdies to be fed and cared for—when one day the car suddenly started off with the robins on a railroad trip, much to their mother's astonishment. But she flew swiftly after the car and almost kept up with it. She found her babies, fed them, and then flew home after the car as it returned. Once again it started, and again returned, and Mrs. Robin flew the eighteen miles four times, keeping track of her babies and feeding them. She must have been tired and bewildered, but she would not for that desert her little ones. E. N.

## LAST SUNDAY AT ISIS THEATER

Entire Program in Charge of Râja Yoga Pupils

THE announcement that the program at the Isis Theater on Sunday evening would be entirely in charge of the younger students of the Râja Yoga Academy at Point Loma drew a large audience which completely filled the theater.

Surely there is some strange spell which attracts the public on these occasions and charms them into a silent and rapt attention to the music, the songs and the speeches presented by the children. One can feel that the whole large audience is woven into a bond of sympathetic feeling, and that it is not the children alone who produce speech and music, but that there is also something in the heart of every listener which speaks and sings in harmony with them. And those who have felt this once on these children's evenings come again and again and bring their children with them, moved by the impulse of that within which is always reaching forth for harmony and beauty.

A program containing 14 numbers was given on this occasion, each number receiving well-deserved applause. The Râja Yoga string quartet, the songs of the tiny tots, the solos by young musicians on piano, clarinet, trombone, and violin, and the admirable singing of the girls' special class gave great pleasure to the vast audience.

From Master Montague Machell's paper we quote the following:

"When such festivals as Thanksgiving, Christmas, and Easter come around, we naturally go back in thought to the event which gave them birth. It is well that we should ever bear in mind these events and their meaning to humanity, for they are all land-marks in the world's history.

"But does the joy of Christmas merely come from knowing that a great teacher named Christ was born on that day? And does the joy of Thanksgiving come only from the knowledge of its history? Namely, that pilgrim forefathers were intending to make this day one of fasting, owing to the scarcity of provisions, when a ship laden with stores from the mother country arrived and turned the occasion into one of thanksgiving?

"To those whose hearts are not yet aroused to the deeper meaning of such an occasion as this, it may be the case. But Râja Yoga gives to the world a larger conception of such festivals.

"Through the power of Râja Yoga we are learning to celebrate the birthday of the Christ within each one of us in our joyous Christmas festivals. And at Thanksgiving time we welcome another birthday for humanity—the birthday of the greater Thanksgiving in the hearts of all mankind.

"Seen in this light Thanksgiving day brings with it a joy that is boundless as time. Truly, if we can all feel this fountain of Gratitude

and love for humanity springing up in our hearts we shall at once realize what is meant by Thanksgiving. It is a day on which are stirred into life those mighty forces Gratitude, and Unselfishness.

"There are many who may say 'this gratitude and unselfishness are very beautiful, but how can I express my gratitude and my unselfishness? I cannot afford to give presents to my friends, I have no means of showing my gratitude.' Of all mistakes which we make in life, probably none are so serious as the idea that our best feelings for others can be measured in dollars and cents. There is no man or woman on this earth who has 'no means of showing gratitude.' Real gratitude and real unselfishness are best shown in the little acts of every-day life.

"The little acts of kindness, consideration, and mutual forbearance are the gifts which gold can never buy. They are worth more than all the gifts of money we could possibly give. Let us celebrate our Thanksgiving by clearing the gardens of our minds, by removing some of the old weeds which we have been watering and nourishing for so long. Many of us have become so hopelessly confused as to what are the real things of life that could we really see our mental gardens as they really are, we should find some utterly worthless weeds grown to prodigious size, while our best plants were hidden beneath the dense mass of foliage.

"But we need not be discouraged, the right time to begin work is at the present moment—NOW!

Do noble deeds, not dream them all day long,  
And so make Life, Death, and the vast Forever,  
One grand sweet song.

"Truly, the hearts of the Râja Yoga children are full tonight, for we feel that we have a message which will go out all over the world. A message which will touch the hearts of those in the shadow of the prison, those who have least faith in their higher selves. And receiving our message, they will be touched with a new hope; their hearts will glow with a greater love for their brothers—they will feel the birth of the greater thankfulness!"

Margaret Hanson's paper was as follows:

"It gives me much pleasure tonight to tell you about the Lotus children of Europe.

"I was very fortunate in being chosen from the Râja Yoga children at Point Loma to accompany Mrs. Katherine Tingley on her European tour. It was a great privilege, and I have found, that although I am a young girl, we can all help.

"One of the first places we visited was the home of Mrs. Tingley's childhood, in Newburyport, Massachusetts. She intends to start a school there. The site is very beautiful, and overlooks the Merrimac river. There are also many beautiful woods around it.

"We also visited the Lotus children of England and Sweden, where Theosophical centers

will be started. One will be in the Royal Forest near London, which is of historic value, having been set apart as a Royal hunting-ground by William the Conqueror. History becomes so real when one is actually in these places where the makers of history once lived.

"The second site for a Râja Yoga Academy is on the island of Visingsö in Sweden, which has been Royal property for generations. Both spots are ideal. There are many Lotus Groups in Sweden, where this great work is being carried on. We stayed there several weeks.

"You who have heard Mrs. Tingley lecture from this stage will appreciate the enthusiasm that those Swedish people expressed. The tones of her voice and her gestures all helped the people to understand the message of Theosophy that she brought to them.

"The Royal Opera House in Stockholm was filled with eager and attentive listeners.

"She spoke to large audiences in all the towns she visited. I felt so sorry when I saw the hundreds of people who were unable to gain admittance because of the crowded theaters. There were tears in many eyes. The ring in her voice touched many hearts.

"It was a constant regret to Mrs. Tingley that she was unable to speak the Swedish language, but her words were faithfully interpreted. The Lotus children of Stockholm had prepared an entertainment for Mrs. Tingley and her party.

"The children were all dressed in uniform. A representative of each class read a scroll in English which they presented to her, and the little ones had action songs. The boys performed many calisthenic exercises, and were proficient in fencing.

"We also visited the 'Falls of Trollhattan' which are the most beautiful in Sweden.

"The peasants still wear their native costumes in some parts of the country. We were in one city on the 'Children's Day.' The children dress in their native costumes or those of other countries, and go about the city with small money-boxes to collect pennies which they use to help the sick children to go out into the country. In the middle of the day all the children paraded through the town, and were over an hour passing the window. They have two festivals, one in summer and one in winter.

"In England the children are carrying on the work in the same harmonious way, doing their part to hold the cable-tow of love which binds all nations. As soon as it was known that a school was to be started in England, applications started to come in from all parts of the world, even from South Africa.

"Everywhere that Mrs. Tingley and her party went, they were received with great enthusiasm. Although I visited many beautiful places, yet to my mind, my dear home in Lomaland is the most beautiful. There many children are being cared for and educated by loving hearts. We are looking forward with great joy to Mrs. Tingley's return." OBSERVER

# Art Music Literature and the Drama

## The Environs of Paris

THE environs of Paris are wonderfully beautiful. In half an hour by train can be reached deep forests, parks with ruins of old châteaux, palaces with their stately gardens and superb fountains. These palaces—some of which are now in ruins, having been destroyed during the French Revolution—were at successive periods royal residences, and many of the most significant events of French history were enacted in these old courts of France. Some of the palaces, viz., Versailles, the Trianons, St. Germain, Fontainebleau, are in good preservation, their gilded rooms, gardens and parks kept in order as show places and open to visitors. Weeks in summer can be spent making daily excursions from Paris to the neighboring places of interest; to St. Cloud whose hilltop commands a sweeping view of the Seine, Paris in the distance, with its domes and towers, its triumphal arches and columns, and the dense foliage of the Bois de Boulogne; to the old Château of Fontainebleau with its great forest covering thousands of acres and fringed by the villages so beloved by artists; to Ville d'Aubray where Millet lived and where one sees the picturesque little lakes and great trees he loved to put into his inimitable landscapes; the great park at Rambouillet which far surpasses the gardens of Versailles in loveliness.

Versailles swarms with visitors in spring and summer—especially on the first Sunday of every month when excursion trains run every five minutes from Paris to accommodate the vast crowds who go to see the playing of the Grandes Eaux, the jets of which are more than seventy feet in height. The lawns and terraces which surround the palace are filled with fountains, statues and vases. These gardens were laid out by Lenôtre, the most famous landscape gardener of his time; and, as has been said of him, he practised geometry, architecture and sculpture upon lawns, trees and ponds.

Following the good-natured, holiday crowd from fountain to fountain, which play successively, one goes back in thought to that frightful year of 1789 and sees in imagination the gardens filled with a surging mob of reckless, frantic men and women, and the gilded salons of the palace sacked and defiled—the outward sign that the whole structure of French society was tottering to ruin. The Palace, a dream of splendor and luxury, in the construction of which “le Grand Monarque” extrava-

gantly lavished millions from the royal treasury, was the center of open corruption, license and vice during his reign and that of his successor, the profligate Louis XV. Its magnificent galleries bring up so many distressing visions that it is with a feeling of relief that we leave it to wander through the miniature palace of the Petit Trianon embowered in gardens and groves. Though this little palace was built by Louis XV for Madame du Barry, it seems to hold only memories of Marie Antoinette; for this was her favorite home and here were spent the happiest days in the sor-

## FRANCE

From *The Litany of Nations*, Swinburne

AM she that was thy sign and standard-bearer,  
Thy voice and cry,  
She that washed thee with her blood and left thee fairer,  
The same was I.  
Were not these the hands that raised thee fallen and fed thee,  
These hands defiled?  
Was not I thy tongue that spake, thine eye that led thee,  
Not I thy child?  
By the darkness on our dreams, and the dead errors  
Of dead times near us,  
By the hopes that hang around thee, and the terrors,  
(Cho.) O mother, hear us.

rowful life of the unfortunate Queen. Here one sees the Temple of Love and the cottages of the “hamlet” bordering the little lake (see illustration) where the Queen with her court companions tried to play at living the simple life.

So short and ill-starred was the life of this beautiful Queen, so cruelly were her thoughtless follies translated in that cruel time into vices and crimes! One who believes in Eternal Justice cannot but feel that even envying Nature, which witnessed the tragedies of a century ago, felt something of the grief and despair of those days and is but waiting, waiting, like some sentient thing, to blossom into new and more radiant perfection as a brighter life dawns for France. STUDENT TRAVELER

## Living Words

“I DO not see,” says Mr. Arthur Symonds, “why people should ever break silence upon the stage except to speak poetry.”

To which a prominent New York critic replies that poetry is now out of date upon the stage. We can say in prose all that we want to say.

Which seems to show a defective conception of the drama. The great artist does not simply copy a bit of nature; he paints *more* than is visibly there in order that we may appreciate what is there. A musician does not merely

echo the audible sounds of nature; he selects, elaborates and orders. If drama-writing is to be an art, it must do the same. It must select its bit of scenery (the plot), and then must give it the setting of expression, in words chosen from *among* those used by the ordinary man, but selected, elaborated and ordered so as to embody the feeling perfectly. Not only must selection and ordering and accentuation be made, of events—that is the plot; but of the expressions of ordinary communication; and that is poetry.

The poetic form is

the necessary condition for charging the words with their full volume of feeling. And we are told that we no longer want that! Which seems to show that we have not, now, the necessary volume lying latent, to which appeal could be made. We require of our dramatists a substitute—rush of action; otherwise we cannot keep up our attention. Indeed the critic admits that Shakespeare owes his remaining popularity not to his intense and vital line, with all its possibilities to the great actor; but to his plot, his action.

In all this there is something to think of, some lesson, if we remember that the more infantile and the more barbaric is consciousness the less could it respond to an appeal for subtlety and complexity—that is civilization—of feeling; the more would it require a show, a vivid spectacle of something doing, an appeal to quite primitive and elementary emotions.

But perhaps the people would gladly have the drama no mere mirror and realistic photograph, would gladly be led inward to their own latent depths, if there were true poet-dramatists who could write what is wanted, and if there were actors who could use words as words of poetry should be used. Theosophy, with its rare insights, its wealth of knowledge, its treasury of wisdom, finds in the drama rare opportunities. The day of the sensational in drama and poetry is passing. STUDENT

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l   O f f i c e   P o i n t   L o m a   C a l i f o r n i a

The Headquarters of the Organization at Point Loma with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West

(Translated from *Karlakrona Veckoblad*,  
October 8, 1907)

**D**URING the last weeks Mrs. Katherine Tingley, Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY throughout the world has attracted the marked attention of the Swedish people, and to judge from the press reports of her lectures, has met with general sympathy. This attitude has no doubt been to some extent the result of the sympathy which she herself has expressed to Sweden and the Swedes. Katherine Tingley speaks most enthusiastically of the nobility of the Swedish national character and of the work which our nation will some day do in regard to other nations, helping to lift them from their present depths of materialism and spiritual degradation. The Swedes, Katherine Tingley says, are now awaking from a spiritual sleep which has been holding them for centuries.

One of the main purposes of Katherine Tingley's present European tour was to visit Sweden and further her work in this country, and also carry out new plans which she has for her work in England, Ireland, Germany and Holland. In her journey through Sweden Katherine Tingley has taken especial interest in the historical places she has visited. After her stay at Visingsö her route included Alvastra, with its old ruin; Vadstena, so full of recollections of the time of Birgitta; Upsala, Falun, and Mora, as well as other places connected with our principal historical events.

As Leader of the Theosophical Movement Katherine Tingley has made several journeys which she names "Crusades." In 1896 she and several members of her staff made such a crusade around the world, when the colors of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY were planted in every country from England to New Zealand, and the Samoan Islands, with their intelligent people. The motto for this crusade was, "Truth, Light, and Liberation to Discouraged Humanity." Ancient sites in Ireland and England, the great Pyramids of Egypt, the temple ruins at Eleusis in Greece, and the rock-cut temples on the Island of Elephanta in India, were visited. After her return to America she established the School for the Revival of the Lost Mysteries of Antiquity at Point Loma. In this School the true nature of man is taught as in ancient times in the mysteries of Egypt and Greece, and from there teachers will go out all over the world; teachers who, having obtained the mastery over themselves, will be able to teach the people the difficult art of self-knowledge and self-control.

Few are yet able to understand the unparalleled significance of this School, says one of Katherine Tingley's Swedish friends. Yet no one can deny the fact that our civilization has reached a point which it cannot pass without some new fructifying ideas,

## MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

and few will contradict the statement that the central one among these must be that of Universal Brotherhood. The work that Katherine Tingley is doing through her Rāja Yoga system is to educate a new generation with new possibilities of realizing this high ideal towards which the primitive religion and culture of our forefathers aimed.

Such a new generation can only be brought up through a special and systematic training of the children. By giving them in their early days a knowledge of their divine nature and its counterpart the lower nature, and by helping them to conquer the latter and thus bring the two natures into harmony can this end be attained. Already the Rāja Yoga educational system is being taught and realized at Point Loma, California, and at Santiago and Pinar del Rio, in Cuba, and new schools are being erected on San Juan Hill, Cuba, in the New Forest, England, and in other places, and soon this system will also be in full operation at the Rāja Yoga School on Visingsö here in Sweden.

The Crusade in Sweden is now nearly finished, after her visit here and to Malmö. It is, however, probable that Katherine Tingley will soon return because she has so many strong ties of friendship with Sweden and the Swedes which will last always in the future.

## Mrs. Tingley in Malmö

(Translated from the *Skanska Aftonbladet*, Malmö,  
October, 16, 1907)

**K**ATHERINE TINGLEY, Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, lectured last evening in the Masonic Hall on "The Message of Theosophy." The hall was completely filled and the audience during the whole time listened with rapt attention. A great number unable to get seats were turned away.

Mrs. Tingley's lecture was full of life, her voice rings with a singular charm and her gestures are peculiarly eloquent. She expressed her regret for being unable to speak in the Swedish language, as she well knew it would be impossible for her to receive the full understanding she was so desirous of having. After her extensive travels through the country she had become greatly interested in Sweden. She held the Swedish people in high esteem and predicted a great future for them by reason of their distinctive traits of character.

She pointed out how disturbance and dissatisfaction reigned everywhere, even here in Sweden.

"This," she said, "was due to the fact that the true conception of man's nature was lacking; men had no certain knowledge of their divine nature, and all the natural high possibilities in everyone. Theosophy comes with the great message that man can fashion his own life, that he can direct the evolution of his own character, and by his own free will live a high and grand life by rendering noble service to all that lives. Theosophy

declares that the real essence of man is immortal and divine.

"Theosophy was brought to the West by H. P. Blavatsky, but she always declared that it was man's inheritance from the most ancient times, that it had always existed even though at times it had disappeared from the sight of men.

"Unfortunately, however," Mrs. Tingley said, "Theosophy has been misinterpreted and the original statement of its teachings by H. P. Blavatsky has been misrepresented by certain persons, who still dared to call themselves Theosophists without having any right to this name.

"It has now, however, reached the point," as the speaker had learned, "that a certain Mrs. Annie Besant has declared that a so-called Theosophical Society of which she is the guiding power, did not have any moral code." The speaker was astounded to hear this and was forced to draw a distinct line between that society and the Theosophical Movement she represented. "H. P. Blavatsky," she declared, "drew the line very clearly in regard to morals when referring to man in his higher and divine nature, though which he has knowledge in this field." No one can be astonished that Mrs. Tingley should protest in the name of Theosophy against such misrepresentation, namely, that the Theosophical Society had no moral code.

Then she spoke of death and showed how Theosophy gives a new hope and a new light on the question. "That which men call Death is not death," she said, "only a period of rest in order to enable the eternal man to take up his work once more where he left it in his last life. Theosophy gives courage and hope through the teaching of Reincarnation and shows that there is justice in life. Theosophy takes the teachings of Christ as true, that what a man sows he must and will reap life after life."

Mrs. Tingley declared that marriage was a sacred institution. She said: "A new and higher view of marriage will bring a new and purer race to be born on earth. The feeling of responsibility must be awakened and the realization of common interest among all men would give humanity a universal brotherhood."

She urged her audience to have courage to begin the study of Theosophy and step by step to live up to the Theosophical ideals.

Music followed the speech, which was interpreted by Mr. Torsten Hedlund from Gothenburg.

Today Mrs. Tingley starts for Paris.

**Mrs. Tingley leaves Sweden—Woman's League Started**  
(Translated from *Göteborgs Handels-och Sjöfarts-Tidning*,  
October 16, 1907)

THE Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, Mrs. Katherine Tingley, has now left Sweden via Malmö. After her visit here in Gothenburg, she made a journey around Sweden and also paid a short visit to Helsingfors and St. Petersburg.

A few days ago a Swedish branch of the International Woman's League was formed by Mrs. Tingley. It is a part of the International Brotherhood League, this in its turn being an integral part of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY.

This new League is a Swedish parallel of a similar League at Point Loma which has had great success in this work. Its purpose is to help men and women to realize the highest possibilities of their human nature and the nobility of their calling. The League has no creed, every member being required to show that tolerance for the opinions of others which he expects for his own. One of the aims of the League is also to give to home life a more elevated and sacred character and it declares that there exists in the higher nature of man a clear and distinct moral sense. It therefore protests against the belief that in nature there is no moral law, or the statement that Theosophy has no moral code.

The International Woman's League has four departments: the Isis Conservatory of Music and Drama; a literary department; a department for the study of the history of art, and all that will enable art to take its true position as a high educational factor in human life; and a department for practical humanitarian work.

**Mrs. Tingley Extends Tour of Old World**  
(From *Evening Tribune*, San Diego, November 16, 1907)

REPORTS from Europe are that Katherine Tingley has been greatly extending her tour. Everywhere in Sweden she has had phenomenal success. From Stockholm she made a brief visit to Helsingfors, Finland, where she lectured to a crowded house in the theater. She also visited St. Petersburg, returning again to Stockholm. From Sweden Mrs. Tingley went to Paris, and from there to Geneva. In all these places important work was done in connexion with the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY. The latest information is that she will remain in Geneva for a short time, directing a large propaganda work throughout Europe, with the help of several secretaries who are with her.

As soon as she has completed this special work she will again begin her public work in Germany, Holland and England, possibly also visiting Ireland, in all of which countries she has numerous Theosophical centers.

While in Sweden Mrs. Tingley made extensive preparations for her educational work and the establishment of a Rāja Yoga Academy on the island of Visingsö in Lake Vättern, and in answer to the report which was recently published in many of the newspapers throughout the United States, that the Swedish government had refused Mrs. Tingley permission to erect her school on the Island of Visingsö adjoining the Royal Forest, it should be explained that this was in regard to the form in which the application had been made which was not legal according to the Swedish law. This detail, however, has been remedied and the application presented in proper legal form so that the work of erecting this school will be begun in a very short time.

In every place visited by Mrs. Tingley many requests were made for another visit soon, and she has said that she expects to again go to Sweden next year.

A cablegram received this morning at Point Loma Homestead from Mrs. Tingley's secretary tells a word further of her movements. It says: "Katherine Tingley, on completion of her special propaganda work in Switzerland and France, now proceeds to Holland and Germany and will then make another visit to England."

## SONNET

James Russell Lowell

AS the broad ocean endlessly upheaveth,  
With the majestic beating of his heart,  
The mighty tides, whereof its rightful part  
Each sea-wide gulf and little weed receiveth---  
So, through his soul who earnestly believeth,  
Life from the universal Heart doth flow,  
Whereby some conquest of the eternal woe  
By instinct of God's nature he achieveth:  
A fuller pulse of this all-powerful Beauty  
Into the poet's gulf-like heart doth tide,  
And he more keenly feels the glorious duty  
Of serving Truth despised and crucified---  
Happy, unknowing sect or creed, to rest  
And feel God flow forever through his breast.

## Man---the Soul, not the Body

TO the minds of those who think upon the problems of life the query "what is man?" is sure to be presented again and again. If we take Paul's description of man we find him described as a compound of body, soul, and spirit. Without going into any deep analysis we may define the soul as the man himself with his will and power of choice; body as his covering of flesh with all the impulses and sensations which tend to pull him down and identify him more and more with material existence; spirit as the divine part, his highest nature.

One of the first tasks in life of a new-born child is to gain control of its physical body and senses. But with the usual modern methods of training and education, when the mind, as the instrument of the soul, has obtained possession and control of the body with its myriad sensations it may become so absorbed in experiencing the pleasures of physical existence, that the soul may forget its high calling and the reason of its entrance into earth-life. We know from observation that man often becomes so absorbed in the hurry and rush of modern life that he forgets altogether that there is anything but the struggle for place and power; or, on the contrary, he may be so weighed down by poverty or sickness that he forgets to look for the inner guide. Yet with mankind as a whole there has always remained a memory which, though oftentimes so faint that it exists but as a dim faith, has yet provided a sure anchorage in all ages. We find it expressed again and again in all the great religions of the world to which man clings because this faith-memory still lives within him and is an expression of the soul's real nature.

It may appear a paradox to say that men in general believe only what they have found from experience to be true, and may it not therefore be that their faith is, as said, the soul's memory, however distorted, of its true source and being.

It is a common belief in the Christian religion that the soul enters a higher life after death, but few speak of it as coming from a

higher life at birth. This teaching of Reincarnation as now again presented by Theosophy is one of the keys to the mystery of our life. The soul comes into earth-life in order to gain experience, and to do this it must gain for itself a fitting instrument. From this standpoint we can see why the body has sometimes been called the enemy of the soul. It may be mastered, and wisely used may become the means for the gaining of great knowledge and enlightenment. But on the contrary, unless we assert our true nature it will become our master and drag us down. Which of these it shall be, we ourselves have the power to decide.

It is step by step that we climb and gain the mastery, or it is step by step that we fall and become slaves. If we take pleasure in sensation and seek to renew it again and again, although for a time we may delude ourselves that we still have control, the day will come when we shall find that we have lost control and have become enslaved. Only those who have been through this experience can know the agony and struggle of again gaining self-mastery. Yet if man fails to fight, if he yields to that which has become an overmastering passion, he may reach a point where the soul can no longer find any answering chord in his nature. Such a picture is terrible, but it is nevertheless true that there are many soulless beings among us in the guise of men.

On the contrary, if we realise our true natures and dominate the animal nature, there is no height to which we may not climb. And not only so, but as we rise or fall are we helping on the whole of not only human but all terrestrial evolution, for the very matter of which our bodies are composed rises or falls in the scale of evolution as do we ourselves. As we live our lives now, so will be our opportunities in the future—opportunities for further self-knowledge and higher development, or if we neglect our opportunities now we shall find ourselves still further bound by the hundred cords of desire and passion.

## STUDENT

AND the person who revolves selfishly around himself as a center is in greater danger of delusion than any one else, for he has not the assistance that comes from being united in thought with all other sincere seekers. One may stand in a dark house where none of the objects can be distinguished and quite plainly see all that is illuminated outside; in the same way we can see from out of the blackness of our own house—our hearts—the objects now and then illuminated outside by the astral light; but we gain nothing. We must first dispel the inner darkness before trying to see into the darkness without; we must know ourselves before knowing things extraneous to ourselves.

This is not the road that seems easiest to students. Most of them find it far pleasanter, and, as they think, faster work, to look on all these outside allurements, and to cultivate all psychic senses, to the exclusion of real spiritual work.

The true road is plain and easy to find, it is so easy that very many would-be students miss it because they cannot believe it is so simple.

THERE is a dawn for every being, when once freed from illusion and ignorance by knowledge.—H. P. Blavatsky

### "ANIMI FIGURA"

John Addington Symonds

GODS fade; but God abides, and in man's heart  
Speaks with the clear, unconquerable cry  
Of energies and hopes that cannot die.  
We feel this sentient self the counterpart  
Of some self vaster than the star-girt sky.  
Yea, though our utterance falter: though no art  
By more than sign or symbol may impart  
This faith of faiths that lifts our courage high:  
Yet are there human duties, human needs,  
Love, charity, self-sacrifice, pure deeds,  
Tender affections, helpful service, war  
Waged against tyranny, fraud, suffering, crime:  
These, ever strengthening with the strength of time,  
Exalt man higher than fabled angels are. — *Selected*

### THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** In Theosophical literature the remarkable statement is made that the moon is the parent of our earth, instead of *vice versa*. Please give the main reasons for this assertion. I would like also to know what, according to Theosophy, is the relation between the other planets and their moons.

**Answer** The statement about the moon being the parent of the earth is one of those difficult matters that cannot be proved by a few quotations. It is a harmonious and integral portion of the whole theory of the universe as treated in Theosophical writings and requires a comprehensive understanding of it. Not only is the earth the successor of another deceased planet, but each of the other planets is governed by the same law. Very little is said in Theosophical teachings about the satellites of the exterior planets, Jupiter, Saturn, etc. The following, bearing on the question, occurs in *The Secret Doctrine*:

Why should Venus and Mercury have no satellites, and by what, when they exist, were they formed? Because, we say, science has only one key—the key of matter—to open the mysteries of nature withal, while occult philosophy has seven keys and explains that which science fails to see. Mercury and Venus have no satellites but they had "parents" just as the earth had. Both are far older than the Earth and, before the latter reaches her seventh Round, her mother Moon will have dissolved into thin air, as the "Moons" of the other planets have, or have not, as the case may be, since there are planets which have several moons—a mystery again which no Oedipus of astronomy has solved. . . .

"Mars has two satellites to which he has no right. Phobos, the supposed inner satellite, is no satellite at all. . . . Phobos keeps a too short periodic time, and therefore 'there must exist some defect in the mother idea of the theory,' as Faye justly observes."

If we wish for corroborations of such teachings of Theosophy as this of the earth's parentage, it is to be found in the fact that they explain a greater number of proved observations than any others, and that they fit into a place in the general plan—a plan which is coherent and rational. H. P. Blavatsky's Teachers, in advancing the philosophic views we are considering, while they have incontestable proofs of their truth, put them forward in such a way as to disarm criticism, for they were taught more as suggestions for thought to be worked out by the thinkers of the twentieth century, than as dogmas to be accepted on personal authority. They knew that as science made progress new facts would come to light which nothing else could explain but Theosophy. We are seeing this exemplified constantly in psychology and other branches of re-

search, but here are a few illustrations of the effects of the lunar connexion which have never received rational, or perhaps any, explanation from science of today, but which the Theosophical hypothesis clears up without difficulty. Such things as the mysterious influence of the seven-day time periods of the moon upon many vital functions such as crises in diseases and other periodic manifestations, the excitement of susceptible persons at new or full moon, the metamorphoses and reproduction of insects and the habits of littoral fauna, the effect of exposing meat to, or sleeping under, the bright moonlight of the tropics, are not explained by science. If the questioner will turn to the CENTURY PATH for September 29, 1907, he will find a record of some new observations of biologists upon the extraordinary behavior of the Palolo worm in the Gulf of Mexico, etc., which prove the undeniable effect of the rays of the moon at one particular period!

From an astronomical standpoint the moon shows some anomalous characteristics as compared with the satellites of other planets, particularly regarding its motion and its great size in comparison with its primary, the earth. These are consistent with the Theosophical hypothesis, but the current theories of astronomy do not deal with them; they are not touched upon in the text-books, though an occasional astronomical lecturer has noticed the existence of these peculiarities. Professor Ledger in a course of lectures delivered in the City of London a few years ago pointed out that in most things the moon appeared more like a sister planet than a satellite of the earth. This is the nearest approach that a leading astronomer has made to the Theosophical position, but we may soon expect a change.

Besides discussing the question from the scientific standpoint H. P. Blavatsky gives a large number of references, in *The Secret Doctrine* and elsewhere, to the subject, showing it was included in the world's mythologies under a slight veil. Theosophy, in short, treats the earth's origin from the moon in the same spirit that any true scientific student would endeavor to prove a theory his teachers told him was true but which he must prove by his own exertions. He would seek for all the facts bearing upon the point at issue, however unlikely they seemed taken singly, or however insignificant, and if no better hypothesis covered the ground after he had fully examined the case, and if it fitted the place waiting for it, he would accept it, at least provisionally; and if he found, as we are finding day by day, that newer discoveries confirmed what his teachers had told him at the outset, the soundness of his position would be assured.

Modern Science does not take into account a large number of factors in this and many other investigations, owing to its materialistic bias; but Theosophy does not reject any alleged fact *à priori*, and it is therefore able to reason more accurately about certain things. The forthcoming Theosophical Manuals, 17 and 18 will give in simple form a general sketch of the evolution of the earth and man, according to Theosophy, and will discuss in more or less detail the interesting question of the transfer of the life-energies from the moon to its daughter "which overgrew it and gave much trouble!" C. J. R.

NEW thoughts and new interests have created new intellectual needs; . . . It is not he who repeats obstinately and parrot-like the old literary formulae and holds desperately to publishers' traditions, who will find himself answering to the new needs; not the man who prefers his narrow party discipline to the search for the long-exiled Spirit of man and the now lost TRUTHS; not these, but verily he who, parting company with his beloved "authority," lifts boldly and carries on unflinchingly the standard of the *Future Man*. It is finally those who, amidst the present wholesale dominion of the worship of matter, material interests and SELFISHNESS, will have bravely fought for human rights and *man's divine nature*, who will become, if they only win, the teachers of the masses in the coming [this] century and so their benefactors. . . .

In order that one should fully comprehend individual life with its physiological, psychic, and spiritual mysteries, he has to devote himself with all the fervor of unselfish philanthropy and love for his brother men, to studying and knowing collective life or Mankind. Without preconceptions or prejudice, as also without the least fear of possible results in one or another direction, he has to decipher, understand and remember the deep and innermost feelings and the aspirations of the poor people's great and suffering heart. To do this he has first "to attune his soul with that of Humanity," as the old philosophy teaches; to thoroughly master the correct meaning of every line and word in the rapidly turning pages of the Book of Life of MANKIND and to be thoroughly saturated with the truism that the latter is a whole inseparable from his own SELF.—H. P. Blavatsky

INQ. Are we to regard Theosophy in any way as a revelation?

THEO. In no way whatever, not even in the sense of a new and direct disclosure from some higher, supernatural, or, at least, superhuman beings; but only in the sense of an "unveiling" of old—very old—truths to minds hitherto ignorant of them—ignorant even of the existence and preservation of any such archaic knowledge. . . . Selfishness is essentially conservative, and hates being disturbed. It prefers an easy-going, unexact lie to the greatest truth, if the latter requires the sacrifice of one's smallest comfort. The power of mental inertia is great in anything that does not promise immediate benefit and reward. Our age is pre-eminently unspiritual and matter-of-fact. Moreover, there is the unfamiliar character of Theosophic teachings; the highly abstruse nature of the doctrines, some of which contradict flatly many of the human vagaries cherished by sectarians, which have eaten into the very core of popular beliefs. If we add to this the personal efforts and great purity of life exacted of those who would become the disciples of the inner circle, and the very limited class to which an entirely unselfish code appeals, it will be easy to perceive the reason why Theosophy is doomed to such slow uphill work. It is essentially the philosophy of those who suffer, and have lost all hope of being helped out of the mire of life by any other means.—H. P. Blavatsky

### Theory and Practice in Theosophy

AT a recent British Association meeting a lecturer took as his subject the interaction between theoretical science and practical science. His main point was that though theoretical science stimulates progress in practical science, there is also a reaction or contrary influence by which practical science stimulates further discovery in theoretical science. Instances are the telescope which led to new discoveries in theoretical optics; and telegraphy, which promoted an understanding of the theory of electricity.

The lecturer was but applying to the case of science a principle that is general. Knowledge leads to action, and action leads to further knowledge. No investigator who should confine himself to the abstract would make much progress; it might indeed be that he would prefer to leave to others the business of applying his theories, but he would inevitably profit by their experience.

Let us apply this general principle to the case of Theosophy. A knowledge of the abstract principles of Theosophy is necessary for one who would apply them; but to confine oneself to the abstract would be equivalent to limiting oneself to a narrow area of profitless study. And mark this point: that not only would the theorist be no good as a practical man, but he would not even be a good theorist. The mind cannot foresee all possibilities or take into account all factors, and it therefore needs experience as a check to its operations. Hence, even if we propose to ourselves a devotion to the abstract side of Theosophy, we shall need the help of experience to keep us from going astray and to supply us with new points of view.

How true this is can readily be seen in the case of science for instance. However much mathematicians may theorize, however accurate may be their knowledge of dynamics and so forth, they never can succeed in foreseeing all the possibilities of nature; and the practical men are always finding out things which the mathematicians never dreamed to be possible, which they even refuse to credit, but which they subsequently endorse by showing them to be after all quite consistent with theory as previously formulated. We have various theories of etheric action in attempted explanation of magnetic and gravitational attraction, and the transmission of light and of Hertzian waves; but what merely theoretical calculation would ever have predicted these facts? Say what one will, experience, practice, experiment are as necessary to theory as theory is to them. The two are twin powers that cannot work apart.

A Theosophist, therefore, who wishes to have a correct theory of life, should put his theories into practice; for they need testing at every step. It is evident to all who have tried to live a Theosophical life that they have learned very much more about Theosophy than they ever would if they had confined themselves to theoretical study. It does not amount to much merely to believe that one has a Higher nature; one will never find out much about it by mere thinking. It is necessary to call it into action. Without this practical effort, the conception of a Higher nature could never amount to much. We might reach to new and seemingly exalted states, but they would be likely to be merely exaltations of

the emotions; or, if genuine illuminations, they would urge to action.

There should not be such a strong contrast made between theory and practice, as though they were mutually exclusive, and as though the practical man must necessarily be an unthinking man. The word "practical" has been misused until it has come to mean almost "unpractical." A practical Theosophist does not abandon anything save what was useless; he applies the knowledge which he has, and gains more by his experience. For him, selfish knowledge is no knowledge. STUDENT

### Gospel Advertising

WHILE thoughtful ministers are wondering what they can do to arouse a deeper appreciation of the quality of the gospel message, other evangelists seem to think that what is needed is quantity. If the people will not take the gospel when it is offered, they must be made to take it by violent methods. At least this is the impression derived from certain circulars that have come to hand, from which the following is quoted:

Order our dollar packet of gospel ammunition: 30 artistic and virile gospel post-cards, 12 personal testimony tracts, etc.

Pastors, urge your young people to form a Gospel publicity league and circularize your district regularly. Push out our modern Gospel tracts every week. Print your weekly topics on the back of them. Print anything on the backs of our Gospel tracts. Do double work—*evangelism* and *advertising*.

Use our post-cards, tracts, hand-bills, mottoes, show-cards, etc., for flyers, newspapers, magazines, cars, bill-boards, etc.

The great principle of advertising—*suggestion*—is recommended for application to the business of evangelism. Great stress is laid on the suggestive effect of a bombardment of "our little gum stickers," and so forth. The essence of this principle is that people can be made to buy things which they do not want and which they know are inferior—by the force of suggestion. The original Gospel surely did not need such recommendations. The value of conversions effected by such methods cannot be great or permanent. In the long run the people learn to discount such advertising and to judge by the merit of the goods alone. The unblushing effrontery with which money and gospel are run in double harness, and the holy *dramatis personae* set up as presiding fetishes over the business, will warn off all possible converts that could bring credit to a cause. If thoughtful Christians, to whom Christ's message is sacred; could only define their creed in such a way as to exclude such damaging acquaintances! STUDENT

### "Infernal Baboons"

A NOTED prizefighter who has for some time left the ring and betaken himself to a better calling, was recently asked whether, during a fight, he ever felt any sympathy for the man whom he was beating. His reply, published in a New York contemporary, is somewhat startling. Here is a little bit of it.

I knew that I was there to do just that thing to him if I could. I knew that if I did not do it to him he would do it to me. I knew that the sting of being licked, if I had to experience it myself, would be intolerable. And yet with all of this in my mind, I repeat that I never started one of my opponents down toward that gloomy world of shadows to which the beaten prizefighter goes, that I did not feel sorry, mortally sorry for him. I felt

ashamed of myself, ashamed of being where I was, of doing what I was doing, ashamed of the mad shouts of the men around the ring to go in and kill the poor devil already rocking towards his finish, ashamed of the whole infernal baboonish situation from beginning to end.

The two adjectives describing the situation are not badly chosen. If Dante had ever seen a prizefight, he would certainly have made a special place in his *Inferno* for the bystanders that yell around the ring; and it would have been a deeper and worse place than that prepared for the two men in the ring. They want to see blood because it means victory; the tiger wants to see it because it means food; and they and the tiger must have the courage to risk something for it. Nothing lower than humanity could have created the *Blood-for-blood's-sake* Demon, or thought out a way of gratifying it vicariously and recklessly! STUDENT

### The Maelstrom in Norway

WE have been so often disappointed in the results of inquiries into the existence of famous natural phenomena that it is quite a relief to learn that the famous Whirlpool of the Lofoden islands, in Norway, is not a myth after all, and in spite of the efforts of the people who like to reduce everything to the commonplace. There are several maelstroms in close proximity and they are extremely dangerous for boats and even large ships. For a few hours in the day ships can pass through them, but as soon as the tides begin to gain strength the whirlpools form and at times they are absolutely impassable for the largest vessels. Victor Hugo, Edgar A. Poe and other writers have given sensational descriptions of them, but in the light of sober fact, it appears these descriptions have been little if at all exaggerated; at least they well represent the danger and the horror of the spot when the tides are rushing at their fiercest and the wind is high. Many wrecks have disappeared in the vortex not to reappear for many miles. The official hydrographic charts of Norway say:

When the wind is steady at flood and ebb tide each day the whirlpool is still for half an hour or more, but . . . toward the height of the tide or when a gale is blowing the water revolves with a speed of twenty-six miles an hour in mighty whirlpools, in which the largest steamers would be helpless. STUDENT

### East and West

THE *Fortnightly Review* contains an account of an interview between some eminent Japanese and an American missionary. One of the former thus sums up:

You have brought us much; you have taught us many lessons, but none of them is so precious, so helpful, so enriching as that which—did you wish it—we could teach you, the lesson of quiet, continuous, reasoning thought. Even in material things you have seen its benefits to us. You are in the habit of saying that the victories you so applaud were won "because the Japanese think out everything beforehand." There are greater victories which each of us can win if he will but learn to think, victories over every ill that can assault poor vulnerable man in this world, for thought robs them all of their sting, and leaves the poorest of its disciples richer than any of your multi-millionaires—rich in spiritual clearness and greatness, in the conscious certainty of union with the eternal harmony which was the beginning and shall be the final outcome of the life of the Universe. # THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES  
IS THROWN OPEN TO ALL

## Fragments of Arcane Science

THE following quotations are taken from the *Ohio Archaeological and Historical Quarterly*.

Of old the Indians abode tranquilly in the Sacramento Valley and were happy. All of a sudden there was a mighty and swift rushing of waters, so that the whole valley became like the Big Waters, which no man can measure. The Indians fled for their lives, but a great many were overtaken by the waters. Also the frogs and the salmon pursued swiftly after them and ate many Indians. Then all the Indians were drowned but two who escaped into the foot-hills. But the Great-Man gave these two fertility, so the world was soon repopled. From these two there sprung many tribes, even a mighty nation, and one man was chief over them all.—*The Maidu Legend of the Flood*.

Before the beginning of the new-making, Awonawilona (the Maker and container of All, the All-father Father), solely had being. There was nothing else whatsoever throughout the great space of the ages save everywhere black darkness in it, and everywhere void desolation.

In the beginning of the new-made, Awonawilona conceived within himself and thought outward in space, whereby mists of increase, steams potent of growth, were evolved and uplifted. Thus, by means of his innate knowledge, the All-container made himself in person and form of the Sun, whom we hold to be our father and who thus came to exist and appear. With his appearance came the brightening of the spaces with light, and with the brightening of the spaces the great mist-clouds were thickened together and fell, whereby was evolved water in water; yea, and the world-holding sea.

With his substance of flesh, outdrawn from the surface of his person, the Sun-father formed the seed-stuff of twain worlds, impregnating therewith the great waters, and lo! in the heat of his light these waters of the sea grew green, and scums rose upon them, waxing wide and weighty, until, behold! they became the Four-fold containing Mother-Earth and the All-covering Father-Sky.—*Fragment of Creation Story*.

It is well known to students of antiquity that Deluges and Noahs are universal. The great Flood, says H. P. Blavatsky, had several meanings, and referred to both spiritual and physical events. The First Cosmic Flood refers to primordial creation, or the formation of Heaven and the Earths. But the terrestrial Deluge has also a dual application. In one case it referred to the real historical submersion of Atlantis; in the other case it is symbolical. But deluges like glacial periods, have been numerous, as geology can show; and, while the great Atlantean Deluge is the one referred to in our own and other Flood stories, yet subsequent floods have been confused with it.

When the wicked remnants of the Atlantean or Fourth Race were thus destroyed, the seed of the Fifth Race was preserved, and this is the physical meaning of the Ark story. Owing to the exact correspondence between the spiritual and the physical—"as above, so below"—it was possible to preserve in the same story accounts both symbolical and literal, referring to the Mysteries and to the history of the Fourth and Fifth Races. As has been so frequently pointed out, the Flood stories exist all over the world, such races as the American Indians, for example, having them even in their smallest details, such as the sending out of the birds from the Ark, the resting of the Ark on a sacred mountain, and so on; and these stories far antedate the arrival of Christianity. This fact is once again respectfully commended to the attention of our biblical critics and theologians, as it seems to have such an important bearing on their researches that to ignore it would be fatal. Is it not obvious that in our Hebrew-Chaldaean Bible, we have but one out of many of these confused semi-symbolical narratives?

With regard to the Creation story, it must be premised that man never was "created" all at once by God as described in Christian theology. He is truly the product of evolution, but not of physical evolution alone. There are several distinct lines of evolution that converge in man, and from which he derives the various principles of which he is compounded. The question is obviously a very profound one, and its full comprehension awaits only those whose purity and devotion of life has led them

## Theosophy the Key

to the portals of Wisdom. But in Theosophical writings there is enough of the broad outlines given to correct some superstitions of modern thought and set inquirers on the right track. Briefly we may distinguish man's evolution into corporeal, mental and spiritual; the first relating to the animal evolution on which modern science speculates; the second to the evolution of the mental and psychic elements in man, and the third to the derivation of the Divine Flame in man. These tenets, expressed in allegorical form, are found, in many degrees of incompleteness and confusion, among the sacred myths of various ages and races. In our Hebrew-Chaldaean Bible we have a fragment. In this account there is a mixture of two distinct Creation stories, as has been discovered by the theologians, who call them the Elohist and the Jahvist accounts. The second one, in Genesis II, ought to come first; it describes how the Lord God (Yehovah) made man of

the dust of the ground and made him a living soul (*nephesh*, "animal soul"). This man was endowed only with natural life, and not yet ensouled.

**"Creation" or Formation** The account in Genesis I, which should come second, tells how God, in this case *elohim*, "creative powers," imparted their likeness to man. This is in accordance with the archaic teaching that the *Manas*, or self-conscious responsible power in man, was imparted to him by the *Mānasaputras*, or "Sons of Mind," Beings who had become perfected in previous great cycles.

The account given in the extract quoted above reminds us much of that in Genesis I; and, as it is only a sample from among very many, it ought to give theologians something to think about, as to how such races came to have such teachings independently of Christianity.

The only way out of the endless difficulties of this sort that must ever confront scholars is to recognize that all these myths and traditions are the surviving fragments of a once well known and universally diffused Science, which was one when the races were one, and has become dissevered as the races became dissevered.

**Modern Science Limited** Nowadays we have a science whose channels of information are the bodily sense alone, whose field of inquiry is the physical world alone, and whose court of appeal is the so-called "intellect." This science makes no demands on character and holiness of life; these attributes are not regarded as essentials for wisdom. Hence this science lends itself as much to the unworthy as to the worthy, as much to the indifferent as to the scrupulous; and its effects upon human welfare are, to say the least dubious.

In olden times, Wisdom was not thus regarded; knowledge was a sacred thing, whose use was a duty and whose abuse was a terrible crime. Purification was the gateway to its attainment; its effects were wholly beneficent. This ancient ideal of Science needs to be restored, ere we can hope to advance beyond the present limited scope of our knowledge to those realms wherein the deeper mysteries of life and nature lie veiled. STUDENT

### Discipline of Children

**S**PEAKING of children, a writer says that where discipline leads to deceit, then better no discipline at all; that the majority of children do things of which the parent knows nothing and practise deceit to avoid punishment. The statement is illustrated by the case of two boys who, having saved a little girl from drowning, denied the story for fear of being punished for going into the water, and were much surprised at being praised and rewarded. Children early learn to deceive through fear, continues the writer, and concludes:

This shows how far grown-ups are from understanding the real nature of the little ones. . . . Perhaps this deceit among children comes because parents find it so much easier to punish carelessly than to explain carefully.

Observe the missing member in the argument: "parents will do that which they find easier." The nail has been hit on the head: the indolence of the parents is what is to

blame. They are afraid of trouble, afraid of their own unpleasant emotions, afraid of their children. Consequently they cannot rule them; is it any wonder?

Discipline which constrains through fear, and does not touch the inner nature, ceases to act when supervision is removed, and hypocrites are bred. The parents have not won the confidence of their children, and appear rather as unreasonable tyrants than as watchful guardians. But whose fault is this? There are many parents who care more for their own feelings than for anything else, and who do not mind what happens so long as they do not know of it; these often argue themselves into an unfounded optimism as to their children, a blissful state which the children promote by their hypocrisy. Often the relation between parent and child is such that the child would do anything rather than consult its parent; its quick intuition has discovered that the parent is troubled, bored, and uninterested by its doings. So it leads a private life all unknown to the parent.

We often hear of the *privileges* of parenthood and much fine gush might be quoted about them. We would like to hear more of the *duties* of parenthood. But perhaps parents "find it easier" to enjoy the privileges than to discharge the duties. We hear much of parental "love"; but what is mis-called "love" is too often a weak sentimentality or merely a love of pleasure. This kind of love can be played upon. Without calling a child "wicked," one can truthfully say that nature, human nature, is all alive in it, and this human nature will make a fine fool of that parental "love." Thus children soon learn to manage their parents, though often the children themselves do not know that they are doing it; the strong natural instincts and desires act on the fears and emotions of the weak parent. The child gets what it wants by playing upon the parental sentimentality and fear of discomfort; and, into the bargain, fools the parent completely.

Children are not automata; they are human beings, very much alive. Nature rules in them, and Nature is not to be controlled by any force short of the human will and intelligence. Not that the parent should control the child by the parent's own will; he should arouse the child's will to control the child's own nature. Instead we find, as above, that the parent often arouses merely a hypocritical cunning which is part of the child's lower nature. Perhaps the reason why the parent fails to arouse the child's higher nature is because his own higher nature needs arousing. So we need a Theosophical Rāja Yoga school for parents, to teach them about their higher nature and their duties to human beings in the helpless stage of infancy.

A child may be very pretty and delicate externally; but internally it is a full-fledged human Soul. We should remember that all the powers of a full-grown person are there, as yet unmanifested outwardly, but still present interiorly. We have a dual nature in the child to deal with; it is a child and yet a Soul. Most parents deal only with the child, as though it were never to grow up.

True discipline is obedience to the light within; the law to be obeyed is no arbitrary law, but the law of right living. But the parents need to know more about these things themselves, in the first place. STUDENT

### Heights and Valleys of Civilization

**A** WRITER'S definition of civilization lies implicit in his selection of an *index* to civilization. The writer of a recent volume of historical studies thinks that the history of civilization might be written as *the history of aspiration*. So written it presents a new and unexpected set of landmarks. The volume gives us Egypt as the earliest of the nations and then shows that in that country aspiration rose as high as it ever has since. The proof consists in a number of quotations from Egyptian liturgies and inscriptions, very ample for their purpose. For example, enumerating indirectly the qualification to be possessed by a soul desirous to enter heaven, the *Book of the Dead* represents such a soul as declaring that

He has not oppressed his kindred, not ill-treated his slaves nor exacted from them excessive labor, or been the cause of cruelty towards the slaves of others; that through his act no hunger has been suffered, no tear has been shed. "I have not deprived the babe of its milk. I have not used a deceitful weight. I have attacked no man, I have deceived no man, I have terrified no man, I have slandered no man. I have never been insolent or ill-tempered or a mischief-maker. I have given bread to the hungry, water to the thirsty, apparel to the naked, a boat to the shipwrecked. I have done that which is right and true for the Lord of right and truth."

A psalm which the volume quotes gives the Egyptian conception of the Deity:

Hail to thee, Ra, Lord of Truth, whose shrine is hidden, at whose command the gods were made. Thou listenest to the poor who is in distress, thou deliverest the timid man from the violent. Thou judgest the poor and the oppressed, Lord of mercy most loving, at whose coming men live.

How many milleniums before Christianity this prayer was first spoken we do not know. The hymns of the Vedas and of the Persian sacred writings would give us very complete parallels. But between then and now intervenes the history of the nations around the Mediterranean basin. And if the altitude of aspiration is the test of civilization, Sir William Ramsay is right—the world went downhill for milleniums and is only now climbing back (though here Sir William might not agree) towards moral heights that had been attained when the Aryan race was young. STUDENT

### Co-operative Housekeeping

**A** SCHEME of co-operative housekeeping is to be tried in one of the garden cities of England. The plan is to build a number of dwellings in the form of a quadrangle, like a college, with separate living-rooms but a common kitchen, with qualified cook and staff; the meals to be served in a common hall, or else, for a small extra payment, sent hot to the private rooms. Other services also will be obtainable from the administration department.

So far as food is concerned, the digestions of the dwellers are likely to be benefited by cookery which will certainly be better and less monotonous than many have been accustomed to; and there will be a great economy of labor and anxiety. But the rights of privacy in housekeeping are very dear. In view, however, of the increase of woman's work in other than domestic spheres, there will doubtless be some demand for this mode of life for families. The experiment is worth trying. STUDENT

# Some Views on XXth Century Problems

## Morals by Surgery

FROM time to time we hear of some good boy who, falling on his head, is thereafter a bad boy. Taken to a surgeon it turns out that a splinter of bone is pressing on his brain. This is raised or removed and he is a good boy again.

The theory that we are what we are because of our heredity or immediate environment, and that the most influential item in environment is the body, comes up at once. According to this theory not only are we not strictly responsible for anything we do or are, but in the future it may be to refined surgery that we shall turn for a moral mankind. Even people who do not put the thing quite so baldly to themselves as that, get some of the shadow of it across their minds, and do not well know what to say about it.

The ordinary man, who does not know much about his own power, may be at the mercy of his bodily condition. If his liver is out of order he is cross and may accept the crossness as a phase of himself, knowing no remedy but a pill. An *animal* whose liver was out of order would have no choice but crossness. Its consciousness is not identical with its body, and the nucleus of it pre-exists and will post-exist the body. But, roughly speaking, the animal's feeling is conditioned and complexioned by the bodily balance. So is man's, to the extent that he is an animal. But he is a man, more than animal, precisely because there is awake in him, present in him, a center of conscious will capable of dominating the whole animal gamut, of permitting or refusing to permit any phase of temper and emotion. He is of course not independent. If his liver is out of order he will have difficulty in suppressing irritability and substituting geniality and placidity. But he *can* do so, first and easily in speech and act; with more difficulty — which diminishes and vanishes with practice — in feeling. The slightest study of his own nature will convince anyone of that simple fact in practical psychology; the slightest attempt along that line will show him his duality, show him exactly where he differs radically from the mere animal, and enable him to face the fact of the restoration to goodness of the bad boy with no loss of his sense of human dignity. Indeed if that very boy had been properly trained to know himself and his power, it would have been left for slighter or other symptoms to indicate the need for the surgeon.

STUDENT

## The Next Generation

THE New York Committee on Physical Welfare of School Children has just published the results of an elaborate investigation made for it by four specially qualified physicians. The investigation concerned itself with New York children only; but the report generalizes, remarking that if these particular children are typical of American children in general, the schools of the country must contain not less than *twelve millions* who are the victims of serious physical defects! Perhaps they are not typical, and we ought to say eight or ten millions — or fourteen.

The report further remarks that these defects are not such as would be prevented by better nourishment and ventilation, but require medical and surgical aid.

It then tries to minimize the seriousness of the situation it pictures, by the expression of an unwarranted belief that if we could know as thoroughly the condition of the children of fifty years ago, we should find it — except as to eyesight — worse. The belief is unwarranted because it is opposed to the figures of tuberculosis. The steady increase of tuberculosis — the most usual form of manifestation of generally weakened tissue-resistance, and the most easily estimated index of it — is somewhat masked by its better treatment. But shielded behind this better treatment and by careful preventive measures, the *tendency* continues to increase. I have not conferred upon my poultry an added power to resist foxes by building better coops nor by setting traps. But their deathrate will be lower.

What is to be done? One suggestion made in the report shows the urgent need of opening the whole question of methods in education. It is that the course of study in public schools should at least not be such as to produce or aggravate disease and defects!

The state concerns itself first with the education of the children who in a few years will compose it; secondly, when at all, with their health. It must reverse the order. And those education officials who have visited Katherine Tingley's Rāja Yoga schools at Point Loma and elsewhere will have gained some further ideas which will ultimately bear rich fruit.

## The Cycle of Instincts

METCHNIKOFF, who proposes to make us immortal by the addition of sour milk to our diet — because the lactic acid formed by the germs therein is fatal to those bacilli in the large intestine whose putrefactive products gradually age and poison us — maintains that at each of the great periods of life a special instinct arises, slowly superseding the previous one. Thus when the time for death nears, the instinct is to *let go*, to rest. Before that, the instinct, sense, feeling, — we have no very good word — is of *the value of life*. By this is meant, not so much the desirability of personally keeping alive as the abstract importance of life itself.

In an ideal life, all these instincts would follow each other in regular order. But in the lives we now live, some do not come at all or only feebly; some are greatly in excess. We are out of balance. Pessimism, for example, is due to the total absence of the value-of-life instinct. And because the lives of all men are too short, the placid death instinct rarely has a chance to appear at all.

The Russian chemist's ideas suggest a few comments. The value-of-life instinct, if it is really present, is an illumination. Its place is usually more or less completely occupied by its antagonist — that unreasoned, unilluminated grasp of life whose obverse is terror at the thought of death. And this sometimes reigns up to the very moment of death. Nevertheless,

though not in that way, one's personal life should be respected, grasped, conserved. For each one of us, in each life and in the totality of his lives, is living out a unique phase of the Great Life of which he is a fragment. Of that Life each of his lives is a day full of meaning and import, just as he may make each of his own days full of meaning for himself, a rounded out phase of his own growth. The greater Life depends on us for its outworking. There are infinite meanings in it, as yet latent and folded, waiting to unfold themselves in our lives. Therefore the ancient students were taught to regard each day from the rising of the sun as sacred, and through all tasks to hold in their hearts, in the silence, the sense of that sacredness. It was a sense of responsibility, of *vocation*, and though it was knowledge it was and is beyond expression, beyond words. In our day we do not think of the heart consciousness as capable of *knowing* anything, nor believe in the possibility of knowledge which is outside verbal expression. So that penultimate "instinct" of Metchnikoff's, whose significance he can hardly have appreciated, now gets little chance of development. But the way is as open as ever.

And again, the death instinct, the instinct to give up and rest, normal as it may be for most, though perhaps not often attained, will itself in stronger and nobler men and women be replaced by another. It is sometimes nobly held off by women who fight for the last minute of life in the interests of their children. And those who have worked unselfishly for humanity, who know themselves as souls and immortal, will go up to and through death with unweakened purpose. They will let go physical life because the instrument is worn out. But they will hold their charge, their vocation, as closely as when physical life ran highest, too strong to crave for rest and ready at once for the rebirth that will bring them again upon the field.

STUDENT

## The Theory of Rebirth

PROFESSOR HAECKEL seems to be doing more good than he knew and in another way than he intended. His statement that consciousness is a "physiological function of the brain," meaningless as it is, has inspired a reply by Mr. Hugh MacColl in the *Hibbert Journal*. He replies to the Professor by passing immediately beyond him and asking where and what is the soul. It is not the senses, which merely transmit; nor the brain, which merely receives and co-ordinates what is transmitted to it; but that which *understands* what it receives. The soul, says Mr. MacColl, is that which feels and thinks. But he will be in difficulties unless he goes a step further. It is that which *witnesses*, and should absolutely *dominate* the apparatuses and processes of thinking and feeling — is therefore not identical with them. They tend to vary with the bodily condition. But the important point in the article is its advocacy of re-incarnation. The soul is continually re-embodied, always rising in the long run "from higher to higher, and from better to better," a reincarnated idea.

## Dolmens: The World's History in Stone

THOUGH the subject of dolmens has been frequently dealt with on this page of the CENTURY PATH, its importance and interest are such that it may well be dealt with again.

In treatises on archaeology we shall find that one of the headings is "Rude Stone Monuments" — by which is meant the huge stones, dating from unrecorded times, set up in every country of the globe. These are classified as: *Menhirs*, single monoliths raised on end; *Alignments*, monoliths arranged in lines; *Cromlechs*, monoliths arranged so as to form an enclosure, like that of Stonehenge; and *Dolmens*, monoliths covered with capstones so as to form a chamber. But there is a little disagreement about the exact definition of these several terms.

In France there are 1600 of the isolated menhirs recorded, mostly in Brittany. The largest known in the world is that of Locmariaquer (Morbihan), which is a rude but smooth-sided obelisk, now lying broken into four pieces, the aggregate length of which is 67 feet. It was of granite foreign to the neighborhood and weighed 382 tons (U. S. A.). The next largest is 37 feet high and there are sixty-seven of various heights down to 16 feet. Menhirs are also found abundantly in the British Isles, in Scandinavia, in Algeria, Morocco, India, Central Asia, America, etc.

Near Carnac in Brittany are various Alignments, the first three groups of which are supposed to be parts of an original line nearly two miles long. A plan that was made of the alignments at Erdeven shows that out of a total of 1120 menhirs that originally constituted the group, 290 are still standing, 740 fallen, and 90 removed.

Of cromlechs, Stonehenge is a famous example. They are generally circular or oval, but rectangular ones are also known. Frequently the stones are arranged concentrically.

Dolmens in their simplest form are three or four upright stones with a single capstone, and they vary till we reach the Giant's Graves, *Grottes aux Fées*, and *Allées Couvertes*. They occur in the north of Europe, in the Crimea and Circassia, through Central Asia, to India. Similar structures have been found in Palestine, Arabia, Persia, Australia, the Penrhyn Isles, Madagascar, Peru, etc.

Now here is an ancient book which all may read; and verily it defies every theory that archaeologists, ethnologists and historians have ever put forward about the human race. And herein we have both a problem and its solution; for the stones were put there largely for the purpose of defying such theories, and well have they fulfilled it! But, more marvelous still, archaeologists still continue to sit among these monuments and construct theories totally at variance with them; so that, so far from being fearful of mentioning the dolmens too often, one ought rather to wish that pictures of them were hung in every study and every schoolroom, to say nothing of the pulpits.

Were they built by Druids? Then what were the Druids doing in Madagascar and Australia? Were they built by Stone-Age men, whose implements are

Lomaland Photo. and Engraving Dept.

INTERIOR OF DOLMEN DE RONDOSEC, PLOUHARNEL, MORBIHAN

found in some of them? Then they could not have been built by the Iron-Age men (whose implements are found in others of them). Some have cup-shaped hollows, clearly pointing to sacrifice; others are covered all over with hieroglyphics. Some were evidently used for burial. It is certain that others were used as fortifications. When not intended for landmarks, they were clearly meant for refuges. In short, they have precisely the marks which any reasonable person would expect to find in buildings which have seen all the races and all the ages, witnessed more history than is written in all the books in the world, and been used by every single race, and class of people, for every conceivable purpose.

No ordinary theory, conformable to orthodox views of the past, can account for the universal diffusion of these monuments, found as they are on every continent and on the oceanic islands. Was there a "race of dolmen-builders"? Such an idea is, in the opinion of many scientists, absurd; and it would need to have been a wonderful race, one throughout the world. Will theories of migration account for them? Here again it would be necessary to suppose extraordinary means of transit across the oceans. We must look for a great race of people, living in times far remoter than history has penetrated, who had access to all these lands, and who were animated by a mighty purpose, as well as possessed of powers adequate to the transportation and erection of such colossi. We must go back to the times when, as geology tells us, what are now waterways were dry land.

The general similarity among the stones shows that the builders were either one people or so united in idea and purpose as to be practically one people. It is inconceivable that all humanity, separated as now into races so alien from one another, would be smitten with the universal mania for erecting megaliths. Again the similarity between most of them precludes the idea that they are the casual accumulations of ages of history, built independently and at different times.

A word or two as to the classification of human Races, as given in Theosophical teachings. These are on a far ampler scale than the meager scheme of our historical chronology. The latter is still under the thumb of ecclesiastical tradition, from which it has not yet succeeded in emancipating itself so far as humanity is concerned, though it has done so in the matters of geology and astronomy.

We are in the Fifth Root-Race at present. Each Root-Race has seven sub-races. Each sub-race has

seven family-races. The family-races are divided into nations. We are in the fifth sub-race of the Fifth Root-Race. The Fifth Root-Race has been in existence about 1,000,000 years, and each of the first four sub-races thereof endured some 210,000 years. Therefore a family-race lasts 30,000 years.

Now these stones were erected by the second sub-race of the Fifth Root-Race, men of gigantic stature. Initiates of this race moved from one land to another for the purpose of supervising the erection of menhirs and dolmens, colossal Zodiacs of stone, and places of sepulcher, as symbolic records of the world's history. They journeyed from Egypt in a northwest-

erly direction, *by land*, over what later became the Straits of Gibraltar; turned north and traveled through the future Phoenician settlements of Southern Gaul; then still further north, until, reaching Carnac in Brittany, they turned to the west again and arrived, *still traveling by land*, on the northwestern promontory of the New Continent. This was when,

"The level of the Baltic and of the North Sea was 400 feet higher than it is now; when the valley of the Somme was not hollowed to the depth it has now attained; when Sicily was joined to Africa, Barbary to Spain," when "Carthage, the Pyramids of Egypt, the palaces of Uxmal and Palenque were not in existence, and the bold navigators of Tyre and Sidon, who at a later date were to undertake their perilous voyages along the coasts of Africa, were yet unborn."—(M. Joly, *Men before Metals*)

These megalithic remains, and especially the "Mounds," are connected with serpents and dragons, alligators and crocodiles. Such symbols are delineated either in their alignment or in carvings upon their face. Often the whole building is a book of hieroglyphics. This proves to the student of symbolism their connexion with the Wisdom-Religion.

Let not the reader be startled by the vast periods of time. Men of science tell us, what is clearly true, that mere size and duration are as nothing in a universe that is not finite; and they pass easily from the discussion of the infinitesimal atoms and light-waves to that of the unthinkable stellar distances. Physical science frankly admits this and talks freely of millions of years in geology and astronomy. Why limit the human race to such a near limit in the past? Whether we limit it equally in the future or not, it is absurd to limit it in the past.

But though these infinitudes of time seem vast compared with the duration of a single physical lifetime and with our physical conceptions of time, it is not so with the life of the Soul or with the life of Humanity. Once enlarge our conception of life beyond the tiny cycle of our own personal life, and we cease to figure so insignificantly in the universe. Let us familiarize ourselves with the grand truth of Reincarnation and of the unity of Souls, and we shall be on the way to realizing a larger life. "What is man, that Thou art so mindful of him?" He is a very great deal more than he thinks he is; and, though he may make himself little enough to be vain, he *can* be great enough to be self-respecting. May the discoveries of science teach humanity to take a larger view of humanity!

# ✻ The Trend of Twentieth Century Science ✻

## A Possible Future

RECENT researches into the nature of crystals, showing that there is a state of matter below the crystalline, have suggested to an imaginative French chemist a new picture of the future of the universe. He has perhaps also been reading a little Theosophy. When a plate of gold which has been much polished or beaten very thin is examined microscopically, the crystals are found to have been broken. It has to some degree lost its softness, and at the edge, where the beating has been carried farthest, it may have become so hard as to crack. In the early stages of the process the crystals are deformed, not broken; they have not only slipped with regard to each other, but one pole of the individual crystal has slipped upon the other along a cleavage plane. As the beating or rubbing goes on, the next slip disintegrates the crystal altogether. Passing through a momentarily fluid condition it settles down into hard formlessness. The next deeper layer shows fragments of crystals cased in the newly formed vitreous matter. This, in a still deeper layer, may surround uninjured crystals.

If, now, the film be heated, the crystals suddenly reappear as they were, and all the vitreous matter vanishes into its old crystalline state. The film is now as soft as ever and the beating may be continued.

Within certain limits of temperature a deformed or broken crystal behaves somewhat as if alive; if injured it will start at once to repair itself; and it will grow in size. Above that limit it may take a new shape altogether, an "allotropic" modification, and this will behave in the same way. Above that again it may be unable to maintain any crystalline form and merely melt. Cooled below a certain point, while retaining its form it will not exhibit life, will not grow, will not repair an injury.

So there is a state of matter below the living crystalline, in which, if there are crystals, they are "dead," a state where the force of cohesion acts to the exclusion of that which carries molecules apart, free. At absolute zero the latter has vanished, cohesion alone reigns. As temperature rises, and the freeing force of heat begins to antagonize the cohesion, the two forces come to a balance and the crystalline form of any substance represents its way of balancing the two. Temperature still rising, cohesion is at last overbalanced, the crystal melts and a fluid results. Still higher, cohesion ceases to work between the molecules; they fly free and a gas results. Still higher the atoms within them are freed. Under the influence of light, vibrations of the same order as heat, the atom itself begins to disintegrate into electrons, and all form or organization, so far as we know, is at an end.

But we know a few cases of the phenomenon called "fluid crystals," bodies which, though nearly fluid, preserve crystalline structure and habits.

Science supposes, reasoning from the past, that we can foresee a time when all matter will have radiated away its heat into space

and assumed an absolutely dead, subcrystalline condition. But we have just learned that this is not the whole of the story. Matter radiates the measurable heat that it has; but we now know of some of the heavier elements that in continuously passing into simpler and lighter ones—and we do not know that the process stops anywhere—generate enormous quantities of heat and light, raising the temperature of all the matter about them. The future destiny of the universe may therefore be, while becoming more and more rarified, to become for uncounted aeons *hotter and hotter*. And the final upshot, when at last radiation *does* win the day, may be a rarified haze instead of a lot of dead globes. On this view, the future evolution of all things living, from crystal upward, consists in the *power to retain form against increasing temperature*, just as "fluid crystals" retain their form through fluid. The forms would get more and more complex to accommodate the increasing heat and light, and their consciousness would correspond. The nucleus of the sun, for example, may have form and organization in spite of a heat that would instantly destroy any form now on earth.

Finally the possibilities of form would be exhausted and the haze of final-primordial stuff would wait until a new Fiat, reinforcing cohesion, would inaugurate the vast drama once more. The spiral serpent would take up his work in chaos. STUDENT

## Fluid Chronology

IT is astonishing how much the few grains of radium extracted since 1898 have contributed to our supplies of ignorance, if also to our knowledge. Until that date the earth's history was all clear and exact. The planet was a hot body cooling regularly and at an ascertainable rate. Calculating backwards we could say about when "the moon was thrown off," (namely between fifty-four millions and "many" hundreds of millions of years before the Christian era), and when the sedimentary rocks began to be deposited, (namely, between twenty-six millions of years ago and a hundred millions).

But these delicate calculations have been upset. Radium will heat its own weight of water to boiling point in an hour, and will go on doing that for thousands of years before its life is over. And while it is dying in this strenuous manner, more is forming. Uranium, another metal, all the while that *it* is dying, is giving birth to radium; and *it* takes hundreds of millions of years to die.

As soon as they realized these facts, geologists perceived that all their calculations might be utterly at fault, their estimated periods any number of times too short. The earth, so far from resembling other cooling bodies, might not be cooling at all, might even be getting hotter. All depended upon the amount of radium in the crust. Examination of the amount in the accessible surface rocks shows that if the same proportion exists right in to the center, the temperature must actually be rising; if it stops sharply at a depth of forty-five

miles, there is enough to maintain the temperature as it is. But as we are pretty sure, from such knowledge as we have, that until now the earth's temperature *has* been falling, we can take two or three paths of speculation. We can suppose that there has always been radium, but that it does not extend so far in as forty-five miles. We can suppose it a recent evolution on the earth, or a recent arrival from the sun. All these three views have their supporters. But it is plain that the last two are compatible with, almost parts of, a so-far unuttered hypothesis that at some comparatively recent date, geologically speaking, the earth may have entered a new phase of her history or come round a turning point. Having been, until recently, cooling, she may have become as cool as she wishes and decided now to warm up again. Neither does it follow that such a warming, to whatever point it were carried, would involve the extinction of life. Astronomers often argue that such or another planet cannot be inhabited because the conditions there do not permit. They are really making an unwarranted statement that conscious life is only possible under the material conditions through which *our* conscious life manifests. From all that we know, it seems eminently probable that if the earth's temperature rose slowly, adaptation of life and organization would accompany.

The moral is, to keep our eyes on the conclusions of science; but to remember that within the week another radium, another X-ray, may require the recasting of the half of them. STUDENT

## The Perspective of Life

MANY years ago, when Virchow first began to write about the cell, it was thought that in that little organism, of which millions make up our bodies, we had the indivisible unit of life.

But presently the view narrowed. The nucleus could live without the cell-body, though the latter hardly without the former. The nucleus was therefore the indivisible unit.

With higher microscopic powers, very much the contrary was found. The nucleus contained from some few up to 200 lesser units, "chromosomes," capable of being singly removed from it and exhibiting every mark of individual life. *They* therefore were the real units.

Not at all. Within each of them were a number of still minuter granules, the "chromomeres," also having a set of important activities of their own, very marked in the processes of division and union of cells.

Surely we are now at the end. We are at the end of present microscopic possibilities. But the facts of heredity cannot be explained unless we postulate within the chromomeres a set of still minuter units, "allelomorphs," each representing some tissue of the body and capable, when the time comes, of reproducing it. And it would seem foolish to suppose that with them we do now come to finality. In fact there may not be any finality. Organization may be limitless both ways. STUDENT

## The Okapi

THE okapi, recently discovered in the Congo forest, was mentioned by the explorer Stanley as an animal of ass-like appearance that was caught in pits; but the scientists, having foregone conclusions to the contrary, would not believe him. Still the okapi does exist. It is found to be a near ally of a fossil specimen found in Greece and Asia Minor. Its nearest living relative is the giraffe; it is larger than a stag. Like the giraffe it has only two hoofs and no remains whatever of the other digits which are represented in the deer, oxen and in most antelopes, by two little false hoofs on either side of the third and fourth toe. The color is most remarkable. The cheeks and jaws are yellowish white, contrasting abruptly with the dark-hued neck; the forehead is a deep red chestnut and the ears are the same color fringed with black. The forehead ranges between vinous red and black, and a black line follows the bridge of the nose down to the nostrils. The muzzle is sepia-colored; the neck, shoulders, barrel and back range from sepia and jet black to rich red; the belly is blackish; the hind quarters and forelegs are either snowy white or pale cream, touched here and there with orange, and boldly marked with purple-black stripes and splotches like a zebra. The hair is very short and glossy. Very little horn is discernible in the stuffed specimen from which the above description (in *Nature*, London) is taken. The animal is said by the natives to feed on leaves and small twigs.

## Harvard's New Timber Tract

THE forestry department of Harvard University has secured, through gift, a tract of 2300 acres of timber land for the practical teaching of forestry. It is described as probably the best body of timber now to be found on an equal area anywhere in Massachusetts. There are 10,000,000 board feet of merchantable lumber, nine-tenths of it white pine; but this occupies only half the area, the rest being occupied by various types of hardwood growth, younger crops of pine, and some open ground. The area includes three miles of the Swift River valley, the basins of two ponds, and the slopes of Prospect Hill; and there are excellent wood-roads. Various people have also donated adjoining tracts of land so as to surround and protect the reservation. A great advantage is that it so happens that there are stands of

## SONG OF THE STORM

OUT of the cavern of Time I spring,  
On the dancing feet of the wind;  
Wildly, oh! wildly my way I wing,  
While the gray clouds hurry behind,  
Trailing a mantle far over the sky,  
And the maniac winds go bellowing by.

The scudding grasses all shivering fly,  
And the plants crouch down to the earth  
The old oaks groan and the poplars sigh,  
But I laugh with a frenzied mirth,  
And call on the tempests to mock their cries  
With thunderous tongues and with flaming eyes.

Not a trembling tree but lifts its arms  
With a vain appeal to the skies;  
Oh! I love their terrors and wild alarms  
And the merciless, mad replies  
From the foam-flecked mouths of the chafing hounds  
That I hold in leash in my hunting grounds.

--- *Pall Mall Gazette*

clude practical lumbering, the planting or replanting of areas from saplings or natural seeding, the study of diseases, and of the various methods of reproduction, cuttings, thinnings, growth, etc. These will be carried on under the combined direction of the German Meister-schule and of the university forest school. STUDENT

## Artificial Honey

CANE-SUGAR, under the action of certain dilute acids or ferments, undergoes the process known as

"inversion"; that is, it becomes transformed into the two products called dextrose and levulose, which are sugars that occur in fruits, the former being also known as grape-sugar and as glucose. When this process of inversion is carried out almost completely, the result is a substance very like natural honey; it crystallizes like honey after standing, and can be liquefied again by slight heating. One process given is to heat the sugar with a solution of tartaric acid to about 110° C., stirring it all the while, until it takes on a golden yellow color.

There are various flavorings that can be added to give the aroma of honey. While the above product is not equal to ordinary honey, it can often be used with advantage to improve natural honey which has a bad flavor through the bees using certain flowers. And, considered as an adulterant, it has the advantage of being a perfectly pure and wholesome one. STUDENT

## Scenic Desolation in Ballooning

AN aeronaut describes graphically the dreariness of the earth as seen from a balloon high up. At a great altitude the beauty of the earth's landscape disappears and nothing is seen but a dark dirty surface. The outlines of the mountains are lost, and the trees, houses, towns, all look like toys. The beauties of illumination disappear, and with them all perspective; there is nothing near, nothing far; distance vanishes. In place of a landscape there are patches of yellow for the fields, the roofs of houses, the white streets; the waters are dark and lack individuality.

Looking up, there is nothing to see but space, sheer hollow space without relief. Utter silence wraps the whole. The aeronaut thinks travelers by air-line will miss the scenery; but doubtless other distractions will be provided for them, as in the case of travelers through the scenery of earth. STUDENT

various ages from the small sapling to the mature tree, and on different areas. The general plan is to work so as to render the forest as profitable as possible from the commercial point of view; and this general plan will in-

silence wraps the whole. The aeronaut thinks travelers by air-line will miss the scenery; but doubtless other distractions will be provided for them, as in the case of travelers through the scenery of earth. STUDENT

AT first sight one would hardly suppose that prosperous and well-built Geneva, with its clean broad streets, fine rows of shops and handsome hotels fronting the beautiful blue lake, with its long bridges from which one can see down—startling fact to a dweller in ordinary towns—through ten feet or so of clear, turquoise-tinted water, at first sight one would hardly suppose that this beautiful Geneva was one of the most ancient cities of Europe. Yet such is the fact. No one knows when it was founded. Caesar found a city here when he came, the frontier city of the Allobroges, and a bridge over the lake too, having crossed which he was in Helvetic territory. One does not know what ancient remains may lie beneath the soil waiting to be uncovered, for the Rhone has changed the surface of the land since the days of Dumnorix, and the site of the ancient city is now in the subsoil. Where stands the little grim cathedral, Calvin's cathedral, reminiscent of him too, in its austerity, and still containing his chair beneath its pulpit, the Romans had a temple of Apollo; on that same hill-top before the Romans came perhaps the Druids of the Allobroges, "in the face of the sun and the Eye of Light," performed the rites of Maponos the Sun God, that beautiful youth whom Arthur's men, with the help of the Five Ancients of the World, set free from agelong imprisonment, as the Celtic legend tells.

Through Roman times—Geneva flourished and grew great under the Romans—the Allobroges kept their individuality, though now incorporated in Burgundy, now beset by Savoy, now united with France, now subdued by Napoleon. Geneva's long struggles against powerful neighbors, as well as oppressive counts and bishops of her own, no doubt awakened in her that love of liberty for which she has become so famous, and prepared her for the great part she has played and perhaps is yet to play in the world's

## Geneva

history. On one occasion the walls of the sleeping city were actually scaled by the Savoyards before Geneva awoke and turned her enemies' prospective victory into a crushing defeat.

But with the love of liberty had grown up a certain license of living, and when Geneva had thrown off the yoke of Rome the town was imperilled by the contests of Protestants and Libertins, and Romanism came near to regaining the ascendant. The Libertins expelled young Calvin, who had made himself

**A** STATE arises out of the needs of mankind; no one is self-sufficing, but all of us have many wants. Then, as we have many wants, and many persons are needed to supply them, one takes a helper for one purpose and one for another; and when these partners and helpers are gathered together in one habitation, the body of inhabitants is termed a state....Plato

such a power in the state, but the state was quickly obliged to recall him. Justice must be done to Calvin, and Theosophists should be the first to give him his due. It was under his rigorous dictatorship that Geneva rose to her greatest power. He represented a revolt not only against Rome, but also against licentiousness. Geneva under his tyranny had yet a half perception of the great Theosophical truth, that freedom is to be found alone when the lower nature is chained and impotent. What they did not perceive, what they lacked, was Katherine Tingley's teaching that this can only be done by awakening in each individual his own Higher Nature. Calvin overshot the mark and the Calvinists made vice attractive by making right

living a tyranny. Yet, to a degree, Calvin did purify Geneva. And now the Genevans, "grateful sons of Calvin" as they inscribe themselves upon it, have erected a monument to Servetus, his chief victim, and apportion blame to their beloved Calvin for his crime.

One portion of the city is full of Calvin, and of the Middle Ages before him. The old, steep, narrow streets leading up the hill to the Cathedral—how these contrast with the broad boulevards of the lower town! Here, within a stone's throw of the Cathedral, is the Rue Calvin, with his house marked by a tablet. One would almost call it a slum. But these queer dark old houses are in truth rich and beautiful within, and the old Genevan aristocracy, descendants perhaps of Allobrogean princes, live there. Here too, is the Rue Farel, after the other great Protestant reformer, and a tablet on the consistory house telling that John Knox once preached there; and here is the Hotel de Ville, ancient Parliament House of the Republic, with, in place of stairs, its cobbled road leading up to the fourth story, up which roadway the representatives of the people used to ride on horseback to their deliberations. In this house, as you may say, Arbitration was born, for here the Alabama case was decided.

In the midst of the lake, midway between the two chief bridges, is Jean Jacques Rousseau's island, with that bizarre hero's statue set in the midst of it. We see Geneva giving birth to an apostle of liberty again; for Jean Jacques was a son of the republic, and never lost his love for his native city, however badly it treated him. In front of the Hotel de Ville Rousseau's books were publicly burned in 1762, yet Geneva was quick to join the Revolution which Rousseau had had such a great hand in bringing about. From that time until 1813 Geneva was one with France. A statue between the Jardin Anglais and the lake, representing two stately female figures, each with an arm encircling the other, com-

memorates the union of Geneva in 1815 with the Swiss Confederation, but not as a mere Canton — she still, unlike Berne, Vaud, Zurich and the others — bears the title of Republic. Official documents are still headed "Republique et Canton de Genève."

What will this ancient community of seekers after Liberty say when the true and unique gospel of freedom, which is Theosophy, or Râja Yoga, is put before it? At present Geneva does not love the name of Theosophy, and very rightly so, for the so-called "Theosophy" that has been presented to it until now has been a weird and uncanny thing indeed, such as no wholesome community could stomach. Its teachers openly proclaim that they have "no moral code" in their society! Evil may be done they say, "for a good end."! We have heard before now of the "greater glory of God." Geneva had

### The Value of Reticence

ALL grace, all beauty, suggest to the thoughtful observer the power of self-restraint, the reserve which enables an individual or object to maintain its existence, separate, yet in harmony with the whole. A true and delicate reserve does not suggest aloofness, except to the ignorant and uncultivated, those who from want of thought have little respect for their own deepest feelings or for those of others.

The grace of reticence is sadly lacking in the life of today. It does exist, in the finer, stronger natures, even though it be unrecognized by the chatterers who dissipate their force in a voluble stream of talk about their own affairs, ignorant or heedless of the fact that this letting-off of personal steam, with its empty garrulous noise, is stopping their progress toward anything real, and that it is

ward withdrawal? Never until we do this shall we reach our deeper feelings nor shall we have true consideration for others. For we cannot estimate the effect of self-indulgence in speech — the heart-wounds, the false impressions it may give.

It is the egotism of the age that is the cause of this garrulity, this never-ending "I" in the mind and on the lips and before the eyes and minds of others — this egotism that takes so many forms, assumes so many guises, and and that is such a subtle enemy to the larger growth of the human heart, such a disturbing element in the deeper currents of life.

How late do we learn that the deepest feelings are stirred no longer in a heart that is drained of these holy depths of emotion by excessive speech, by words, words, words, which by "explaining" every feeling and laying the heart bare to the gaze of others in

GENEVA, CITY OF THE ALLOBROGES — THE ALPS AND MONT BLANC ON THE LEFT IN THE DISTANCE

enough of this doctrine centuries ago, witness the Reformation; hence the name of Theosophy, because of this pernicious misrepresentation, has come to imply something to be avoided — except by cranks and spook-hunters.

But when Râja Yoga is set up on the banks of that unpolluted blue water: when the lives of its students shall be witness, as clear and pure as the turquoise Rhone, which maintains its purity right through the city, which flows on, even after its junction with the turbid Arve, unmingling with the impurities of the latter river! Beautiful Rhone, are you not the fitting symbol of the new life that shall come to this glorious, heroic, liberty-loving city? Will there not be new judgment then? Geneva has already no state church and no capital punishment; her principal religion is already said to be almost creedless in its breadth, Calvinism having died out within it. But in the coming time, with Râja Yoga, Geneva's freedom shall be something more than merely negative. The age-long ideal of the children of the Allobroges shall find its fulfilment. For freedom, like peace, is in reality a warrior quality, always going out over, conquering and illuminating the needy, waiting world.

CRUSADER

Geneva, Switzerland, Nov. 1907

only when this valve is shut that they can move on in power and true dignity.

This lack of reserve and discretion in speech and bearing — proclaiming in itself a lack of mental poise and depth of feeling — betrays a growing tendency toward vulgarity.

There is a power in thought even though unexpressed, and the economy of this will give us, at the opportune moment, the power of expression and the ability to command attention.

When we consider calmly and speak deliberately then will our words come forth with power; but we cannot do this until we have learned something of the grace of reticence. Through the constant practice of judiciously withholding our words we shall find ourselves, when the occasion demands a free expression of our feelings, able to hold our minds steadier and to grasp the subject in hand more competently. Then the feelings we have kept to ourselves will have gained coherence and intensity, the worthless will have dropped away and the true we shall see to be true in the light of our own deeper natures.

Why can we not realize the value of reticence, and recognize the truth that ripe thought, correct ideas, and just judgment are the fruits of deep contemplation and an in-

self-exploitation, cause the real thing to vanish.

Reserve is strength. What comes from the heart reaches the heart of others, and the truest relations between human beings have naught to do with volubility concerning what exists, or what has happened, or what might happen, or what ought to.

What respect we have for those who stand in delicate reticence upon "a spot of their own," protected by their power to restrain useless, self-revealing speech!

ELISABETH BONN

THE beauty of Indian women is one of the charms of Mexico. In the capital, where the Indian has degenerated by contact with the whites, by extreme poverty and menial service, it is less to be remarked than in the smaller towns and in the country. But the beautiful faces one takes in memory away from Mexico are those of Indian women. Fine eyes are universal and, what one hardly expects, fine features, according to Caucasian standards; broad brows, straight noses, well formed mouths and chins full but not gross or heavy. The expression is very generally intelligent, and often one is struck with the nobility and refinement of the countenance.

One frequently sees types among the peons that seem to belong to some highly civilized ancient caste, an Egyptian priest of royal blood, a Roman centurion, an Aztec emperor.—Editorial in the *Tulsa, I. T., Indian Republican*

### Lighthouses

**W**HAT a blessing are lighthouses to those who travel upon Nature's great highway the sea! For though the waters appear harmless enough, there are often dangerous reefs and sandbanks hidden beneath the surface which might destroy any passing ship with all its occupants, were it not for those friends of all sea-goers, the lighthouses.

The United States has the best protected coast of any country in the world in the way of lighthouses. Although a large number of these have been constructed with comparatively little difficulty, others have demanded the greatest courage, determination, and ingenuity that men can show. But then they were built for a good purpose, and that makes a great difference; for men can work much better and do greater things when their motive is good than when it is bad.

One of the most difficult lighthouses to build was that of Minot's Ledge, near Boston. The rock on which it stands is barely large enough to hold it. The present structure of stone was completed in 1860 and was a great triumph for the engineers who had charge of its erection. The iron one which had been built twelve years before was destroyed, and the keeper and two assistants lost their lives.

Another noted lighthouse is that of Spectacle Reef in Lake Huron. The main difficulty in building this was to make it strong enough to resist the enormous pressure of the winter ice. It is quite unprotected, being ten miles from the nearest land, and with ice and waves bearing down upon it for one hundred and seventy miles. It is surrounded by a wall of masonry which is so fitted together and bolted and rivetted that it is stronger than a solid circle of stone would be. The wall is constructed so that the first ice which collides with it is broken and ground on the seven feet of the water which covers the reef. This ice then protects the lighthouse from other ice.

Spectacle Reef lighthouse was built in 1873. As no navigation is carried on during the winter, it is of course used only during the rest of the year. The year after it was erected, when the keeper came for a second season, he found the ice piled up forty feet around it.

On the extreme northern point of the Florida reefs is another lighthouse which required much labor to construct. This is the lighthouse of Fowey Rocks. During the process of erection it was necessary to build a platform twelve feet above the water where the men could wait for the supplies with which to work. The weather was so bad that the men were often forced to wait for hours and even days at a time before the tugs could get to them.

The last of the lighthouses which we will mention is that of Tilamook Rock, Oregon. This was probably the most difficult in construction of them all. The first party of working men that attempted to land met with failure and the foreman lost his life. After this it was very hard to secure the necessary skilled labor.

Finally, however, in 1879 men and provi-

### THE PESSIMIST FIREFLY

S. W. Foss

**A** PESSIMIST firefly sat on a weed  
In the dark of a moonless night;  
With folded wings drooped over his breast  
He moped and he moaned for light.  
"There is nothing but weeds on the earth," said he  
"And there isn't a star in the sky;  
And the best I can do in a world like this  
Is to sit on this weed and die;  
Yes, all that I need  
Is to sit on this weed,  
Just to sit on this weed and die.

"There is naught but this miserable swamp beneath,  
And there isn't a star overhead."  
"Then be your own star! then be your own star!"  
An optimist firefly said. [wings  
"If you'll leap from your weed, and will open your  
And bravely fly afar,  
You will find you will shine like a star yourself,  
You will be yourself a star;  
And the thing you need  
Is to leap from your weed  
And be yourself a star."

Then the pessimist firefly leaped from his weed  
And floated far and free;  
And he found that he shone like a star himself,  
Like a living star was he.  
And the optimist firefly followed and said:  
"Why sit on a weed and groan?  
For the firefly, friend, who uses his wings  
Has plenty of light of his own;  
He has plenty of light  
For the darkest night,  
He has plenty of light of his own."

Ye firefly souls with your folded wings,  
Why sit with the weeds in the night?  
Lift up your wings and illumine the dark  
With your own self-luminant light.  
For darkness comes with the folded wings  
And shrouds the starless land;  
But there's light enough for the darkest way,  
If you'll let your wings expand.  
There's plenty of light  
For the darkest night,  
If you let your wings expand.—Selected

sions were landed and the work proceeded. Building themselves a strong shelter rivetted to the rock, they labored as best they might. The greatest difficulty was in landing the supplies, and stone and tools, which involved great engineering skill as well as great peril.

While we are talking about lighthouses we may as well mention the post-lights and lightships which are just as important to sailors as are the lighthouses. The post-lights are used on rivers and in bays for night navigation, while the lightships are really floating lighthouses, placed where the latter cannot be built.

The most famous of these is that of Diamond Shoals, off Cape Hatteras, where it storms the whole year round. Many attempts have been made to build a lighthouse there, but as yet they have not succeeded even in laying the foundation, owing to the terrible roughness of the sea. However, a new plan is under way for another trial. The foundation alone will weigh about 20,000 tons, or as much as 266,667 men of 150 pounds each.

The invention of wireless telegraphy has

proved a great blessing to the lightships. Not very long ago a whole ship's crew was saved by the use of the wireless message in calling for aid.

Electricity has been tried as the illuminant in lighthouses, but proved a failure owing to the difficulty of keeping it focussed. At present kerosene is used. The lamps are so arranged that all the light is directed in the way desired, usually forward, without any waste in other directions.

In the best lamps there are six circular wicks, which when burning furnish a steady light which is so dazzling that it is impossible to look at it. The heat generated is so enormous that the chimneys must be changed every fifteen or twenty minutes so that they will not melt and run away.

Some countries, such as England, Denmark, and Belgium, exact a toll from every ship passing within sight of their lights, but our country, as well as France and Spain, furnish the lighthouses free to all.

A RĀJA YOGA PUPIL

### A Japanese Hero's Thoughts About Education

**"C**ONSIDERING how naïve is youth, a severe education does not seem at first sight to be fitting, but herein man resembles a plant. Of a tree, for instance, only a little sprig at first shows; with careful attention little by little the branches and leaves are developed; then a prop is given to the same that it may grow straight, and the poor growths are cut off. If each year goes on carefully with this treatment one may obtain straight, beautiful trees. With man it is just the same. As the child comes to be four or five years old a prop is given him in the person of a good tutor who shall remove all the bad growths; shall subdue wilfulness, and make a fine man out of him. Often this foresight of care is neglected, allowing the child to grow up in freedom without protecting him from his own self-will. Only when the child can already think for itself do the elders begin their admonitions, but then it is quite too late; the branches of wilfulness are already too far grown, and the stem can no longer bring forth new branches. A good tree is no longer to be aimed at."—*Iyēyasu*

(From *An Artist's Letters from Japan*, by John la Farge.)

A MEMBER of an exploring expedition to the South Pole describes a sight to delight the eye in that desolate region. One day the party came upon great fields of flowers on the sea of ice—not the kind boys and girls of less frigid countries know, however. These were ice flowers. They are described as beautiful beyond description, waxen white, perfectly formed with delicate feathery leaves, when caught by the sun agleam with every color of the rainbow.

The phenomenon is explained in this way: while the sea is freezing much of the salt is pushed out and the part which comes above the ice assumes these exquisite flower forms.

# THE CHILDREN'S HOUR

## The Fairy Folk of the North

THE fairies, who play such a prominent part in the imagination of childhood, live still very clearly in the memory and traditions of Scandinavia. They have given birth to the rich folk-lore literature in these countries and thus we are able to take a view of some of their peculiarities.

The elves are still divided into two classes, the white and the black. The white or good elves dwell in the air, dance on the grass, or sit on the leaves of trees; the black or evil elves are regarded as an underground people, who frequently inflict sickness or injury on mankind, for which there still is a particular kind of doctor to be found here and there. The elves are believed to have their kings, and to celebrate their weddings and banquets, just the same as the human inhabitants of the earth.

There is an interesting intermediate class of them called hill-people, who are believed to dwell in caves and small hills. When they show themselves they have a handsome human form. The common people seem to connect with them a deep feeling of melancholy, as if bewailing the half-quenched hope of reaching a higher form of life. Their sweet singing may occasionally be heard on summer nights out of their hills, when one stands still and listens, or, as it is expressed in the ballads, when one lays his ear to the elf-hill; but no one must be so cruel as by the slightest word to destroy their hopes, for then the sprightly music will be turned to weeping and lamentation. The people usually call the elves *Huldror* and their music *Huldrclåt*. It is in the minor key, and of a dull and mournful sound. The fiddlers sometimes play it, being thought to have learned it by listening to the underground folk among the hills and rocks. There is also a tune called the elf-king's tune, which several of the good fiddlers know right well, but never venture to play; for as soon as it begins both old and young, and even inanimate objects, are compelled to dance, and the player cannot stop unless he can play the air backwards, or some one comes behind him and cuts the strings of his fiddle. Ole Bull, the people think, learned to play from the hill-people.

The little underground elves, who are thought to dwell under the houses of mankind, are described as sportive and mischievous, and as imitating all the actions of men. They are said to love cleanliness about the house and place, and to reward such servants as are neat and cleanly.

The trolls are not generally regarded as evil. They are thought to live inside of mounds, hills, and mountains, sometimes in single families, sometimes in settlements. They are often mentioned in the folk-lore. They are thought to be extremely rich, for when on great occasions of festivity they have their hills raised up on red pillars, people that have

Lomaland Photo. and Engraving Dept.

"I AM TRYING TO BE A RÅJA YOGA"

chanced to be passing by have seen them shoving large chests of money to and fro, and opening and clapping down the lids of them. Their dwellings are very magnificent inside, being decorated with gold and crystal. They are obliging and neighborly, freely lending and borrowing, and otherwise keeping up a friendly intercourse with mankind. But it is true that they sometimes steal. Trolls have a great dislike to noise, probably from the recollection of the time when Thor used to be flinging his hammer after them. The hanging of bells in the churches has for this reason driven most of them out of the country.

The nisse is the Swedish brownie. He seems to be of the dwarf family, like the trolls, as he resembles them in appearance, and like them he has plenty of money and a dislike to noise and tumult. He is of the size of a one-year-old child, but has the face of an old man. His usual dress is gray, with a pointed red cap. No farm-house goes on well unless there is a nisse in it, and well is it for the maids and the men when they are in favor with him. They will find the traces of his help everywhere in their work. But he punishes them for any irregularity that takes place.

The neck is the river-spirit. Sometimes he is represented as sitting during the summer nights on the surface of the water, like a pretty little boy with golden hair hanging in ringlets, and a red cap on his head; sometimes as above the water, the upper part of him like a handsome young man, but the lower like a horse; at other times as an old man with a long beard, out of which he wrings the water as he sits

on the cliffs. The neck is a great musician; he sits on the water and plays on his gold harp, the harmony of which operates on all nature. To learn music of him, a person must present him with a black lamb and also promise that his soul shall take a higher form in another life.

The stromkarl is a musical genius like the neck. He who has learned from him can play in such a masterly manner that the trees dance and waterfalls stop at his music.

The merman is described as of a handsome form with green or black hair and beard. He dwells either in the bottom of the sea or on cliffs near the sea-shore, and is regarded as a beneficent kind of being.

The mermaid is represented in the popular tradition sometimes as good, at other times as evil and treacherous. Her appearance is beautiful. Fishermen sometimes see her in the bright summer's sun when a thin mist hangs over the sea, sitting on the surface of the water, and combing her long golden hair with a golden comb, or driving up her snow-white cattle to feed on the strands or small islands. Her appearance is a sign of both storm and ill success in their fishing.

It is the belief of most of the common people of the North that all these various beings were once worsted in a great battle with superior powers, and condemned to remain during this age in certain abodes. The rocks were given to the dwarfs; the groves and leafy trees to the elves; the caves and caverns to the hill-people; the sea, lakes and rivers to the merman, mermaids and the necks; and the small waterfalls to the stromkarl. They still live and fill the fairy-tales and folk-lore with their strange characters.

And surely there must be some deeper meaning hidden in the tales. Can the Råja Yoga children find it? I believe they can.

STUDENT

## The Discobolus

THIS is the name of a wonderful white marble statue that may be seen in one of the great art galleries of Rome. In ancient days in Greece it was part of every youth's training to build up great physical strength and also a skill in games. The statue gives us a very clear picture of the beauty and grace and strength that the Greek youths had. The reason that it is so wonderful is that the sculptor, whose name was Myron, was able to model the figure so as to show the Greek athlete alert and poised, just at the very moment before the discus or quoit was sent flying from his hand. We see the youth standing, all attention, his muscles tense, and so real is it we almost expect to see the discus thrown as we stand gazing at the statue. Myron made the statue of bronze, and this one of which we write was copied from it in marble. E. N.

# The Theosophical Forum in Isis Theater

S a n D i e g o C a l i f o r n i a

## LAST SUNDAY AT ISIS THEATER

Dr. Herbert Coryn makes Address on "The Optimism of Theosophy"

DR. HERBERT CORYN was the speaker at the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, and was listened to by a large audience.

A delightful music program was rendered by students of the Isis Conservatory.

From the address we quote the following:

"The days for the sudden speaking of great messages are not over; as there have been moments of possibility in the past, so will there be in the future; and the signs point to one as now near at hand.

"Some of the lesser moments are known to us all and occur frequently. They are the culminations of slow changes of opinion, going on under the surface unnoticed. Then somebody begins to talk and the hour catches fire. The political color of a country appears to change suddenly; or there is a blaze of war spirit; or a people strikes for liberty; a new Japan arises; a Wesley stirs a million hearts; a Luther frees a million minds. But the Luthers and the Wesleys had to have the moment or they would have spoken into the unlistening void; and the moment was the visible breaking out into flame of a glow that had been creeping about in the unseen depths. And as there are lesser moments like all these, so at much longer intervals there are greater ones, perhaps only a few through the long course of a civilization, in which infinitely more may be done. It is one of these that is coming, and the expectancy is in the air. Men do not *know* that they are expecting something, but they show that they are by their readiness to listen to and try everything. Nothing is too absurd. More than one claimant to be even Jesus Christ is now living. They have their following, at any time their audience. 'Of course it's all nonsense,' people say. But they *think*.—so secretly as not even to know it themselves,—but perhaps there's something in it. At any rate there's something somewhere coming.' And so there is, and that is why Theosophy is optimistic, for it knows what that is and where it is coming from.

"Even our present remains of Christmas Day show the possibilities of a moment. We feel quite differently on that day, more genial, more inclined to smile and be brotherly. We would shake hands with the first man we met if we felt sure that he felt as we do. He does, but he does not know that *we* do; and so we only wag the tail of our eye pleasantly at him without other salutation. Imagine a Christmas morning a hundred times intensified, so universally pleasant and compelling and benignant that everyone resolved at all costs it should stay. By the time this morning comes, as it will, men will have learned from Theosophy what made it so and how to adjust their minds by a little daily thinking so as to keep it so; the battle of the ages will have been won.

"Now what if spiritual growth be not — to

put the case in an extreme form — a matter of *growth* at all, but of *freeing* from bonds; and what if, one day, we should determine to smash them by one great effort? Ordinarily, spiritual growth comes by a long succession of small efforts from day to day. But a day might come, when, if we had made the preparation, the soul would suddenly see the possibility of breaking the shell about the heart (where it lives) and coming forth into daily life.

"But what is the preparation we have to make? And what sort of change is this redemption?"

"Part of the preparation consists, of course, in doing our spiritual best from day to day. The other part consists in legitimately *hoping* and expecting; and in getting rid of the idea of slow spiritual toil year after year as our only chance of the great Christmas Day. That is depressing; to some people paralyzing; and constitutes one of the bonds — an unnecessary one — which the soul will have to break. If, while making all the effort we can, we are *expecting* that in some hour of silence the soul, the spiritual nature, may stir in the awakened heart and come forth — our expectancy has made its task easier, just as our doubt and despair might keep it imprisoned until death. It is possible to seize during life that soul-freedom which blind teachers tell us is the gift of death only. But this must be thought possible, and looked for. And when, as Theosophy spreads wide, and in every nation there are thousands holding this thought and expectancy in mind — it is they who will make possible the coming forth "in a moment of time" of the hidden, waiting world-soul. And by these who believed and hoped and worked, the rest, who could not believe and had no hope, will be touched by the same new fire, radiated by the same full reigning dawn. The message-speaker will but need to say *Look*, for the Light is among you, is everywhere, enwraps the earth.

"We all have our better moments and our worse. It may be that the better and higher come at night when all is quiet, including our own minds. The day's pressure and rush is forgotten; we begin to see ourselves a little, how foolish was that quarrel, how mean that deed, how unkind that word. The soul is then beginning to speak; we feel more, larger, better, in some indefinable way, than by day — nobler, more forgiving. And then, too, nature is more beautiful, distant music more beautiful, and the scent of the flowers. That is also a consequence of the stir of the soul, more humanity, more beauty, more peace, more compassion, more brotherhood. If the soul can do that when it just stirs, when we can just feel it merely because the world and our mind are for the moment quiet, what can it not do, what could it not make of us, if it were fully awake — or rather, if we were fully awake to it? In truth, *it* is always awake; it is *we* who must do the awakening. We must seek and compel those quiet moments, day by day or

night by night, find our divinity. For they are our evidence, evidence for us ordinary persons, apart from what the great Teachers have said, that the soul *is* in us, that we *are* veiled gods and divine, and that the veil is the mind with all its worries, meannesses, quarrelsomeness, greediness, passion and changeableness.

"Again, it is because we are souls, though only slightly awake, and by gleams, that to us nature is beautiful as it cannot be to any animal: the sunrise, the moonlight's path of silver across the water to our feet, the lap of little waves when the tide is low; it is because we are souls that music is beautiful; because we are souls the stress of some great emergency may sometimes make us heroes; because of that we can have pity and compassion; because of that we can, if we will, say no against any pressure of temptation. It is the soul that makes us human instead of animal; it is the soul which, when fully awake, will make us divine and gods.

"What is called the moral life, in which constant attempt is made to overcome selfishness and all those other failings, is a *means* to a *preparation* for the glorious, free, awake life of the soul. But the moral life is a poor and sad thing unless we live it in hope, in expectancy, unless we silver it with the quiet moonlight of those moments of search for the soul, of listening in our own hearts for the music of the soul.

"Nor do we *have* to spend our whole lives trying to learn to be moral and unselfish and brotherly. If we have been seeking the soul, there will come a time when the result of our efforts will have entered into our being, when we shall have learned the Divine Law, learned how to go divinely. And then for the first time we can swiftly and surely explore the scenery of the Divine world.

"These then, are some of the sources of the optimism of Theosophy. It sees that human life need not be, and will not be, the painful thing it is; and that we do not need death to open for us the doors of a new heaven. It is optimistic because it sees that there are thousands on the verge of the great awakening. It is optimistic because every one of these, once awake in the new life, will awaken a thousand others who need the help and hope that only one himself awake can give. It is optimistic because its custodians have watched human history from age to age; have recorded age after age; and from a supreme vantage ground can interpret with certainty those one-pointed signs of the times to which the world is so blind."

OBSERVER

## Theosophical Meetings

PUBLIC Theosophical Meetings are conducted every Sunday night in San Diego at 7:30 at the Isis Theater, by students of Lomaland assisted by children of the Râja Yoga School. Theosophical subjects pertaining to all departments of thought and all conditions of life are presented. Excellent music is rendered by students of the Isis Conservatory of Music of Lomaland, and Theosophical literature may be purchased.

## Art Music Literature and the Drama

### A Proposed Home for Artists

IT is reported that a Frenchman is trying to carry out a plan to purchase a Benedictine monastery, situated about three hours' distance from Paris, this to be used as a home for poor artists in which they may live and work, free from the crushing strain of the struggle for existence that so often kills out the artistic aspiration of men of talent who are not, at the same time, men of business. At first sight this scheme seems an excellent one, in spite of the many difficulties in the way of its successful development; but it is quite open to question whether artists are more likely than other men to do their best work when relieved from the pressure of want—that seems so great an enemy to art. Is it not sometimes remarked in the career of the greatest men that their best work was done when difficulties were greatest?

I fancy that such a scheme would be eminently successful if it were directed by a master with autocratic power in the control of the establishment, if he were not only a true artist but wise in the judging of character and the guiding of men. However, under ordinary circumstances, I fear the plan, if carried out, might possibly encourage that tendency, so natural to artists, to draw away from the life of the world and wander in the regions of idealism, where the souls of the dreamers sleep the enchanted sleep of astral intoxication.

There seems to be a certain kinship between the desire of the religious recluse for the peaceful cultivation of his spiritual selfishness, and the artistic craving for a haven of refuge from the hard duties of worldly life in which to cultivate the aesthetic selfishness which frequently does duty for love of art. The selfishness of the religious recluse may be counteracted by the rule of his order, if there be a strong ruler at the head of the institution; but it is hardly likely that any such rule could be established in an artistic retreat such as that which is proposed unless it were under the control of a strong and wise master-artist. Some such conditions doubtless existed in the studios of the early masters, whose pupils were apprenticed and bound to obedience; but, in these days of so-called freedom, such conditions are hard to find outside the ranks of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, whose members have fortunately found in Katherine Tingley just such a master and just such conditions. But here it is the master who made the school, as in a limited way Wagner made Bayreuth, and in perhaps another modern instance a Herkomer made Bushey. That such homes of art will rise in the near future I think most probable; but the master must be found first, and it is the work of Katherine Tingley in her Rāja Yoga Schools to prepare men and women fitted

to hold such positions. Then, with the ideal of service to Humanity as their basis practically applied in every detail of daily life, such homes will be what they should be, and not shelters for the victims of aesthetic selfishness.

R. MACHELL

### Shakespeare's Genius

THE following note on Shakespeare and his Sonnets appears in a contemporary:

Wordsworth held that with the sonnet-key Shakespeare unlocked his heart. Browning retorted that, if so, "the less Shakespeare he." The truth is that the

has passed through many human experiences in past incarnations, a very slight experience of the same kind in this life is sufficient to awake all the old memories. Not that these memories are awakened in the form of recognized personal experiences; but they are awakened to the extent of enabling the man to learn more from a single brief episode than others might learn from a lifetime. Some people, in fact, are taking revision courses, so to say, in life. Shakespeare was probably the incarnation of a Soul rich in wisdom, and very slight provocation sufficed to arouse in him the latent memories, so that he could tap a profound source. This was his "imagination."

The personality of Shakespeare is indeed a mystery to the philosophy that accepts ordinary personalities as a standard; but perhaps it is not altogether insoluble. His portraits are said to represent an expressionless individual, without any salient features, except the spacious forehead. He was not so much a man of character, as a portrayer of character. He was receptive, plastic, and mobile. To account for his writings on ordinary lines, we have to send him to Denmark, make him a lawyer, and so on; even to multiply him and make him synonymous with a group of writers, like Homer. But he did not need to spend toiling years over law and all the other things he writes about. He was a man who could make much out of a little. We can imagine that as he sat in his tavern, drinking his ale, every face, every gesture, every speech, of his fellows would be a whole human history to him. In each personality he would see a type, a type that was familiar to his Soul's experience, in countless repetitions through untold ages. Who can tell how far Shakespeare was or was not conscious of the source of his genius? Perhaps he exercised it

without ever awaking to self-consciousness. Perhaps he had times when he became prescient of the inspiration of the Soul. In any case his everyday personality was a mask, and no doubt it was sufficiently ordinary.

Perhaps there is an essential difference between the transcendent genius and the ordinary genius. The ordinary genius may carry his talents about with him in visible form like so much baggage, and have a broad brow, an eagle eye, a vast memory, and so on. But perhaps the transcendent genius excels not so much in the possession of cultivated faculties and mental endowments as in a wonderful power to call into being various latent powers on occasion. So he might be a very ordinary person when off duty. He would not need to be erudite, as his knowledge would be drawn from an inner source when required. We might compare Shakespeare to a ray of simple white light, so ordinary, yet containing every color, and the source of all radiance. STUDENT

Lomaland Photo. and Engraving Dept.

ST. GEORGE AND THE DRAGON (LOUVRE): PAINTING BY RAPHAEL

ways of genius are past finding out. Shakespeare was able to make an artificial theme appear to burn with personal pain and rapture. It is impossible to tell where the artist ends and the man begins. It may be that Shakespeare unpacked his own shame and anguish in the sonnets. On the other hand, it may be that he was dramatising an imaginary shame. He was quite capable of either feat. We may argue that his adventurous love of sensation must have led him into the darkest depths of experience. But we may also argue that his imagination was omnipotent enough to survey and chart the darkest depths of sensation without the help of experience. It is better to confess that the personality of Shakespeare is a mystery as insoluble as the mystery of life itself.

Truly it is rather narrow criticism which argues that a writer must have experienced in his *present* life all the emotions he depicts. He may depict the thoughts and sentiments of others, that come floating into his receptive imagination. Or again, he may be genius enough to tap the reservoirs of his Soul's vast experience in its countless past lives. For one who

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l   O f f i c e   P o i n t   L o m a   C a l i f o r n i a

The Headquarters of the Organization at Point Loma, with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West

## Katherine Tingley in Europe Clippings from the Press

Katherine Tingley in Malmö  
(Translated from *Sydsvenska Dagbladet*,  
Malmö, Oct. 16, 1907)

THE Leader and Official Head of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY throughout the world, whose headquarters are at Point Loma, California, lectured last evening in the great hall of the Free Masonic Lodge here in Malmö. A very attentive audience filled the hall to its last seat.

Although Katherine Tingley does not speak our language she kept her audience spell-bound through her wonderful voice and gestures, which gave to her lecture such a distinctive character.

Mrs. Tingley's subject was, "The Message of Theosophy," and in a remarkable speech she made plain to her audience the vast possibilities of man, once he awakes to the realization of his higher nature. She declared that in essence man was divine, and that as such he had the inherent power of conquering his lower nature and its weaknesses. She said that Theosophy, accentuating the necessity of purification and refinement of the whole nature, has a very high moral code; in fact, its code of morality is the highest, and it holds this out as the ideal which must be striven after in the life of every man. Further, Mrs. Tingley showed that any system which did not accentuate high morality and did not have any moral code, was an open gateway to vice and crime.

Mrs. Tingley said that she felt sure her audience would appreciate her making this statement, for it had recently come to her knowledge that a small so-called Theosophical Society, of which Mrs. Annie Besant was the head, had declared through her that it had no moral code. Mrs. Tingley expressed her astonishment and regret and said, "How dangerous for struggling humanity such a teaching must be!" Mrs. Tingley hoped it would be clear to all that she was forced to draw a distinct line between a society which put forward such dangerous teachings under the name of Theosophy and the society she herself represented, which, on the contrary, pointed to the existence of a distinct high moral law.

In connexion with this Mrs. Tingley touched upon the sacredness of marriage, the responsibility of parents and the need of a broader conception of man's relation to other men and to his native country and to the world. She declared that the present condition of humanity called for a higher interpretation of the divine laws of nature, and that before happiness could be attained by men individually or a people collectively a nobler conception of justice must inspire the law makers, and, indeed, all classes of society.

Mrs. Tingley speaks in such a way as to appeal to the most highly cultivated, as well as to those who have not had such opportunities of education.

## MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

She is very optimistic and her charming manner and gestures give a characteristic expression to all that she says. This was especially marked when she pointed out the help that Theosophy gives to everyone who feels the need of understanding the true meaning of the bible and other sacred books. She hoped that everyone interested in the deeper meaning of life would begin the study of Theosophical literature, and she accentuated the fact that none of the officers or workers in her society received any salary, and that the Theosophical teachings are open for all at the public meetings without any charge.

Katherine Tingley's Lecture at Helsingfors, Finland  
(Translated from *Hufvudstad-Bladet*, September 29, 1907)

THE lecture by Katherine Tingley yesterday afternoon at 4:30 o'clock attracted an audience that completely filled the theater. One delightful feature was that in addition to the lecture there was a fine program of music and readings. The scene on the stage, a Greek temple, was decorated with laurels and flowers, and the ladies wore Greek dresses which harmonized with the stage setting. There was a refined, one might say a sacred, touch to the whole.

Mrs. Hanson read with fine feeling some quotations from "The Mysteries of the Heart Doctrine," which were interpreted by Dr. Bogren. The Hon. Miss Nan Herbert spoke of the Rāja Yoga School at Point Loma, and of Mrs. Tingley's Rāja Yoga system of education which is carried on there. This system aims to develop the inner harmony and balance of the whole nature which is to be attained only through the awakening of the powers of the heart. From the very beginning the children are taught that happiness can be achieved only by seeking to make others happy. Excellent results have already been attained with the children at Point Loma, and visitors who have had an opportunity of seeing something of the children's work have been astonished at the expression of joy and happiness which radiates from the children's eyes.

The Rāja Yoga system, she said in conclusion, will at last conquer the world.

Finally Katherine Tingley spoke. She has a very dignified bearing and a pleasant sounding voice. Her lecture, which was interpreted by Dr. Torsten Hedlund from Gothenburg, was on "The Influence of Theosophy and its Work in the Future." She declared that she had found that the present

time was specially auspicious for the spreading of the sublime truths of Theosophy. Humanity more than ever was looking for some new hope, something higher, which could liberate it from the heavy weight of materialism. Theosophy taught man to realize that he was divine and showed the way in which the divine ideal might be attained in practical life. The UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY had given

special attention to school and home life. There is a call for education on higher lines, and a need for higher and purer ideals regarding marriage, which the speaker declared was a sacred institution. These, she stated, can be attained only if the will is turned towards that which is noble, divine, and eternal.

The speaker was fully convinced of the glorious future of Theosophy, and said that no personal sacrifices were too great for her that would help Theosophy to a final victory in the hearts and lives of men. She hoped that in Finland there would awaken a great interest in its beautiful teachings.

## The Latest News from Mrs. Tingley

The latest news we have heard of Katherine Tingley's tour is the following cable from one of her secretaries:

Amsterdam Holland. Nov. 19, 1907

Katherine Tingley's work at Amsterdam most successful. Great meeting held. All papers very appreciative. New Lodge formed.

THE "SECRET DOCTRINE" will show what were the ideas of all antiquity with regard to the *primeval instructors* of primitive man and his three earlier races. The genesis of that WISDOM-RELIGION, in which all Theosophists believe, dates from that period. So-called "Occultism," or rather Esoteric science, has to be traced in its origin to those Beings who, led by Karma, have incarnated in our humanity, and thus struck the key-note of that secret Science which countless generations of subsequent adepts have expanded since then in every age, while they checked its doctrines by personal observation and experience. The bulk of this knowledge—which no man is able to possess in its fulness—constitutes that which we now call Theosophy or "divine knowledge."

Thus, unity of everything in the universe implies and justifies our belief in the existence of a knowledge at once scientific, philosophical and religious, showing the necessity and actuality of the connexion of man and all things in the universe with each other; which knowledge, therefore, becomes essentially RELIGION, and must be called in its integrity and universality by the distinctive name of WISDOM-RELIGION.

It is from this WISDOM-RELIGION that all the various individual "Religions" (erroneously so called) have sprung.—H. P. Blavatsky

# From "THE BOBOLINK"

James Russell Lowell

O YE whose living is not Life,  
Whose dying is but death,  
Song, empty toil and petty strife,  
Rounded with loss of breath!  
Go, look on Nature's countenance,  
Drink in the blessing of her glance;  
Look on the sunset, hear the wind,  
The cataract, the awful thunder;  
Go, worship by the sea;  
Then, and then only, shall ye find,  
With ever-growing wonder,  
Man is not all in all to ye;  
Go with a meek and humble soul,  
Then shall the scales of self unroll  
From off your eyes---the weary packs  
Drop from your heavy-laden backs;  
And ye shall see,  
With reverent and hopeful eyes,  
Glowing with new-born energies,  
How great a thing it is to BE!--Selected

## Capital Punishment

IF at the present day the human race as a body stood well girt about with the knowledge of all the links that bind present, past and future, and with this mantle of wisdom could step forth into the new time in full command of the situation, how different from what it is at present would be the human lot! Humanity is not so equipped, however, and never can be until, awakened to a belief in the Higher Law, men seek and find and practise its precepts and, having regulated their own lives, proceed so to change the man-made laws evolved during ages of ignorance that these human laws become once more undistorted copies of the eternal law, reflecting its wisdom and compassion. And one of the first laws to be reconstructed because it is one of the greatest menaces to human progress, is that in accordance with which human life is taken by violence—capital punishment.

A pitifully narrow conception of man's nature and destiny, a conception from which the light of truth is obscured by selfishness, is responsible for the adoption of this means of attempting to prevent the crime of murder. Brain minds unilluminated by the wisdom of the ages evolved laws which other brain minds, even those of intelligent and humane citizens for the time accept as just. How can they perceive the injustice of them when their comprehension is limited to one phase or two of man's complex nature? when the mysteries of the great unseen realms of thought and feeling in which impulse arises, are not understood in their relations to the deeds done by men? How can humanity which has forgotten the Higher Law, forgotten the essential unity and inter-relation of all beings, forgotten the soul wisdom that includes every aspect of body, soul and spirit and shows the One Law acting everywhere, frame laws in harmony with the eternal?

The broad view given by Theosophy reveals

a human life as consisting of many threads of thought, feeling and action, binding each man to all his fellows. If one of these lives is cut off before its energy has been transferred as by a natural death to another part of the texture of his being, the whole life fabric of humanity suffers; there is a scar, a gap, an injury to be repaired. A human life thus cut off while its motive power is centered in the passionless instincts such as animate a murderer causes a terrible injury to the life of humanity as a body; for this energy is freed, passing out into the thought atmosphere to find a lodgment where it may, to strengthen like murderous impulses, to bury seeds of evil intent in the dark corners of other weak natures, to do its deadly work of *breeding* crimes such as those which brain minds have fancied they were preventing by the execution of the criminal.

It is a strange and pitiful comment on human ignorance that though each man woman and child lives in an atmosphere of thought and feeling, the source of every word and act, this unseen realm is almost ignored; there is little knowledge of the forces there active, and less acceptance of any responsibility in such matters. Have we learned nothing yet from epidemics of incendiarism, suicide, and murder? It would seem so. Humanity does not seem to be aware of the dangers besetting it in the realms of thought and feeling. We hear little of any means of protection from such dangers, though we do hear a great deal about the wrecks made of human lives by sudden invasions of evil impulse into lives hitherto apparently blameless. When will humanity learn that the source of these sudden outbreaks of crime is to be found in the undead murderous instincts of victims of capital punishment? Undead? Yes: for though the life of the body was taken, the murderer is not dead. The murderer was not that body, but the bundle of passions and desires that inspired its acts, and this the electrocution, or the hanging, parted forcibly from the body, expelling it into the thought world, while depriving it of the opportunity offered by life in a body, and offered *only* by life in a body, the opportunity to redeem itself and pass at death onward into the light rather than back into the darkness.

We have recognized, as is shown by our reformatory institutions, that persons with evil tendencies are safer in places well guarded where their energies can be gradually directed into useful channels and where they have been formed, by means of such training, to become less and less of a menace to the public welfare; where, in fact, they may redeem themselves by work; but in the same world in which this more compassionate method is used, the law sanctions the forcible removal from a physical body in which a gradual transformation of the brutal instincts *might* be accomplished, of the passions of the greatest of all criminals, the murderer. If before his life be taken he can be made to confess his crime, or to profess religion, so much the better; but he is given no chance to work out his better mind into better deeds. And if he has *not* repented, if he dies in impotent rage and hate, think you this seething volcano of criminal impulse can sink out of sight forever? Is it not rather this demon which causes the sudden fear and dread in the young and innocent? or in the sensi-

tive and delicate who may be overpowered and become the victims of this force which *can not by violence be deprived* of its outlet into action. While human laws thus distort the mandates of the eternal laws of wisdom, human society breeds monsters such as this by capital punishment, the undead, though disembodied murderers, who have their strength increased by every execution, and who constitute a horrible vampire which feeds upon the very heart of human life.

What then shall be done with these dangerous criminals? Suppose that we face the necessity of transmuting the evil in these natures instead of expelling it and ignoring the dread influence it wields. What is the spiritual alchemy by which this change can be effected? It is a secret known to few, a miracle which like every other miracle ever known, can be worked by those who have first rectified themselves and become the pure in heart.

The power of the appeal made to the dormant higher nature of another is known only by those, and can be exercised only by those who have listened to their own souls and have triumphed over evil by means of a *much more searching and telling* process than many are willing to endure. The few who have persevered, and having conquered selfishness, live in the light of their divinity will be found able to appeal thus to the divinity in others, even the most unpromising, and will be able to call it forth and to inspire the criminal to *reclaim himself*.

Only in this way can murderers be destroyed, can crime be effectually prevented. That this is not done more frequently today is due to the fact that humanity has not, as a whole, awakened to its divinity, and hence knows not the Law of Compassion.

M. T.

## We are Immortal

LET us consider a few of the simple and beautiful teachings of Theosophy. We are immortal beings in our higher natures with as vast a past behind us as is the future ahead. Slowly by our own efforts we are making possible the manifestation of the godlike qualities of our real selves, and all the higher attributes of character—perseverance, courage, patience, purity, compassion,—building a worthy vehicle for the "heaven-born spirit dwelling in our hearts."

It is a refining process that we are engaged in and it is aided or hindered by our every thought and act. Noble and unselfish deeds and thoughts transmute the baser metal of the lower nature, clarifying it and letting the golden light of divinity shine upon our path in all its radiance. "The soul demands altruism and will be satisfied with nothing less," said William Q. Judge, and taught how man's higher nature always works in line with the law of life and that a great purpose lies behind all evolution, and that the goal of humanity's effort is perfectibility.

What an extended range of vision we gain if we look upon each earth life as but a stage in the soul's journey; if we realize that our lives are governed by law; that in the formation of our character and in the circumstances of our lives the measure that we have meted out to others is meted back to us, whether of kindly helpfulness and love or of indifference and hardship; of ever increasing opportunity or of hindrances upon our path. ## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** What is meant by the "Christos dwelling in us"?

**Answer** The Christos dwelling in us is the Christ principle. The eternal spirit of truth in every soul. The individual ray of spiritual light incarnated in the temple of the body—that which "lighteth every man that cometh into the world."

It is the existence of this divine spark in all which is the ultimate basis of universal brotherhood: "for both he that sanctifieth and they who are sanctified are all of one: for which cause he is not ashamed to call them brethren."

H. P. Blavatsky said that "Christ—the true esoteric Savior—is no man but the divine principle in every human being." It is the union of the human side of the nature with this divine spirit which is manifested through the perfected humanity of all the world's Initiate Teachers, "whether the name be Horus, Krishna, Buddha, or Christ."

The true purpose of life is that man may learn to become united with his higher self—the Christos in the kingdom of heaven, which is within. The lower kingdoms are led along under the guidance of Nature and natural laws until the all-pervading spirit becomes individualized in the higher animals into animal souls. Only man is gifted with the light of Manas—mind—and only he has free will with which to choose between good and evil. In our dual human nature, mind is the battle ground of the conflict between the animal body seeking supremacy for its own selfish desires, and the spiritual soul seeking to raise the whole nature and finally to unite the individual soul to the universal spirit—what Emerson called the Oversoul. No vicarious atonement can save a man or make him more or less than he has become by his own efforts; he must work out his salvation and thus attain to perfect at-onement with his higher nature.

It is the Christos within us which is so conscious of the largeness and liberation and beauty of real life that it willingly accepts the limitations and sorrows of incarnation that it may know the truth even when veiled in the flesh, and that it may also help to raise the world of matter toward its own estate. It is the Christos within which strives to make us "perfect," as Jesus said, giving us courage to cling to life through the hard lessons of poverty, sickness, disappointment and sorrow. Conscience is another name for the divine urge toward the highest and best in our natures, and the truth is obscured only as we deliberately turn away from the inner light.

In the humanity of the Nazarene is seen a hungering, thirsting, sleeping, weary man of sorrows—the Christos crucified in matter. In his divine compassion and love and self-sacri-

fice is seen the perfect flower of which all human impulses of pure aspiration and unselfishness are seeds of promise.

It is the Christos within which impels us ultimately to transmute the inertia and sensations of matter into a larger and finer sense of life and being; and this struggle between the light and darkness which "are the world's eternal ways," continues through myriad lives until each soul can say, as did the Elder Brother: "I am the way, the truth, and the life."

STUDENT

**Question** Theosophy asserts that man is divine. All religions teach that he is more than a mere animal, but how are we to gain a real sense of our divinity, and recognize it as a present conscious power?

**Answer** Self-analysis is not only a difficult process, but one full of many surprises, and oftentimes humiliation for the personality of the one who undertakes it. Yet self-analysis is necessary if we would come to know ourselves as we really are, and is the first step towards a realization of our divinity.

Let us ask for the moment, what is it that we are analysing, and what is it that conducts the analysis? Some say that the mind is the analyst. It is true that it is an instrument in analysis, but have we not power to analyse the mind itself and our mental processes? Oftentimes in the contemplation of an act, instantaneously without any analysis whatever, there is within our consciousness a something that knows whether the act should be done or not. If now we begin to reason about it we find arising in the mind excuses and arguments. What is that in man which knows without argument? Some call it conscience, and some intuition. But however we name it, what concerns us most is that it exists, and that there is, as it were, a spectator, an onlooker with the power of judgment and the power of will, standing apart from all mental processes and the desires and sensations of the lower man.

On reflection we come to realize that this spectator is ourself, with the power to use the mind and the senses in order to gain experience in both the world of thought and matter.

Once we say that man is dual we have the keynote for the realization of his true nature. Here is the first step in the analysis of our complex nature. But it may be asked, how do we know what is high and what is low? Through experience, and through the power of judgment of the "spectator" referred to above, until finally the only right course of conduct, the only one which brings a sense of true happiness, is seen to be that which is in conformity with this inner judgment.

When we speak of divinity we all have some conception of what is meant by the term, and it brings up in the mind such ideas as truth, purity, honor, justice; and once that we set ourselves to determine who and what we are, we find that these ideas all have part in our true nature, in that which ultimately we know to be ourselves.

From the above considerations, is not the answer to the question perfectly plain, namely, that to realize our divinity we must seek to act in accordance with our highest ideals and to make those powers of our nature which we recognize as akin to, or attributes of, divinity, the dominant factors in everything we do. To

realize our divinity we must act in accordance with that which is divine.

But this implies something else. It implies the refusal to act in accordance with that which is contrary to divinity.

It implies a positive attitude of mastery and domination over all the lower elements of our being. It requires the conquest of all the passions and appetites, and of all tendencies to selfishness, greed, or lust. In other words it means an active warfare. It is not sufficient mentally to conceive the idea of divinity or make the mental or verbal assertion that we are divine. This must be followed by action, and by constant purification and refinement in act, thought, and in speech. Divinity cannot be realized if the instrument through which it acts or which it uses in order to gain expression in this outer world be not pure and sound. Any other course would be hypocrisy and result in degradation. This body in which we live must be made a temple and all the powers of mind and heart must be sanctified servitors therein, acknowledging only one master, and striving after the realization of but one ideal—Divinity.

STUDENT

**Question** I can believe that life is continuous and does not end with the body; that knowledge once gained is not lost, but how can we be sure that we continue life on this earth?

**Answer** One of Nature's laws, which we accept without question, is that the sun which sets today will rise tomorrow, so also must we not believe that our life does not end with the night of death, but that the soul will continue in a new body on this earth?

We reap where we have sown, as well as what we have sown. We do not plant grain in one field and reap it in another; so our acts in one life on earth return to us in another life here, until we have overcome every evil in our own natures and have learned to live to benefit mankind. Then we may look for other worlds to conquer.

Is it not only logical to believe that the causes which brought us here once to this earth, will bring us here again and again, until we have become perfect characters and made life on earth all it might be; learned to live in harmony with each other and developed all the faculties possible to us?

We have not earned the right to some other heaven until we have made life on this earth the heaven it might be, and we may be sure that this earth will be our schoolroom until we have learned all the lessons here and are ready to enter a higher school, some other world, perchance, or anywhere in this vast universe, for as Milton says:

The mind is its own place, and in itself  
 Can make a heaven of hell, a hell of heaven.

Is one life on earth enough to learn all there is? We have all said at times: "If I had my life to live over how differently would I do." So we would with the knowledge and experience which we have gained from this life, profiting by our many mistakes, and we may be sure that we shall have the opportunity to come again and again to earth to reap what we have sown, to repair our mistakes, to finish what we have left undone, to take a new step forward in life's eternal journey; to help the world on to peace and brotherhood. A. O. B.

### Coincidences

IN the columns of *The Spectator* (London), Mr. Rider Haggard reminds us that about two years ago he wrote a historical romance. For the hero he invented the name Peter Brome "as being one that I had never heard." He represented the father of his hero as having been killed at the battle of Bosworth Field (Fifteenth century); as having owned property in Essex "a few miles over the Suffolk border"; and as taking a bird for his coat-of-arms.

After the publication of the story Mr. Haggard received a letter from a certain Colonel Peter Brome Giles, the High Sheriff of Bucks, asking where he had obtained the particulars concerning the Brome family. Mr. Haggard replied that he had invented them all and asked the colonel the reason for his question. That gentleman accordingly explained that an ancestor of his own was named Peter Brome; that he had been killed at the battle of Bosworth Field; that he had owned property in Suffolk; and that he had taken a bird for his coat-of-arms!

Mr. Haggard naturally asks the readers of *The Spectator* if they can suggest an explanation of a coincidence against whose casual occurrence the odds would be so enormous. The editor's suggestion is this:

It almost looks as if Mr. Rider Haggard, when he thought he was inventing, was unconsciously receiving random and accidental brain-waves, à la Marconi, from Colonel Brome Giles. Was Colonel Brome Giles, we wonder, working at pedigree questions at the time when Mr. Rider Haggard was planning his novel?

May not a similar explanation fit some of the cases of plagiarism which occasionally astonish the literary world? These are sometimes so open, and the perpetrator of so high character, as to put conscious theft almost out of the question. Some years ago, for example, an English Prime Minister pronounced a funeral oration over somebody which was almost identical with that of Thiers over St. Cyr. A living eminent novelist once made one of his heroines deliver her soul to the stars in a longish poem — which had appeared years before in an obscure magazine.

Science is only just beginning to understand the inter-relation of minds, and of the conditions of receptivity it knows almost nothing. But the facts already demonstrated will presently be found to require a *mental* ether for their explanation as imperatively as the transference of light and electricity requires a physical one. We wonder under what name the *Astral Light* of Theosophy will appear in the text-books? But this is much more than a transmitting medium. It is the terrestrial — and in its higher degrees, cosmic — memory of all that has ever happened, ever been said and even thought. We are all of us more or less closely in touch with it, often obtaining from it more than we suspect and certainly contributing to it more than we suspect. Mr. Haggard need not have been receiving brain-waves from Peter Brome's descendant; but in his search for a name and some incidents with which to credit his hero's father, he certainly lighted accidentally upon some records which the Colonel had made or refreshed in the Astral record-book. What was the link of association is impossible to say, but some link there assuredly was.

STUDENT

### Coal-Gas vs. Electric Light

IT used to be thought that the incandescent electric lamp would give us purer air in our rooms than gas does; but now, according to a writer in the *Scientific American*, it has become perfectly clear that a gas-lighted room will be nearly always more pleasant and healthy to live in than one lighted by incandescent electric lamps. Thus, the fact having been discovered by actual experience, science fulfils its accustomed rôle of explaining the facts and vindicating experience.

Gas creates carbon dioxide, but it gets rid of this gas, by generating air-currents, at a much faster rate than it generates it; so that the total effect, as regards carbon dioxide is that it is lessened. But the electric lamp allows the carbon dioxide from the lungs to remain in the room, for it starts no convection currents. When, however, we consider the poisonous exhalations from the lungs, which are so much more unpleasant and injurious than mere carbon dioxide, the advantage of coal-gas lights are even more marked. For the naked flame burns these up; and, more than that, it gives off just enough sulphur dioxide to disinfect the air. A naked flame is a great purifier, probably in more ways than science knows of; and the gas-flame has the same advantage over the bottled filament as a grate fire has over hot-water pipes. The writer also argues that the vitiated air will become purified by diffusion through the ceiling and walls, but that would surely be a slow process.

The principle here involved is an important one. It is that we so often worry over trifles and calmly ignore much worse evils; take precautions against minor incidents and take no heed of major ones. Many of the inventions remove lesser evils only to introduce greater evils. There are prepared foods that are cleared of various ingredients believed to be injurious; but after a while they are found not to succeed, and then we discover that the supposed injurious ingredients must have had a use after all. The electric trains on the underground railway make no smoke; but the smoke used to disinfect the bodily effluvia, and sulphur dioxide is said to be good for consumptives. So one might multiply instances; often we purify and clean too much or in the wrong place. Many mechanical appliances are more cumbersome than the simple means they replace.

Science, being so material, never takes into account all the factors of a problem. It often condemns things on imperfect information. We are familiar with the antithesis so often made between natural conditions and artificial conditions. Ought there to be this antithesis? If science were really an exact interpreter of nature, then its art ought to be simply nature improved, nature made yet more natural. The reason why invention so often introduces unhealthy conditions is, not because there is any radical incompatibility between science and nature, but because science is so ignorant and imperfect and makes so many mistakes. If we become convinced of the unhealthiness of conditions in cities, the proper remedy is not to go right back to primitive simplicity, but to find a condition of things where science would help nature instead of counteracting her. Our intellect was given us for the glorification of life and nature, not as an eternal adversary.

But, if science is to succeed on these lines, it will have to be less materialistic, and learn

to consider man as something more than an animal mechanism, and nature as something better than so much material or machinery.

STUDENT

### Origin of Some Inn Signs

ONE of the signs of Bacchus, God of genius and inspiration, was a branch with green leaves. Bacchus was crowned with vine-leaves or ivy, and his attendants bore the *thyrsus*, a wand entwined with ivy and surrounded by a pine cone. Hence a bush was a sign used by the Romans to denote an inn, and from them copied by medieval Europe, whose inns were distinguished by a bush hung outside.

Any feudal lord putting up at the inn hung his coat of arms outside; hence the coat of arms came to be associated with inns as a sign; and thus inns in towns, where there were many of them, were distinguished from one another by different blazonry according to the particular lord who lived near or patronized them.

These heraldic shields were not always understood by those ignorant of heraldry, whence we get such names as the Green Man, the Red Lion, other animals of various colors, crosses, crescents, etc.

The Royal Arms gave rise to the numerous Crown Inns, and the King's and Queen's Heads had a similar origin.

Religious signboards were also in favor, such as the Virgin, Saints, and Cross-keys (the Papal arms); but many of them did not survive the Reformation.

St. George, with or without his Dragon, is popular in England, St. Patrick in Ireland, St. Andrew in Scotland, and St. David in Wales; these being respectively the patron saints of those countries.

Other signs were intended to represent the class of people for whom the inn chiefly catered; as crossed swords for soldiers, and a ship or anchor for sailors. Other innkeepers again, put up their own name pictorially represented; and finally, as the multitude of inns increased, mere fancy was resorted to and every possible subject utilized.

### Metallic Beautification

EARRINGS, now for a long time out of fashion are beginning to have their day again in England. Those whose ears were once pierced are hastening to re-establish the right of way through the long disused little channel; those who in such a cause do not mind a little pain are submitting to the needle; others are ignobly and subterfugiously hanging the pendants by fine wires over the ear. Fashion is once again prescribing which shape of earring shall be worn with which shape of face, which jewel with which complexion.

We do not much like interfering or even making a suggestion in such a delicate matter. But we cannot help asking ourselves why the ear alone should receive the honor of metallic adornment? In other parts of the world the nose and lips are also pierced and ringed, and the results are there regarded as very beautiful and becoming. For round faces the nose-ring is, we understand, somewhat oval; for long faces it is round or just slightly elliptical. Ought we to be outdone in this matter by mere savages! Perish the thought!

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES  
IS THROWN OPEN TO ALL

### Purloined Theosophical Teachings

THAT common sense and logic are dawning in our midst is evidenced by what we read in the current press. The London *Spectator* reviews an article in the *Hibbert Journal* entitled, "Where and What is the Soul?" written in answer to a statement by Haeckel that "Consciousness is a physiological function of the brain" and "consequently no exception to the general law of substance." The author contends that the body is the instrument of the Soul. He points out that physiologists assert that the eye, the ear, the nerves, etc., are mere organs or instruments of transmission, being themselves as insensitive as the wire which conveys electricity; and they declare that it is the brain alone which hears, sees, and feels: but why, asks the author, do these physiologists exclude the brain from the list of insensible channels or instruments?

They follow the trail until they reach the brain, where they lose it, and then tell us that the brain is the goal; just like a hunter who, losing the trail in a stream, should argue that the fox was in the stream. We have no reason for thinking that the brain is the goal and does the feeling and perceiving; on the contrary, the evidence leads us to regard it as merely part of the mechanism, itself insensitive.

Thus we get to the ether, and the author reminds us that in wireless telegraphy (for instance), certain mechanisms can be operated upon by conscious Beings from afar, and made to transmit thoughts and sensations which the mechanisms themselves neither feel nor understand. The whole body, brain included, is merely a mechanism of the Soul.

The author thinks that the Soul existed before the body and will exist after it, being continually re-embodied in some form or other, and always rising in the long run from higher to higher and from better to better.

He regards that vague form of unreasoning knowledge which we call instinct as memory.

He questions whether there may not be something in Wordsworth's phrase about children trailing clouds of glory.

He thinks it very probable that those who die may be supplied with a new body, unless they have deserved a superhuman one, and may come back here.

The reviewer tries to make a plea against Reincarnation. He holds that the indifference to a future life is the result of a lack of imagination; and that as in this literal age we have ceased to derive any meaning from the theo-

logical imagery, we have been driven to adopt the passing fancy of an Oriental idea. Men desire a future of spiritual triumphs, but do not recognize it in the descriptions of golden streets and harps, and so they have tried to find it in Reincarnation. But his protest stops here; nor does he give any real argument against Reincarnation. The objection against coming back to "our life here" instead of passing to a better state is founded on the assumption that this is the only kind of life possible on earth and that disembodiment is essential to perfection. Likewise the intervening period of spiritual existence between two incarnations is entirely overlooked by the critic.

While all who regard the promotion of Theosophical truths as the one ideal worthy of their life's work, will be glad to see public opinion being influenced by these truths, they would be gladder still if they could see any acknowledgment of indebtedness to Theosophy and its self-sacrificing Teachers. We have not seen the article under review; but, so far as the reviewer is concerned, not one word is said of Theosophy or of H. P. Blavatsky, though the author's name is freely used and the reader is left to infer that the views are his own. It is hardly possible to credit the editor of the *Spectator* with ignorance of the fact that these views, so far as they go, are the very views put forward, though in full and clear form, many years ago by a Teacher who alone dared to brave the slander and contumely which were at that time the reward meted out to those who advocated them. As a pioneer, blasting the rock of public prejudice, H. P. Blavatsky has paved the way to conditions which render it safe and comfortable for others timidly to venture a few scraps of her teachings, provided they do not mention her name. But a paper which habitually protests its love of fairness would have earned greater credit for the sincerity of its protestations if it could have seen its way to make some slight acknowledgment of the existence of Theosophy and H. P. Blavatsky, but for whom the views for which the author is given so much credit would not have seen the light. As it is, but little respect can be felt for a public opinion which, after traducing the name of a Teacher, later on, without revoking the slander, puts forward her teachings as its own.

But H. P. Blavatsky's teachings carried with them certain moral obligations, certain exigencies for reformed life, and certain sacrifices of comfortably settled prejudices and habits of life and thought; and possibly this may

have disturbed the feelings of some who, while unwilling to undertake such responsibilities, yet felt their cogency. The sting of an unanswerable rebuke may have rankled in bosoms capable of recognizing truth,

**Light** yet unwilling to acknowledge it. H. P. Blavatsky unmasked  
**in** all shams, and may have revealed many people to themselves for the first time; nor was she readily forgiven. Fortunately, however, she was not left entirely to the tardy efforts of people who prefer to feel their way more cautiously and who will not risk their reputation by associating it with that of their unpopular leader. There were a few who aspired, however humbly and unworthily, to share the honor of her self-sacrifice; to whom the approval of their own conscience was more than the approval of accredited organs of public opinion. Such workers do not expect recognition and are willing to accept misrepresentation as the necessary condition of success in their chosen work. But they are waiting to grasp the hand of that man who shall stand forth and declare that he champions the honor of H. P. Blavatsky, the founder of the latest revival of those ancient teachings by which the world is now so ungratefully profiting; while they cannot but look with coldness on protestations of equity and scholarship made by those who can write learnedly of Theosophy without mentioning either its name or the founder of the Theosophical Society.

**Honor to whom** Honor is Due  
Theosophy without mentioning either its name or the founder of the Theosophical Society.

In conclusion we may add, what the *Spectator* apparently did not think it worth while to add, that the inquiring public can find, in the Theosophical Manuals, the views here so cautiously hinted at explained in full; and that it need not waste time over these very second-hand fragments when it can get the original entire. It will save infinite time and trouble to study the original teachings of H. P. Blavatsky, instead of waiting while the public press lets them out in painfully slow dribbles, and with much added matter of its own. The author has spoken of man under a dual aspect only—body and soul. Obviously the notion of Reincarnation given under such limitations cannot be worth much and is likely to lead to absurd conclusions, as is always the case when people indulge hastily in speculation without having first equipped themselves with an adequate supply of data. The meager notions which people entertain as to what is possible to human nature, and their limited ideas as to the possibilities of the Infinite Life, encourage one to expect but little from such timid groping. It would be better worth while to study what the great minds of the ages have thought on these subjects, than to try slowly to rediscover for ourselves the elements of a science that is as old as man himself. But the public has its gods; and at least those gods have been compelled to follow to some extent the lines laid down for them by Theosophy. STUDENT

### What is the Matter with the Schools?

UNDER the head of "Fol-de-Rol in the Schools" the Los Angeles *Graphic* has been complaining of the inefficiency of high school graduates in the three R's, and maintaining that the public schools seem to impart educational trimmings instead of essen-

tials. It holds that too much time is spent over cooking, sloyd, drawing, etc., to the exclusion of arithmetic, reading, grammar, etc. But a correspondent thinks it is wrong to blame the "faddists," for they are the only people honestly trying to remedy the real fault which lies elsewhere. This fault he finds in the false ideal set by the university, for which the schools have to prepare. The university sets up a standard of ornamental knowledge as against useful, and thus the schools are handicapped from the start by a false objective.

But in pleading for the *utile* as against the *inutile*, this writer shows a certain vagueness as to what is to be comprehended under these terms, and is dogmatic as to what is utile and what is inutile. He says the schools were founded on the wrong principle that "only a comprehension of the inutile can give true mental discipline and true culture." And he classes book-keeping as utile and Latin as inutile, holding that the former gives far better mental training than the latter.

But is the utile to be understood as that which has a direct bearing on commercial life? If so, then we have a standard of utility which may be called in question by those who do not regard our present commercial ideals of life as worthy of admiration and perpetuation. And are *belles lettres* to have no place in education? Or must they be considered as purely ornamental and therefore inutile? Those who take a broad view of what constitutes a well-equipped mind will certainly wish to put in a plea for classical languages and literature.

The fact is that neither of these writers has touched the real point. Amid all the controversy that goes on as to what subjects to teach, one finds so many and contradictory views expressed that there is no discernible issue in favor of any of them; and one comes to the conclusion that the question of subjects is not the important one. It seems as if there is no possible curriculum which can avail to make the difference between a competent citizen and an incompetent one; a conclusion which after all is not so strange to those who believe that mere intellectual education is not what makes character.

It is wrong to blame the teachers, who in the main fulfil a difficult task with conscientiousness and credit. They have enough to do in counteracting the adverse conditions under which they are required to teach. These conditions are the things that the pupils are taught out of school hours.

All teachers know the difference between a bright pupil and a dull one, and that there is something in the constitution or character, the presence of which makes any subject easy of acquisition and profitable, while its absence renders all equally futile. This is the thing to be cultivated. There is no curriculum that can make useful men and women out of poor material, and no curriculum that can keep back a really bright pupil. To spend so much thought over the curriculum is missing the mark; if we had the right material in the pupils, we should not need to worry so much over the curriculum. Almost all subjects can be made profitable to a bright mind, and will serve to develop concentration, mental discipline, and so forth; but no subject can supply the deficiencies of a weak mind.

The faculty of assimilating knowledge and gaining mental aptitude is a question of self-

control, and this self-control must be acquired from the earliest years. Few even among experienced teachers realize to what an extent the temper and emotions, the nerves and general health, have to do with mental efficiency; and how dulness may be, unknown even to the pupil himself, at bottom a fault of temper—a stubborn refusal on the part of the faculties to work, accompanied by a weakness of will which fails to overcome it. And to find the cause of this inefficiency of character and temperament, we have only to consider the unwise way in which many parents bring up their young children, yielding to the children's weaknesses, encouraging their whims, pampering their infirmities. The result of this is that the children are sent to school lacking in the prime requisites of education—requisites more essential than the three R's—power of attention, poise of temperament, self-command, obedience, vigor of health. It is the lack of these qualities that renders the problem of the teachers so hard, nor can they devise a curriculum that will supply that lack.

Of course the false ideals of life are responsible both for the laxity of parents and the false standard of the universities. What is a man? What is he to become? If he is merely an intellectualized animal whose destiny is to achieve success in business and society, then why not devise a system of education to that end and leave out morals and all such superfluities? But we are inconsistent, and it is our divided purposes that create the confusion. We shall need to revise our ideals as to the true standards of life, ere we can expect a satisfactory system of education; for as long as there is such perplexity in those ideals, everything, education included, will partake of it. STUDENT

### The Curfew

ONE of the libels printed in histories against William the Conqueror is that he rendered himself much hated by the English by introducing a foreign custom of ringing the curfew bell at eight o'clock in the evening as a signal for all lights and fires to be put out, and that he did this in order to prevent the English from conspiring around the fire against their Norman conquerors.

But the curfew was an old medieval custom, and it is probable that William merely revived what was already a law of the land. This law was common in medieval times, chiefly on account of the danger from fire at a time when houses were built of wattles and thatched with straw and the fires were in the middle of the room. The people had grievances against William, but not especially on account of the curfew. He was a disciplinarian; and his methods, if rough, were certainly not rougher than the people of those times.

By the time the curfew was abolished in Henry the First's reign, the people had come to love it and many kept it up, enforcing it by family law after it had ceased to be national law. There have also been times when the custom was utilized in order to prevent disorderly congregations of people, as in the reign of Edward I, who enacted that taverns should not sell liquor after the curfew. It has been kept up to this day in some places, both in Europe and America, being used as a signal for vespers, or to summon children indoors, or merely as an old custom. STUDENT

# Some Views on XXth Century Problems

## A Latter-day Lucretius

AN idea of Hearn's, with its time element telescoped into the Now, has yielded in the mind of a contemporary writer a fruitful speculation. Hearn, profoundly tinged with a form of Buddhism, often suggested that through the eyes of each present man looks out the whole past. The living atoms that composed the individual men of ten thousand years ago, broke apart at their deaths, and, charged with memory, went their several ways in nature. But in no long time they recombine, throng together in new admixtures into new individuals, again attain temporary unifications of consciousness. These new units, men, find themselves growing up in a world which seems all new and strange to them, and yet not wholly so. For lying half latent in them are the atomic memories gleaned when those atoms were previously combined. And so again, and again; and at last ourselves, the most recent of the temporary combinations, having in us the re-grouped memories of all the past. Out of our eyes therefore looks all the past, and though the world seems partly strange it is no older than we, or rather than the temporarily grouped atoms of whose consciousnesses our consciousness is made up.

Hearn's idea was a half vision of several great truths. His commentator as it were telescopes it, saying that through our eyes looks out all the *present*, that through each man's suffering and joy the whole humanity suffers and rejoices.

And yet Hearn's idea remains standing, in its truth and half truth. Man's body (or bodies, for there are some of finer stuff than the physical) is of course "atomic," monadic, and the eternal monads begin to throng round him for their incarnation from the moment of his conception. But they were, teaches Theosophy, most of them, *his before*, in other lifetimes. Their new groupings are as *he* grouped them before; their memories are of experiences into which *he* led them, or which he permitted them. It is he himself with all his measureless past, that looks out through his own eyes. Yet, since they may have also, some of them, dwelt awhile perhaps with other men, the speculation of the modern Lucretius may not be altogether a fantastic dream. Men are not absolutely separate units, even physically. We do in some degree share experience, and every motion of man's thought or feeling acts with more or less force, inductively, far and wide. Consciousness has also its connecting ether. Through that the Divine Inspiration constantly reaches us all. He who yields to it, yields to it for all and all are bettered. Said Maeterlinck:

We live by Truth hidden. In so far as it has not yet appeared we are mute, chained. But if one of those extraordinary minds which are the antennae of the innumerable human soul, sights it but for an instant whilst groping among the shadows, the hindmost of us by I know not what sudden and inexplicable thrill, feels himself freed from something; . . . and the inner selves of all, without betraying anything externally, inaugurate a serener era and celebrate profound festivals in which we have but a late and distant share.

He is differentiating the inner consciousness, where we are all at one, from the outer, that of the separate personalities that root in the inner.

If that is true of a truth discovered, it is truer of an aspiration made. Yet perhaps there is no difference: an aspiration is a truth discovered, though it will not go into any words or even mental forms. STUDENT

## The Three Illuminations

"THE fancied illumination of the mystics," says a scientific contemporary, talking of the mechanical achievements of the day. "The true illumination is the idea of the inventor, flashing suddenly into his mind."

That is one form of illumination, the illumination of thought. And the true mystic knows as much about it as the inventor. He too has received it. But as mechanical invention was not what he sought, he got the illumination upon another department of his mind. He got a flash of understanding of the universe.

But there is an illumination of *feeling*, which has nothing to do with thought. Listening to music unveils areas of feeling which to most of us are not otherwise accessible. It is a true illumination.

Both these may however pass and leave the man pretty much as he was. Men of relatively, and even very low order are susceptible to the illumination of music, and remain of low order—though perhaps not quite so low—after the music is silent and the feeling has passed. The inventor is not necessarily a *higher* man for what he has done or what has come to him. Nevertheless the higher kinds of mental illumination do tend to elevate character, or to lead to wider thought and nobler conduct.

The other, the third illumination, is an access of self-knowledge, of self-consciousness in the better sense of that term. It may be helped by, but is quite other than, the mental and emotional illuminations. The sudden realization of the boy that he is a young man, is something of an example of it. But that is one of a line which only concern the personal nature. The *real* illumination of this kind is the self-recognition of the inner consciousness that it is an eternal self, a very part of the universe, passing into and out of life again and again, winning slow accessions of strength, and with the sacred task committed to it of helping to fuller and higher life all else that lives.

Katherine Tingley, speaking on "self-discipline," once said:

When a man, becoming conscious of his own divine nature, in the silence, begins to think himself different from what he seems, begins to think he is a god, as Theosophy says he is, begins to let the imagination pulse through his heart telling him of mighty things beyond ordinary comprehension, begins to feel something that reminds him of his duty to humanity—that is discipline.

It is the way to the third and highest illum-

ination. If it is gained, the other two will follow in their highest terms. "Seek ye first the Kingdom of Heaven, and all these things shall be added unto you." STUDENT

## Degenerate Drama

A NEW YORK dramatic critic takes issue with a fine play recently produced in that city on the ground that its *motif* is not comprehensible to the multitude. The heroine is converted, and he urges that such an experience is not stageable. She is leading a more than questionable life, is suddenly overwhelmed with a sense of the blackness of it, makes a great internal spiritual appeal for help—gets it and stands free.

Ordinary emotions, says the critic, are alone the subject of proper drama. We have all experienced them and know all about them. When we see them they fire in us a like train. "But with the more intimate and subtle emotions, among which the religious emotions take first place, no such train awaits to be fired." By implication, we know nothing about the religious emotions, nothing about that intensity of inner appeal which may end in sudden triumph over the lower nature. Again by implication, in a whole theaterful of people there will be few or none who know anything of any deeper life in themselves than that of their personalities, or do not know enough to recognize the signs of its stirrings when presented on the stage. Says the critic:

Most of us live all our lives in "a universe one story high," which makes the whole process of transformation in another doubly hard to comprehend; that internal upheaval and change in values which to us who have been more or less true to one single self all our lives seems often perhaps illogical and unreal.

The calmness of the statement is as complete an indictment of pulpit teaching and effort as it would be easy to find. For the critic writes with no sort of bias against religion. He seems to think it well enough for those who can make anything of it.

Surely, if religion has not made life *two* stories high—or deep—it has never been practical. Religion is the personality's recognition of its contact with or containment of something spiritual, higher, wiser and more beautiful than itself, something because of which, through daily communion, it will at last become purified and wise. And we are assured that the public are so little acquainted with this higher element, whatever they may call it, that they cannot appreciate its workings when represented on the stage! It is high time that the Stage came back to its ancient and noblest function—to make manifest to the people the workings, the mysteries, of the inner nature. It was the visible enactment of the workings and powers of the human soul and its cognates in nature. To restore that function and adapt it to present needs is part of the work of Katherine Tingley. It is the task of the drama to reflect life, but the life dramatically reflected can be as well the deeper as the more superficial. STUDENT

## Pre-Pliocene Mastodons and Elephants in California

ACCORDING to reports, miners excavating the outfall at Los Angeles, California, found fragments of two animal skeletons, which have been described by the Smithsonian Institution as those of a mastodon and an *elephas columbi*. The mastodon was about twenty feet high and the elephant twelve. The discovery of the two together puzzles scientists, as these animals were supposed to have belonged to different regions and to have been the product of different cycles. Schemes drawn up from incomplete data are of course liable to be upset by any fresh fact; and it is a pity that science should often be so dogmatic on such an inadequate basis.

Besides these animals, there were the bones of a fossil horse, two-toed; and of a deer. At a lower level were found Tertiary shells. The animals are believed to be pre-Pliocene, and it is stated that this proves that this part of America was dry land before the British Isles and the greater part of Northern Germany.

Students of Theosophy are familiar with the statement in *The Secret Doctrine* that America is older than Europe, and discoveries like the above bear out that statement. E.

## Rökstenen, the famous Swedish Rune-stone

A FEW miles east of Lake Vättern in Sweden, near the mountain Omberg, stands the most interesting of all the Swedish rune-stones, called after the place, "Rökstenen." The inscription covers both sides and is the longest runic inscription yet found in the world, consisting of about 750 runes. There are not only the younger Swedish and the older Teutonic runes, but even so-called twig-runes and secret runes. It long defied the unremitting exertions to decipher its riddles, but now we are sure of the solution of most of them, and the stone has proved to be a most valuable document as irrefutable testimony to the existence of songs and sagas in these early days of Sweden.

The traces of the ancient Swedish literature are wanting in a regrettable degree, and sometimes one can hardly keep back the thought that they have been removed intentionally. We know well how many rune-stones and other runic inscriptions were spoiled by Christian fanatics, who thought there was some heathen magic concealed in the runes, which kept the minds fettered in their ancient faith. And as the runes were generally carved on tables of ash-wood, these have probably been lost in fires or have decayed. As it is now, we know of this early life in Sweden by indirect means only, mostly through the Icelandic Eddas and sagas and even through the Anglo-Saxon Ode of Beowulf.

There are about two thousand rune-stones to be found in Sweden. Some of them date back to the sixth century, others have been erected as late as the thirteenth. They are generally memorial stones with some simple inscription about the deeds of the one concerned. Now and then appears however a

line or a strophe from some commonly known song. Though the literature itself is gone, we have here some faint traces of it. And in some of them are pictures of men and animals from the sagas, clearly showing that these were spread over the country.

Rökstenen is dated back to about A. D. 900. As stated in its first words, it is a memorial of a fallen hero named Wamud, erected by his father, Varin, and the runes are cut by "Biare, chief of the temple, wise master of runes." All the rest of the inscription is about several folk-stories of valiant deeds with many names of persons and places. Among the folk-stories stands a strophe, which in the ancient strong

Lomaland Photo. and Engraving Dept.

RÖKSTENEN, IN SWEDEN

and terse language sings about "Thiaurik, gallant leader of sea-champions." On one of the sides is moreover a line in secret runes, which has been deciphered as: "May Joulfr (Odin) give you his blessing." Perhaps we have here a formula used by the chief of the temple when pronouncing a benediction on the multitude.

Several of the names and deeds mentioned are to be found in the Icelandic sagas and even in Beowulf. They seem to have a clear connexion with the Anglo-Saxon saga about Varmund and his son Offa, though the scene in the inscription is pure Swedish and that of the province where the stone is found. It says, however, that the hero died a cruel death when on an expedition to a foreign country he was separated from his men; and from other tales it seems as though this country were England.

Thus we find when comparing the inscription with other sources that there must have been original Swedish sagas and folk-stories about the subjects which are treated of in Beo-

wulf and many Icelandic tales. The traces in these few lines have their special Swedish characteristics.

It is interesting to note that the stone is situated so near Visingsö, and we can not but wonder where the temple stood, of which Biare, wise master of runes, was chief.

STUDENT

[Two pictures of the (restored) rune-stone at Sörby appear in the *CENTURY PATH*, vol. ix, no. 40, where it is stated that runes are inscriptions found in Northern Europe, representing a Scandinavian language which was used before the introduction of the Greek alphabet by the Phoenicians. How the "Teutonic barbarians" came to have such writing, in defiance of the authoritative pronouncements as to the origin of the alphabet, is a puzzle for scholars. The runes originally had a magical significance, and a man "learned in the runes" was a man who had knowledge of natural secrets. These characters were made up of certain cup-shaped marks and other signs which have been found on megalithic monuments in other parts of the world, as, for instance, India, and were symbols of ancient mystic science. Later, letters from the Greco-Roman alphabet became mingled with the original characters.

STUDENT]

## The Lost Plays of Menander Found

EVERY reader of the *CENTURY PATH* knows that H. P. Blavatsky foretold discoveries which should bring to light the mind of the ancients and make it intelligible to the modern world. That this prophecy is being abundantly fulfilled is coming to be very widely realized. A writer in the *London Daily Telegraph* says:

It seems that we need set no limit to our hopes of what treasures of the past the archaeologist may restore to us. Almost each year now brings to light some ancient papyrus bearing work unread and unknown for a thousand years of one of the great writers of Greece.

Which remarks are called forth by the fact that M. Gustave Lefébvre has found in Egypt papyri which contain over 13,000 lines of Menander, accounted by the Greeks one of their finest comedians. These lines form parts of four plays, none of which is complete, although enough is there to enable readers to reconstruct the plots. Certainly enough is there, also, to make it possible to estimate the literary value of this hitherto lost poet's work. It is said that these remains justify Menander's high reputation in the ancient world.

These finds serve the purpose of drawing attention to the fact that what we know of the ancients is based even now on comparatively slight evidence; however much has been saved, more has been lost; whatever has been discovered, more remains to be found; we do not know what may come to light, and so our expectation is whetted. Why not the lost plays of Aeschylus, or completer records of the teaching of Pythagoras for the next find? And after the *Logia* of Jesus already discovered, why not a whole flood of new light on the origin and founder of Christianity, based on indisputable and flawless evidence, proving that religion a version of the world's ever-reappearing one fundamental Science of Life? STUDENT

# ✻ The Trend of Twentieth Century Science ✻

## A Curious Inversion

THE astronomer of Lowe Observatory, certainly a profound and original thinker and a mystic, contrives to blend his mysticism with materialism. Writing recently in a popular contemporary he points out that the human body, like every other body in the universe, is a congeries of absolutely uncountable corpuscles or meta-atoms. "These, as stated, are pure electricity in one of its protean phases." But then he goes on:

A wider generalization is that mind or thoughts are mere flowings of these corpuscles into and out of those standing enigmas of science, the mysterious cells embedded in the cortex of the brain.

This sentence only seems to mean something. Real meaning it has not and cannot have. For what is that in Mr. Larkin which has this conception, thinks this thought—or tries to? He answers, corpuscles. Then the proper statement is, corpuscles are mind: not mind is corpuscles. You cannot explain the mind, which you immediately know, by calling it the product of something you only know as *mind*. We have somehow taught ourselves to conceive the objective—of which corpuscles are a part—as something which is the opposite of subjective, the opposite of the conscious. It cannot at the same time be the opposite of the conscious and also the conscious itself. It would be permissible to call the corpuscles the flash-points of raw cosmic consciousness, and then to consider thought, our thought, as our reduction of them to order, our order, the regularizing of them, the making systems of them, their first step in education. But for that, a human ego, a soul, using will, standing in the middle of them, with a plan for them and a duty to them, must also be postulated. STUDENT

## Bacterial Consciousness

WE are accustomed to consider bacteria from a strictly selfish and egotistic point of view. That the intrusive little creature which invades us and gives us pneumonia or measles may have his feelings, his likes and dislikes, may even be capable of fear, we have never troubled to imagine.

A German bacteriologist, perhaps bent upon other aims, has however done some suggestive work in this direction. His subjects were the "Purple Bacteria." They exist everywhere, but not sufficiently massed to show their beautiful color. They have the singular fancy for storing particles of pure sulphur in their bodies, doubtless obtained from their food; and perhaps, since they greatly dislike oxygen, using the sulphur for some such purpose as oxygen subserves in other organisms.

Put a little pressed hay in the bottom of a tall glass or test-tube; fill that with water, cover it with a glass plate, and put it in the sunlight. The plate is to exclude oxygen, and if the water is also covered with a film of oil, so much the better. In a few weeks the Purple Bacteria will have formed a beautiful film on the bottom and sides of the glass.

As we have said, they can not only do without oxygen, but they hate it. A colony of one

of their species has been known to live a year in a drop of water hermetically sealed between a microscope slide and the cover-glass. *The Scientific American*, summarising Professor Molisch's work, says:

If an individual alga, of the species *Pleurococcus Vulgaris*, which is found as a green deposit on trees and varies from 1/12,000 to 1/4000 inch in diameter, is placed in the center of a colony of active Purple Bacteria on a microscope slide, the bacteria scatter in all directions, leaving an empty space, because they cannot endure the infinitesimal quantity of oxygen exhaled by the microscopic alga under the influence of light.

If the light be shielded off for a moment, the alga ceases its exhalation. In half a minute the bacteria discover that and have again crowded into the space.

We can, if we are sanely imaginative, understand that a bacterium should have likes and dislikes. This one, for instance, as we see, dislikes oxygen. It also loves light. But *fear*? Well, here is the experiment:

One species of Purple Bacteria is corkscrew-shaped, and amuses itself by continual rotation in one direction and also by rapid rhythmic motion to and fro on a straight line. Have some of them in view on a microscope slide, and for a fleeting instant cut off the light with your hand. They instantly reverse both of their movements!

None of these and like phenomena prove consciousness, or preference. But anyone who doubts it should also doubt the consciousness of a man who moves out of a room where there is a dead rat or draws his chair nearer the fire on a cold day. Our own consciousness has a sense, if we would but develop it, that can detect consciousness in other organisms, and can know therefore with certainty that all nature is conscious. But the case in point seems so obvious as hardly to need its use. STUDENT

## The First Defense

WHILE Metchnikoff has been studying the luxuriant bacillary flora of the alimentary canal, showing that we are slowly poisoned to death by the products of their activity, and suggesting that we should do various strange things to kill them and thus become immortal—a New York dentist has been showing that nature is prepared to do all that is necessary if only we will permit her. That some of the digestive juices are antiseptic, for example gastric juice and bile, we have long known. He has proved it for healthy saliva, calling it a sterilizer "before which bichloride of mercury and sublimine are nowhere." He collected more than a pint of this fluid and exposed it to the open air throughout the roasting New York summer of 1901. At the end of that time it was perfectly free from any evidence of decomposition. Its chemical constitution, slightly saline, slightly albuminous, would suggest it as an ideal culture medium. But it proved capable of preventing the development of any bacteria whatever.

This would probably be an exceptional case; his subject must have been an unusually heal-

thy organism. But it shows that food, met during mastication by an antiseptic fluid and thoroughly mixed therewith, and met lower down by a succession of other antiseptics, should remain entirely free from bacillary interference throughout its digestion. M. D.

## The Axis of the Universe

THE suggestion of Professor Kapteyn that the universe of stars is double and that the two halves are approaching and interpenetrating, is already giving place to another. This rests on the same facts and calculations, but interprets them differently. If we looked at a very scattered cloud of bees that was rotating about an upright axis, a cloud at some considerable distance, we should first note that some bees were moving to the right and some to the left. It might only be with much attention that we finally discovered that it was on the further side of the cloud that the movement was to the left and on the nearer to the right. That discovery would give us the conception of the axis and enable us to sort out the confusion. If in addition to this general rotation the cloud contained small groups of bees revolving about local centers, and still smaller groups whose members were moving variously with regard to each other, the difficulty of getting at the general plan would be still greater.

Such is the new conception with respect to the universe, born from Professor Kapteyn's. STUDENT

## Artificial Life

SCIENTIFIC contemporary gives the heading "Artificial Life" to an account of certain experiments of Professor Delage on the egg of the sea-urchin. These experiments are in continuation of those made by Professor Loeb. The latter showed that the fecundation of the egg can be done by certain chemical solutions causing the necessary changes in it. These changes he regarded as osmotic (the passing of fluid into the egg) and oxidative. Fecundation, in his view, is simply oxidation, and he assigns to oxygen a very important rôle in the living universe. At any rate, his eggs duly came to maturity. So do Professor Delage's, but he thinks the changes consist in coagulations and solutions of the egg-membrane. Exciting them with a combination of tannin and ammonia he got the same results as the other experimenter.

One would think from the heading of the accounts that they had created the eggs upon which they experimented! And the public, who vaguely read the echoes of the work, do actually think so. In the lower kingdoms of life the fecundating cell appears to play only the part of a stimulant to the egg. That it can be, at those levels, replaced by other stimuli, proves exactly what it proves and no more. And as soon as we get higher in the organic scale we find that the fecundating cell, so far from being replaceable, carries half the heredity. The experimenters have merely discovered a new way of evoking a response from life, from that which was *already living*. C.

## The Metal Tantalum

**A**MONG metals once thought to be very rare but now discovered in considerable quantities is Tantalum, an element allied with Tin, Titanium, Tungsten, Vanadium, etc. It is described in old books as a black powder, but this was because the metal was impure from the presence of carbon, as was the case with other metals of the group. The chemist, Ekeberg, who first discovered it, in the form of its acid oxid, called it Tantalum from Tantalus, because it could be surrounded by acids without being affected by them; but others will think that immunity is hardly a quality attributable to the legendary Tantalus. In 1902 Moissan obtained the metal with only 0.5 per cent of carbon, a quantity sufficient, however, to change its properties entirely; but lately von Bolton has obtained it nearly pure. In this state it is found to have a wonderful combination of ductility and hardness, being comparable in the latter respect to the diamond, and yet easily drawn into wire. Its density is 14.05; and when rolled and melted in bars, 16.64. It can be drawn into wire of .03 millimeter. Its tensile strength is next to iron. It is not affected by sulphuric, nitric, or hydrochloric acids, even when these are hot; but hydrofluoric acid attacks it. Since its industrial importance has been recognized, larger quantities have been found and it is now valued at less than silver, or at about \$5 a pound.

One of the chief uses is for electric lamp filaments; with carbon the conductivity increases with the temperature, so that an extra strong current does not increase the light but merely destroys the filament; with Tantalum the conductivity lessens with the temperature. It is also being used for pens, one of its properties being its resistance to acids. Thus it may be considered a "noble" metal. It is expected that metallurgists will begin to invent useful alloys containing this metal; and there are other metals in the same group also being developed, notably vanadium and columbium.

STUDENT

## Lizards and the "Third Eye"

**I**T is asserted upon the authority of Science, and upon evidence which is not merely a fiction of theoretical speculation this time, that many of the animals—especially among the lower orders of the vertebrata—have a *third eye*, now atrophied, but necessarily active in its origin. The Hatteria species, a lizard of the order *Lacertilia*, recently [this was written in 1888] discovered in New Zealand (a part of ancient Lemuria so-called, mark well), presents this peculiarity in a most extraordinary manner; and not only the *Hatteria punctata*, but the chameleon, certain reptiles, and even fishes. It was thought at first that it was no more than the prolongation of the brain ending with a small protuberance, called epiphysis, a little bone separated from the main bone by a cartilage, and found in every animal. But it was soon found to be more than this. It offered—as its development and anatomical struc-

ture showed—such an analogy with that of the eye, that it was found impossible to see in it anything else. There were and are palaeontologists who feel convinced to this day that this "third eye" has functioned in its origin, and they are certainly right.—*The Secret Doctrine*.

The eyes in the human embryo grow from within outwardly, originating in the *brain*, and not, as in insects and cuttlefish, being part of the epidermis. This confirms the Theosophical teaching that the senses are developed from within.

Professor Lankester is quoted by H. P. Blavatsky as suggesting that our mammalian ancestors may have been *transparent*; which she says is right, as there was a time when man and all living animals were transparent. This was in an early Root-Race, before the stage known as the separation of the sexes was reached. When that stage had been passed, man lost much of his spirituality (the "Fall") and became grosser not only in that sense but also physically.

The external senses were used, and the inner eye gradually became atrophied; its rudiments still remaining, however, within the brain. This "third eye" is the organ of spiritual sight—not astral sight or what is ordinarily meant by clairvoyance, but the power of true discernment and seership; the use of

which cannot be dissociated from absolute purity, of heart, mind and body. In the animal, the third eye had its analog in an internal eye that was the organ of sight. With the densifying of the body the eyes have become external, and two instead of one. In the stories of one-eyed and three-eyed giants, Cyclopes, etc, we have reminiscences of these ancient facts, though the third eye was never in the center of the forehead, that representation being merely symbolical.

It must be remembered that though there are physical analogies between man and animal, man is also the product of a spiritual involution. Also that according to Theosophical teachings, the animals, in the present Round, *succeeded* man; they imitate on a lower scale structures and functions which he has in his nature; hence their anatomy often affords a valuable confirmation of the ancient teachings. The lizards preserve rudiments pertaining to a long past type of structure.

STUDENT

## Distillation of Wood

THE Department of Agriculture points out that the ordinary method of making charcoal from wood wastes all sorts of valuable substances obtainable by the destructive distillation of wood. By conducting the two operations together, wood alcohol, pine-oils, resins, acetic acid, etc., would be saved. T.

IT has been said that the sincerest mourners at the funeral of Whittier, the poet, were women. They realized the loss to their sex of one of its most loyal and helpful friends and coadjutors, for his approval, sympathy and aid were always to be counted on in all movements for the elevation of woman and the securing of her rights as a human being. He believed in the right of woman to develop her entire nature as she might see fit.

In return for this sweet and tender side shown toward women Whittier was rewarded by the devotion and friendship of many of the noblest representatives of the sex. Lucretia Mott and Lydia Maria Child, with whom he served in the cause of human freedom; the poets, Lucy Larcom, Harriet Prescott Spofford, Rose Terry Cooke, Celia Thaxter, together with Sarah Orne Jewett, Elizabeth Stuart Phelps-Ward, Mrs. Annie Fields, Margaret Sidney and a host of others prominent in literature and in humanitarian and philanthropic movements. Celia Thaxter, the poet of the Isles of Shoals, was discovered and introduced to the world by Whittier. His domestic life was always one of charm, filled with the loving care of his mother, sister, nieces and cousins. Whittier's mother was a devoted disciple of the Society of Friends, a person of deep, religious and emotional nature, as one can clearly see who looks at the oil portrait of her which still hangs in the little parlor at Amesbury.

It was Whittier's elder sister, Mary, who recognized his literary possibilities and who sent one of his first poems to Garrison's paper, the Newburyport *Free Press*, thus starting his literary career. But it was his younger sister, Elizabeth, who became his intimate literary companion and presided for so many years over his Amesbury home. She is described by acquaintances as a lovely character, unselfish and considerate, with a gentle and sympathetic nature, more vivacious and dramatic than her

## A Laureate of Freedom

1807-1907

brother in expression. Admiration for him led her to write verses in her early womanhood, and in tender sentiment and sensitiveness to nature's beauty she is said to have often surpassed the Quaker bard himself. She entered into the reform movement of that day with zeal and courage and many of her verses were written for this cause. They are described as being very militant and aggressive, full of deep scorn. In the small collection of her

### THE THREE SILENCES OF MOLINOS

THREE Silences there are: the first of speech,  
The second of desire, the third of thought;  
This is the lore a Spanish monk, distraught  
With dreams and visions, was the first to teach.  
These Silences, commingling each with each  
Made up the perfect Silence, that he sought  
And prayed for, and wherein at times he caught  
Mysterious sounds from realms beyond our reach.  
Oh thou, whose daily life anticipates  
The life to come, and in whose thought and word  
The spiritual world preponderates,  
Hermit of Amesbury! thou too hast heard  
Voices and melodies from beyond the gates,  
And speakest only when thy soul is heard.

— Longfellow

poems which Whittier appended to a volume of his own called *Hazel Blossoms*, which was published after her death, none of the "political tracts in rhyme" are included, however, as he cherished her for the more gracious memories of her mind and heart. In the prefatory note he speaks of her distrust of her own powers, her lack of ambition for literary distinction, and of how she found greater happiness in generous appreciation of the gifts of her friends than in the cultivation of her own. He acknowledges his indebtedness to her for the stimulus and companionship of his most pro-

ductive period as a poet; for she entered perfectly into his moods and poetic aspirations, finding her chief joy as his literary adviser and home companion. Her death was a severe blow to him and, although he lived for forty years thereafter, he never ceased to miss her care and companionship. Her place was partially filled for several years by a namesake niece, Elizabeth Whittier, until the latter's marriage to S. T. Pickard, the editor of the Portland *Transcript*, who became the poet's literary executor. Whittier's finest poem, *Snowbound*, considered the best idyl of American rural life, is said to have been written as an elegy to his sister Elizabeth. In it her portrait is set in the amber of beautiful lines for all time. *The Vanishers* is also another memorial poem for her.

Like her brother, Elizabeth Whittier had slender opportunities for education, but she possessed an alert and acquisitive mind, was well read, and developed an intelligent admiration of books. She inspired the women of Amesbury with a love for good literature and, today, the most prominent woman's organization in the town is named for her, the Elizabeth H. Whittier Club, a fitting memorial of her noble character and life.

The photographs of Whittier with which the public is most familiar depict him as an old man, his sweet and benignant face wreathed with white beard and hair, somewhat resembling Longfellow. In the rarer portrait published with this article we have an opportunity to see the younger, Emersonian face without the sadness of time upon it; the beautiful head, the fine features and the glittering black eyes flashing with the inspiration of a great cause.

Whittier is usually referred to as "the Quaker poet." He is said to have "lived as a Quaker, fought slavery as a Quaker, and written as a Quaker." To understand his character, therefore, and comprehend rightly his poetry and prose, we must understand his

religion. It is not possible here to go into the history of Quakerism; suffice it for our purpose to say that the main principles of the sect are Freedom and "The Inner Light." Sociologically it has been described as a pure democracy, a pure precipitate of Christianity; a protest against hypocrisy and tyranny. Philosophically its doctrine held that every man and woman may be enlightened by "The Inner Light," an inward illumination of the mind which resulted in a habit of silent worship or silent waiting. Self-sacrificing, benevolent and of lovely lives as the Quakers were and are, their system of thought could not but result, in many instances, in narrowness, tameness, and stationary negativeness. It is from the liberal wing of the Quakers, however, that many great and noble souls have come, as Whittier, John Bright, and Lucretia Mott. They rose above all that was narrow and confining in their religion, and exhibited only its deeper side.

The Quakers were inhumanly persecuted by the Puritan commonwealth of Massachusetts, and so we find Whittier inheriting a loathing of oppression from generations of persecuted Quaker and French Huguenot ancestors, mingled with the militant Puritanism of the Newbury Greenleafs. It is not strange, therefore, that the central element in his character was love of freedom; that

Hate of tyranny intense  
And hearty in its vehemence.

But his hate and passionate indignation are always mixed with the beauty and melody of a great soul. His scorn and contempt were invariably noble.

Whittier as an artist has been criticised more than any other American poet. He is accused of too much moralizing and of being lacking in scholarship, in profundity, in creative imagination, in harmony and rhythm. His poetry is lyrical or descriptive; he is not conventionally dramatic nor conventionally skilled in rhyme or meter; he tells his stories simply and sweetly; they are full of cheer, of pictures of wayside flowers, of the beauty of lowly things, and they appeal to the universal heart. If one were asked to name the finest poems of Whittier, the historical ballads and lyrics of *Snow-Bound*, *Tent on the Beach*, *Maud Muller*, *Barbara Frietchie*, *The Witch's Daughter* and *Telling the Bees*, undoubtedly would be the choice. It was in this line that Whittier accomplished his most original and best work and, written as they were in the full maturity of his powers, they are free from many of the defects of his earlier efforts.

All his writings are deeply tinged with the scenery, legendary lore, and folk-life of his native Merrimack Valley. It is this which makes them of especial interest to readers of the CENTURY PATH at this time when the 100th anniversary of his birth is being celebrated, for, in the heart of the region which is immortalized in the poetry of Whittier, the morning of the life of Katherine Tingley was spent. Before she started on the Theosophical tour in which she is at present engaged, she revisited these old New England scenes, and said that her childhood's home, the beautiful spot overlooking the "stream of our fathers" with its broad vista of hill and dale, wood and meadow, the steeped, chimneyed towns and the "green prairies of the sea," was destined

to become, in a few years, "a Râja Yoga Center of Light."

Whittier has been called a Theosophist. Others have said: "What a pity! He almost saw the light." It is true that he did not see the light just as the Theosophist of 1907 sees it, for he lived a generation too soon. But he did see the twilight of the dawn, and his heart was full of faith that the light was there, forever there, behind the shadowy mountains of questioning, unsatisfied doubt, of iron creeds and selfish dogmas. He felt "the earth move sunward" and a glory shone before him even though it may seem to many to have been

JOHN GREENLEAF WHITTIER  
(From a rare and almost unknown picture of the poet, in the private collection of a Lomaland Student.)

YET, sometimes glimpses on my sight,  
Through present wrong, the eternal right;  
And, step by step, since time began,  
I see the steady gain of man;

That all of good the past hath had  
Remains to make our own time glad,—  
Our common daily life divine,  
And every land a Palestine.

Through the harsh noises of our day  
A low, sweet prelude finds its way;  
Through clouds of doubt, and creeds of fear,  
A light is breaking calm and clear.

—Whittier in *The Chapel of the Hermits*

but the radiance of his own "Inner Light." These deep feelings he has voiced in his songs. He asserts again and again the humanity of Christ, the co-equal divinity of all human beings, the coming of an Age of Gold when

All men shall be priests and kings,—  
One royal brotherhood, one church made free  
By love, which is the law of liberty.

Those who are at all familiar with the work of Katherine Tingley and her predecessors in Theosophy, all who have read Whittier's *Chapel of the Hermits*, *Miriam*, *The Over-Heart*, *Worship*, *My Triumph*, *The Shadow and the Light*, *Astraea*, *Raphael*, *The Prophecy of Samuel Sewall*, and fifty other poems of his

that could be mentioned, will understand that the linking of his name and work with hers is not an idle fancy; that there was a deep meaning in those links, forged across the Merrimack, and that they play more than an unimportant part in the golden chain which is to reach around the world. Had it been possible for the life of Whittier to have stretched on into the present century, he would have had the joy of seeing daybreak everywhere, and, almost at his very doors, just across the sparkling waters, on the beautiful slopes of "Laurel Hill" the fulfilling of his vision and of his prophecy, born of a faith and hope and trust that comes from a heart filled with love for humanity.

A NEW ENGLAND STUDENT IN LOMALAND

### The Mother of Edvard Grieg

A WRITER in *The Musician* gives the following interesting glimpse: STUDENT

Edvard Grieg united in himself the blood of the Scotch and the Norwegian races. His great-grandfather left Aberdeen after the fatal battle of Culloden, preferring to exile himself to suffering the dangers of his native land where so many who had remained faithful to the cause of the Stuarts paid for their devotion with their blood. He established himself at Bergen, where his son and grandson also made their homes. Here Edvard Grieg was born, June 15, 1843.

Seldom do we find that men of pronounced genius in music inherited their gift from their fathers. Perhaps it is not fair to say that the mother has the greatest influence on the child, yet the current of genius in the case of Grieg seems to have flown into his life from the maternal side. By ancestry and by temperament, Mme. Grieg was artistic, and by training she was an excellent musician and her son's first teacher. The lessons commenced when the boy was about six years old. The mother, as teacher, occupied the position which educators consider so favorable to progress: she not only instructed him in what to do and how to do it, but she was able to supervise his practice. She was bent on making him musical, and resolutely set herself against his pronounced habit of dreaming, a habit against which Grieg was obliged to struggle as boy and man. Mozart and Weber were Mme. Grieg's favorite composers, Mendelssohn was also studied, and the newer works of Chopin.

### An Artist's Tribute to a Friend

ONE of the foremost Italian periodicals, *La Nuova Antologia*, published in Rome, contains an interesting article by the Countess Franchi-Verney about the late violinist, Josef Joachim. As she was for many years intimately acquainted with him, although whether or not as a pupil the writer cannot say, she knew many details of his life and work not known to the public. Her article of some twenty pages in length, exhibits a deep appreciation of the man and his musical work. The Countess herself is an unusually talented violinist, who lives in Rome and is one of the favorite artists of the Dowager Queen Margharita. But this conveys little to those who do not know that she was, in the days when Massart, her teacher at the Conservatoire, Paris, presented her to the public, the wonderful girl artist, Teresa Tua. After some years of brilliant work upon the continent she returned to her native country, and since her marriage to Count Franchi-Verney, who is himself a distinguished musician, musical historian, and music critic, she has done no public work outside of Rome. STUDENT

# OUR YOUNG FOLK

## John Greenleaf Whittier America's Hero-Poet

ONE hundred years ago on the 17th of this month, in the farmhouse shown in the picture, John Greenleaf Whittier first saw the light of morning. The farmhouse and its surroundings are practically the same today as they were a century ago. Indeed, great pains are taken to keep them so, for the estate belongs to the city of Haverhill, Massachusetts, within the boundaries of which it is situated, and thither, all through the year, hundreds of pilgrims come as to a sacred shrine, because it was the birthplace and early home of a poet and a hero.

For the barefoot boy who lived in this farmhouse brought with him, from the "clouds of glory" whence he came, the gift of song; or, perhaps, he learned it from the brooklet,

the music of whose liquid lip  
Had been to us companionship,  
And, in our lonely life, had grown  
To have an almost human tone,

or from the whispering trees, or the sighing western wind, for he tells us himself that Nature was the teacher of his boyhood; that he walked with her hand in hand and talked with her face to face, and that she answered all he asked. And so it came about that his heart was filled with love and sympathy for every living thing and full of trust and joy. He was one of the "Children of the Light" and became in after years the interpreter of the beauties of nature which surrounded him, the painter of its manifold charms in rhythmic verse, the avenger of the downtrodden and the defenceless, the pleader for justice in all the earth, and the evangelist of a liberty so full and free that neither color, nor creed, nor sect, could set against it the semblance of mete or bound.

And, on this centennial anniversary, great crowds will gather in the busy city of Haverhill (now one of the three great shoe-manufacturing centers of the country) and in the town of Amesbury (where the last forty years of the poet's life were passed), with great orators and those whose names are famous in literature, to honor the memory of the barefoot boy.

Young Whittier's parents, and several generations of his ancestors, were Quakers, a gentle religious sect of very upright lives but with what seem to us rather queer customs of dress and manners. They refused to accept any authority in matters of religion and standards of conduct, each one relying on his own conscience as a guide, and they had formed habits of silent, expectant brooding, listening for the voice of conscience or waiting for the illumination, in their minds, of what they called the "Inner Light." The barefoot boy grew up under such influences with a silent, brooding, sensitive nature, his mind saturated with religious and moral earnestness, gentle and modest, and pure and sweet.

Whittier did not have the advantages of association and education as had Longfellow

## THE BAREFOOT BOY

John G. Whittier

BLESSINGS on thee, little man,  
Barefoot boy, with cheeks of tan!  
With thy turned-up pantaloons,  
And thy merry whistled tunes;  
With thy red lip, redder still  
Kissed by strawberries on the hill;  
With the sunshine on thy face,  
Through thy torn brim's jaunty grace;  
From my heart I give thee joy,—  
I was once a barefoot boy!  
Prince thou art,—the grown-up man  
Only is republican.  
Let the million-dollared ride!  
Barefoot, trudging at his side,  
Thou hast more than he can buy  
In the reach of ear and eye,—  
Outward sunshine, inward joy:  
Blessings on thee, barefoot boy!

O for boyhood's time of June,  
Crowding years in one brief moon,  
When all things I heard or saw,  
Me, their master, waited for.  
I was rich in flowers and trees,  
Humming-birds and honey-bees;  
For my sport the squirrel played,  
Plied the snouted mole his spade;  
For my taste the blackberry cone  
Purpled over hedge and stone;  
Laughed the brook for my delight  
Through the day and through the night,  
Whispering at the garden wall,  
Talked with me from fall to fall;  
Mine the sand-rimmed pickerel pond,  
Mine the walnut slopes beyond,  
Mine, on bending orchard trees,  
Apples of Hesperides!  
Still as my horizon grew,  
Larger grew my riches too;  
All the world I saw or knew  
Seemed a complex Chinese toy,  
Fashioned for a barefoot boy!

O for festal dainties spread,  
Like my bowl of milk and bread,—  
Pewter spoon and bowl of wood,  
On the door-stone, gray and rude!  
O'er me, like a regal tent,  
Cloudy-ribbed, the sunset bent,  
Purple-curtained, fringed with gold,  
Looped in many a wind-swung fold;  
While for music came the play  
Of the pied frogs' orchestra;  
And, to light the noisy choir,  
Lit the fly his lamp of fire.  
I was monarch: pomp and joy  
Waited on the barefoot boy!

or Emerson. His chances of education were limited and the library of Farmer Whittier contained less than a dozen books, the only one that approached poetry being a rhymed history of King David. But a momentous day came when the poetical Quaker boy was gathering in hay in the meadow; a wandering pedlar stopped and displayed, among other treasures from his pack, a copy of Burns' poems. This the lad eagerly purchased and he himself has left us a picture of what then happened—a picture that must appeal to every youth who remembers the happy day when first the reading of a poem carried him into the realm of song and imagination.

How oft that day, with fond delay,  
I sought the maple's shadow,  
And sang with Burns the hours away,  
Forgetful of the meadow!  
Bees hummed, birds twittered, overhead  
I heard the squirrels leaping,  
The good dog listened while I read,  
And wagged his tail in keeping.

Now Burns had true manhood and nobility of soul; he was a poet of freedom and independence of thought for all men, and he became the barefoot boy's patron saint.

Down in the deep-shaded old city of Newburyport, at the mouth of the river, some fifteen miles away, lived a young man of pronounced humanitarian ideals who published a weekly paper and in this the first poems of Whittier were published. This editor became so interested in the farmer lad who sent him poetry that he rode out on horseback to see him and encourage him in his literary work. Whittier was encouraged and wrote more and better poetry and prose articles which were readily accepted by various papers and eagerly read by the public who began to inquire about this gifted Quaker poet, and where he lived. Distinguished people sought out the farmhouse to see him and they found him mending stone fences, or hoeing in the garden, or hunting in the barn for eggs, or haying in the fields; and, although he was shy and awkward, they could not but admire his fine intelligence and noble character. He was offered editorial positions on various papers in Haverhill, Boston and Hartford, some of which he accepted.

It was at this time that Whittier wrote many of his Indian legends, for he early recognized the romance of the aboriginal life of New England when the great forests, in which the sound of an axe had never rung, came down to the banks of the Merrimack and the powwows and war-dances of the red men were held in the changeless shade. One of these poems, an idyl of great beauty and considerable power, is called *The Bridal of Pennacook*, which describes the life of the Indian tribes whose villages

With roofs of bark and walls of pine,  
Through whose chinks the sunbeams shine,

were in the north-eastern part of Massachusetts and in New Hampshire, and the beautiful natural scenery which surrounded them. Now the nixies and water-horses of the Merrimack are delayed in their race to the sea and forced to turn hundreds of spindles in the great cotton and woolen mills which tower on its banks, but, in this dim period of tradition, when the great chief Passaconaway

Held his long unquestioned sway  
From the White Hills far away  
To the great sea's sounding shore,

the Merrimack poured down its silvery flood unchecked and unbridged.

No bridge arched thy waters save that where  
the trees  
Stretched their long arms above thee and kissed  
in the breeze

# THE CHILDREN'S HOUR

No sound save the lapse of the waves on thy shores,  
The plunging of otters, the light dip of oars.

The poem is full of the music of Indian names and the heroine, the chieftain's daughter, Weetamoo, is described in this fine stanza:

Child of the forest!—strong and free,  
Slight-robed, with loosely flowing hair,  
She swam the lake or climbed the tree,  
Or struck the flying bird in air.  
O'er the heaped drifts of winter's moon  
Her snow-shoes tracked the hunter's way;  
And dazzling in the summer noon  
The blade of her light oar threw off  
its shower of spray.

It was at this time, when 24 years old, that Whittier reached a great crisis in his life. He was obliged to face the question whether he would give up his principles or renounce the brilliant career which was opening before him. This was an important period in the history of the country; society was stirred and public opinion divided on great questions of public policy. It is not hard to guess on which side Whittier took his stand at this critical moment. He heard the call of duty in his soul and obeyed although he knew it would cost him dear—the foregoing of all his aspirations for political and literary preferment, the putting by of all his dreams. For the quarter of a century which followed, this shy and sensitive Quaker poet was socially ostracized, misjudged and even was threatened with personal violence; but he never abandoned his principles for the sake of bread, or the sake of fame, or the sake of escape from personal danger. The moral courage and patriotism which Whittier displayed during this long, self-sacrificing struggle in the interests of freedom are the chief glory of his character and justify us in calling him a hero.

The latter half of the poet's life passed quietly and uneventfully at his modest home in Amesbury, nine miles from the farmhouse of his birth. He devoted himself mainly to literary pursuits, but continued to be allied with all great movements in the interests of humanity. His charming ballads and lyrics brought him great recognition in literature and a high place in popular estimation. In them he painted in fresh colors the rugged and picturesque New England landscape so that we can see it too, in all seasons; he sang of the legends of his beloved Merrimack Valley, of the virtues and ways of the Puritans, the plain and simple home life of that rare and bold race who helped to lay the foundations of this republic.

A kindred spirit with whom he spent many pleasant hours lived across the Merrimack on the Newburyport shore. His fine estate was on a high hill crowned with orchards and

meadows where the birds sang and the bees hummed, and in summer the air was very sweet and quiet all around. There was an old vine-covered house, a grassy lawn, long rows of shady maples whose green leaves turn to scarlet and gold in the frosts of autumn, and a magnificent big pine tree, with fragrant breath, waving its tassels against the blue sky. In the vicinity of this charming home were acres and acres of hill-side almost covered with a shrub known as the laurel (*Kalmia latifolia*), which in May and June is fairly overspread with a profusion of wheel-shaped delicate pink blossoms, and the whole vicinity is a perfect fairyland of beauty and

from these lovely flowers, being called "The Laurels," or "Laurel Hill." Whittier and his friend often visited together in the midst of these beautiful scenes, walking beneath the maples or sitting under the big pine, and in this favorite retreat Whittier wrote some of his sweetest lyrics.

This friend of Whittier's was Nathan Chase and was the grandfather of a little girl named Katherine, now the great Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, and the wise and loving founder of Rāja Yoga Schools. Little Katherine's childhood was spent on her grandfather's estate and she too loved all the beauties of nature which

THE BIRTHPLACE OF WHITTIER AT HAVERHILL, MASSACHUSETTS

## From "RAPHAEL"

John G. Whittier

THE tissues of the Life to be  
We weave with colors all our own,  
And in the field of Destiny  
We reap as we have sown.

Still shall the soul around it call  
The shadows which it gathered here,  
And, painted on the eternal wall,  
The Past shall reappear.

Think ye the notes of holy song  
On Milton's tuneful ear have died?  
Think ye that Raphael's angel throng  
Has vanished from his side?

Oh no!—We live our life again:  
Or warmly touched, or coldly dim,  
The pictures of the Past remain,—  
Man's works shall follow him.

sweet odors, so that the people come from all about to enjoy it. The place takes its name

abounded there, especially the big pine tree; and beneath it, while "the sun tangled its wings of fire in the branches," she played and dreamed; dreamed and planned a great city which should be beautiful in all its parts, with lovely homes, wise parents, unselfish children growing up sweet and pure, with no evil, no suffering, but happiness and brotherhood reigning everywhere. (This sounds like Point Loma, does it not?) Now Whittier too longed for and dreamed of all this; he surely thought of it also when he sat under the big pine, only he did not know how to go to work to bring it about. But he wrote about it all with a singing pen so that all the world could hear. And it may be that we shall yet see a Rāja Yoga School at "The Laurels" where Whittier passed so many happy hours and Katherine Tingley lived as a child. The pine tree whispers, "Watch and wait." ## LAST SUNDAY AT ISIS THEATER

"The Call of the Beautiful"

An Interesting Address by Mrs. Grace Knoche

THERE was a good attendance at Isis Theater last Sunday evening at the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY. Mrs. Grace Knoche gave an address on "The Call of the Beautiful," which was listened to with much interest. The music program was rendered by the Râja Yoga Quintet and as always gave great delight to the audience. From Mrs. Knoche's paper we extract the following:

"It is the eternal call, the call of the soul throughout the ages, 'The Call of the Beautiful.' Life takes on a new meaning. The heart glows with a new fire. Aspiration awakens. The warrior-spirit is stirred. Love leaps up as some swift flame from embers long ash-hidden and there is awakened the consciousness of a great truth, the greatest in the world, the truth that all men, all creatures, are divine and all bound, indissolubly bound, by the heart-ties of Brotherhood; compassion is born and from that time on the battle-royal is entered and life's processional becomes a royal one in a deeper than the ordinary sense.

"But long before that, indeed, almost as soon as the soul speaks at all, the brain-mind begins its own interminable recitative. Arrogant in book-knowledge, with petrified opinions upon all subjects, with an over-weening sense of its own importance, steeped perhaps in the materialism of one age or the so-called science of another, what wonder that the brain starts up in alarm when it sees its own proper territory invaded by some airy nothing called "soul" and its legions of the Beautiful?

"According to Theosophy, the mind is not a settled, unchanging something that may grow and acquire quite independently of the other parts of our complex human nature. Instead, the Wisdom-Religion shows plainly that it is the link between body and soul, "the link between the spirit of God above and the personal man below." It is the reincarnating being but always becoming dual as soon as it takes upon itself the garment of a physical body. It is impressionable and, because of this, is constantly changing, the nature of the change depending upon whether the influences bearing upon it are higher or lower, of the soul or the body. When shaped and fashioned by the lower part of the nature, by the passions, ambitions, or by cold intellectualism, we see but mind in its lower aspect. What a world would this be if all people had the knowledge and could therefore walk on through life undeceived by the sentimentalist, the so-called "apostles of the Beautiful," the scheming fanatic, and the brilliant but heartless intellectualist! On the other hand, did we realize that the high powers of the mind are active only when shaped and colored by the light of the soul itself, that only when intellect honestly and trustingly reflects the heart-light, what a world of suffering

would be spared. What a world of mistakes would never be made and how short would be the path to the life beautiful of which we dream! The best life today as the world goes, is a thing of shreds and patches compared with what it might be with this larger wisdom as its guide! Humanity is so imposed upon, it would seem, at times, so willing to be. The Call of the Beautiful is in the air as never before since the sunset time of old Greece; men's hearts are stirred responsively and a great deep longing for something lovelier and better is voiced in the very silence of things; yet the minds of so many are set at arguing and protesting, and some are pulled by the misunderstood lower nature over into chasms and abysses. And out of all this whirling, seething, eager and turmoiled heart-and-brain life of the world, will there ever come order, peace, law, and that beauty that is of the soul? Theosophy answers, 'Yes, when Humanity understands itself.'

"'But will not this adjustment come without Theosophy,' you may ask, 'even if not so soon, perhaps, yet soon enough? Are not educators doing so much to bring the beautiful into the lives of children, artists and musicians giving more and more freely of their talents? Even our slums are being invaded by the kindergarten. Will not all these agencies make the world quite a beautiful place in time?'

"To answer this one can do no better than quote from a writing of William Q. Judge, done some years ago in answer to a student's question upon some matter in occultism. The question was as follows:

Even if this is, spiritually considered, a Dark Age, is it not in part redeemed by the increasing triumphs of mind over matter, and by the effects of science in mitigating human ills, such as the causes of disease, disease itself, cruelty, intolerance, bad laws, etc?

"Mr. Judge answered as follows:

Yes, there are mitigations of the darkness in just the same way that a lamp gives some light at night, but it does not restore daylight. In this age there are great triumphs of science, but they are nearly all directed to effects, and do not take away the causes of evils. Great strides have been made in the arts and in cure of diseases, but in the future, as the flower of our civilization unfolds, new diseases will arise and more strange disorders will be known, springing from causes that lie deep in the minds of men and which can only be eradicated by spiritual living.

"Would you have the world better, then? Would you do something, if only a little, to bring down into life that real Beauty that is of the soul? Then spread the truths of the Wisdom-Religion, first of all the truth so accentuated by the three Leaders, Helena P. Blavatsky, William Q. Judge, and Katherine Tingley, that the beautiful and the moral are one; that beauty cannot be divorced from the highest moral code and be other than a counterfeit or a sham; that the criterion is not a knowledge of art or music or rhymings in the brain-mind sense, but is *the life, the spirit-*

*ual life*, from which alone all that is truly beautiful must spring. Work for the little children. Give them the opportunities that you did not have. Fill their lives with music and color, and with noble and heroic ideals.

"Would you have the world better? Would you bring the 'Beautiful' back again into life so that no longer shall our poets mourn 'Pan hath gone,' and 'Balder the Beautiful is dead, is dead.' Then spread the knowledge of Theosophy—not by carrying around a lot of brain-mind facts, but by *living it*. Everyone can do this, and often the very one who thinks that she can do nothing, who thinks she is neglected or forgotten, can do the most of all, for she has the supreme chance, the greatest chance in the world, to make the greatest conquest in the world—over herself; to turn from a selfish brooding over personal slights and ills and pains to that supreme contemplation of the universal things of life which is the sign of godhood. We are forgotten? But the Law never forgets, the Eternal Light shines on and on forever and forever; it is we who in our weakness forget that fact, and so turn away. That is Theosophy, that is what it means to listen to 'The Call of the Beautiful.'

"There was once a little chorus of blossoms that lived their life of a day or two on an English slope near the sea. A thousand passed by, perhaps, and gave them not a thought, but after the thousand came a poet, whose heart was aching, too. But he heard the mystic call, 'The Call of the Beautiful,' as these golden blossoms danced and coquetted and spoke—yes, spoke—to his heart. And he left an immortal writing to tell us what happened:

I wandered lonely as a cloud  
That floats on high o'er fields and hills,  
When all at once I saw a crowd,  
A host of golden daffodils,  
Beside the lake, beneath the trees,  
Fluttering and dancing in the breeze.  
The waves beside them danced, but they  
Out-did the sparkling waves in glee:—  
A poet could not but be gay  
In such a jocund company!  
I gazed, and gazed, but little thought  
What wealth the show to me had brought.  
For oft, when on my couch I lie  
In vacant or in pensive mood,  
They flash upon that inward eye  
Which is the bliss of solitude;  
And then my heart with pleasure fills,  
And dances with the daffodils.

"Let us keep alive in our hearts, with the zeal of the warriors of old, this dream, this picture of the Life Beautiful, the real thing. Painted upon the screen of time it will stand for ever, germ and model of a new up-building life for all humanity. In just holding this vision in our hearts, in defending, preserving and protecting it, we ourselves will stand, and induce others to stand, as co-workers and kinsmen of the Creators and the Gods." ## An Artist's Interpretation of Theosophical Truth: The Duality in Human Nature

THESE is a fact which lies within the inner intuitive knowledge of every human being, which it were well for us never to lose sight of for a moment, if we would fulfil our destiny. It has been the theme of the philosopher, the poet and the artist since literature or art existed. It is found illustrated in the Egyptian *Book of the Dead*, and in the writings of the Egyptians, thousands of years before the Christian era. It is the keynote of the teachings of the greatest of the philosophers among the Greeks, and is dealt with in some of their noblest masterpieces of sculptured marble. And it runs, like a thread of light, through the philosophy, literature, poetry and art of the Middle Ages down to the present time. This fact is the Duality of Human Nature, and the illustration on this page is an example of this, chosen out of many hundreds which might do equally well to illustrate the subject.

To the unthinking, who pass their lives in looking for sensation from without or seeking satisfaction in external possessions or temporal distinction, these symbolic pictures have little or no meaning. The drama here represented is going on, but their attention has not been drawn to it, and they are distracted by questions of comparatively little moment, such as the technical quality of the paintings themselves or the era of their production. The question as to how it was that such a theme ever came to be the subject of the artist's genius, is to them of less moment than a so-called critique on the way in which he has treated it.

Yet, on looking more deeply into the question, one cannot help being impressed with the fact that these ideals have always had a strange attraction for artistic, creative instinct. One can not help wondering what the artists were thinking about whilst they painted the pictures, and how far they realized the depth of meaning which they contain. And perhaps we should not be very far wrong if we came to the conclusion that the artist of ancient Egypt or artistic Greece had a deeper comprehension of the subject matter of the symbolic work than the artist of the later and darker ages, who found himself in an atmosphere obscured by dogmas and creeds which hampered the full appreciation of the all-embracing truth of his traditional theme.

No doubt the strange fascination that these and similar pictures contain for many of those who are not fully instructed as to their deeper meaning, lies in the fact that there is a dim consciousness at work within them which tells

THE TEMPTATION OF CHRIST  
FROM PAINTING BY SCHEFFER (LOUVRE)

### FRAGMENT

From Browning's *Saul*

I HAVE gone the whole round of creation; I saw and I spoke,  
I, a work of God's hand for that purpose, received in my brain  
And pronounced on the rest of his handwork—returned him again  
His creation's approval or censure: I spoke as I saw.  
I report, as a man may of God's work—all's love, yet all's law.  
Now I lay down the judgeship he lent me. Each faculty tasked  
To perceive him, has gained an abyss, where a dewdrop was asked.  
Have I knowledge? confounded, it shrivels at wisdom laid bare.  
Have I forethought? how purblind, how blank, to the Infinite Care!  
Do I task any faculty highest to image success?  
I but open my eyes—and perfection, no more and no less,  
In the kind I imagined, full-fronts me, and God is seen God  
In the star, in the stone, in the flesh, in the soul and the clod,  
And thus looking within and around me, I ever renew  
(With that stoop of the soul which in bending upraises it too)  
The submission of man's nothing-perfect to God's all-complete,  
As by each new obeisance in spirit, I climb to His feet.

of a deeper import than the one that they at first recognize.

But the student of Theosophy realizes that herein is portrayed the drama of the human soul, which is being played *within himself*. The rebuke of the Christos to the lower animal man is beautifully symbolized by Scheffer's great painting, which now hangs in the Louvre. It is the contest which is going on within each human heart. The figure which stands firmly

upon the rock and points ever upwards, is no *person* or *individual*, but the saving divine spirit which may be the guiding star of every human soul; while the animal tendencies of the lower man are typified by the dark figure which points downwards to destruction. As human life exists today both the qualities, we might say entities, symbolized by these figures are *parts of the same man*.

Two other paintings also, one by the immortal Raphael and the other by Guido Reni, symbolize the same contest. It is interior to man's consciousness and fought out upon the battle-field within. The hero soul of man has chosen "whom he will serve" and with the "sword of the spirit" has firmly resolved to destroy the dragon of his lower nature, and become the ruler of the spiritual kingdom within himself. Calm and alert and intensely active, he takes up the spiritual warfare and builds his character upon a sure foundation.

Theosophy teaches that this is not only possible, but that it is the goal to which all humanity must arrive in the future. And to him who has already seen the battle-field and whose heart has not failed him at the sight, are possibilities beyond belief. STUDENT

### The Higher Interpretation in Music

AN American critic, who laments that Joachim could never be persuaded to leave his pupils long enough to make a tour of America, adds:

It is thoroughly characteristic of Joachim's temperament and truly indicative of his attitude toward his art that it was not as a soloist that he preferred to make his public appeal. He was superbly equipped with all the gifts by which a great soloist needs to be distinguished. He was a thorough master of his instrument, which he played in the grand style, with a noble tone, admirable alike in the amplitude of its volume and the beauty of its quality, and with an accuracy of execution which in his prime was quite impeccable. No one who has heard him render the "Bach Chaconne" will admit that he has had a superior or even an equal within living memory, or will doubt that he might, had he wished, have toured the world in triumph. But his ambition did not lie in that direction. It was his choice to interpret the masters rather than to exploit himself.

One hopes that the mantle of Theosophical ideals such as these will rest upon shoulders more than one, for the world needs musicians whom neither gold nor ambition can lure.

A LOMALAND STUDENT

ACCORDING to the *Tageblatt* of Berlin, the manuscripts of eleven heretofore unknown dances by Beethoven have been discovered at Leipzig and will shortly be published. H.

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l   O f f i c e   P o i n t   L o m a   C a l i f o r n i a

*The Headquarters of the Organization at Point Loma, with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West*

## Kāma-Lokic Consciousness

AS an instance of the helplessness of modern authorities and schools of thought, in face of modern psychological problems, and of the need for a reliable source of information, advice and systematized knowledge, the following case from the papers is important. We find that such problems frequently come up, as they have done all through history, but more frequently now that the race is passing through a rapid evolution; and that there is no religious, scientific or other authority competent to deal with them. In putting forward Theosophy as the only thing that can solve such problems, no mere claim is made, but a prophecy; for it will be discovered by the people that Theosophy is able to make good its claims. The world gives ear to truths that vindicate themselves by their results.

A girl has been sleeping since August 19th, and in her waking intervals tells strange stories of her experiences while asleep; from which the following is quoted:

When I am away from you, I am in another world, where all the people we knew before they died are now living. I do not know where it is, but my life there seems as real as my life here. I do not believe it can be heaven, because the people there look as they did when we knew them here. Willie Meuve, who was killed by the engine, has the hole in his head, and his arms are gone. I met Mabel Blake (dead two years) in one of the halls. The first thing she asked me after I kissed her was whether she hadn't got fat. Nobody talked to me about dying. Nobody seemed to realize that they were dead. I met grandmother and she knew me.

The case has been given to the Psychical Research Society to investigate! Some investigators attribute it to a blood clot on the brain, "but" others think that the girl is a marvelous trance medium. Why she cannot be a trance medium and yet have a clot on the brain, passes comprehension; and whatever the psychic reason, there surely must also be a physical reason. A university professor will conduct an investigation in the interest of the university! Some think that the place where the girl goes is Purgatory!

Now it is quite clear that the experiences are genuine, and it is equally clear that not heaven nor purgatory nor the other place will answer the description. Also it is very much to be doubted whether the Psychical Research

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

Society will make much of it. That Society investigates such phenomena in the spirit of an inexperienced explorer in a new and hitherto unexplored land and expatiates over raps and automatic writing and telepathy in a style of learned ignorance with which we are familiar. Nor are the other bigwigs likely to throw much light on the subject.

There are many planes of consciousness possible to man, and each of these is again subdivided. That of waking consciousness is the last of the last. Therefore independent investigators experimenting vaguely without guidance are likely to make endless mistakes. All the lowest of these planes, that is those nearest to the waking consciousness, are astral and psychic, and pertain to the lower elements of man's nature. There is nothing spiritual in them; many of them are very dangerous and full of horrors. This state in which the girl finds herself is clearly one of these. The people appear as last seen in life, maimed limbs and all; they are astral remnants, soulless, automatic, unintelligent (witness the foolish remarks made by them). It is the world of "shades" spoken of by the ancients, wherein the remnants of man's lower nature repeat and repeat the actions of earth until their energy is run down. Such a world the spiritists contact in their séances. The child doubtless was pure; but such immunity as she enjoyed would not be the lot of everybody who should contact such a plane; for therein dwell the shades of criminals and vicious persons, from which we are usually protected by physical life. Contacting these on that plane, without the protection of the physical body, which would be entranced, would lay us open to temptations and obsessions we could not resist. Hence Theosophists do not cultivate acquaintance with such planes, rightly thinking that self-control and purity of life are the necessary pass-keys for all knowledge, without which it is dangerous and unprofitable. There are now certain coteries of so-called "occultists" who dabble in these things, with the help of a few

ideas they have got from Eastern sources. But, as they are merely engaged in selfish pursuits and have no care for the interests of humanity, their studies will be mischievous both to themselves and to the interests of the race. It is scarcely necessary to say that the oriental "mahatmas" who are undertaking to teach them are not particularly anxious for the progress and welfare

of western races; but their wisdom at least reaches the point of knowing that their teachings are not calculated to further that progress and welfare. We taught the Red Men and other races how to drink, and it did not advance their progress; now other races are teaching us things, which, like drink, offer promise of glowing results, only to destroy.

Theosophy does not eschew knowledge; it merely contemns these back-door attempts to enter the portals of knowledge. The knowledge which Theosophy offers is as the bright daylight sun compared with the flickering torches of science or the wan moonlight of so-called "occultism." It were better to hand the girl over to the doctors and remove the blood-clot from her brain, than indulge in this kind of astral vivisection. E.

THIS is a highly important matter, whether Reincarnation be a true doctrine or not. For if each nation is only a mass of new egos or souls, it must be much affected by the matter-environment left behind by nations and races that have disappeared for ever.

But for us who believe in Reincarnation it has additional force, showing us one strong reason why Universal Brotherhood should be believed in and practised.

The other branch of the responsibility is just as serious. The doctrine that removes death from the Universe and declares that all is composed of innumerable lives, constantly changing places with each other contains in itself of necessity the theory that man himself is full of these lives and that all are traveling up the long road of evolution.

The Secret Doctrine holds that we are full of kingdoms of entities who depend upon us, so to say, for salvation.

How enormous, then, is this responsibility, that we not only are to be judged for what we do with ourselves as a whole, but also for what we do for those unseen beings who are dependent upon us for light.—William Q. Judge

## TO ADVERSITY

Thomas Gray

WHEN first thy sire to send on earth  
Virtue, his darling child, designed,  
To thee he gave the heav'nly birth,  
And bade to form her infant mind.  
Stern rugged Nurse! thy rigid lore  
With patience many a year she bore:  
What sorrow was, thou bad'st her know,  
And from her own she learn'd to melt at others' woe.  
Thy form benign, oh Goddess wear,  
Thy milder influence impart,  
Thy philosophic train be there  
To soften, not to wound my heart.  
The generous spark extinct revive,  
Teach me to love and to forgive,  
Exact my own defects to scan,  
What others are to feel, and know myself a man.

## The Message of Theosophy

THROUGHOUT the ages there have been great Teachers whose sole purpose in life has been to bring the Light of Truth to all humanity — the only light by which the world can be saved, the Light of Brotherhood. Such was the message of Theosophy to the world at the end of the nineteenth century and which is beginning to be lived today in this our twentieth.

Not for those who with limited vision do not wish to be convinced of its truth, is this message. Not in a controversial spirit, or as a new addition to the overwhelming amount of theories and opinions already afloat in the world, awaiting recognition, are the teachings offered. The glorious message of Theosophy is for those who earnestly long to know the Truth, the whole Truth, and nothing but the Truth, who are crying out for help in the darkness, for something to solve the hopeless, intricate problems of life. For such souls Theosophy has a message, for it alone solves all problems and answers all questions. The practical, everyday side of life, through its teachings, becomes simplified and its meaning clear; it takes on a new aspect and fills the soul with new hope.

There are always those who "rush in where angels fear to tread," who without study and careful thought, try to force an entrance to the sacred temple of the Higher Wisdom, and because of their haste fail to see the straight Path leading to the Portal; who ask unnecessary questions of the guides along the way, and are highly indignant because they are not answered according to their already preconceived notions — questions which a little forethought would have shown them to have been in fact altogether unnecessary. To such headstrong people Theosophy has little to give. But the true student, the quiet, earnest, sincere seeker will find its teachings soul-satisfying, because they both appeal to his reason and also fill the aching void in his heart.

The truth of any teaching must be judged by its power to give an answer to all ques-

tions, each answer being in harmony with the others, and with Truth itself. Step by step the student of Theosophy will come to see the logical, practical basis for life, for sane healthy living and happiness that its principles give. The true student will find these for himself, and will come to see his responsibility for his own lot in life. He will learn as the Persian poet, Omar Khayyam, has said that each is himself his own heaven and hell:

I sent my Soul through the Invisible,  
Some letter of that After-life to spell;  
And by and by my Soul returned to me,  
And answered "I myself am Heaven and Hell."

Theosophy states its tenets as such and wisely leaves the questioner first to find the Truth for himself. It owes no explanation to anyone but stands there a great perfected whole, — the Wisdom-Religion of the ages, explaining always if we but search, what other systems have failed to do, and thus it stands alone.

The many new theories ever increasing in appalling multiplicity, new systems of thought presented each day, confuse the mind of the student, until he studies the simple teachings of Theosophy, and here he finds the great whole of which these are all but parts. He must study, however, with the heart of a child.

Except ye become as one of these little ones ye cannot enter the Kingdom of God.

In ordinary schools the pupils are required to accept many statements on the authority of their teachers and masters, until the time comes when they shall have learned the first, simpler, lessons. Before they understand calculus they must master the simple laws of arithmetic and algebra. So the student of Theosophy must reserve some of his deepest problems until he has learned at least a few of the fundamental principles of this Wisdom-Religion.

Those who have not hitherto been willing to do this have misunderstood the teachings, while some have tried to turn them into channels of profit to themselves and their own ambitious and selfish schemes, and in fact, perverted into absolutely wrong channels of destruction and malicious evil those forces of which Madame Blavatsky warned them in the early years of her teaching. Even soulless men, she said, can be brilliantly intellectual and misuse the divine fire, as would a child a match in a powder magazine.

The heart must be the living vital force which guides the head; which would otherwise run riot when left by itself; and though it may show all sorts of mental nimbleness and love of intricate philosophical problems, without the true influence of the heart, the head is not rightly balanced. The great trouble with the world today is too much head and too little heart.

For those who are really in earnest, Katherine Tingley has said, "intellectual fireworks have little attraction." Such are those who have tried for self-love and glorification, to pervert the true teachings of Theosophy, which have self-sacrifice and self-purification as their basic principles. In wounded pride and vanity such students have turned against the teachings of those true Leaders whose unselfish devotion and deep heart love for humanity have caused them to sacrifice all that the world holds most dear, that they might bring

a little more light to sorrowing hearts, a little more joy to all that lives. The teachings of Theosophy in all their spiritual significance have always been the living help and blessing given from age to age by the great Teachers, the Christs of the world, who have devoted their very lives to the salvation of the great human family.

These teachings date back to the dawn of that Golden Age when there was but one great Wisdom-Religion embracing all. Then, after ages, came the deluge of materialism and priestcraft, obscuring the truth, plunging humanity into the gloom of doubt and despair.

All that is now included under the terms science, religion, and philosophy give us of themselves nothing really consistent or definite to stand on, nothing in harmony either with each other or the Great Whole. Without a guide Humanity is left drifting on the dark waters, and the soul cries out in this darkness for something besides doubtful statements and too oft repeated denials in the many systems of thought to which we have gone for light. Then we turn to the message which Theosophy has to give, and here we find the missing links, the lost keys that open the gates to the Garden of the Gods.

Let once the seeker after Truth turn to the Light of Theosophy and, if he is truly trying to learn, and not simply to disprove, if he really longs to find a practical benefit for all suffering humanity in the simplest problems of daily life, then all his questions will be answered, and his soul satisfied. He will certainly not find here, however, an easy going salvation, nor a scapegoat of any kind, nor a premium on mental inactivity and spiritual selfishness, as is offered in many so-called religions and sciences. There is no personal profit, no applause. Here he will find simply a climbing up hill all the way, but at each step the vast landscape grows more wondrously beautiful and he begins to know things at their true basic value. To gain the heights we must climb; no one can do this for us, but as we struggle upward into the Light we find that this Light of the Everlasting Sun is guiding all the comrades and travelers on the Way, and has been guiding them for ages past. Theosophy has the testimony of the ages too long neglected by our archaeologists, geologists, and all scientists; but which is now being revealed as Madame Blavatsky prophesied it would be in this century. The further back we go in our scientific search, the surer do we become that this is so and that when the Universal Wisdom-Religion was known there was no hard and fast division between religion, science and philosophy, for the ancient Wisdom-Religion included them all.

So today again has come the reaction against a knowledge limited to the lowest material world regardless of the higher nature, the true soul of man. The world soul once more awakening has cried out for Light, for a knowledge of the deeper mysteries of man, those fields left entirely unexplored by either religion or science, both of which, after all is told, end only in vague statements on the one hand, and cold abstractions on the other. The cry has been heard, and the messengers of Light have come into the world, with the message of Theosophy, the gospel of a new hope and of salvation for Mankind. C. H. H.

## A MYSTERY

J. G. Whittier

THE river hemmed with leaving trees  
Wound through the meadows green,  
A low blue line of mountain showed  
The open pines between.

One sharp tall peak above them all  
Clear into sunlight sprang,  
I saw the river of my dreams,  
The mountain that I sang.

No clue of memory led me on,  
But well the ways I knew,  
A feeling of familiar things  
With every footstep grew.

Yet ne'er before that river's rim  
Was pressed by feet of mine,  
Never before mine eyes had crossed  
That broken mountain line.

A presence strange at once and known  
Walked with me as my guide,  
The skirts of some forgotten life  
Trailed noiseless at my side.

Was it a dim-remembered dream  
Or glimpse through aeons old?  
The secret which the mountains kept  
The river never told.—Selected

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** It is claimed that Jesus taught Theosophy, but if Theosophy does not teach the forgiveness of sins what did Jesus mean when he answered the Scribes who criticised his claim to forgive the sins of the man who was cured of the palsy? He said: "But that ye may know that the Son of man hath power on earth to forgive sins (then saith he to the sick of the palsy) arise, and take up thy bed, and go unto thine house."—Matt. ix, 6.

**Answer** There can be no question that among the Jews, as among all other nations, there existed the notion that God could be induced by various ways, such as sacrifices, etc., to pardon wrong-doing. The same idea persists in Churchianity today; some even going the length of teaching that a fallible human being can grant "indulgences." It need hardly be said that all who hold to the law of Karma, or the great principle of Causation in Nature, do not accept this. Theosophists believe that the law of seed-time and harvest holds good in the moral world as much as in the physical; and they believe that it is a wise and merciful thing that this is the case, that "we reap the seed we sow, the hands that smite us are our own." Anything else would not be just; and justice rules the world.

How then, is the fact to be met, that all over the world, and in all ages, men have thought that by some process the great Law of Causation could be annulled, or set aside? In the first place, the notion of appeasing God and thus getting pardon is an unworthy one, and belongs to a low stage of human life. In the next place the use of the word rendered "forgive," does not necessarily imply that Jesus fell in with the popular misconception. It is a fair, and a very important question to ask, then, what did Jesus mean by this word "forgive"?

This word was used by early English writers sometimes in the sense of to *put away*. (See both Webster and the Oxford English Dic-

tionary.) Now, the word *aph-icmi* generally meant to *put away* (*apo* and *icmi*), to send forth, to let go, to give up. (See Wilke-Grimm). This is really the true and only process, when the lower self, in the light and power of the Higher Self, or the God within, resolves to put away the evil thought or action. This is the real forgiveness, or putting away, or becoming free from the evil. However, to be cut free from the causes that produce evil does not ensure that a person, or a nation will escape the results of the evils already done. But it does something far better, it sets us on our feet, and gives us strength so that we can meet the result we have caused.

That Jesus could and did enkindle this vigor of a new life into many cannot be questioned. It is the province and duty of every Christ-like man to do the same thing to some extent. This case of the man suffering from palsy, or paralysis, may have been, as was supposed, the result of sinful indulgence. From the man's faith a thorough change of mind is implied; so Jesus says: Be of good cheer, young man, your sins are put away. The scribes looking at the matter in their own legal way exclaim: Who can forgive sins but God? Jesus replies, knowing their tone of thought — (who is this blasphemer? He does not cure the sick man, but talks about forgiving sins) — "Why do you think it is easier to say thy sins are put away, than to say arise and walk?" Then he says to the man: "Arise, and take up thy couch, and go into thine house."

Properly considered, no man except the sinner himself can "put away," or "forgive" him his sin, though the impulse, help or power to quicken the higher nature of the man to overcome may come from someone else. Hence it is said in the Old Testament, "Wash you, make you clean," etc. Jesus as the "Son of Man," is the prophecy and assurance that every Son of Man has this power, through the vivifying impulse of the Divine Self, or the Christ within. Our forgiving others, in the sense of giving the impulse and awaking the power in others by which they can conquer the evils of their lower natures, is the measure and pledge that we have attained to that state in which we have become separate from the same evils, or similar ones.

(Rev.) S. J. NEILL

**Question** If we have to undergo such a wide experience of life and if this is indispensable in the process of evolution, why do we have no recollection of the experiences of our past incarnations.

**Answer** Perhaps we do retain the recollection of them except that it is not available, but can become so under certain conditions. The soul is the possessor of the real memory and the fact that we live so little of the real soul life should be a sufficient answer to the question. The memory of the personal man, the habitual self, as we know ourselves today, is different and depends on the brain and general physical and mental condition. It must be borne in mind too that each time we return to earth we have a new brain, a new physical body, and hence it cannot be expected that the memory of a previous existence should in any sense inhere in these as they had no part in those previous experiences.

But let us look at the matter from another

standpoint. Would it really be a help to remember the experiences of the past life in such a way as the questioner evidently has in his mind, that is in the sense in which we remember experiences of the present life? First of all how many are there who can control and guide the present physical body with its sensations and desires? How then could it be expected that he could control the memory of many lives? Suppose for instance a person who has had a great grief and who allows his memory continually to turn the mind back to that one event. Does he not lose much of his usefulness in life? Indeed is it not possible that he may even become incapacitated for the work of this life by the constant brooding over the past? And what if he had the griefs of many lives to ponder over?

Have we not instances also of those whose memory of this present life has driven them to insanity or destruction? What then would the accumulated memory of many lives constantly rushing through their brains mean to them?

This side of the question may not have been thought of by the inquirer. There are many who turn their minds to this subject with no other thought than that of the pleasurable side of experiences and what they would call successes in life. They do not realize that the ordinary human life is made up both of pleasure and pain, and joy and grief, and that if there is to be any memory of the past the dark side of life cannot be excluded. But suppose only the pleasant experiences should be remembered, would they be a help? Would they not on the contrary occupy so much of the attention that it would be impossible to perform the duties that belong to the present life? Success and pleasant experiences have ruined as many lives as failure and hardship have done, and just as great danger would lie in that direction.

The fact of the matter is that we are not ready to face the detailed experiences of the past. Men and women of the present age have not sufficient control over themselves, and to have the door opened to these inner experiences without having full control over one's nature would be a calamity indeed.

But in another and very real sense we do have memory of the past. As William Q. Judge says: "You are the past of yourself." How comes it that certain children are born with great aptitudes in certain directions? What is it but a kind of memory with which the soul has been able to impress the present physical or mental nature? Our characters and all the strong tendencies of our lives are transmuted memories. We cannot now read the details of the events that have built these up but they are as surely the result of the past as is any result which we can trace to a cause in the present life. If we could but face the truth should we not be forced to acknowledge that we do not avail ourselves even of the lessons and the experiences of the present life? And surely until we do that it would be vain for us to expect to have a recollection of those of a previous life. When we have learned to use what we have at command today it will surely be time enough for us to look for something further, and in the meantime we shall be fitting ourselves to profit by a wider recollection that will some day be ours, when we have become fit to receive it. STUDENT

### Does God Cause Disease?

**A** RECTOR is reported as having said that he disputed the usual doctrine of Protestant churches that sickness and death are sent by God, and believed them to be due to bad city government and bad drainage.

"The hand of God" is a generalization for causes outside the range of our view. In times when people did not know that bad sanitation causes disease, they attributed disease to the hand of God. Nowadays we no longer say that cholera is caused by God, but there are other things which we still attribute to God, because we do not see their cause. "Visitation of God," is a regular legal phrase. As time goes on, we shall discover the causes of some of these things and no longer say God caused them. Perhaps, if the truth were known, there is a cause for everything that happens to us, even for those events which are called casual and fortuitous and accidental.

Then where, it will be asked, does God come in at all? The theological God comes in nowhere, for he is simply a conception of the theological mind—a great personality who is supposed to rule over the universe somewhat like a king. But there is room for a Universal Spirit, though we need not personify it. We see that in Nature life and law rule everywhere; but we do not personify that and worship Pan, like the ancient Romans. Why then should we personify that higher spiritual Life that rules in the hearts of men and guides the movements and destinies of the whole Universe?

There are laws in life—natural laws and spiritual laws—and through their existence it comes about that certain actions will always produce certain consequences. If, therefore, we do things that will lead to the plague, is the fault ours or the law's?

But what people should understand is that every fate that befalls us is related to some action or actions of ours, the effect being linked to its cause by connexions that may be distant and invisible, but are not the less real. To understand this, however, one must be prepared to enlarge his views beyond the negations of science and the narrow dogmas of ecclesiasticism, and study a science that informs about the mysteries of interior Nature and the divine powers of the Soul; to accept the doctrine of Rebirth; and to recognize man as primarily an immortal Soul. Otherwise these deeper questions of life must continue to remain unsolved mysteries, and we shall have to be satisfied with calling the vast unknown by the name of the inscrutable God.

It is clear that both science with its "chance," and religion with its "God," are equally superstitious; for each invents a vague comprehensive word in lieu of explanation for what it does not understand. But superstition should give place to knowledge, and the true student of life must endeavor not only to recognize laws but to understand them. The pursuit of some kinds of knowledge may be useless and profane, but not so the aspiration to Divine Wisdom to which man is heir by reason of his Soul.

The ancient doctrine of Theosophy teaches there is in man a spiritual Soul and an animal soul; that the union between the mind and the animal soul produces our terrestrial intelli-

gence full of passions and delusions; but the union of the mind with the spiritual Soul produces Wisdom and Power and Peace.

Hence in considering such questions as the cause of our afflictions, we may have faith in a higher Law, but should aspire to turn that faith into knowledge, and not rush from the extreme of superstition to the extreme of scepticism. Theosophy is a reverent attempt to understand the laws of life and to abide by them.

### "In God We Trust"

**T**HE curious little bit of history connected with the appearance of this motto on our coins has just been unearthed. It seems that a certain clergyman who had not studied archaeology for nothing looked with prophetic eye far into the future. He saw that this nation and civilization, like others of the past, must ultimately vanish and its relics become the subject of antiquarian research and exhumation. Those far off searchers, speculating upon our spiritual condition, would find coins wheron was—or was not—written "In God we Trust." If it was not there, we should have been even as the "pagan" nations. If it was, all would be satisfactory.

Secretary Chase seemed to take the same view and the inscription was struck.

A lobby conversation was, it is reported, overheard the other day. One senator was dwelling on our national shortcomings, finally expressing the opinion that we needed "a thrashing." Another agreed. But the first went on meditatively: "The trouble is there's nobody can do it."

We should probably nearly all take the same view. And nine out of ten of us think that "We trust in God." But for what do we trust God? To do justice? But if justice and our welfare require that we should get beaten? Apparently we do not trust so far as to expect that. Either even God cannot arrange that, or God is on our side.

Are we then trusting God at all; or is it only a tribal god that we invoke, a national deity, not even a god of battles, but a god of *our* battles? Need we look down on the "pagans"?

If the hypothetical antiquary be as wise as by that far time he should be, he will read the inscription and say: "Oh yes, that's all very well; but what *kind* of God did these people 'trust'? Was it the Universal God of Justice or a mere American Mars?"

Is it not obvious that if a country needs "thrashing," the slightest touch is sufficient whatever the size and number of armies and battleships? A false move, a little failure of judgment, a momentary forgetfulness on the part of a messenger or subordinate—and the thing is done. It is said that Waterloo was lost merely because of a little slip on the part of Grouchy.

### Indifference to Immortality

**A** WELL KNOWN professor of medicine comments on the "utter indifference" with which most people regard the subject of immortality. He seems to think that if people really entertained such a thought as that they would survive after death, they would make it the topic of conversation and newspaper discussion. One does not find, however, that people usually make their most sacred and solemn thoughts the subject of conversation

or newspaper comment; small talk and everyday topics generally fill these places. Again, we may put the question another way and ask, if people really believed that death were the end, would they behave as they do?

The fact is that the theological idea of immortality taught us to neglect the present and fix our interests on a future prospect; whereas the proper attitude that should arise from a conviction of immortality is an attitude of interest in and dutifulness towards present opportunities. A conviction of immortality does not enjoin that we should always be looking ahead; this would be adopting a very temporal attitude, for is it not an emphasizing of the illusion of time? The Soul lives in an eternal present, and it is a mistake to regard the attribute of immortality as being concerned only with extent of time, to look upon it as mere duration. The professor describes the indifference of dying people to the question of immortality, but should we expect them to make it a subject of conversation or even of reflection?

It is of course evident that the professor's argument cuts both ways, and that people do not go about with a lively conviction of mortality or rave on their deathbeds at the awful prospect of spending the remainder of their existence in a state of annihilation. In short, people are just as indifferent to mortality as they are to immortality; they are interiorly conscious of the true state of the case.

Intellectual discussions on immortality, whether for or against, have very little to do with our actual feelings or conduct. The Soul knows and the mind is inadequate to the problem. We get a much better idea of what existence means by living our life as broadly and nobly as we can, than by indulging in speculations in which fear and concern about our future interests play the chief part.

### The Dog and the Surgeon

**A** REMARKABLE instance of a dog's sagacity is related by a London veterinary surgeon. One evening a man took a Japanese collie, which was suffering from a serious and painful affection of the ear, to the surgery. The surgeon

operated on the animal, which was then taken by its master to his home over a mile away.

On the following evening the dog found its way, unaccompanied, to the surgery, and as soon as the door was opened jumped up on the operating table and waited until the veterinary surgeon could attend to it. The surgeon examined its ear, and poured in some lotion, and the dog immediately left and went home.

Every evening since, punctually at eight o'clock, the dog has visited the surgery by itself, and submitted to the same process, and has then gone home again.

### Deadly City Fogs

**A**T a meeting of the Coal Smoke Abatement Society in London, it was stated that in a three day's fog in Manchester it had been calculated that for every square mile there were one and a half hundredweights of sulphuric acid and thirteen hundredweights of soot. The lungs of adults living in big cities had been found to be black on the surface, and more or less so down to the depths; and during the great fog of 1880, the deathrate in London rose in one week from twenty-seven per thousand to forty-eight. **STUDENT**

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

### Very Broad Christianity

"THE Relation of Christianity to Religion" is the title of a sermon preached by a clergyman in England and printed in *Unity* (U. S. A.)

In this sermon the preacher takes a view of religion so broad that it might almost have been the introduction to a Theosophical Manual. He shows that religion is universal, common to all men, dependent upon the fact of man's divine origin by which he recognizes the ties that bind him to the Eternal; that creeds are the adaptations which each people makes for itself and that they are to be judged solely by their inherent merits; and that Christianity is but a particular phase of universal religion. Yet with all this, he is still a Christian clergyman advocating Christianity!

How does he maintain this most difficult attitude? Usually one finds, in sermons of this kind, that though all religions have truth in them, Christianity has the most and is the best of all the religions. Here we find this argument implied rather than expressed. Indeed, if not implied, there is practically left no ground on which the preacher could continue to maintain his position as a Christian minister. In one place he describes this somewhat peculiar attitude of mind:

### Limited Universality

There is not less devoutness among the Brahmans or Mohammedans than we can find in our companies of Christian believers: does God think less of their worship and reverence than of ours? The ethical theism of the Jew is as firm and strong today as it was in the splendid prophets who redeemed his race from mere ceremonialism and lip-service: is it less acceptable to the Infinite Goodness than the tribute of virtue and service offered in the name of Christ? *Naturally we love our own the best; we believe our own faith to be the highest possible, or we should not hold it; but we must be appreciative to the spiritual strivings of others who are no less sincere than we endeavor to be.*

Try to imagine the attitude of a person who believes that his own religion is the best, and who yet admits that in so believing, he is indulging prejudice, that his own religion is not really the best, and that each other sectary is equally just in believing his religion to be the best! Perhaps an analogy will help: an Englishman (say) may love his own national customs best

### Loyalty or Bigotry

and yet know perfectly well that they are not really the best. Still he may think they are the best for him. But what is impossible is that he should think that his own customs are the best for everybody and yet at the same time

know they are not. Which of these cases represents the preacher's attitude? Does he think that Christianity is the best religion for Christian nations or for people who have been brought up Christians, but not for other nations and other people? If so, then he renounces the entire evangelistic idea and reduces Christianity to a mere national or racial custom. It is not likely that he intended his audience to gather this idea. Or does he love Christianity, but yet know that such love is only a sectarian prejudice and that his love is founded on mere predilection and not on any superiority of Christianity? In this case he virtually says, "Know the truth, but follow your own prejudices." There remains but the impossible attitude of at the same time knowing Christianity to be not the best and believing it to be the best.

### No Middle Course Logical

The most logical attitude is to maintain that Christianity is the best of all religions, God's latest and greatest revelation, superseding the others. But our preacher, though we feel that he must imply such an attitude or allow it to be assumed, hesitates to state it. And indeed it will not bear plain statement, so absurd, in face of all facts, historical and otherwise, is such a claim.

The preacher begins by saying that he can remember when it was the fashion to call Christianity the only true religion, the others being false. Against this view he quotes St. Peter in a declaration which may be commended to the notice of those who regard that apostle as the first bishop of their church:

God hath showed me that I should not call any man common or unclean:

and St. Paul in his oration on Mars Hill:

### Harmonious Differences

God that made the world and all things therein, He, being Lord of heaven and earth, dwelleth not in temples made with hands, neither is he served by men's hands as though he needed anything, seeing he himself giveth to all life and breath and all things; and he made of one every nation of men to dwell on all the face of the earth, having determined their appointed seasons and the bounds of their habitation; that they should seek the Lord, if haply they might feel after him, and find him, though he be not far from every one of us; for in him we live and move and have our being; certain of your own poets have said, For we are also his offspring.

He thinks the days of such prejudice are past and there is promise of a return to the "pure and unadulterated gospel of Jesus Christ." What is the pure and unadulterated gospel of Jesus Christ? Who was Jesus

Christ? Christianity is built on a mass of traditions, an accumulation of centuries of dogmas and theological views, a few selected writings whose origin is involved in great obscurity, and the alleged life of a Galilean. These writings present a medley of mystic and moral teachings having kinship with numerous so-called pagan sources, and to be found in almost any sacred

**What is Christianity?**

writings, the world over. They contain statements about the Galilean Jesus such as are to be found in other scriptures about other sacred personages, as that he was mysteriously born, tempted, executed, that he rose again, and so forth. History gives us no information about him whatever. Hence the "unadulterated gospel of Jesus Christ" is a sufficiently vague phrase. We have certain views attributed to Peter, others to Paul, and a vast mass of theological opinions as to the correct interpretation of the same. But who shall agree as to what are the original teachings of Jesus Christ?

However our preacher seems to get an impression of charity and tolerance from his view of the teachings of Christ, and he thinks that this inner spirit of Christianity has made itself felt against the outer crust of intolerance and narrowness. Yet he attributes the late increase of breadth and tolerance more to causes alien to Christianity, namely to the growth of scientific and geographical knowledge; and he mentions the science of Comparative Religion which has taught us to study the various manifestations of religion in man.

**The Unification of Knowledge**

One thing has been made perfectly clear by this new knowledge and the scientific application of it; namely, that Christianity is one thing, and Religion is something larger and more comprehensive. It is no longer possible for the thoughtful man, however devout a Christian he may be, to say or think that the terms "Christianity" and "Religion" are synonymous and co-extensive. He cannot refuse to see that much precious Religion exists outside of the Christian circle of influence. He cannot any longer divide "religions" into "true" and "false," for he sees that there is and must be truth in all. He cannot even speak, except carelessly, of "religions" at all; for he has learnt the great and liberalizing truth that Religion is One, though its manifestations and expressions are full of variety. He has come to see that the Church of God is greater than all the churches, stands high above their dogmatisms and half-truths, comprehends them all in spite of their arbitrary dividing lines, and even includes multitudes, whom they have ignored or cast out.

**The Religious Spirit and Its Many Garments**

The Church which is truly catholic comprehends every earnest worshipper, and excludes no manifestation of reverence, whatever intellectual shape it may assume. The spirit of the living God can never be restrained within ecclesiastical demarcations. Wherever the human spirit reaches out in aspiration and devoutness, a ready response of the Divine Nature is found.

... Christianity is a particular manifestation of the religious spirit which is common to all mankind. It may be simply and fairly defined, I think, as "the religion of Jesus."

After giving many definitions of "religion" by various writers, he gives his own as being that "Religion is the reaching out of man's spirit to God, the connecting link between earth and heaven," and adds his approval of a definition by H. Fielding Hall, that "Religion is the music of the Infinite echoed from the hearts of men."

The following, which is a Theosophical teaching, is given:

**Man's Divinity**

The fact of man's religious tendency is a necessary corollary of his divine origin.

But the particular form it takes depends upon race, etc., and —

Whatever his form of faith [may be], his fervor and zeal, his sincerity and devoutness, are equally manifest.

Which reminds us of the *Bhagavad Gita's* saying: "In whatever form a devotee desires with faith to worship, it is I alone who inspire him with constancy therein, and depending on that faith he seeks the propitiation of that God, obtaining the object of his wishes as is ordained by me alone."

Further, the preacher continues:

It is clear gain when our minds are sufficiently broadened to enable us to realize that no religion is false, however inadequate it may seem to us; that no idolatry is in itself wicked, but simply an incomplete and childish attempt to express the worshipping spirit; that no doctrine of theology is untrue, merely an imperfect guess at the truth. Our own favorite doctrines are nothing more; and never a man was born who knew, or could know, the whole truth of God. Some of our worship, is perchance idolatry, too. Certainly, it would seem so to men who approach God in other ways. The religion which we love with all our hearts appears to earnest and thoughtful men, born and reared under other influences, to be pernicious and fatally false; yet we know that it is not so, any more than their own faith is without beauty and truth to support it. . . .

**Doctrine the Bounding of a Truth**

It is simply a question of degree between one form of faith and another, between one phase of religion and another, and each must stand the fair test of comparison. Jesus must be measured with the founders of other world systems; our Bible must take its place beside the other Bibles of the world; the best will plead its own cause. No thunder-voice from Sinai is necessary to proclaim, "This is the Word of God." If it is a divine word, it will speak for itself and make its influence felt. No mighty miracle is needed to proclaim the divine appointment and commission of the prophet: his preaching will make it plain. The Savior of the world requires no herald angels: he will save, the best proof of his divine warrant.

**And yet the Question is Begged**

Only in full and open comparison with other faiths will the beauty of the best appear. Whoever is convinced of the supreme dignity of his own Lord and Master need fear no rivalry with any other: rather will he court comparison.

This is clearly a bid for the audience to comfort themselves with the assurance that their own religion can stand the trial, and to accept this assurance as already settled and to be taken for granted. And he adds:

This comprehensiveness of view, this generosity of recognition of religion as the human attempt to reach the Divine, will not interfere with our private interpretation of the great principles for which historic Christianity has stood, or diminish our loyalty to it in the least. But the principles will be amplified beyond our earlier thought: we shall see that our faith was greater than we knew. Do you ask, Where is the place left for Revelation? Ask rather where that place is not. God has always been revealing himself to those who were able to see the

marks of his presence. Has Inspiration gone, do you ask? Have you not learnt that it began when man was yet in his infancy, and will remain as a growing influence through the whole of his adult life? What becomes of the Incarnation, think you? Does the Divine Indwelling in Jesus, then, become any the less true or significant if you also admit that God was in Buddha and Zoroaster, and in the Bab, and that his spirit is present to a greater or less extent in us all? Does not the larger outlook make it seem more than ever true that we are the temple of the Living God, that the Spirit of God dwelleth in us, and that the temple of God is holy, which temple we are?

**Universal Inspiration**

Religion is no private demesne, but a public garden, wherein every man may walk freely, gather rosebuds that will not wither, and taste of fruits neither forbidden nor disappointing. *Christianity, as it was in Jesus, is the choicest portion of that wonderful garden where the sun shines brightest and the flowers smell sweetest.*

But no; it will not do. The position is absurd. If Christianity is to bestride triumphantly, like a huge colossus, the entire muster of religions and philosophies since the world began, rise superior to everything that may turn up in the course of future discovery, and defy both time and space, it must be something so vast and lofty, so free and all-embracing as to lose every whit of resemblance to all that has hitherto gone by that name. Even the qualification, "as it was in Jesus," will not save the situation, though it leaves a loophole for vagueness. The plain truth is that the only thing which can so include all is Theosophy, the eternal and universal Wisdom-Religion and root of all religions. The names of Christianity and Jesus are kept as consolations; but they are like the Roman consulship in the time of the later emperors.

**The Tree and its Fruits**

The sermon sounds well; but wait until it is put into practice. Some other religions have preserved elaborate and luminous teachings about the mysteries of man's inner nature, as to which Christianity is entirely silent. Were these teachings the erroneous intrusive element or were they part of God's revelation? If we decide in the former way, then we are setting up a standard of authority based on our own religion, which may be all right but carries us no further than we were in the old dogmatic days. If we choose the latter alternative, then how can a religion which has no teachings on this subject be superior to religions that have great and luminous teachings thereon? The part cannot include the whole, and Christianity had better make up its mind whether it is to be the whole or continue to be merely a very small part.

**The Throes of a Creed**

Another point is that other preachers, in their efforts to take up a tenable position, are affirming what this preacher denies and denying what he affirms. Some pin their faith to the man Jesus, others throw over the man Jesus and talk about the "Christ idea." There are too many doctors in the case, and the result of their combined treatment would be fatal. It is to be hoped that readers of this sermon will take the preacher's prescription and cultivate a knowledge of the valuable truths to be found in other religions.

## Some Views on XXth Century Problems

### In Sheep's Clothing

THAT the hypnotists are beginning to hedge is an encouraging sign of the growth of public knowledge and opinion. By the older methods, when the hypnotic state was induced by direct gazing and personal manipulation, everyone perceived that there was a domination of one consciousness by another. Mechanical methods took their place; but the original instinctive objection, for the time a little weakened by the substitution, has regained its force. The purely superficial consciousness is still wiped out or deadened; the deeper organic consciousness is reduced to an absolutely passive or plastic condition; and then it is as effectively molded by the spoken — and unspoken — "suggestions" of the operator as if he had pursued the original direct means. The public now appreciates this and hence it is assured by the hypnotists that the curative force lies solely within the patient; it is *he* who does all the work; the operator's suggestions simply show him the way in which he shall best direct *his own* powers toward the curative end in view. The rôle of the operator is merely innocently advisory.

There is just enough truth in this to make it worse than an entire misstatement. The curative work *is* as much done by the patient's own forces as if he had obtained and successfully followed the counsels of a physician. That is as far as the truth goes. But it remains true that his mental and organic consciousness has been artificially and forcibly reduced to a plastic and negative condition and laid open to whatever influences may then work upon it, visible and invisible. Who shall say that it can ever entirely rid itself of this impress? We know that given a sufficient number of séances, the number differing with different people, the patient almost ceases to be an active member of society. The state is now permanently negative. All spontaneity and initiative have vanished. Consciousness is so unstable that a sudden noise, a flash of light, a smartly uttered word, will reduce it to the hypnotic state and make it amenable to any suggestion that may be made, including that of forgetting the suggestion itself — though acting upon it — on awakening. There is no reason for doubting that if for any patient the number of séances necessary to reduce him thus to a ruin, be for example fifty, one séance will carry him a proportionate distance thither. It will moreover greatly smooth the way for the operator at the second. The ice has been broken.

The curative result, in respect of some particular disease, may be achieved; but at what expense? As the hypnotic state passes off — to the extent that it does pass — the reviving forces begin to flow along the path prescribed for them by the operator. Suppose that in trying to teach a man to make a difficult muscular movement, requiring the perfect isolation of one muscle, we knew some method of reducing every other muscle in the body to utter paralysis. Directing his attention now to that one muscle he might overcome the

difficulty and learn the trick of moving it separately. But at the expense of all the rest, which for that feat had needed a reduction to paralysis. He might or might not believe us when we assured him that the process had not damaged them — even if we carefully concealed from him the fact that if they were thus paralysed a few dozen times they would remain permanently incapacitated.

There is no man but can get for himself better results than hypnotism can give him, and with an addition to, instead of a diminution of, his dignity as man. Let him get and follow the best medical advice he can. Let him cultivate habitual cheerfulness as one of the fine arts, and remember that no deep and lasting health can be gotten except by daily exercise of all parts of the nature — physical, mental, and spiritual. It can no more be gotten, so close are their relations, by exercising one of them only — still less *none* of them! — than complete and proper muscular development could be gotten by exercising daily a few of the muscles. Let him throw off fear and learn to walk and feel as a man prepared to deal finely with whatever the next moment and hour may bring. And finally, let him throw off his cares and clear his mind before he lies down at night and before he goes to a meal; and, at the meal, eat every fragment as a man and not an animal.

This is the sane path to health; and if, here and there it tentatively leads to a less than complete result, it is because the Divine Law has something to teach that man through sickness.

### The Thread and Its Beads

NOW that play-writers and novelists are availing themselves of the growing belief in Reincarnation and picturing two and even several successive lives of their heroes and heroines, they should take a little more trouble to study the laws that govern the succession. In nearly every case they reproduce the same personality unaltered from one birth to another. Now though there is of course an unaltered element it is often unrecognizably hidden beneath surface changes. The law of Karma — that the present is the product of the past — is part of the law of Reincarnation.

Many elements blend to make up the total of a personality, the impulses to action and the means for action. The latter, mind and body as they now show themselves, depend upon the past play and interaction of the former. At the base of his personal nature a man may be a musician. For several lives, under that impulse he may have cultivated the technical arts of expression. But unless he lived on higher levels and developed the higher side of his character, ambition, love of applause, love of money, may have conjoined as motives for hard work. All the lower impulses play into each other's hands, transmute themselves one into another, and, if given a free hand for successive lives, ultimately appear as the lowest of them. The musical impulse, at first

aided in its work by ambition, would, as that changed itself downward from love of power and applause into love of money and then of luxury and then of sensual enjoyment generally, be gradually hidden. The man who in one lifetime astonished the world with his execution and composition, might in another die in a poorhouse. Some lives are lived wholly on the capital acquired by past efforts, and we look admiringly at a brilliant career. But it is a career of expenditure; no new efforts are being made. The unseen, perhaps unsuspected intervals between the displays of easy talent or genius, may be spent in debauchery. The next life may be almost a ruin. There may be indications of past greatness, impulses to do great things in a great way, but no mental power to carry them out. It has all been squandered or left without cultivation.

### The Philosophy of Good Resolutions

AS the New Year approaches, people will be making new resolutions. And as, in due course, its newness recedes, most of these resolutions will be broken. Since a broken resolution does not leave you as you were, but something lower, it is very desirable to understand the philosophy of resolutions so as to be able to make one that will last.

A bad habit is a sort of entity in consciousness, pressing for satisfaction, and with a certain amount of intelligence of its own. To think of doing a thing is the first step towards doing it. The *thought* of doing the thing you have decided not to do, usually comes from the little entity which past doings and yieldings have created; the next step is the *wish* — from the same source; the third step the *act*. But though in making a resolution, the thought comes from yourself, it is none the less the thought of that thing, even if it be that of *not doing* that thing. And it will equally prove the parent of the wish. The only difference is that the wish deferentially and prudently remains hidden for awhile, perhaps growing in its concealed security, waiting until you are off guard. To outwit this little game, the form of resolution must be opposite and positive; for example: I *will* henceforth get up early, and not, I *will not* lie in bed. That latter is a faint ante-production of the sense of bed-luxury. The thought must be of alert rising. *That* picture must be made. So with others.

But why not make a resolution that contains all the rest? Why not, every night, imagine and feel the divine power to climb higher through each moment of the coming day in the scale of manhood and nobility and self-dominance and compassion; and the first thing in the waking morning return to and reiterate the same feeling? That would be sawing through all the roots of the tree of evil at once, instead of filament by filament. *For a long time the tree might not show the slightest sign of falling*; but one day it would come crash all at once. Then we should be *free*, ready, for the first time, for real life.

## A Mammoth 75 Feet Long?

AN intention to describe the discovery of a mammoth in Alaska by the geological department of the Smithsonian Institution is nipped in the bud by the fact that the measurements given in the report for that animal are 75 feet long and 40 to 50 feet high — dimensions which, do what one will, must excite scepticism. It is possible that the feet given should be inches, the specimen being a young beast; or the whole report may be made up. This great woolly elephant often reached a length of ten feet in the adult male.

The peculiarity of mammoth remains is of course, that owing to their situation amid the snow and ice, their remains have been preserved, not in fossil, not in bone, but intact, flesh, hair and all, like a mummy. The fact of their being found intombed in the frozen earth has given rise to the superstition that they were a burrowing animal which perished on exposure to the air. The mammoth is an extinct animal of the elephant kind, having close affinities with the modern Indian elephant; its body was covered with long hair underlaid with thick wool, as a protection against the cold. The northern part of Siberia is the place where its remains have been most abundantly discovered; and it has been the source of a considerable export trade in fossil ivory from there and from Khiva further south. But its geographical range was extensive; there is scarcely a county in England in which some remains have not been found, in alluvial gravel and in caverns, while its teeth have been dredged up from the bottom of the German Ocean. In immense numbers in various parts of Central Europe they have been found, even as far south as Rome and Santander (Spain); as also in Asia and the northern part of North America.

The geological age is Pleistocene, and is admitted to be contemporary with man in France. (In *The Secret Doctrine* Man is stated to have been contemporaneous with the Mesozoic monsters, being then a giant able to cope with them.) In caverns in France are found prehistoric drawings of the mammoth; and it is

indubitable that did not specimens of the actual animal exist, these drawings would be taken for mythological figures. H. P. Blavatsky alludes to the representations of animals now known to have existed in Mesozoic times, made by ancestors of the Chinese, who must therefore either have been expert palaeontologists and zoologists or have received the descriptions traditionally from those who had beheld their originals.

### The Discovery at Thebes

AN antiquarian sent out two years ago by Toronto University to collect Egyptian antiquities for the museum has returned, it is reported, with a large collection and the account of some interesting discoveries.

One of these discoveries was of a statue of Hathor in the form of a cow. They had

been burrowing for twenty months in the high granite rocks of the valley of Deir el Bahari near to Thebes. Here sixteen years ago Professor Naville had been excavating at the granite gateway of the temple of the XVIIIth dynasty, and had unearthed two temples, which have taken a force of 400 workmen several years to clear out. The Toronto expedition turned over the ruins of the southern of these temples; and, on clearing away slabs belonging to the reign of Rameses III, came upon a stone belonging to a different age. Under this they discovered a buried chamber, the walls of which were carved in bas-relief and magnificently stuccoed; and in it a life-size statue of a cow emerging from the water. Water lilies hung from her horns, and the stems of lilies dangled from her forelegs. The head was covered with gold, and on the horns were the symbol of the moon's disc and the feathers of a divine aura. It is rated, says the report, the finest piece of animal sculpture yet found, being anatomically perfect; and the expression of motherhood in the face indicates great artistic power and feeling. Under the head stands the little prince Amenhotep, and he is again represented in the rear, being suckled by the cow.

The sculptured and richly painted walls were evidently the work of great artists, and looked as if they had been done yesterday. The statue was conveyed by a specially constructed railway to Cairo.

The next task was to look for the tomb of Mentu-hotep, the original builder of the temple. Finding the opening to this, and descending through a small hole, the explorers crawled over, under, and through six hundred feet of dark stifling passages, and finally found themselves in a room with roof supported by great monoliths. From this room it was necessary to break through a brick wall and then to tunnel under a granite block, and then the tomb was reached. It had evidently been plundered thousands of years ago, for the traces of the marauders were found; but an alabaster shrine of great beauty was discovered. It is ten feet high and ten by twelve on the floor, and is surrounded by the debris of the spoilers. E.

## Subliminal Consciousness

WHEN we inquire into the probable amount of consciousness possessed by the lower orders of being, we use the test of reaction to stimuli. When we touch some minute and lowly being in the pond and find it move slowly or contract, we suppose its consciousness dim. But there may be another order of consciousness, purely subjective, not at all open to experiment. We do not know anything about the degrees of this, and for all our experiments can ascertain it may grow brighter the lower we go, may be in inverse ratio to the other or reactional consciousness. Of course we have both in our own bodies. The consciousness by which we estimate our rank is turned outwards upon the external world through the senses; it lives in the cerebral and spinal nervous system. With it we see, hear and so on, think and compare, and react by movement. But the other lives in the other nervous system, the sympathetic. It is feeling, at one end the acute feeling we call emotion, at the other the bare feeling of awareness of existence. It is changed and enhanced, for example by sunlight; but it is independent of the thought "sunlight" possessed by the other. And yet its change of feeling is, in its own way, a knowledge of the sunlight. This consciousness came first in evolution by millions of years, this instinctive, non-reasoned consciousness of being. The sensuous thinking consciousness is a function slowly evolved in order to deal with the external world. And it is this consciousness that we must refer to when we say that all nature, every atom and molecule, is conscious. In man its self-awareness of being has the power of self-awareness of *spiritual* being. For all life is really spiritual. STUDENT

## Racial Stature

A PHYSICIAN has advanced a not unlikely cause for the decrease in stature of certain races. It is not, he thinks, a case of heredity; and in one or two generations the failure could be corrected. After an exhaustive examination of the factors concerned in determining the size and weight of newly born children, he finds that the chief is the mother's age at marriage. If she marries too early, before her own complete physical development, a double effect ensues. There is not enough reserve vital force to perfect both mother and child; a compromise is made and both suffer. The child is small and undernourished; and, since the mother never afterwards fully completes her own development, all the successive children also suffer.

At twenty-five, thinks the physician, a woman reaches physical maturity. But if marriage is delayed a few years even after that, so much the better for the subsequent children. He talks of reserves of vital force, but the secret would seem to be that an undeveloped organism cannot properly absorb from nature the full energies necessary for motherhood and must give to the child that which it would be otherwise drawing for its own perfecting.

Examining the various races in the light

of his theory, the doctor finds the Scandinavians tall because they tend to marry late; the Hebrews in Poland, the southern French, the Italians, and the Hindûs small because they marry very young. The Japanese stature, he maintains, is a consequence of the same law.

## Tired by Light

WE have known for a long time that metals feel fatigued as we do; and recover by rest as we do. The barber knows that his razors after long service have to be put on the shelf for a few months. They refuse to take an edge until they have slept. But this fatigue is after mechanical strain, comparable to our own after a hard day's work. Much subtler strains also tire metals, strains as subtle as the impact of light. The behavior of the curious metal selenium has revealed this. It is not ordinarily a good conductor of electricity; but it becomes one during the moments that light is playing upon it, and in the degree of the light. A well-known and very pretty experiment shows this property. A wire along which flows an electric current is split longwise for a short part of its length. Into the continuity of one branch is let a piece of selenium; into the other an electric lamp. The selenium is resistant enough to force almost the whole current along the lamp branch. The lamp accordingly lights up. But the light immediately decreases the resistance of the selenium; accordingly the current takes that path and the lamp goes out. The selenium, being in darkness, promptly raises its resistance and the lamp lights again. And so on — "for ever"? No, for in time it would be found that the selenium gets tired and the effect of the light is delayed. We are not aware that the experiment has ever been continued so long that the selenium refused absolutely to respond at all. But the indications are that this time would ultimately come.

## The "Poison Squad"

THE "Poison Squad" is a band of young men, twelve in number, who work under Dr. Wiley in the Bureau of Chemistry of the Department of Agriculture. It has been in existence for six years and a second is about to be formed. Its members volunteered to submit to certain experiments in diet. The question is whether certain extraneous ingredients commonly added to food, or substances commonly used as or with food, are injurious. The young men agree to submit for a sufficient length of time to a diet in which these doubtful items form a marked feature. The symptoms of injury, if any, are noted, and the ingredient causing them goes down in the black book. But these symptoms are of course never allowed to reach a danger point. Soda water is to be the first experimental material of the new squad, and if the public is wise it will carefully watch the reports of this as well as previous experiments. It ought to be extremely grateful to these young men for finding out its bad habits and its unsuspected

dangers, and show the gratitude by reform.

The squads might do medicine marked service. We eat vegetables and fruits as they come round. Probably each vegetable and fruit has some specific effect on the economy and the sum of all these effects means health. But medicine should know these effects separately and exactly, far more so than now, so as to be qualified to select any one of them which in any patient needs accentuation. We really know nothing about the *therapeutics* of nine out of ten of our vegetable foods, making rough guesses from their chemical constituents. That tomatoes are "good for the liver," parsley "for the kidneys," and celery "for rheumatism," can hardly be called exact science. The keynote of voluntary self-experimentation, one might remark, is in refreshing contrast to that of vivisection. STUDENT

## The Solar Family

AN electrician suggests that communication with other planets may after all be no such wild dream. He founds his suggestion, of course, upon the recent methods of wireless electric transmission. Wherever a spark passes between two separated points, that spark becomes the center of an expanding sphere. A stone flung into water makes a circular ripple in two dimensions, length and breadth on the flat. The spark makes a circular — now to be called spherical — ripple in all the three dimensions. The sphere expands at the rate of 186,000 miles a second, and as its boundary passes a receiving station its message is recorded. In about eight minutes, still with the same center, its radius is the distance between that and the sun. It becomes feebler and feebler in exactly the same ratio as does light from a shining object, for it is but a kind of light; or we can say that light is a kind of electricity.

There would therefore be two somewhat formidable obstacles to communication with a planet. The first would be the feebleness of the pulse by the time it had reached that distance. The second that there is no common language; and the consciousness of say the Mercury people may be so different from our own that no common language would be possible. The first difficulty might be overcome by the use of finer instruments of reception than we here as yet possess. We cannot suppose that in the relatively few years during which we have been dealing with electricity, we have reached finality in the methods for the detection of its waves. We have in fact only begun our career on that line. The other difficulty is useless to comment upon, except to suggest the unlikelihood of the consciousness of the beings on two planets of the same little system exhibiting absolute diversity in kind. As the same laws of matter prevail here as there, though there may be others not here in action and states of matter not here existing, we may perhaps assume that the same may be said for the subjective side. We do not indeed know that our consciousness does not already owe some of its changes to consciousness on other spheres of our system. STUDENT

## The Kea or Sheep-Killing Parrot

THE Kea or mountain parrot of New Zealand has, as is well known, the reputation of having changed its original vegetarian habits and acquired the practice of attacking sheep by alighting on their backs and tearing the flesh. A few years ago an investigator claimed that this was a superstition, as he had been unable to find any one who could confirm it from actual observation. But further investigations, as reported by a New Zealand biologist in the *Scientific American*, vindicate the truth of the story and inculpate the bird. This observer has collected accounts from eye-witnesses of the kea's proceedings.

The reason why so few people have seen the kea at work is because the killing is mostly done at evening or early morning in places which men seldom reach until long after the deadly work has been accomplished. Over thirty men give testimony. The bird attacks in ones or twos or in numbers, but usually one or two do the killing and the others share the spoil. It selects the pick of the flock, settles on the ground near its quarry, hops around for a while, and then leaps upon its prey, usually upon the rump. It begins by tearing out the wool and at last gets its beak into the flesh. Then commences a run, the sheep vainly trying to dislodge its enemy, until it falls exhausted and becomes a prey to the devourers.

There are various theories as to how the parrot acquired this flesh-eating propensity, some thinking that it was originally in search of maggots, and others that it was driven by hunger to feed on meat thrown away at the sheep stations. In view of the Theosophical teaching that men influence the lower creation by their thoughts and moods, there would seem to be a connexion between the predatory habits of this animal and the arrival of the destructive white man in the country.

STUDENT

## The San José Scale

THERE is no evolution on the physical plane alone, either from animals up to man or from man down to animals. But upon invisible planes such processes may take place, the beings thus created appearing afterwards on the physical plane, clothed in visible bodies. Whence the myriad swarms of little creatures that infest plants? Are these the

prototypes of future man? Much more likely they are the offscourings of man. The amount of predatory and voracious instinct which man generates has to be worked off somehow, and the discarded elements of man's psychic nature afford material for the ensouling of these parasites whose sole aim is to devour and destroy.

As fast as we find out how to deal with one pest, another appears, and the resources of civilization are kept busy trying to counteract the effects of civilization. Trees have not only to be protected against cutting down and burning, but against the parasites. One of the most

formidable fruit-tree pests seems to be the "San José scale," so called because, it is said, it was first colonized at San José, California, by a man who forty years ago heedlessly imported it on foreign seedlings. Its habitat is stated to be China. The scale is about one thirty-second of an inch in diameter, circular in outline, of a somewhat conical form, and the

general color effect is an ashy gray. The insect lives by sucking the juice of the wood, and a formidable list of fruit trees and shrubs which it infests is given. The young are born alive and not from eggs. Each mother produces on an average ten every day for a month or more; and before she has finished, some of her offspring have begun to do the same. It has been calculated that a single mother will give rise to 1,600,000,000 in one season; and most of these remain on the same plant. They are carried from tree to tree by birds, ants, etc., to which they may chance to cling. As remedies lime and sulphur wash is used, but has to be applied hot and makes an ugly appearance. A beetle was imported from China to prey upon it, but the beetle did not thrive here. There are however some beetles native to this country that will feed on it; and it is hoped that, in time, they will become more aware of the presence of this stranger and that the balance of nature will tend to restore itself.

STUDENT

## The Roosevelt Dam, Arizona

ONE of the world's greatest dams will be the Roosevelt dam, now being built across the gorge between the mountains through which runs the Salt River, in the Apache mountains, 78 miles northeast of Phoenix, Arizona. This dam will be 270 feet high and will store more than three times as much water as the Assuan dam on the Nile. It will make fertile 272,000 acres of desert.

The little town of Roosevelt, with a population of 2000, and with electric lights, churches, schools, etc., will be destroyed; it is in the valley just above the dam. But 50,000 people will find homes and sustenance on what is now cactus and sage-brush.

The Government, being unable to secure cement by contract at a sufficiently low price, built its own cement works on the spot, thereby saving an immense sum. Besides the cement works, there

are saw-mills, refrigerating plant, waterworks, electric light plant, machine shop, rock-crushing plant, etc., all run by means of a power canal; and many miles of good roads had to be constructed and a telephone line to Phoenix laid. In making these irrigation works we are imitating our ancient predecessors the remains of whose vast constructions are still found. T.

PALM HOUSE, SEFTON PARK, LIVERPOOL, ENGLAND

THERE are moments in the lives of nations as well as individuals when the deeper feelings of the heart rise to the surface and bid all those small things that fill the lion's share of everyday life be silent. These moments are precious, indeed, be it the keenest sorrow or the greatest joy that created them, for then the nation or the man confronts the Soul, and can, by grasping the opportunity to let its pure vivifying force permeate the common mind, rise to a higher realization of its *raison d'être*.

This is the case with Sweden at the death of King Oscar, surely felt by all Swedes over the whole globe. And well it may be, if they pay a tribute to his memory by making his long, noble life of true service an inspiration strong enough to dispel some of the clouds that hamper the liberty of action of the nation's soul, so loved by him and so faithfully served and revered in his poems, speeches and most important acts. If everyone tried to give an expression in some action for the common weal to the best feelings now stirred in his heart, what a monument this would be for the ages to come, what a true example set by Norsemen before other nations! That would make his death the gateway to the greater life for the nation of which he had a presentiment, when the abundant ideal sources of the state should be allowed to flow outwards in a constant stream of noble deeds. Such would be more appropriate at the present time than mere grief, more in harmony with King Oscar's own temper. He was something more than a ruler of his people in the ordinary sense, and had endeared himself to them as an intimate and personal friend. His truly democratic habits, mingling as he did among his subjects in the most natural way and learning of them their needs much as a father would listen to his sons, his sympathetic heart always ready to feel with others and bring about better con-

## King Oscar of Sweden

A Loving Tribute from one of the Swedish Students of Lomaland upon learning of the death of noble King Oscar, so esteemed by Katherine Tingley and all her Students.

ditions, all won him this position, and the vacancy left by the death of this silver-haired father of his country is most worthily filled by giving utterance to the best in our hearts.

King Oscar has long been one of the most interesting among the royal heads of Europe. The romantic way in which his grandfather, Napoleon's great field marshal Bernadotte, won the Swedish throne, has always thrown a peculiar shimmer of romance over the family, more so as the kings, in spite of their

LET us hope with that grander hope of the soul, the energy of right action, that the day is not far distant when the great sweeping force of Love, of true brotherliness, shall encompass humanity, when the knowledge of right living shall be within the grasp of all.—Katherine Tingley

French ancestry, have seemed so extraordinarily well fitted for the North. In fact, King Oscar was a rare type of a true Swede. In height he stood six feet two inches, taller than most of the Scandinavians, even though as a rule they are tall men. His eyes were blue in color and commanding but kindly. In appearance he was every inch a king, and there was no monarch in Europe who was more stately and more regal in bearing than he. Through family connexions he stood in close contact with the other sovereigns in Europe and his figure was well known, loved and respected in the different countries.

In King Oscar we saw a man of learning on the throne. Seldom indeed is profound learning so harmoniously blended with the

deep feelings of a rich heart; seldom is the appearance of a king so simple and gentle, so wholly noble: qualities such as the Northern people of old liked to find among their chiefs.

King Oscar was distinguished in philosophy and had received degrees from so many universities of Europe that, in so far as degrees indicate, he might have been called the most learned man in Europe. He was a poet, an author, a translator, learned in political economy and the science of government, a musician and a lover of all the arts. He has translated into Swedish many of the pearls of literature from other tongues touching the most different subjects. As an orator and linguist he was unrivaled; and when speaking, to the perfection of diction he always added a touch from the heart.

With all his accomplishments as a scholar, King Oscar was a brave man, and among the decorations he wore upon his breast on state occasions the one nearest to his heart was a simple medal bestowed upon him many years ago by the French Government as a reward for saving several lives at the risk of his own, when journeying through France as a young man.

The old King was a great lover of peace and he guided his country in peace throughout the thirty-five years of his reign. Even in such a time of trial as at the separation of Norway his quiet dignified attitude stilled the raging passions of conflicting parties and made possible the peaceful agreement. His devotion to the cause of peace attracted the attention of other countries, and several times he was called upon as final arbitrator by the United States, England and other nations. A loyal supporter of Masonry, he was at the head of the Masonic order in Sweden.

With America he forged a new link this year through the visit of his grandson, Prince Wilhelm, who was received with such a marked feeling of sympathy by all Americans.

KING OSCAR OF SWEDEN

The Prince carried a message from his old grandfather to the Swedish citizens of the United States with greetings and expressions of his joy at finding that the Swedes were good citizens in their new country, thus honoring their noble fatherland and its great traditions.

Oscar II was born January 21, 1829, and succeeded to the throne at the death of his brother, King Carl XV, on September 18, 1872. He was married June 6, 1857 to Queen Sophia, daughter of the late Duke Wilhelm of Nassau, and who, with four children, survives King Oscar.

The new king and eldest son, Gustaf V, was born in 1858; his now Queen was the Princess

Victoria of Baden. They have three sons and two grandchildren. King Oscar thus had the rare joy, so seldom vouchsafed, of watching the first steps of the fourth generation.

*Le roi est mort, vive le roi!* The young monarch much resembles his father in gigantic stature and in the blonde features which are so typically Northern. He has often acted as Regent during the illness or absence of King Oscar and is regarded as having his father's characteristics of sincerity and simplicity.

Gustaf V now receives the country in a state much like that of newly tilled soil, full of rich germs. The people look up to him with hope and conviction that he feels the

signs of the time and that through his care and virile strength he will protect the seeds sown by his father and speed the growth of the greater Sweden, which, stronger than a mere mirage, is pictured in the hearts of the growing generation.

His motto, "With the people of the fatherland," seems to indicate that he perceives and acknowledges the high tide-wave of youthful enthusiasm and energy which can and will assist him in this grand work, for this is a time in the world's history when the strong under-currents rise to the surface and he who understands this and works in harmony with the Higher Law will accomplish a work heretofore undreamed of. A SWEDISH STUDENT

# OUR YOUNG FOLK

Lomaland Photo. and Engraving Dept.

SCENE 1. The Lomaland shore: High on his boulder throne, the cliffs towering above, sits the Caveman. His harp hangs silent in his hand.

Time: The winter solstice.

CAVEMAN:

Now faintly lap the waves this pebble strand;  
The coursers swift of Neptune shun the land.  
Last night a wondrous vision came to me,  
As I sat musing by the soundless sea,  
Methought the pulse of Nature ceased to beat,  
Apollo's steeds with lagging lifeless feet  
The pale car drew beneath the ocean's rim  
And left the face of Nature cold and dim.  
Then fell with darkness quick the solstice night.  
The sea now vanished from my straining sight  
When lo, from out the depths of gruesome gloom  
Now monstrous dragon forms began to loom,  
Like those that held the olden world in thrall.  
Over the tideless dark they seemed to crawl  
With purpose grim and fell. They reached the shore  
Their talons gleaming grim with rage for gore.  
Forth from their nostrils breathed a baleful blight  
That wrapped the hearts of men in pall of night.  
High Courage vanished from his lordly throne,  
Base Fear prevailed in dread dim halls alone.

(A merry peal of laughter startles the Caveman. He looks up. A group of tiny lads and lasses are peeping at him over the edge of the cliffs. They troop down the rock-hewn stairway to the beach, singing a merry ditty.)

Caveman, Caveman,  
Look up and be gay;  
Caveman, grave man,  
Come and join our play.

Caveman, brave man,  
We are warriors bold,  
We'll save man, Caveman,  
By our darts of gold.

## CHRISTMAS IN LOMALAND:

### A Medley

(They quickly gather up the long garlands of kelp lying on the beach and joining hands around the Caveman they dance and sing.)

#### SONG OF THE SUNBEAMS

For we're the merry sunbeams  
That laugh upon the sea,  
That sparkle bright in dewdrops  
Upon the grassy lea.  
We fly from the singing bowstring  
By great Apollo drawn;  
We stay the dragon Darkness  
Close by the gates of Dawn.  
For though so gaily appareled,  
So lightsome and so free,  
Our hearts are true and radiant  
And mighty strength have we.  
We sleep within the golden grain  
That lies in Nature's breast,  
We live within the battles won  
O'er weakness and unrest.  
Be happy, faithful Caveman!  
Old Neptune blows his horn,  
For by the might of Apollo bright  
The glad New Life is born.

CAVEMAN:

O my Rāja Yoga boys and girls,  
With your rosy cheeks and sunny curls.  
You have brought me tidings full of cheer,  
Of the mystic Morning now so near.  
You are close to Nature's living heart,  
She to you her secrets doth impart.  
Now the turning tide doth shoreward run,  
See how warmly glows the golden Sun!  
I will bid my harp to ring and sing  
With the joy the Sunbeam Fairies bring.

(The children group themselves at the foot of the throne, and a little boy steps forward.)

LITTLE BOY:

Guardian of this silver strand,  
O Caveman good and true,  
We, the children of Lomaland,  
Bring greetings unto you.  
Our grateful hearts invite you  
To join our Christmas glee:  
We're sure it will delight you  
Our happiness to see.

CHILDREN ALL (clapping their hands):

Oh, do come, Father Caveman!  
Come to our lovely home.  
'Tis the palace of a Waveman,  
Crowned with a sea-green dome.

CAVEMAN (striking his harp):

Blessings on you, lads and lasses!  
Birds, blossoms and waving grasses,  
Starlight bright and sunshine gay,  
Gladden all your joyful day.  
Yes, I will join your merry fête —  
But haste away; 'tis growing late.

(The children scamper away singing:)

Oh, we're the merry sunbeams  
That laugh upon the sea,  
That sparkle bright in dewdrops,  
Upon the grassy lea.

CAVEMAN (with harp firmly grasped, striking triumphant chords):

O Lords of the Light and Wondrous Water,  
Bless fair Loma, Earth's beautiful daughter;  
From her domes of beryl and amethyst  
The voices of children arise. O list  
Their paean of praise. Ye mighty Powers!  
Send Joy with garlands of fragrant flowers,  
Companioned by dancing happy Hours  
To grace the festival 'mid blooming bowers  
'Neath lovely Loma's sacred towers.

# THE CHILDREN'S HOUR

SCENE 2. The great Rotunda upon the Hill: stately flowering trees, magnolias, acacias and oleanders encircle the central space. At one side rises a terraced embankment, studded with flowers. In the midst of the central space under the dome is the magical formation of Neptune brought forth by one stroke of his trident at the last Festival of the Solstice. Seaworn boulders surround the basin of the fountain. A pale blue light hovers about it.

*Time:* Christmas Eve. Soft music sounds which swells to a triumphant march as a procession of children enters, preceded by heralds.

HERALDS:

Behold, behold,  
The gates of gold  
Are now unrolled!  
And the new life  
With joy is rife,  
Thus ends all strife!

SONG OF MARCHING CHILDREN

Gentle maids of high degree,  
Gallant knights of chivalry,

March we hither,  
March we hither. [spears  
See our golden gleaming  
As we come with sounding  
Marching hither, [cheers,  
Marching hither.

Now brave youths and  
modest maids,  
Wend their ways on glad  
crusades.

Marching whither?  
Marching whither?  
To the sacred spots of earth  
Bringing hope and peace and  
Marching thither, [mirth;  
Marching thither.

(A fanfare of trumpets sounds. The children take their places as a guard of honor about the embankment. An amber colored light suffuses the scene. Enter Joy clad in a flowing robe, with a garland of roses. She is accompanied by tiny maidens in rose color who dance and strew her pathway with flowers. She mounts the embankment.)

Joy:

As we were flying 'twixt the heaven and earth,  
Circling in sunshine's widening golden girth,  
The season sweet when tossing billows rest  
As Halcyon broods upon her nest —  
From earth we heard a paeon glad of joy,  
That gentle Zephyrs thence did skyward buoy  
On dewy fragrant wings. With deep delight  
To earth we turned our wand'ring winged flight,  
And soon we saw a softly glowing star  
That brightly beamed upon us from afar.  
And like a star its light did seem to sing.  
That "Life is joy and sweet eternal spring!"  
The song then drew us to this glowing dome  
Where hope and peace and love have found their  
Now reign the halcyon days upon the deep. [home.  
Aeolus' stormy winds are lulled to sleep —  
Lo, comes the hour of magic spell!  
From ev'ry charmed spring and haunted dell  
The spirits joyously come forth to sing  
And trip it merrily in fairy ring.  
They come not now as mischief-loving sprites,  
But good and true, they share our pure delights.

(Joy and the Hours with waving garlands and dancing, charm the trees. Joy sings:)

Now from these fair woodland bowers  
Come forth shy maids  
That love deep shades  
Of forest glades!

Dance, Dryads with the rosy Hours!

(The Dryads slip from the trees.)

Lomaland Photo. and Engraving Dept.

DRYADS: Oh, the joy that breathes  
In the sweet cool woods  
Where mistletoe enwreathes  
All the holy groves.

(They dance and sing:)

Round the lordly oaks  
Hand in hand we go,  
Dancing to and fro  
Round the sacred oaks.

Joy (weaves a spell over the fountain and chants:)  
From the brooklets of the mountains,  
From rivers, streams and fountains,  
Come, pale Naiads, Jove's fair daughters,  
Trill the tunes of flowing waters.

NAIADS (arising slowly from the fountain):

Oh, are we still adreaming?  
Or is this only seeming?  
This pale blue light astreaming —  
Like ocean's depths agleaming!  
O'er the charmed Isles of Greece  
Once we wandered in sweet peace;  
Here again our sorrows cease,  
Golden Joy grants sweet release.

Joy: Amid the fountain's rushes  
Where the waterlilies bloom,  
Hark! merry song now gushes  
And fair forms begin to loom.

(The little SEA-CHILDREN appear, and resting with elbows on the brink of the fountain they sing:)  
Down where the branching white coral  
And the pink sea-mosses grow,  
Where sunfishes bright  
In butterfly flight  
Dart through the shimmering glow,

Is the palace of pearl  
With shell-like curl [below.  
Where the Mere-King rules  
And we're his little mere-

children  
That play in the gardens ma-  
Where anemones shy [rine  
And sea-ferns high

Grow in the emerald sheen.

There we build a palace

Like a lotus chalice [green.

And float through the limpid

We sport with tiny creatures

That own the Mere-King's

The jelly-fish blue [rule;

Of cerulean hue

Is the mermaid's reticule:

Star-fishes abound,

And sea-urchins round

We take with us to our school.

(They disappear.)

Joy: boulders,

Come, Spirits of sea-worn

Shake the weight from off

your shoulders,

Appear as when the Norse-

men bold

Walked with Odin in days of

old.

GNOMES:

Cold are the homes

Of the friendly gnomes

In cloudly Niffenheim.

Our hammers ring

For the fierce Frost King;

We forge cold Winter's rime.

TROLLS:

Under these stones,

Giant Ymir's bones,

We heard the Caveman's song.

Trolls we are high

And with magic might

We join this jolly throng.

ELVES:

Fair Freya's Elves

We call ourselves; [heim,

We come from bright Elf-

The dear domain

Of sunshine and rain:

We're happy all the time.

Joy: [woods,

Come, Sylphs of the olden

Come join our sylvan Bro-

therhoods'

Sweet sport. Again make

earth rejoice

With fairy dance and elfin voice.  
(The FAIRIES spring from the flowers and after whirling and dancing they sing:)

Now sound the merry chiming bells,  
We fairies have come back, come back!  
With starry crowns and magic spells,  
Not a laughing face we lack;  
We followed fleet on Joy's swift track.

Joy: The spell o'er the earth is broken!  
By magical sign and token  
I know that the joyous new Light  
Is filling all hearts with its might,  
With freedom and sorrow's surcease,  
With brotherly love and with peace.

(To the heralds:)

Now clarions ring to the world  
That Brotherhood's banner's unfurled.

(The trumpets sound a second fanfare. A procession of children of all nations enters. They march through the rotunda to the flag stands. Each child claims his nation's banner; then they march on singing victoriously.)

Wave banners, for all earth is glad today;  
Wave banners, for dear Joy begins her sway;  
Wave o'er all the nations, Brotherhood and Peace!  
Shall wrong and sorrow cloud the awakened world?  
Down bitterness and strife! From these fair fold-

unfurled  
Waves Brotherhood o'er Earth, Brotherhood and  
On children, we will bless mankind; [Peace!  
Selfishness and strife we've left behind;  
Wave banners, wave and blow. Brotherhood is  
Peace!

# The Theosophical Forum in Isis Theater

S a n D i e g o C a l i f o r n i a

## LAST SUNDAY AT ISIS THEATER

"Some Teachings of William Q. Judge," by Mrs. E. T. Bundsmann — "Lighting the Fires," by a Rāja Yoga Student.

THE great interest taken in the Isis Theater meetings held by the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY was fully maintained at the meeting last evening, there being a large and appreciative audience. One of the young Rāja Yoga pupils from Point Loma read a paper on "Lighting the Fires," and Mrs. E. T. Bundsmann read some interesting extracts from the writings of William Q. Judge.

As an introduction Mrs. Bundsmann said:

"William Q. Judge, the successor to H. P. Blavatsky as Leader of the Theosophical Movement throughout the world and predecessor of our present Leader Katherine Tingley, has left in his writings a wonderful amount of practical teaching showing the relation of Theosophy to every-day life. Although he wrote some books yet most of his writings consist of articles which were published in his own magazine *The Path*. Just as H. P. Blavatsky taught, especially in her valuable book *The Key to Theosophy*, so also William Q. Judge insisted that Theosophy is not a mere theory, and that no one can understand the meaning of life or acquire true wisdom except by living the life. All three of the Leaders of the Theosophical Movement, H. P. Blavatsky, William Q. Judge, and Katherine Tingley, insist upon obedience to the highest moral law. Theosophy itself is the highest moral code, and as Katherine Tingley has said, demands a purification and refinement of the whole life. In the following extracts from the writings of William Q. Judge it will be seen how necessary is a strict adherence to the highest moral law, and also how helpful are the teachings of Theosophy, especially that of Reincarnation, in an understanding of ourselves and human nature generally.

### Practical Theosophy

"The ethics of life propounded by Jesus are not different from those found in Theosophy, but the latter holds in its doctrines a compelling power which is absent from Christianity and from those systems which require a man to be good for virtue's sake alone. It is not easy to practise virtue for the simple reason that we ought to do so, since the desire for reward is inherent in humanity, and is a reflection of the evolutionary law which draws the universe ever upwards to higher points of development. A man reads the command of Jesus to turn the other cheek to the smiter, to resist no evil, to forgive without stint, and to take no thought for the morrow, and then—pauses. His next thought is that such a canon is wholly utopian, and would if followed subvert society. In this he is sustained by eminent authority, as well as by example, for a great bishop has declared that no state can exist under such a system.

"Theosophic doctrine, however, on either the selfish or spiritual line of life, convinces that the moral law

must be obeyed. If we regard only the selfish side, we find that when people are convinced that evil done in this life will be met with sure punishment in another reincarnation, they hesitate to continue the old careless life when they lived for themselves alone.

"Hence practical Theosophy must enter into every detail of life in our dealings with others and our discipline of ourselves. It reminds us that we should be more critical of ourselves than of others, that we must help all men if we are to be helped ourselves. And herein the Theosophist may escape the accusation of selfishness, for if in desiring to lay up for a future incarnation a store of help from others by giving assistance now himself, he does so in order that he may then be in a still better position to help humanity, there is no selfishness. It is the same if a man were to desire to acquire this world's goods in order to help those dependent on him, and surely this is not selfish.

"The practical Theosophist adds to his charitable deeds upon the material plane the still greater charity of giving to his fellow-men a logical reason for the practice of virtue. He extinguishes a hell that never could burn, and the terrors of which soon faded from the mind of the sinners; but he lights the lamp of truth and throws its beams upon the mortal's path so that not only the real danger, the real punishment, can be seen, but also the reward and compensation.

"The civilized man cannot be guided by fear or superstition, but reason may take hold of him. Theosophy being not only practicable but also reasonable as well as just, its doctrines are destined to be those of the civilized man. They will gradually drive out the time-worn shibboleths of the theologian and the scientist, giving the people of coming centuries a wisdom-religion deeply-based and all-embracing.

"The practical Theosophist will do well if he follows the advice of the Theosophical teachers now many years in print, to spread, explain, and illustrate the laws of Karma and Reincarnation so that they may enter into the lives of the people. Technical occultism and all the allurements of the Astral Light may be left for other times. Men's thoughts must be affected and this can only be done now by giving them these two great laws. They not only explain many things, but they have also an inherent power due to their truth and their intimate connexion with man, to compel attention.

"Once heard they are seldom forgotten, and even if rebelled against they have a mysterious power of keeping in the man's mind, until, at last, even against his first determination, he is forced to accept them. The appreciation of justice is common to all, and the exact justice of karma appeals even to the person who is unfortunate enough to be undergoing heavy punishment; even if ignoring justice, he does good in order to make good karma, it is well, for he will be reborn under conditions that may favor the coming out of unselfish motive.

"Teach, preach, and practise this good law for the benefit of the world, even as do all the Helpers of Humanity."

### Respecting Reincarnation

"Objections frequently raised against 'Reincarnation,' and that appear to those who make them to be strong, are some growing out of the emotional part of our nature. They say, 'We do not wish to be someone else in another life; how can we recognize our friends and loved ones if they and we

change our personality? The absorbing attachments we form here are such that happiness would seem impossible without those we love.'

"It is useless to say in reply, that if Reincarnation be the law, it can and will make no difference what we would like or dislike. So long as one is governed by his likes or dislikes, logical arguments will not dissipate objections, and if it is coldly asserted that the beloved objects of our affection pass at death forever beyond us, no relief is afforded to the mind nor is a strictly accurate statement made. In fact, one of the miseries of conditioned existence is the apparent liability of forever losing those upon whom we place our hearts.

"What are these loves? must be asked. They are either (a) a love for the mere physical body, or (b) one for the soul within. Of course in the first case, the body being disintegrated at death, it is not possible for us, nor need we wish—unless we are grossly materialistic—to see that in the other life. And *personality* belongs only to the body. Hence, if the soul that we do love inhabits another physical frame, it is the law—a part of the law of Reincarnation not often stated or dwelt on—that we will again, when incarnated, recognize it. But that, the recognition or memory of those whom we knew before, is one of the very objects of our study and practice. Not only is this the law as found in ancient books, but it has been positively stated, in the history of the Theosophical Society, in a letter from a Teacher addressed not many years ago to some London Theosophists. In it he asked them if they imagined that they were together as incarnated beings for the first time, stated that they were not, and laid down the rule that the real affinities of soul life drew them together on earth.

"To be associated against our will with those who lay upon us the claim of mother, father, brother, son, or wife from a previous life would be neither just nor necessary. Those relations, as such, grew out of physical ties alone, and souls that are alike, who really love each other, as well as those who harbor hate, are brought together in mortal bodies as now father and now son—or otherwise.

"So, then, with the doctrine of Devachan we have the answer. In that state we have with us, for all practical purposes and to suit our desire, every one whom we loved on earth: upon being reincarnated we are again with those whose souls we are naturally attracted to.

"By living up to the highest and best of our convictions, for humanity and not for *self*, we make it possible that we shall at last recognize in some earth-life those persons whom we love, and to lose whom forever seems such a dreary and uninviting prospect."

OBSERVER

### Theosophical Meetings

PUBLIC Theosophical meetings are conducted every Sunday night in San Diego at 7:30, at the Isis Theater, by the students of Lomaland, assisted by the children of the Rāja Yoga School. Theosophical subjects pertaining to all departments of thought and bearing on all conditions of life are attractively and thoughtfully presented. An interesting feature is the excellent music rendered by some of the students of the Isis Conservatory of Music of Lomaland. Theosophical literature may always be purchased at these meetings.

## Art Music Literature and the Drama

### Gustaf Vasa, a King among Kings

WE are all familiar with what happened when a new cycle liberated new forces in the world's life four hundred years ago. Columbus, at the head of a large army of explorers, gave us new worlds to inhabit. The Renaissance and the Reformation gave us new thought-worlds to explore. There was general expansion on almost every hand, and how strong this renewing power really was is disclosed by the fact that the people were able in so short a time to adapt themselves to the new conditions. In a few decades we find the generally so slow-moving masses raised to a higher state of mind, with wider views on vital questions than ever before.

History becomes to an open mind more and more organic and full of useful knowledge, without which we are too apt to regard events in the past as mere facts without penetrating into their relationship and deeper lessons. And yet, when the new cycles come and we find men prepared at the right places to guide the new power into such channels that it will reach the people rapidly and with least resistance, the guiding hand behind the scene is almost visible. These true leaders deal with things in that simplicity of manner that reaches the very heart of rising questions, breaking up the present molds of thought so often regarded as settled truths for all time. They use the materials in building loftier mansions for more far-reaching thoughts and acts, thus proving themselves to be the pioneers of mankind.

At this important time we find Sweden led for nearly forty years by such a leader, a true Swede, whose character shows a rare blending of the best qualities in the national character. In his farewell speech to his people shortly before his death Gustaf Vasa spoke as a father to his children, and the way in which he had performed his great task gave him a natural right to do so. Even today we see in him the father, the king among our kings, and his very name arouses the best in our hearts and acts as a purifier of the mental atmosphere.

Before his time Sweden had taken scarcely any part in common European affairs, engaged as it was in a constant struggle for independence against its mighty neighbors, and in conciliating the opposed and powerful inner forces which arose in its rapid evolution from pre-Christian conditions to those of a modern state. In the fifteenth century, however, kings and emperors throughout Europe, and most of all the Roman Pope, were stirred by the voice of Saint Birgitta, a herald who foreshadowed the true place of Sweden among the nations. Her work was still more accentuated two hundred years after her time, when Gustaf Adolf victoriously fought for the freedom of thought in Europe. These two hundred years fill some of the most interesting and important pages in history, and ought to be more generally known. The forces of light and darkness were brought close to the surface, and as leaders at this critical time appeared such bright figures as Engelbrekt and the three Stures,

true Warriors of the Light, whom the people trusted with a singular love without once being deceived. They kept the light burning in the darkness before the dawn of a new cycle.

To judge from appearances there was not much to justify the great hopes that filled the heart of the young Gustaf Vasa. When the

santly taken away from peaceful occupations. Gustaf, though of one of the noblest families, was too young and not sufficiently known among the people to have any great chance to make his voice heard. He had to pass through that purifying trial of all great souls, that of utmost loneliness, and not until he in vain had tried every means to arouse an answer to the enthusiasm and hope in his own heart and turned his steps into the deep, silent woods in order to leave his beloved country, apparently destined to be crushed, did the tables turn.

Gustaf belonged to the noble Vasa family, which was related to the former royal dynasties. His father had a high position and was a member of the Council, but did not partake in political life so prominently as his ancestors. His mother's was also a noble, wealthy family.

According to the established usage Gustaf was, as a small boy, sent to the court. It is said that almost at once he took the leadership among the boys there in their games. One of their most beloved sports was to play king, council and subjects, preferring complaints, with Gustaf as king; and it is recorded that he spoke and acted in such a manner that it attracted the attention of the real king.

Soon we find him in the battle at the side of Sten Sture the younger, bearing the Swedish banner. At the negotiations with the Danish king after Sture's death, he with others was sent as hostage; but instead of being liberated afterwards, when the Swedes had recognized the union with Denmark and Norway, they were carried away to Denmark and kept in captivity. Here Gustaf lived in a family that was related to his own and which had taken the responsibility of his keeping; and here he learned that the king was making great preparations to deal a decisive blow to the independence of the Swedes, which up to this time had seemed unconquerable. This time he thought to succeed with stratagem, and lulled the Swedes into security with his fair promises. Gustaf felt that his heart would break and that he must return home to warn and awaken his country to its danger. At last he found an opportunity to escape, disguised as a cattle-driver, to Lübeck. After many difficulties and narrowly escaping capture, he was carried over to Sweden in a small vessel, exposed to a raging storm and dangers from hostile ships.

Then Gustaf stood once more on his native soil with his heart full of enthusiasm, his soul of energy for the great task he felt as his. He first entered a town which was besieged by the Danes and encouraged the people to do their utmost, with trust in the future. But he was met with indifference and had to leave it secretly in order to save his life. A price was put upon his head by the king and he had to live in the deep forests, only entering the villages and speaking to the people in the night time. Everywhere on his way to Stockholm he found the same condition, that messengers from the king had journeyed around, reading his letter of fair promises, that the people were tired of wars and at last believed that a new day of peace would dawn.

(To be concluded)

GUSTAF VASA

KING OF SWEDEN 1523-1560

(From an old Portrait)

last Sture lost his life in battle and none was found to keep the scattered interests together for a common end, the Swedes, almost from exhaustion, consented to join the union between Denmark and Norway, this although they were well aware of its dangers by former experiences. The constant struggles had brought the country to a state of confusion as the bone and sinew of its population, at this time far from reaching a million, were incen-

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

Central Office Point Loma California

The Headquarters of the Organization at Point Loma with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West.

## Theosophy and its Counterfeits

IT has often been said that to get news of home one must go abroad, and that strangers know more about one's affairs than oneself. But though the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY has received all kinds of comment and presentation at the hands of the public press, we must confess to a feeling of slight surprise at a statement recently made by a contemporary published monthly in New York. In the first place the public is informed that of late years, save for an "occasional newspaper or magazine article" in regard to Mrs. Tingley's work at Point Loma, "interest in Theosophy has been languid in the country." The statement that Theosophy has been languid—so utterly contrary to fact—of itself causes no great surprise for it is a regrettable fact that there are some who deem it to their interest to belittle the work of this Organization. Possibly it was from one of these that the writer may have obtained his information, but it labels the magazine in question as at least not being well-informed or very wide-awake.

Were it not, however, for the fact of the writer's use of the word "occasional" which shows, as said, that his range of vision has not been very extensive, one might suspect him of an attempt at subtle sarcasm in regard to certain self-styled Theosophists who are in no way whatever connected with or recognized by the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY. For outside of Katherine Tingley's work, *i. e.*, the work of the world-wide Theosophical Movement of which she is Leader and Official Head, where indeed would one look for evidences of Theosophical activity?

It is true there are a few people who use the name Theosophy and call themselves the Theosophical Society, but evidently these have made so little impression upon the writer in question that they were an entirely negligible quantity until the arrival of Mrs. Besant in this country. And now comes the cause for the amused surprise—namely, we are informed, and evidently in all seriousness, that Mrs. Besant after lecturing in the large cities of the country "will spend some time with Mrs. Tingley."

It is a matter of very sincere regret that there should be any misunderstanding in this respect regarding Mrs. Tingley's work, and the explanation of it can only lie in the fact that the writer has but very vague and hazy notions regarding Theosophy and the Theosophical Movement and has heard little more than the names of certain people connected with it or alleged to be so connected. Otherwise he would know that in this country, at the Boston Convention in 1895, something like 93 per cent of the delegates then present whose action was afterwards ratified by the lodges throughout the

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

## MEMBERSHIP

country utterly repudiated all connexion with Mrs. Besant, and this position is still held. But were there no other reason for this position taken by the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY it could not do otherwise than take it in view of a recent statement made by Mrs. Besant and published in her magazine: that "The Theosophical Society has no moral code," which statement she made in defence of her support of a certain person whose alleged misconduct and gross immorality we cannot refer to in detail here, but who had previously been expelled by Mrs. Besant's associates, and whom, it is said, she calls her "friend and fellow initiate."

The Theosophical Society, or to give its full title, the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, founded by H. P. Blavatsky, continued under her successor William Q. Judge, and now under the leadership of his successor Katherine Tingley, does however have a moral code, the highest moral code. Theosophy teaches moreover that there resides in the heart of man a perception and knowledge of true morality. Theosophy is itself the highest moral code. "Theosophy," says H. P. Blavatsky, "... is divine Science and a code of ethics so sublime that no Theosophist is capable of doing it justice." And yet says William Q. Judge: "It is so simple that it will not overwhelm the understanding of a child."

The work of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY under the guidance of Katherine Tingley has become world-wide; it has girdled the earth and touched every nation of mankind. Its members are not perfect but Katherine Tingley makes this demand upon them that their actions shall be in accord with their professions. It is the same position as was taken by her illustrious predecessors, and referring to this same subject the former of these nineteenth century Teachers wrote:

"Theosophy leads to... action—enforced action, instead of mere intention and talk.... But no Theosophist has the right to this name unless he is thoroughly imbued with the correctness of Carlyle's truism, "The end of man is an action and not a thought, though it were the noblest," and unless he sets and models his daily life upon this truth. The profession of a truth is not yet the enactment of it; and the more beautiful and grand it sounds, the more loudly virtue or duty is talked about instead of being acted upon, the more forcibly it will always remind one of the Dead Sea fruit. *Cant* is the most loathsome of all vices."—*Key to Theosophy*

William Q. Judge said the following:

"It is a call to work for the race and not for self, a request to bring to the west and the east the doctrines that have most effect on human conduct, on the relations of man to man, and hence the greatest possibility of forming at last a true Universal Brotherhood. We must follow this program and supply the world with a system of philosophy which gives a sure and logical basis for ethics, and that can only be gotten from those to which I have adverted; there is no basis for ethics in phenomena, because a man might learn to do the most wonderful things by the aid of occult forces and yet at the same time be the worst of men."

In one of her lectures during her recent visit to Sweden referring to Mrs. Besant's declaration that the Theosophical Society had "no moral code," Katherine Tingley expressed her astonishment and regret and said, "How dangerous for poor struggling humanity such a statement must be." And she hoped it would be clear to all that she was forced to draw a distinct line between a society which put forward such dangerous teachings under the name of Theosophy, and the Society she herself represented, which, on the contrary, had the highest moral code and pointed to the existence of a distinct, high, moral law.

Furthermore, as again expressed by Katherine Tingley:

"Theosophy does not teach or endorse hypnotism or any psychic practices. On the contrary Theosophy protests against these and points out the terrible dangers attending them. It asserts most emphatically that they do not lead to true knowledge nor to a true understanding of life. Theosophy does not offer spiritual instruction for money, nor does it teach that the higher knowledge can be gained in any other way than by the greatest purity of life and thought."

The above extracts, brief as they are, show clearly the position taken by the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, and in conclusion, to quote again from H. P. Blavatsky: "Theosophist is who Theosophy does." J. H. FUSSELL

## The Leader in Europe

LETTERS and cables from Europe report great success attending the Leader's visit both to Holland and Germany. In Holland the first place visited was Amsterdam where a meeting was held in the "Concertgebouw" which is the largest and handsomest hall in the city. The hall was crowded by a most interested and intelligent audience who listened to Mrs. Tingley with the greatest attention. As in Sweden she spoke in English, her lecture being afterwards translated into Dutch by one of the members present. The newspapers next day without an exception gave splendid notices and everywhere Theosophy was talked of: at the hotels, in the coffee-houses, on tramways, and in private families. A new Center was formed here and great impetus given to the work.

### From "THE SPHINX"

James Russell Lowell

ONE seed contains another seed,  
And that a third, and so for evermore;  
And promise of as great a deed  
Lies folded in the deed that went before.

So ask not fitting space or time,  
Ye could not dream of things which could not be;  
Each day shall make the next sublime,  
And Time be swallowed in Eternity.

God bless the Present! it is All;  
It has been Future, and it shall be Past;  
Awake and live! thy strength recall,  
And in one trinity unite them fast.

Action and Life---lo! here the key  
Of all on earth that seemeth dark and wrong;  
Win this---and, with it, freely ye  
May enter that bright realm for which ye long.

Then all these bitter questionings  
Shall with a full and blessed answer meet;  
Past worlds, whereof the Poet sings,  
Shall be the earth beneath his snow-white feet.

### Light for the World

HOW much this old world of ours needs light in these days of conflicting creeds, when the evils that so beset us seem not to diminish but to increase! But may it not be that one reason for this is that we have regarded the sorrows and troubles of life as being imposed upon us from outside and not of our own making; and in like manner have looked for their removal by an outside power instead of realizing that it is we ourselves who must make the change? Yet how can we do this? It is here that Theosophy throws such a flood of light upon life; and in its teachings of Karma and Reincarnation we find a key to the hitherto unsolvable problem, a key which unlocks the doors of the storehouse of ancient wisdom and divine knowledge.

In olden times the knowledge of these two great teachings was the common property of mankind, but through the selfish ambition of those who sought to enslave man and who knew that their power would be increased if he could be kept in ignorance, these doctrines were obscured, and the teaching that man lives many lives on earth was declared to be a heresy.

Long ages has humanity wandered in darkness, but H. P. Blavatsky, the Light-Bringer, has proclaimed once more this light-giving truth, and restored the ancient teaching of Reincarnation.

This teaching has been aptly called the lost chord of Christianity, and once its true import is realized it becomes clear how, lacking it, much of the Master's teaching has been obscured, making necessary an appeal to blind, unreasoning belief. But with the teachings of Karma and Reincarnation there is no longer a violation of man's inherent sense of justice. That Jesus taught the doctrine of Karma most distinctly may be seen from his words "With

whatsoever measure ye mete it shall be measured to you again": and "Do men gather grapes of thorns or figs of thistles?" These have been the teachings of the world's saviors ever since time began, and coupled with this has always been the other teaching, its twin doctrine, of Reincarnation, a definite example of which was given by Jesus when he said to his disciples that John the Baptist was Elias. And there is that other teaching of Jesus and all the Great Ones,—the perfectibility of Man; "Be ye therefore perfect even as your Father which is in Heaven is perfect." Yet how can this perfection be attained save through many many lives, for we well know that one does not suffice?

Karma and Reincarnation are universal truths. "Evolution," said H. P. Blavatsky, "is an eternal cycle of becoming"; and it is through these great laws of life that men come to realize that they are divine, gaining experience and knowledge through many earth-lives. Reincarnation and Karma are a death-blow to the materialistic theories of evolution that would make of mankind merely a race of superior animals. Our bodies and lower natures are indeed animal, but *we* are not, and it is *we* that incarnate, as we first incarnated ages ago to inform and uplift that grade of life which the human animal form represents, as well as the kingdoms below it. Man, the real man, *ensouls* the body and it is his duty to live as a spiritual being while still in the body of flesh, by exercising his divine power to subdue the animal nature.

Each of us is such an incarnated soul with infinite possibilities; but no one and nothing can draw these out and make them actualities save only ourselves by our own efforts to live in accord with the higher law of our own divinity.

STUDENT

### "After Many Days"

"A MAN'S deeds come back to him." "Whatsoever a man soweth that shall he also reap." "Cast thy bread upon the waters, and it shall return unto thee after many days."

How little do we realize the truth of these words, spoken centuries ago! Not until the painful results of man's wrong deeds come back to him, and he begins to question himself as to the cause of the pain, does he begin to awaken to the true meaning of these familiar sayings. So long as he is reaping the harvest of good deeds done he accepts his happiness without question, but when he feels the pain he rebels, and wants to know the cause. The doctrine of fate, or belief in an avenging God may be an easy way of excusing ourselves for our inefficiency or our ignorance, but is it reasonable to set aside the questionings of our hearts in this manner?

We know how when little things happen to us we are apt sometimes to say, "Well, luck seems to be against me today." How foolish! Is it not the outcome of some act which we ourselves have done? Again, one may possess a body strong and vigorous enough to stand abuse for years. Then, later on, when some malady makes life a continuous pain, stretched out over months, or even years, we are unable to see the cause of it, or too often refuse to do so, but instead try to continue old habits, and complain against fate.

And so it is with Karma, which is but the

name Theosophy gives to this law of cause and effect, or adjustment. Often Karma acts in one life. One can see examples all about of abuse and dissipation in youth, followed by degenerate and sordid manhood and womanhood. But some are overcome by disaster or so-called misfortune, for which there is no apparent cause in their lives. Can we say that Karma is not exacting payment for a debt long deferred? Sometimes when a man or a woman seems to be having a hard fight in life, may it not be the result of wrong deeds or thoughts in a former life? If we could always remember that "Each man is his own creator, creating his future life by his present," what a beautiful future we could be building. We must reap that which we have already sown, but in our daily life it is our privilege to sow what seed we will for future harvests. When men really *believe*, and not merely *say* the texts above quoted, will they not strive to put into life more of unselfishness, and less of greed; more of compassion, and less of judgment of the other fellow; more of earnest endeavor, and less of irresponsibility?

Then too, there is the brighter side. "That which a man sows, that shall he also reap." Good deeds come back as well as bad deeds. Many a person is what we commonly say "Born under a lucky star," but in the light of Theosophy that lucky star, as the accumulation of all the noble unselfish thoughts and deeds of former lives, *belongs* to him. Has he not won it through action and aspiration toward the higher things of life?

Karma waits at our side, and when we have acted, or not acted, she adjusts the effects so as to teach and train us. We have freewill; the future is absolutely in our hands. Karma, if we so choose, will show us her face as friend; it is always inner peace for those who walk with her.

A YOUNG STUDENT

### The Leader in Europe

(CONCLUDED FROM PAGE 14)

On the following day Katherine Tingley and her party went to Groningen, a quaint market town of some 275,000 inhabitants and important commercially. Here Mrs. Tingley spoke the same evening to a densely packed house in the "Nieuwe Schouwburg," a theater, and the best hall in the city. The meeting was attended by the Professors of Groningen University and their families, professional men, newspaper representatives and the best people in the city. An interesting event took place here. An interpreter was needed and there was no one on hand. While the house was filling suddenly one of the Dutch comrades said that he had just heard that a young man then in Groningen had lately visited Point Loma and that he spoke English well. Messengers were dispatched to find him but they returned saying that he was then in the Theater itself to hear Mrs. Tingley speak. On being asked he at once consented to interpret her lecture and did so remarkably well. The gentleman just referred to is a university graduate and a great student and much interested in Theosophy, and the following day he applied for membership in the Organization. The papers of Groningen were not only respectful without exception, but even laudatory, and Theosophy is now being talked of on every corner of the town.

Another large meeting was held at Arnhem in the largest hall of the city, the "Muis Sacrum," and another crowded and successful meeting held.

Detailed reports of the meetings are expected and will appear later.

The Dutch Theosophical Magazine *Lotus Knoppen* is widely read and goes among the best people of the country.

RECORDER

## THE PAST SHALL LIVE AGAIN

From Lowell's "TO THE PAST"

WHATEVER of true life there was in thee  
Leaps in our age's veins;  
Wield still thy bent and wrinkled empery,  
And shake thine idle chains;—  
To thee thy dross is clinging,  
For us thy martyrs die, thy prophets see,  
Thy poets still are singing.

Here, mid the bleak waves of our strife and care,  
Float thy green Fortunate Isles  
Where all thy hero-spirits dwell, and share  
Our martyrdoms and toils;  
The present moves attended  
With all of brave and excellent and fair  
That made the old time splendid.—*Selected*

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** Is the environment into which we are born the result mainly of our own past action or is it our share of national Karma?

**Answer** A little consideration of the subject will I think show that our Karma is partly individual; partly that of the family into which we are born; of the community, nation and race to which we belong, and also in a sense of the whole of humanity. To say that it is entirely individual would be contrary to the teaching of Universal Brotherhood and of the interdependence of the whole human race.

A little study shows clearly that each nation has its own special characteristics in which every individual of that nation shares to greater or less extent, but at the same time there exists room for innumerable personal variations. So much is this the case that any one of wide experience with men of different nationalities is almost invariably able to discern quickly to what race any individual with whom he may come in contact belongs. For instance, although English and Americans of English stock have so much in common in the matter of language and habits coming down from a long past, yet anyone who is observant can quickly detect the difference of nationality. Similarly there are marked differences to be observed among persons from different sections of the United States or even from different sections of such a small country as England. For instance, a Yorkshireman has certain peculiarities that distinguish him from a Cornishman; a New Englander can easily be distinguished from a Southerner or a Western man. All these are but the outward indications of differences in character and feeling, however slight these differences might be, could we but analyse them, for there is nothing in the outer nature of man that does not have its roots in the inner nature.

In saying the above the characteristics of a man of cosmopolitan experience and education are not overlooked, for there are some men whose experience has been so wide that the marked peculiarities or phases of development in character that might have been representative of the community or even nation to which they belong by birth may have been to a large extent wiped out, or overshadowed and made less prominent and yet not entirely removed.

It can be clearly seen from a study of history that there are times when all the individuals of a nation seem to share more generally

in the national Karma, such as for instance in times of war or great national calamity or in times of general prosperity. And again there are times when the whole national Karma may be said to focus in one individuality, in which event, as seen especially in times of war, it may be that the personal Karma or phases of it may be held in abeyance.

William Q. Judge, writing on the subject of Karma, speaks of three fields of action which operate respectively upon man: 1. In his mental and intellectual nature; 2. In his psychical or soul nature; 3. In his body and circumstances. Furthermore there is that Karma which is now operating in our present life; there is that which is held over from the past but which has no field for operation at the present time, being inhibited due to the working out of other lines of Karma which will not permit its operation and being held over until a future incarnation; and the third class, that Karma which we are now making or storing up by our present thoughts and acts and "which will operate in the future when the appropriate body, mind, and environment are taken up by the incarnating ego in some other life, or whenever obstructive Karma is removed."

One further important point to be borne in mind is that no part of our nature and no circumstance of our lives is exempt from law and that it is by the operation of law that we are born in any particular race, nation, and family to share in the racial, national, and family Karma, and also that therein, in these broader fields of Karma our own personal Karma to greater or less extent in any incarnation finds room for expression.

From all the above, it may be said that our Karma is in part the result of individual past action and in part our share of national and even racial Karma, the relation of one to the other varying.

STUDENT

**Question** What is the difference between the intelligence exhibited by animals and that possessed by man? Is it merely a difference in degree?

**Answer** In *The Key to Theosophy* H. P. Blavatsky says: "The difference between animals and man is this: the former are ensouled by the 'principles' potentially, the latter *actually*." In *The Secret Doctrine* one of the fundamental statements on which the whole teaching is based is as follows:

The fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every Soul—a spark of the former—through the Cycle of Incarnation (or "Necessity") in accordance with Cyclic and Karmic law, during the whole term. In other words, no purely spiritual Buddhi (divine Soul) can have an independent (conscious) existence before the spark which issued from the pure Essence of the Universal Sixth principle,—or the OVER-SOUL,—has (a) passed through every form of the elemental world of that Manvantara, and (b) acquired individuality, first by natural impulse, and then by self-induced and self-devised efforts (checked by its Karma), thus ascending through all the degrees of intelligence, from the lowest to the highest Manas, from mineral and plant, up to the holiest archangel (Dhyani-Buddha).

The key to the answer lies in the distinction

between the terms "by natural impulse" and "by self-induced and self-devised efforts." The intelligence that we see operating throughout nature in all the kingdoms below man is the general intelligence of nature; that is, their evolution proceeds through natural impulse coming from a common source, guided and governed by the general laws of nature. But once the human kingdom is entered a new factor is introduced and henceforward development and evolution take place by means of "self-induced and self-devised efforts." That which distinguishes man from the lower kingdoms and in fact makes him man, is the incarnation of Manas, the human soul, through which man gains self-consciousness. Until the human kingdom is reached there is no real self-consciousness but only an approximation thereto in the case of the higher animals, which is especially exhibited in those animals which come into close association with man.

The basis of all life is the monad, Atma-Buddhi, which contains the potentiality of all the principles, these coming into development gradually as the monad journeys on its pilgrimage from kingdom to kingdom. The distinction between the intelligence exhibited by animals and that possessed by man may be said to be that between the lower nature and the higher. The latter can properly only be predicated of man and implies his conscious co-operation with the higher laws of nature. On his part effort is required in order to act in harmony with these laws. In a measure he has become a part of them and himself aids in carrying them out. He realizes that he has two natures and must consciously follow one or the other. He feels, as does the animal, "natural impulse," but he not only has the power but it is his duty to control it and at times to resist it. On the other hand the animal has only natural impulse and is guided by it and under its control. The general intelligence of nature working through the animal kingdom suffices for its support and general well-being, and were man to live naturally so far as his outer nature is concerned it would act thus also for him and he would have the instinctive knowledge for self-preservation as have the animals. Man has, however, abused the knowledge of nature which should be his by right and consequently has to suffer. In this sense the intelligence of the animals is far ahead of that of man, but not consciously so; nor will it always be so for this is a part of the birthright of man which he will regain as he purifies his nature and lives in accordance with the Higher Law. Generally speaking, the animal, except where it comes under the direct influence of man, has no choice save to follow natural impulse. But man has the choice to follow or to abuse it. In other words he has the power to be one of the lords and co-workers of nature instead of, as are the animals, nature's servant.

STUDENT

THE man to whom the universe does not reveal directly what relation it has to him, whose heart does not tell him what he owes himself and others—that man will scarcely learn it out of books. . . .

There is no more lovely worship of God than that for which no image is required, but which springs up in our hearts spontaneously, when Nature speaks to the soul, and the soul speaks to Nature face to face.—*Goethe*

### Men and Times

THE French mind tends to think of history much more in terms of men than we do. Of the two theories that it is the occasion which calls forth the man, and the man that creates the occasion, they incline to the latter. A statue to Rousseau has just been unveiled, and Minister Briand, in his eulogy of that curious personality, credited him with the parentage of modern Liberty:

... The Liberty born of the breath and cries and tears of Jean Jaques, his child so weak that it was all but a product of his fancy—but it was our liberty which lives from him and through him. ... His wandering shade, going the world around and leaving everywhere its track, and well-nigh everywhere creating liberty. ...

One might as well ascribe to an explorer the creation of the new land upon which he plants a flag. The common sea of human consciousness, upon which as little separate personalities we swim about so busily, slowly heaves up some great idea. And then someone sights it first, perhaps shows the way. The civilization of the time collects upon it, mines it, cultivates it, gets what is possible of its wealth—and finally goes elsewhere. Then the land goes down, has its surface washed and renewed, and in time reappears. In the green depths, therefore, are all the great continental ideas upon which humanity has ever lived. The idea of universal brotherhood is just emerging. The peaks are above the surface. More or less completely, it has been up many times before. But men, having partaken of its fruits for awhile, left it—and the left lands sink. Yet it is the one and only soil upon which Theosophy will grow. Perhaps ages of bitter experience will now have taught men to stay there, once again that they find it. It need never sink. C.

### \*Instantaneous Propagation\* of Epidemics

A DOCTOR points out with regard to the germ theory of disease, the following difficulty. The grippe visited America in 1842, appearing suddenly and spreading all over the United States in a day. In St. Petersburg in December 1778 it struck down 40,000 in a night. And there are many other such instances recorded. How were the germs carried and propagated so fast? "There are surely some missing links from that chain."

If the germs propagate the disease, what propagates the germs? The same question might be asked with reference to the sudden appearance of such epidemics simultaneously in several widely separated parts of the civilized world, with reference to plant epidemics, and even with reference to cases where no germs at all have been found, such as waves of crime or of thought. It would be easy to collect enough instances to show that the world of men is connected by links as subtle as the ether that transmits light and electricity, and far too quick in their capacity of transmission to wait for steamers to cross the Atlantic.

But why make a difficulty out of it? Can we not speak to each other across oceans, without any perceivable, or even conceivable, communicating medium? Cannot light girdle the earth seven times in one second? If the electric spark can cause the movement of remote iron filings, and the sun kindle our fires

or twist our compass needles through his ninety million miles of distance, why is it wonderful that brain should affect brain and body body?

In the phenomenal world everything is extended widely over what is called "space," and we can only get from one thing to another by passing over a vast number of intermediate things. So, when we find light appearing in a place a couple of hundred thousand miles distant, in one second after it has been with us, we have to infer that it has a traveling velocity of some 200,000 miles a second. But some geometers tell us that our three-dimensional space is only a limited form affecting physical matter, and does not necessarily qualify other things besides physical matter. Distance is an obstacle due to our limitations, but it may not exist for beings that are not subject to those limitations. The idea that a thing cannot appear in different parts of the earth without having to be propagated along the surface is an assumption. We are all closely united, and the life of each one is important in its possible influence on the lives of others. STUDENT

### The Divining Rod

THE use of the divining rod for discovering the location of underground water and metals is of ancient origin and widely extended acquaintance; and the endeavor of scientists to prove that its action depends entirely upon the involuntary movements of the diviner himself, who knows beforehand where the water and metals are to be expected, is an instance of the curious bias of judgment possessed by them. As has been so often remarked by clearer judgments, the arguments by which scientists seek to overthrow facts which they do not want to believe would also overthrow the facts that they do believe; since to effect their proof they are obliged to impugn the reliability of the best witnesses and to reject the very kinds of evidence upon which science itself relies.

A writer in the *Scientific American* says that an investigator found that the points of the rod turned downward independently of his will, but that more complete tests showed that this was effected by unconscious changes in the inclination of his body. In the first place it is unwarrantably arrogant to assume that previous users of the rod in all ages would have remained ignorant of such an explanation, or would have continued to employ the rod if they found that it only told them what they already knew. In the second place, the facts show that the rod is frequently bent by the combined effect of the force acting on its ends and of the operator's efforts to keep it straight.

Also one would very much like to know what, short of actual experience of facts, would ever inspire anyone with the notion of finding water by walking over the ground with a forked stick; and why hazel-wood was a preferred kind, other kinds being also used according to the particular mineral sought.

It is not denied that a member of the Geological Survey, not being a natural diviner, knowing where the water was located, and walking over the ground in the expectancy that the stick would move when he came to the right place, might trace in himself involuntary actions of the muscles. But this will

prove nothing to the purpose, except upon the assumption that because I cannot do a thing, therefore nobody else can, and everybody who says he can is a humbug. STUDENT

### Nestorian Christians

PEOPLE who make a plea for Christianity as the supreme religion of the world usually forget the other churches into which that religion is divided and think of their own church. But, even were it possible for Protestant and Romish Christians to agree, and even if the Greek Church were added, there are the Syrian Christians, of whose very existence many advocates of Christianity are undoubtedly ignorant.

Yet these Syrian Christians can equal and probably excel most churches in the matter of antiquity and claims to authenticity.

The Nestorian Christians of Asia Minor are the real original Syrian Church, and carry back their pedigree to the days of the apostles. They speak the Syriac or Aramaic language in which the Gospel was originally preached and which was the tongue of Palestine in the time assigned to Jesus. They are named after Nestorius, the leader of a revolt from the Church of Rome in the fifth century; and their church is an outgrowth of that of Antioch mentioned in Acts xiii. They declare they are descended from converts of the apostle Thomas.

The Patriarch lives at Kochanis, a small town in the Kurdistan mountains, a region full of interesting races and antiquities. The Nestorian heresy, largely a question of exact terminology in connexion with the nature of the Godhead, is a vague and complicated matter. The emperor Theodosius expelled Nestorius from the church as the only way to stop the disputes between him and the notorious Cyril of Alexandria. The followers afterwards spread their influence into Persia, India, and China. STUDENT

### A Simple Oil Pump

A MINING engineer has invented a method of drawing oil from bore-holes which seems to have that beautiful simplicity characteristic of great inventions. It is merely to pass a thick endless rope over a wheel and down into the well. As one side comes up saturated with oil, it is squeezed out with rollers. The only weight to be lifted, therefore, is that of the oil. One wonders how many other such simple machines may be possible, which we have not yet invented; whether we have not perhaps added more to the complexity than to the simplicity of life by our complicated machinery. H.

### The Christ Face in Art

A WRITER on "The Christ Face in Art" comes to the conclusion that there is no trace of an authoritative traditional likeness of Christ, and says that the representations made in different ages give a clue to the ideals of the respective ages. Thus the Christ face is the picture of an ideal. Hence we are surely open to new departures in delineating this conception. The negatively-good, undecided, effeminate Christ is the type of the corresponding ideal held by so many devout people. When we are more noble in our religion, we shall have a nobler representation of the Christ face in art. STUDENT

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES  
IS THROWN OPEN TO ALL

Postage prepaid - - - - - \$10.00

THE THEOSOPHICAL PUBLISHING CO., Point Loma, Cal.

# ISIS UNVEILED

A MASTER-KEY TO THE  
Mysteries of Ancient and Modern Science  
and Theology

By H. P. BLAVATSKY

2 Vols. Royal 8vo., about 1400 pages, indexed; cloth.  
With portrait of the Author

NEW POINT LOMA EDITION, WITH A PREFACE

by H. T. Edge, B.A. (*Cantab.*) an old student under H. P. Blavatsky and now a member of the Staff of Professors at Point Loma, California.

Vol. I treats of Ancient and Modern Science  
Vol. II treats of Ancient and Modern Religion

The reprint of this invaluable work is in answer to a constant demand, which shows that the book is *alive* and is needed by the liberated spirit of the age.

Postage prepaid - - - - - \$7.00

THE THEOSOPHICAL PUBLISHING CO., Point Loma, Cal.

# The Key to Theosophy

A Clear exposition in the form of  
Question and Answer of the

Ethics, Science and Philosophy of Theosophy Exhaustively Indexed. With a Copious Glossary of General Theosophical Terms

by H. P. BLAVATSKY

THE KEY is a remarkable Compendium of Theosophical teaching. It is the book of books for beginners and higher students  
The incessant call for this work has exhausted the earlier editions. NEW POINT LOMA EDITION NOW READY

### The Age of Scientific Superstition

KNOWLEDGE cannot be separated from responsibility, for it confers powers that cannot lie idle but must be employed for good or for ill. But there is a tendency in human nature to covet knowledge and neglect the responsibility.

The duty which increased knowledge entails is that of elevating our aims and ideals of conduct to a level above that of people who have less knowledge. Put in other words, this means that we must unfold our nature evenly and develop harmoniously, or else deformity will be the result.

Modern scientific thought has been characterized by an inequality of development, a disproportion of growth resulting in deformity. Side by side with very narrow little views of some things, we find great penetration and acuteness with regard to other things. Great strides have been made in the study of the external phenomena of nature, the parts and functions of animals, and other outer details; but the accompanying views as to man's essential nature and as to the real meaning of the universe have been narrow and crude.

### Cynical Animalism

The chief characteristic has been the prevalence of what may be called "animalistic" theories. These theories are marked by a pessimism, a cynicism, a lack of warmth and ideality, which well match the most narrow bigoted views of theology. The aim seems to be to represent man as nothing more than a higher animal and to deny him anything more than the life of groping his way darkly amid his propensities and delusions. He is made subject to the inertia and attractive forces of matter, and anything superior to these is denied. Yet, with strange inconsistency, the pronouncements of his "intellect," itself alleged to be a product of matter, are asserted with an arrogance incomparable.

The word "materialism" is liable to much misunderstanding. It may mean merely an honest attempt to get down off the plane of unpractical superstition and put science on a basis of certainty and practical usefulness. Or it may mean animalism. Often we attack the latter meaning and the former is put forward as a defence. Theosophists are bound to withstand this animalistic tendency wherever it may be detected, even though its presence may be unperceived by the one who is unconsciously advocating it or advocating a theory that involves it.

If man is evolved from matter alone, then

matter must contain all the potentialities that have unfolded and will unfold, together with a self-developing power. It must, in fact, fill the place of the ultimate Unknowable, the fundamental Being about which nothing can be predicated save that it exists. The picture which certain schools of scientific thought have substituted for the theological idea is indeed a strange one. Starting with man, as at present found in Western lands, we glance back over the pages of those fragmentary annals known as history. The races that preceded our own were, it is said, not so advanced; the races that preceded them still less advanced; and so we go on until we come to races which did not have any civilization. Beyond them

### Omnipotent Impotence

it is supposed that the chain continues through the various gradations of the animal kingdom, then through the plant to the mineral kingdom. And all this evolution is represented as taking place of itself. It is evident to a logical mind that on this theory the primordial atom which was the parent of all this evolution must have contained within itself the potentialities of the whole subsequent fabric, together with a power of self-development. In it must have been contained the eternal Idea, the omnipotent Will, the infinite horn of plenty. Should we not bow down in meek adoration of that marvelous atom, the source of all, the sustainer of all, the inscrutable end of all!

Man, according to this theory, finds himself mysteriously present in the midst of a boundless universe of unknown possibilities which he is seeking to discover. Nature, once his parent, is now his slave; that mighty brain of his, once evolved by the atom, has taken the bit in its teeth. Man is omnipotent — or, on second thoughts, one is not quite sure whether

### Fatuous Pessimism

this is correct and whether man is not, according to the theory, a helpless piece of driftwood. It is such a wonderful blend of pessimism and conceit that it is not easy to grasp.

Is it not a wonderful picture, to imagine some great physicist standing in his laboratory, investigating nature and finding out things about it? Does it not incite one to ask, Whence came all those marvelous properties he is discovering? How many more of them may there not be? And nature seems like a great passive entity that is endowed with all these marvelous powers, discovered and undiscovered, and allows itself to be dissected without a word — an infinite storehouse of treasure which would all lie utterly sealed up and useless if man did not dig for it. And yet

the genius and initiative of man was itself evolved from this very same passive indolent nature! Scientists tell us they are plain matter-of-fact people, not given to metaphysical conundrums; and it is as well they tell us so, as otherwise we might be inclined to doubt it.

The plain matter-of-fact state of the case is that we stand face to face with two great facts: our own mysterious being, and that mysterious entity we call nature; the former ever-active and assertive, the latter passive and waiting to be operated upon. Both of them boundless and unfathomed. It is possible to proceed much farther than this in the discussion of the relation between these two, their origin, and so on. The process of discussion has given rise to philosophies innumerable, physical and metaphysical, ontological, monistic, dualistic, and so forth. Of these by far the most comprehensive, self-consistent, and luminous is the one outlined by H. P. Blavatsky in *The Secret Doctrine*, in the language of some of the oldest books in the world. It stands, to the other philosophies, in the relation of a masterkey to a bunch of keys, or a common root to a list of words.

But, though we must have our metaphysics on a rational basis, yet in the practical duties of life we are not concerned with ultimates.

**Right Thought,  
Right Action  
are Inter-  
dependent** We have to take, as our axioms, the fact that we are here, alive and conscious, and that there is a universe around us.

The plants and animals all do this easily without question; but we have a self-conscious inquiring mind, which makes the problem more difficult. But this mind has to be ruled and regulated, like the other faculties.

The universe is an eternal existence (no other hypothesis is worth a moment's consideration) and we are a part of it. Within us moves a Power which we cannot fathom; it is the mainspring of all our life and thought; from it come all knowledge and will and aspiration; it impels to action. There are also a great many other lesser forces, which we recognize as the same as those which move the animal and other worlds — the forces of desire impelling to self-preservation and self-gratification. These lesser forces, however, take on a far stronger aspect in man on account of his intelligence. Life teaches us that these propensities are for the maintenance of the animal nature, and that if made to drive the chariot

**Self-control  
of Forces  
of Life** of intellect, they will become exalted into devouring passions which lead to misery and destruction. Consequently, we are driven to seek that

in us which is higher than the passions. At this point, however, we are hampered by a thick deposit of old theological ideas, overlaid by a mechanical way of thinking derived from science.

Instead of seeking for that in our nature which is superior to the vicissitudes of the mind and emotions, we imagine a dogmatic God with a set of theological conceptions attached; or, abandoning this, we try to argue ourselves into the belief that the phenomenal world can somehow be sufficient to itself and form its own cause, and that our life springs from nothing and to nothing will return.

The old crude theological dogmas have ceased to enchain some minds, but they have been replaced by an equally absurd outfit of scientific superstitions and catch-words which becloud the mind and lead it from the path of clarity and common sense. The elaborate investigation of the quantitative

**Fact-  
Grinding  
Strabismus**

laws of dynamics in physical matter, the intimate study of chemical reactions, the minute scrutiny of physical structures and functions in physiology, have filled so large a sphere in the mind that they warp the judgment in other concerns. Scientists want to extend the dynamical relations of physical matter to include the whole realm of being, to explain everything by chemical reactions, or to make the visible functions of the cell responsible for all. Hence we enter the domain of investigation with preconceived formulas in the mind and are prevented from an unobscured vision. But can we not look at our life without these hard and fast dogmatic creeds of science? We are conscious of incentives nobler than self-interest — of love, forbearance, devotion to duty, etc. Must we then wander off the straight track to discuss whether or not these can arise from the movement of matter within the brain, whether the soul can be weighed, and so on? No; there is no need to get back to the everlasting

**Honorable  
Activity  
the Teacher**

dynamical and physical way of looking at things. Let us rather investigate these forces by the test of experience and use, cultivating them in ourselves, without speculating as to their exact origin, utilizing them as powers in life and observing their effects.

In short, why not study man as he is, here and now, accepting him as a present fact, instead of going into theories as to his origin? Why not study nature and see how much we can find in her, instead of cramming our heads with scientific superstitions about her?

What a situation — that science, the champion of practicality, should be getting us into a rut of superstition and unreality and shutting us out from the realities of life with a curtain of mental conceptions that have no reality behind them! Surely in after years this will be known as the age of scientific superstition, of dynamical bigotry and persecution!

The right stand to take is "I am a man (or I am a woman) and a Man (or a Woman) I will be, come what may. My Soul is my own.

**The Dignity  
of Human  
Dignity**

I will show forth its strength and its beauty. I care not whether I am immortal or not, whether I have a Soul or not. I am human and human I

will be." With such an attitude towards life, one would be in the way of discovering facts about oneself and about the Soul and immortality and nature. The phantasmagoria of three-dimensional space and moving atoms might vanish from the imagination and enable other modes of perception to arise that would give life a new meaning. And everywhere there are signs that the spirit of man is rising up against the tyranny of ideas and trying to assert itself as a living fact in face of the theories. The growing recognition of brotherhood as a fact in nature will prove Soul the paramount fact of life. STUDENT

## A Larger View of Human Life

WHEN we reflect on the vastness of the universe, even within the scope of man's perceptions and the reach of his intellect; and contrast this with the smallness of the limits assigned by man to his own powers and to the duration of his own life; we must be struck with the incongruity. It is not that man should play so small a part in so large a drama, but that he should have the power of linking his imagination and his interests with it and yet have no share in it. This is the incongruity.

I read the annals of past empires and see centuries on centuries and millenniums on millenniums stretching back into an indefinite past. I read until I seem to be almost an actor in those bygone dramas. Yet I only came into being a few years ago, and must for ever vanish from this earth in a few short years, never again to visit that drama that will roll ceaselessly on without me! Intolerable thought! The animals know nothing of Egypt and Greece; but that a being with an intellect so capacious as man's should live and die as an animal is supposed to live and die is inconceivable. Again, I can measure distances so vast that no terrestrial measures will define them and they have to be measured in "light-years"; and amid all this vastness I am but a microscopic speck of dust! Can there be such an awful chasm between man's aspirations and his realizations? Again, what a small thing is any one person's personality amid the myriads of humanity! Is our sense of existence to be for ever confined to that small circle?

These thoughts indicate the lines of the future development of man, an evolution of his consciousness from the plane of personality and its kindred limitations to a larger sphere wherein it partakes consciously of the greater life of the universe and of humanity. That the Soul of man actually has such an extended life is a teaching of Theosophy; and the destiny of man is so to link or identify his mind with the Soul that he may raise his self-consciousness to that same high level. The Soul lives on through incarnations, manifesting itself again and again in human form on earth, though the unawakened mind knows it not. But the knowledge of that Soul can be shed on the mind when the mind has by its purification and evolution prepared itself therefor. And the sphere of action of a man is not for ever confined to the limits of physical action. Nor are the mysteries of the relationship between his own and other people's personalities to be for ever unsealed; for he will one day learn what is the meaning of that strange limitation, personality, and what is his true relation to others.

As we are still hugging the phantoms of dead creeds and superstitions belonging to ages when man's knowledge of the world was much more limited, we need to supersede these by beliefs which give to man a more elevated place in the universe and make him a being worthy of his own intelligence: beliefs based upon the knowledge of nature and history possessed by the advance-guard of the race who have always stood ready to share their knowledge and experience with all whose lives and aspirations have made this demand on their own higher nature, on their divine birthright. STUDENT

# Some Views on XXth Century Problems

## A Humorist's Philosophy

**M**R. G. B. SHAW wakes up every morning to find himself discussed from some new standpoint. But he must have the satisfaction of feeling that people are at last sifting out the grains of real philosophy which he has mixed with so much other matter, and seriously considering them. He has but to press the best of his ideas a little further to find it what he thinks it now is — a working religious basis.

Says one of his exponents:

The central idea is the conception of the underlying energy of life as the world-will. Shaw has conceived this as a force — the Life-force, as he calls it — eternally seeking expression by instruments of greater certainty and power.

This is the creative Will of the universe. The instruments are whatever has life, man highest among these. The urge in man to climb higher is the urge of that Cosmic Will. In all his efforts to transcend himself he is lending himself to that force, expressing it, and by the same efforts expressing his so-far unexpressed but ever pressing fuller Self. But:

The Life-force must not be imagined as standing apart from ordinary things. . . . Just as there is no such thing as poverty, but only poor people; just as there is no such thing as happiness, but only happy beings; . . . so for Shaw there is no such final and complete thing as the world-will, but only a world willing itself toward ampler certainty of its end.

The thinking mind will not and cannot stop there. It will take two more steps. Just as the idea of poverty is abstracted from the contemplation of poor people, and happiness from the consideration of happy people: so the idea of moral height, whether clear or vague, when real and living — that is, when a force in conduct — is abstracted by consciousness from the touch of something higher than itself, from its perception of something higher than itself. A man cannot lift himself by his own bootstraps. With constant effort that something higher is attained. But immediately the conception rises because a yet higher degree of being comes into view. Mr. Shaw is trying to avoid the pitfalls of the theological controversies about the nature of God. It is that which is at once always in sight of every man as his inspiration, yet always beyond; always being attained, yet unattainable for its infinity; indefinable because the next step upward, opening a new view, will dissolve the definition. As human consciousness rises, this Supreme passes into it in manifestation, is assimilated, and is the urge towards its own manifestation; yet there is always more, higher, beyond. The higher that human consciousness rises, the more clearly does it feel itself in the presence of something greater than, and beyond, itself. From that it constructs its ideal, and by that it raises itself.

And further: if each human being is an effort of this Divine to find manifestation, a something upon which divine work has been done, would it not be very poor economy to let death bring to naught any one of such half

finished products? The man has not exhausted the possibilities of life; rather he is but now beginning to understand them. Surely he will return, resume the splendid task, find new ties to his fellows, expunge from his mind the animosities and petty ambitions that have hindered his real work for ages, stopped his intellectual and spiritual growth. Collectively men must become one Brotherhood if they are to manifest the infinite phases of one Divine. The whole theory leads on to brotherhood and to Reincarnation, for only thus can the infinite Harmony, thus far unheard and almost unconceived, find and perfect its keyboard. Thus completed, the theory is Theosophy. STUDENT

## Positive and Negative Tonics

**W**E seem to have devised as yet no real test by which we can estimate a positive advance or recession in human longevity. There is a negative advance, due to the removal of certain agencies that kill. Whether there is a positive advance we do not know; the evidence on the whole is the other way. The average has crept up to 32, 33, and here and there 35 years. The causes of this small movement have recently been summed up by Dr. Wiley, and it will be seen that they are mostly negative, the removal of agencies that kill.

Only half as many children under 5 years of age now die as was the case a quarter of a century ago. This is because they are no longer poisoned to death by foods which they cannot digest. In other words we understand the limitations of an infant's digestive powers. But there is no evidence that the children have as yet more initial vitality than they had several generations ago.

Another factor in prolonging human life is the check to the ravages of typhoid fever.

We know about drainage and the ways in which typhoid spreads. We no longer permit ourselves to be poisoned by sewage, but there is not the slightest evidence that we are more resistant.

Another factor adding to the length of human life is the outdoor treatment and segregation of consumptives. Scientific investigation has established the fact that tuberculosis is an infective disease.

In other words we treat the consumptive better, and by segregating him we protect others. But the others are not any the more fortified against it.

Progress in surgery and especially in asepsis and anti-sepsis, is another cause for the prolonging of life. This, clearly, ranks exactly with the other causes; it is an avoidance of poisoning.

Still another cause for the increasing length of human life is in the hygienic education manifested not only in the family, but in the common schools, the high-schools and the universities.

This means that in a quarter of a century or more we have learned the value of sunlight, fresh air and water; something about the necessities of diet; and that girls need exercise like boys. Here, it is true, we have something a little more positive.

Life statistics have been kept for too short

a period to enable us to say very much. But it looks as though, when we have proceeded along these lines as far as we can, when we have minimized every physical cause of death, we shall perhaps have brought the life length up to thirty-six or thereabouts. It might reach a little further, certainly nowhere near the biblical 70 or the classic century. To approach them we must do something to the *mental* life of the individual. The general habit of mind is to seek for pleasure in directions which are injurious to the body. So far as matters of diet go, the public seem inclined to awake to this truth. But every individual knows that there are plenty of other reforms he must make before health is open to him.

The great natural tonic, the *positive* producer of longevity, is happiness; until mankind is happy it never can be healthy. And it can never be happy until brotherhood is the motor in thought and conduct. With brotherhood in the air, nine-tenths of the *fear* which darkens human consciousness — fear of want, poverty and starvation, fear of the acts and motives of others — would vanish. One of the chief among all the causes that lower the flame of vitality is fear.

So the task of *positively* lengthening human life lies far beyond the province of medicine and hygiene. They can but remove some of the barriers to the work of the great positive agent. STUDENT

## A Human Document

**T**HE English Home Office has been trying to acquaint the people with facts about their drinking habits. In order to get the facts, public houses in London and in eight provincial towns were watched and the enterers counted. Here are some figures for twenty-three average saloons in London, four day's counting, twelve hours per day:

Women	39,541
Children (!)	10,746

Taking *one* of these at random, the figures were:

Women	3332
Children (in arms, 136)	1389
Men	3533

Most London streets half a mile long contain more than twenty-three saloons, and there are many hundreds of such streets. London contains about one-sixth of the total British population.

America appears to be rapidly, and justly, deciding that the use of alcohol is a pure — and purely unnecessary — evil, one, moreover, that can be abolished by a stroke of the pen, and is making that stroke in State after State. England may now watch results.

If the Home Office will placard its figures for those twenty-three houses, and subjoin a statement of the total number of houses in London, the placard will constitute a treatise on Eugenics and on Sociology and on Political Economy and on Civilization, and a sermon and a jeremiad. It would be the table of contents to the most appalling "human document" that ever challenged the realists. STUDENT

## Runic Remains in Sweden

IN a preceding issue (vol. xi, no. 6) we found that the inscription on the famous rune-stone, Rökstenen, plainly showed the existence of song and saga in Sweden a thousand years ago, although the records from this time are very scanty. In the picture today we see one more of these indisputable proofs. This one is of another kind; here it is not the runic inscription, but the figures, that are essential. Similar markings are to be found over a vast area of Sweden; partly as here on the rocks, but mostly on rune-stones in combination with inscriptions. The usual way to adorn a rune-stone was to cut along the border a dragon holding his tail in his mouth, or having the head and tail united together by a heart. The dragon is the most characteristic figure of these old times in Sweden, and on wood such as in chairs, tables, door-posts, shields, etc. it was worked out with the most elaborate artistic skill. On the rune-stones the dragon serves as a place for the runic inscription. The space within was then filled with figures in some connexion with the inscription, or most often from one of the most beloved sagas.

The pictures on the Ramsunds mountain are from the Sigurd saga; and, as they occur very often, this saga seems to have been the most beloved one in Sweden. Sigurd pierces the dragon Fafnir with his famous sword. Within we find Sigurd's horse, laden with the treasures and fastened to a tree, in which are sitting the birds who in their song tell Sigurd of the treachery of Regin, the brother of Fafnir. To the left is the decapitated Regin and the trade-emblems of the skilled forge-smith: the hammer, the bellows, the tongs and the anvil. Further on are Sigurd frying the heart of Fafnir in the fire, and an animal which must be the otter, appearing in the very opening of the saga, and here holding in its mouth the disastrous golden ring, which by its inherent curse causes all the fearful events.

This saga is preserved to our day in its Icelandic form in the Edda in a grand poem, and in its German form in the Nibelungenlied. Apparently the leading features were the same even in Sweden, though the persons figuring must have been given pure Swedish characteristics.

It is worth while studying this old saga, which had such a wide influence over the minds of our Teutonic forefathers. In its present form it is a mine of deep truths, and it is probable that it originally had a still greater significance, as is the case with almost all the sagas and myths. According to H. P. Blavatsky, Fafnir must have represented an Initiate. Sigurd ate of his heart and understood then the languages of the animals, *i. e.*,

he was instructed by Fafnir in his secret runic knowledge and magical ceremonies until nature was an open book to him.

It is interesting to note that these universal symbols of dragons and snakes, remains from the time when the mysteries were still alive, were in common use in Sweden as late as eight hundred years ago. A SWEDISH STUDENT

## Early Christian Remains in Egypt

THE cities of antiquity are almost all discovered. The day of great archaeological finds has nearly passed.

With this astonishing remark begins an article on the discovery of the "Lost City of St. Menas," in the *Scientific American Supplement*. It is difficult to imagine a more reckless statement. Even if it applies to the cities of

Christian monachism, the patron saint being a St. Menas who was martyred under Diocletian. Thus a sacred city, Abu Mina, grew up, the resort of innumerable pilgrims. In the reign of Arcadius a basilica of noble proportions was erected by the emperor over the martyr's tomb. Moslem fanaticism, however, swept all this civilization away. Now the springs have long dried up and the buildings are sand-buried ruins; the site appeared impossible to locate.

Some archaeologists, wandering about the desert in the hope of discovering this lost site, at last found an earthen vessel bearing the representation of St. Minas; and began excavations in the locality. The result gave sufficient encouragement to induce the German Government to finance the work, which is now

being carried on with several hundred Arab workmen. Four great basilicas have been entirely excavated, and many other sacred buildings, baths, etc. brought to light, together with the sanctuary of the patron saint. The basilica of Arcadius was entirely covered with marble within and without and its roof was supported by fifty gigantic columns. It was 190 feet long and 166 feet broad in the transept.

There are vast remains of ancient Christianity; but those of the monastery are the most remarkable. It covered an area of ten-and-a-half acres, and was larger than St. Peter's at Rome. The pavements of more than fifty rooms, corridors and halls have already been unearthed, and an amazing quantity of marble porphyry and fine granite found.

Thus there is much to be discovered about this ecclesiastical period of Egyptian history; and, as usual, we are finding that everything was on a grander scale than it has usually been considered prudent to suppose. STUDENT

Lomaland Photo. and Engraving Dept.

PICTURES FROM SIGURD SAGA, ON RAMSUNDS MOUNTAIN, SWEDEN

which we have record in our scanty classical annals, how many more cities are there of which we have no record? Does not archaeology constantly dig up such cities, older than our annals? Then again archaeology is not limited to the finding of cities mentioned by Greek or Arabian annalists. The researches of archaeologists, so far, have been either in places suggested by preconceived ideas, or else accidental and unexpected; and they have been in but a few spots here and there. Moreover the science of archaeology is very young. Anything like extensive and systematic digging has not yet been done; consequently archaeology lies chiefly in the future. The author contradicts himself by adding:

That the ruins of a celebrated city, the holiest site in Christian Egypt, should so long have remained unknown in the immediate neighborhood of so populous a center as Alexandria, seems little short of incredible.

The ruined city lies in the northeast corner of the Libyan desert, near Beheig, an insignificant station on the new railway from Alexandria to the Tripolitan frontier. The country is desolate and inhabited only by wandering Bedouins; but was once a great center of

## Man: Divine or Pithecoïd?

THE Ancestors of those who are termed by us the most ancient peoples of the world—now called respectively the Aryan Hindus, the Egyptians, and the oldest Persians, on the one hand, and the Chaldees and Phoenicians on the other . . . were governed by the DIVINE DYNASTIES, *i. e.*, kings and rulers who had of mortal man only his physical appearance *as it was then*, but who were Beings from spheres higher and more celestial than our own sphere will be, long Manvantaras hence. It is useless of course to attempt to force their existence on sceptics. Their greatest pride consists in proving their patronymic denomination as *catarrhinides*; which fact they try to demonstrate on the alleged authority of the *Coccyx* appended to their *os sacrum*, that rudimentary tail which, if they only had it long enough, they would wag in joy and forever, in honor of its eminent discoverer. These will remain as faithful to their ape-ancestors as Christians will to tailless Adam.—H. P. Blavatsky, *The Secret Doctrine*, ii. 328.

# The Trend of Twentieth Century Science

## The New Diet

PROFESSOR CHITTENDEN has been continuing his plea in favor of a greatly reduced dietary standard, a plea which, based upon careful experiment, he has been making for several years. Recent scientific research on the individual cell has come in collaterally to his support. His text, this time, is the case of the well-known Mr. Horace Fletcher. This gentleman, finding himself several years ago in ill-health, apparently breaking down, tried the unusual experiment of steadily reducing his food — especially the nitrogenous part of it — whilst greatly increasing the time spent in eating it. His health much more than came back; some definite maladies disappeared; and his physical and mental endurance is still growing. This year Professor Chittenden tested him again for the latter, after four years. He is fifty-nine years of age and not in training; but his record for endurance "far surpassed" that of young and vigorous athletes in full training and was better than at the test of four years ago. He still eats very little and only when positively hungry. To put the case technically, his nitrogenous metabolism is about 7 grams per day, that of the ordinary eater being often 30 and over. The latter should remember two things:

(1) Nitrogenous food is a stimulant which we have learned to demand, and we mistake the demand for hunger. This stimulant is as costly to the body as any other; and after it is over there remains the labor of removing the waste, also a very costly process, and, if any hitch occurs, so far as the nitrogen waste is concerned a very dangerous one.

(2) The amount of actual nitrogenous waste and wear necessitated by cell work is very small; replacement of this trifle is really all the nitrogen we need; the rest of the food should be fuel, carbonaceous and saline matter. A leading part of the digestion of this is done in the mouth, and most dyspeptics can therefore immediately bring their trouble to an end. Reduction of the nitrogen intake leaves the demand for a stimulant unsatisfied; there may be some sense of the lack. But when this is passed the beginning of health is entered upon.

M. D.

## Species in the Mineral Kingdom

THE discovery of meta-elements has suggested to more than one chemist that each of the known metals and other elements are comparable to biological species in the most modern acceptation of that term. "Species" is a line drawn round all plant or animal individuals which, while not yet identical, closely resemble each other. The latest view is that each species really consists of a number of sub-species, permanent, and the members of each of which exactly resemble each other. The small variations within each species are due to the temporary unions of the sub-species, the offspring exhibiting in various degrees the qualities of the two parents. But these sub-species being permanent, the further offspring are always sorting themselves

out again, again reproducing the pure qualities of the grandparents or great-grandparents.

A discovery pointing in the same direction has been made with respect to the metals. Sir William Crookes, examining certain rare metals, first of all yttrium, found that any given sample of it was really a compound consisting of ingredients each of which, while behaving chemically exactly as yttrium, gave a slightly different spectrum. Some other metals have been similarly resolved, and the complexity of their spectra suggests that the same is true of them all. Paracelsus may hereafter be justified in his declaration that what we call gold is a compound of more than one "gold," one only of these deserving to be called pure or to be used in medicine. But we do not understand his directions for the separation.

The metals in fact bear upon them the marks of evolution, of the struggle for existence. All the intermediates may once have existed between say gold and mercury. Nearly all were wiped out, all save those that clustered close around the two great types. And these, still persisting, make up the compound metal we know. Even the main types are sometimes so close as to occupy the same compartment in Mendelyeff's table, for example nickel and cobalt.

One day we may discover some way of reading the mysterious history of metals by direct reading of their "memories." Whatever they have passed through must have left its traces, somewhat as the thread of a Poulson phonograph retains clearly enough to reproduce exactly all the infinitely complex sound impressions made upon it. No one has the least idea how it does so, save to suggest that its magnetic lines are somehow altered. The microscope reveals nothing. There are certain metallic alloys, identical in chemical composition, which yet behave differently according to the order and way in which the ingredients were added — the phenomenon known as Hysteresis. We read the history from the behavior. As we make the Poulson thread reproduce what is hidden away in its metallic molecules, so we may one day make any fragment of any metal or element relate to us in some way all that it has passed through.

STUDENT

## Death by Drowning

AN Elgin physician and professor in a Chicago school of medicine, has thrown a good deal of light upon what is ordinarily called drowning. In such cases it is assumed that the cause of death is the entry of water into the bronchial tubes and lungs. He maintains, on the strength of careful examination of drowned persons and resuscitation of them after as considerable interval as six hours, that the water does not enter the tubes and lungs until *after* real death, and is therefore not the cause of it. Before real death, the entry of water is checked by persistent spasm of the glottis. Asphyxia then supervenes, and the non-breathing body is steadily chilled down to the temperature of the water. Finally it dies; and then, it may be, water flows into

the air passages. But not necessarily; and the fact that no air is found on the recovery of the body does not prove that murder was committed and the body then thrown into the water.

Since, as it appears, vitality may remain present though latent even for hours after respiration has stopped, and that when death comes, the chilling of the body may have been its cause, the first step is to use heat. The body is placed in hot water, which is furthermore flung upon it from a height. If the work is going to be successful the spasm of the glottis will presently relax and attempts at breathing begin. The bathing is then stopped, the patient wrapped up in blankets wrung out of hot water, artificial respiration continued until breathing is well established, and the patient is put to bed. This program has been tried by a number of physicians throughout the country and very favorable results reported.

There are no certain signs of death known to medicine, short of *rigor mortis*. It has even been maintained lately on good authority that we must go further than that for certainty, as far as the commencement of decomposition. But some, at any rate, of the cases of *rigor mortis* are due to the coagulation of the muscle fluids and absolutely imply death.

M. D.

## Is the Earth Getting Hotter?

GEOLOGISTS seem very loath to admit the possibility that the temperature of the earth is not falling but rising. Yet such evidence as there is, very recent, points in that direction. It is possible that the fact itself, if it is a fact, is also recent. The evidence comes under two heads: the omnipresence of radium, and the universality of radioactivity. The geologist Strutt has examined scores of rocks, finding all of them to contain more or less radium. It varies in quantity, but this variation does not seem related to the igneous or sedimentary origin of the rock. The amount is very much more than would be required to maintain the heat of the earth. Either, therefore, it exists only in the crust, or the earth's temperature is rising.

Another chemist, Mr. Campbell, has conducted some delicate experiments on a number of metals and their salts, finding them also radio-active, though in a less degree than radium. Thwing also, experimenting on small cylinders of various metals and rocks, has found them to have a temperature gradient of their own. But the heat they are able to maintain, so far as is yet known, is less than that necessary to maintain the general temperature. It is evident that the ancient doctrine of eternal flux is strictly true. There is disintegration everywhere, and, presumably, parallel integration. It now remains to estimate the amount of radium in relation to the depth in the crust of the rock containing it. If it should be found constant at all accessible depths, or to increase, there can be no reason for suggesting that at a certain point it ceases to exist — except the preconception that the earth is in process of cooling.

RODNEY'S MONUMENT, SPANISH TOWN, JAMAICA

**Rodney's Monument**

**S**PANISH TOWN is the old capital of Jamaica. It was to Port Royal, the sea-port of Spanish Town that the British admiral Rodney brought his prizes in 1782, after his victory over the combined French and Spanish fleets under de Grasse, which victory saved Jamaica from invasion.

**Shipping Irish Scenery to America**

**I**T is reported that Philadelphia has recently received a consignment of 200 tons of the basaltic columns of the Giant's Causeway. The Causeway not being in a legal sense an ancient monument is not under special protection, and the Irish courts decided that the stones belonged to a company; so presumably it is legal to sell them. In former days people made pilgrimages to favored spots, but now they prefer to annex as much as they can of the favors and bring them home to their magpie's nest.

STUDENT

**Facts About Tortoises**

**T**ORTOISES have most of their bones outside their bodies; for what we always call the shell is not really a shell at all. It is not in the least like the shell of an oyster, mussel, or snail; nor even like the shelly armor of a crab or lobster. It is really a part of the skeleton; and a close examination will show that it is made up of two parts: an upper one called the carapace, and a lower

one called the plastron. The carapace is made partly of the middle joints of the backbone and of the ribs, which are very broad and flat and are fastened firmly together at the edges like the bones of our skull. The plastron is made up in exactly the same way, partly of the collar-bones and partly of some extra pairs of ribs on the lower part of the body, which are found only in certain reptiles. Thus the "shell" of the tortoise is a kind of bony box, covered with horny skin with five large holes, one in front, through which the head can be thrust out and withdrawn, and one at each corner for the legs. Hence it may be said that when a tortoise is frightened and withdraws its head and limbs, it gets inside its own chest.

The carapace being made of bone and of an arched shape is very strong, and one can stand upon it without hurting the animal. If it were a true shell it would break under this treatment.

The tortoise has no lips nor teeth, the mouth being very much like a bird's beak, with sharp horny edges. A tortoise, eating lettuce leaves, just strips off shreds and swallows them whole. The jaws of a small tortoise are not strong enough to bite one's finger; but the gigantic specimens found in some parts of the world could snap off a finger as if it were a carrot.

Tortoises lay eggs, but do not hatch them by the warmth of their bodies, being cold-blooded animals. They bury them in holes in the ground

in dry places, and leave them to be hatched by the heat of the sun. They dig these holes with their feet, using the fore feet like picks to dig the earth, and the hind feet like shovels to push it away. In the early autumn they bury themselves and hibernate until the spring.—(*Adapted from Rev. Theodore Wood in London "Tribune."*) E.

**The Meadow-Lark, the Farmers' Friend**

**T**HE American meadow-lark, with golden breast marked with black, has been made the subject of investigation, as to its diet, by the Department of Agriculture. After examining the stomachs of nearly 300 birds from different parts of the country, they found that 75 per cent of the contents consisted of insects—bugs, beetles, grasshoppers, caterpillars, etc. The bird lives chiefly on destructive insects, noxious seeds and waste grain; and even when found feeding in a grain field it is eating insects as a rule. Hence the shooting of it is a very poor practice. STUDENT

**Conflicting Earthquake Theories**

**W**E are told in the text-books that the earth is slowly contracting from loss of heat, this contraction causing a puckering of the crust, like the skin of a rotten apple, and so forming mountains; also that earthquakes are caused by the sudden "giving" of the rocks during this process.

But another Professor says "all this must go"; it is wrong. The earth does not contract at all, he says; consequently there can be no puckering and jarring from any such cause. Though heat may escape through the crust (20 miles thick), the interior does not fall in temperature. Mountain-building is caused by leaky ocean-floors permitting water and lava to come into contact, whereby steam is generated, which bulges out the crust. The fact that mountains occur along sea-coasts is held to support this view. Earthquakes also are caused in the same way.

A while back was reviewed an article by a scientist, who held that the weight of the crust was more than sufficient to prevent the strongest dynamite from exploding, let alone steam.

With such manifold and vague data to start from, figures may lead us almost anywhere.

The Professor quotes Aristotle to the effect that the Greeks thought earthquakes were due to the agitation of vapors within the earth, which tended to escape and diffuse themselves in the atmosphere. But then were not the ancients usually wrong? He calculates anew the age of Mother Earth, which he puts at ten million years, and rejects the radium hypothesis, which upsets all calculations of age based on thermal considerations. STUDENT

Theosophy is the quintessence of duty.—*Helena Petrovna Blavatsky*

**A**N interesting triangular discussion has been going on in one of our Eastern periodicals. It was opened by a certain parent whose little girl had been attending public school for two years and who found at the end of that time, to his horror, that she could not do the simplest examples in multiplication, that her writing was execrable and that she was incapable of reading with the slightest expression or clearness of enunciation. This parent, before bringing his woes to the attention of the public, decided that he would find out, if possible, where the fault lay, *i. e.*, whether the girl were stupid and mentally incapable, or whether school methods were poorer than in the days when he (the father) went to a country school house. He knew that two years under the "primitive" methods of his childhood had left him perfectly capable of doing the things his child could not do at all. More than that, he knew that something or other had awakened in him a great love of learning at the early age of eight, while his child was indifferent about her books to an exasperating degree. He took her out of school and gave her a few weeks of personal attention on his own part. At the end of that time the child showed a marked interest in her books and had learned the three R's very acceptably. Then he stated his case in the papers.

This made a bad showing for the public school system and, not unnaturally, one of the teachers retorted in behalf of the schools, declaring that the child could not possibly have learned so rapidly under the father's tuition had she not been getting in those two years a wonderful foundation of "development and awakening," upon which this father had but to build.

The father then re-entered the lists, speaking not from the standpoint of a teacher, nor one reminiscent of the good old times, but from that of a business man. He said:

## The Method vs. the Child

There is no enthusiasm, no fervor, no energy in what they do. That is the criticism that is being made of the children of today everywhere, and it suggests a situation that certainly justifies a feeling of apprehension. Enthusiasm and energy are at the bottom of all real success in life. A spirit of don't care never achieved results worth while in any direction. And yet it seems to be the actual fact that the children of today are lacking in vim, listless in their work, taking little sturdy interest even in play. It is the complaint on every side among employers of boys and young men that they bring but a vague attention to their work even when they mean well. They have as a rule no enthusiasm nor energy and

Nada te turbe;  
Nada te espante;  
Todo se pasa;  
Dios no se muda,  
La paciencia todo lo alcanza,  
Quien á Dios tiene  
Nada le falta.  
Solo Dios basta.

no power of concentration. Sometimes they are awakened to these qualities by their employment and become competent; but on the whole the young people of today are not a reassuring company.

There is an educational problem, no doubt about that. This controversy is but one of the many signs which betray a lamentable lack of faith in existing educational methods, not to speak of an equally lamentable lack of knowledge concerning the child's nature and needs. To a degree the father understood his child's intellectual needs—for it is noticeable that the moral question, so ubiquitous today in educational discussions, was not mentioned—but he did not know the remedy. His experiment in giving a child personal attention was in the

nature of an experiment, one no business man could find time to continue. The school assumes to understand the child's real needs, but results do not go to show that this assumption is a defensible one. The whole thing calls up to the mind a vivid recollection of the picture we used to have on the last page of our school drawing-books, which represented two little chickens, each strenuously tugging away at a worm that was stretched in agony between their tightly-set little bills. Below the picture was the carefully printed caption: "Which will win?" Nothing was said about the worm. The same question is being asked today in the educational world by combatants over various methods—but what about the child? Supposing one does win—what good word can be said of a victory that sacrifices the child in the process? Has not the time gone by for mere experiment? The Rāja Yoga School at Point Loma holds that it has and, what is more to the point, is demonstrating this before the eyes of the whole world. Those who will not look will not see this, but such are becoming fewer. The educational eyes of half the world are already turned this way. STUDENT

## The Work of a Woman Explorer

**F**EW women have undertaken anything in the nature of exploration which equals the accomplishment of Mrs. Leonidas Hubbard in Labrador. Upon the death of her husband, who perished in his attempt to explore further into that little-known country, this courageous woman determined to complete his unfinished task. Accompanied by three Indian guides and a young Eskimo, she followed the Nascaupsee and George rivers to their sources and traveled through six hundred miles of unknown country, accomplishing the trip in about two months.

As a result of her efforts the world is richer than before in knowledge of the topography,

climate, flora and fauna of Labrador. As her visit was made in the months of July and August, nature was at her loveliest there and Mrs. Hubbard in her report gives many glorious nature pictures. Owing to the clear sparkling atmosphere the coloring is indescribably beautiful. She calls it a land of rainbows. To quote from the report made by her to the American Geographical Society, the first part describing a most unusual and beautiful sight, a caribou migration:

On August 8 we came upon the migration, and

Through the caribou belt other game was more abundant also. Every day mother ducks with their flocks of little ones were seen, and a number of geese were taken. Gulls and loons were there in numbers, and ptarmigan were very plentiful as far as the head of the Barren Ground Water; but beyond none were taken until we reached the post.

Along the lower part of each of the rivers signs of foxes in large numbers were found, and the lemmings on which they feed made us not a little trouble. They were about in thousands, and the ground was so perforated with their holes as to remind one of a porous plaster.

her eagerness to believe that they really were clover.

There was a wonderful clearness in the atmosphere, which made landmarks miles away seem very near and clothed the far distant hills with color indescribably beautiful. In the blue of the hills and the waters and the sky there was a peculiar silveriness, which, with the white of the reindeer moss and the dark green of the spruce forests, touched in places with tender green of the white birch and poplar, made a combination of color which I think can scarcely be surpassed in beauty anywhere in the world. In a way which I could neither describe nor understand, it was comforting.

Lomaland Photo. and Engraving Dept.

THE GREEK THEATER, POINT LOMA, CALIFORNIA

saw one herd in which there were thousands. We did not find them again in such numbers, yet for fifty miles of our journey they were seen in smaller herds every day, and sometimes many times a day.

They were in summer dress of pretty brown, shading to gray and white on the under parts. The antlers were in velvet and of immense size, and males and females were already herding together. Apparently they had been in occupation of the country for some time.

From Ptarmigan Point, on Lake Michikamats, to the head of Long Lake, on the George River, the country was a network of their trails, in the woodlands and bogs, cut deep into the soil, on the barren hillsides broad, dark bands converging to the crossing place at the river. North of the Height of Land we passed at intervals long piles of whitened antlers; and along the shore opposite our camp of August 15 a broad band of white caribou hair, four feet above the river, told of their crossing and re-crossing while shedding their winter coats.

Only once in passing this part of the country did we find trace of their enemy, the wolf. Throughout the journey we did not see any, but once, while running down the lower George River, a lonely cry came down to us from one high up on the mountainside.

In the lakes fish seem abundant, though we traveled too fast to do much fishing, and the nets were not once in the water. There are brook trout, ouaniche and namavcush, some whitefish, in the lakes, and in the lower George the sea trout and salmon.

The flowers are beautiful, though not so varied as in the home country. All along the Nascaupsee blossoms of the Labrador tea filled the air with their fragrance and pale laurel grew in abundance. Now and then we crossed great beds of blossoming cloud berries and everywhere the star flower and bunchberry showed their white blossoms.

One day while ascending the Wapustan River, Gilbert handed me a dandelion, and during the day I saw several of them, but did not find them again throughout the journey. On the upper Nascaupsee the pink bells of the low cranberry showed in the carpet of glossy green, and near the water the blossoms of the dewberry.

Violets grew along both rivers, but most beautiful of all was the twin flower. Its delightful fragrance first attracted my attention and looking down I saw the long trailing vines.

At Ungava masses of this beautiful flower creep along the foot of the mountain, while indoors in a pot on the window sill Mrs. Ford, the agent's wife, treasures two tiny clover plants, almost afraid in

Of her own part in the expedition Mrs. Hubbard recently said:

My husband was misdirected, broke down, and perished of exhaustion. I determined to finish the work in which he had fallen. I told no one lest I should be opposed. Publicity would have led to enforced abandonment of my scheme.

My outfit consisted of two tents made of balloon silk. I had also two canvas-covered canoes, 750 lbs. of provisions, two rifles, three 22-caliber single-shot pistols, and a 32-caliber revolver.

Mrs. Hubbard followed the route taken by her husband, the exhaustion consequent upon following which cost him his life, for some distance inland, and then broke into new and unexplored country along the courses of the Nascaupsee and the George rivers. Of these she reports:

These rivers were of great breadth and very deep. The George was at one part three miles across. The rapids were exceedingly dangerous, and we traversed the whole lengths of the streams in canoes, which were managed by the men who accompanied me. I did not meet a living person over a stretch of 350 miles, and the only signs of human life were the skeletons of some deserted wigwams. STUDENT

RAJA YOGA WARRIORS IN LOMALAND

### A New Year's Call to Duty

WITH our hearts still full of Christmas joy we find ourselves at the threshold of the New Year. What new glad unfoldment of life shall it bring to boys and girls? And how are we going to set to work to make 1908 a year that shall link young hearts everywhere in a more joyous, uplifted effort to serve, than has ever before been made?

First of all, as in all moments of high thought and true feeling, our hearts turn in gratitude to the great Theosophical Teachers, H. P. Blavatsky, William Q. Judge, and Katherine Tingley. These Teachers are always so close when we think high thoughts and make high resolves, because it is these Great Souls who have given the people in the world the magic touch that has awakened a longing to live to serve Humanity.

So much has happened in 1907 to encourage the young folk. Mrs. Tingley has prepared for the opening of two more Râja Yoga Schools. The prospect of more comrades-in-arms, equipped with Râja Yoga, makes us feel stronger and more enthusiastic in our work. And we feel a great joy in knowing that so many boys and girls in Europe have shared with us the inspiration of the presence of the Founder of the Râja Yoga Schools. We resolve to look deep into our hearts and rouse into activity more of the love and strength which the knowledge that we are divine tells us are there for us to call forth.

Of course we know that there are weak places in us to strengthen. Perhaps, nay, surely, if our purpose is *deep* enough it will make a firm place under the weak spots and gradually strengthen them. If we look at ourselves honestly we shall see that another thing

we need, in order to do away with warped places in our natures, is to work *steadily*. A great writer once said that all along the path of life are to be met people who just fail of having a great power to help with because they cannot be counted on for long. There is always a place and a time when they weaken—sometimes when a breath from their divinity would have lifted them into a higher realm of effort, if they had only *kept on steadily a little longer*. The story of how wisdom and poetic inspiration came to Taliesin, the greatest of the Welsh bards, illustrates what may happen to many another, if he could but acquire steadiness of effort.

Long ago a woman living in Wales, who studied the arts of magic, had a son who was her despair. She saw that he was not going to be a success in life. He had neither the grace and strength of form that would make it possible for him to become a knight and win glory by feats of arms; nor had he the wit and wisdom that would make the great King Arthur and his knights value his services as a counsellor. So Caridwen, for this was the unhappy mother's name, resolved to brew some magic liquor in a great caldron from which, so her books on magic told her, would proceed inspiration and wisdom for her son.

Every day Caridwen gathered herbs which she placed in the caldron, herbs of which she knew the magic properties, and from which she knew would issue "the blessed drops of Inspiration and Science" that would make the person whom they touched a sage and a seer, whose knowledge of past and future would make him sought after by the highest in the realm.

Caridwen set an old blind man to keep the

fire burning under the caldron; and to stir it she appointed a lad, whose instructions were that he must keep on unceasingly for *a year and a day*. Only from a caldron of magic herbs thus watched and steadily stirred could come the magic drops of Inspiration.

But Caridwen like many other people who try to use magic to carry out their own personal purposes and desires, forgot, or never knew, the one thing that might have won her son the magic gift. She set him no task that took a year and a day's steady application to duty to complete. And one day towards the end of the year while Caridwen was out gathering herbs, the mystic drops burst from the liquor in the caldron and fell on the boy who was stirring it.

In a twinkling he became enlightened; he saw all the past and all the future, and felt the inspiration of a bard. He knew his divinity in short, and withal knew even his present danger and how to escape from the revengeful anger of the disappointed mother, who came home to find the caldron broken, the magic drops escaped, and all her labor of no benefit to herself or her son.

*A year and a day!* He was willing and able to keep on for that period of time unfalteringly—and the great gift came—the gift of the soul that is so close to many a boy or girl. Taliesin's wisdom and inspiration gave him the power to serve nobly. His name means "Radiant Brow," and was given to him only after he had won his guerdon by *steady work*.

May 1908 find many boys and girls whose deep purpose and devoted attention to duty bring such a gift of the Soul to make them better fitted to serve nobly! GENTIAN

# THE CHILDREN'S HOUR

Lomaland Photo. and Engraving Dept.

THE RÂJA YOGA TOTS WAVE TO ALL NATIONS, "A HAPPY NEW YEAR!"

## A New Year's Letter

DEAR Children All Over the World: Happy New Year! It is with joy ringing in my heart that I write these words to you. I feel, here in Lomaland, as if I were sitting in a secret room where beautiful gifts were being made and the children for whom they were intended had guessed very little about them. Well, you are the children and not very many of you know what is being prepared for you here at Point Loma.

You have heard by this time that your Lotus Mother of Lomaland has visited many countries of Europe this autumn and has met many of the children there. She went just like the fairy godmothers in the stories, not for her own pleasure, but because she knew that she was needed there at that very time. She went to prepare something for the New Year.

From land to land Lotus Mother went, finding everywhere people who would willingly give up everything they had to help to bring happiness to the world. They had been longing to do something for years but did not know just what to do. And because they were not thinking of themselves, and therefore really *could* help, Lotus Mother showed them what to do, and opened up the way for them, and now they are happier than they have ever been before; for they have Lotus Mother's promise that they shall have Râja Yoga Schools, and in two beautiful forest homes Râja Yoga work has actually been begun.

So that now the friends of children with Lotus Mother at their head are working hard to prepare for these schools where you may grow wise and noble. Lotus Mother is working hardest of all; she must see that all is done in harmony with the Law; she has to cheer and help all the others when hope begins to fail and they grow weary; she has to be always on guard so that enemies may not de-

CHILDREN OF LIGHT, as ye go forth into the world seek to render noble service to all that lives.---Katherine Tingley

stroy what is being done; she is looked to for help and advice from all parts of the world.

The students in Lomaland are working busily too, to fit themselves to be teachers in the Schools. They are learning to know the heart of things so that they can respond to the heart-cry of the children; they are learning to listen so attentively to conscience that her voice will never be silent when they need to hear; they are learning to work without praise or pay but just because they love to do right, for until they do this they can never teach the little ones that "Life is Joy." And Lotus Mother is guiding them in all this and teaching them in wonderful ways what they need to know of books, music, art, industries, science, and the household matters that make life happy and beautiful.

Now what are *you* going to do to prepare yourselves for all that will come to you from Râja Yoga? Begin to be worthy; begin with this New Year. Try to be heroes for the Right — never cowards who do what is wrong and selfish just because others do it. It is harder for children to do this who do not live in blessed Lomaland, for here every person and everything seems to sing a glad song when the children do right. Here too the feeling of responsibility has been awakened. They know, even the tiny tots, that whenever they do wrong, this makes it harder for all other little ones to do right and thus Lotus Mother's great work for Humanity is hindered. They have learned to care about this, and so they rejoice in conquering the little evil doer in themselves, knowing that in this way they make shorter the time that must pass before the world becomes a happy place for all the

children who have needed Râja Yoga so long.

Many years ago a little girl was told that what she wished whenever a star fell would come true. She stood out on the snow-covered earth looking up at the stars, one New Year's night. She thought of playthings, of pretty clothes, of many things, but none of them seemed worthy of a wish that the stars were going to make come true. How could she expect a star-fairy to do anything just for *herself*? But as she said to herself "I will wish for something that will make everyone happy," a star shot gleaming across the sky and she felt that a star-fairy had gone on an errand that would help her wish to come true.

After that when she used to watch the stars she often found that just when there was a shooting star she was thinking of something else and had no time to say her wish before the star had gone. Then the little girl thought "I will think my wish so hard all the time, I will so keep it in my heart that the star can read it there and know." And because her wish was for Brotherhood and for True Comrades such as Râja Yogas make, it came true and she is a happy worker in Lomaland today. Let the stars remind us of this great wish we can keep in our hearts for the Light of Brotherhood and Râja Yoga to come to all the children in the world.

You see in the picture the Râja Yoga tots waving the flags, wishing the nations "Happy New Year." They say: We will stand by your flags for Brotherhood until your children are ready. Our hearts are strong and brave; they hold the love of all the nations of the earth. We see lights gleaming in the distance where other Râja Yoga Schools have begun their work. There other comrades will grow up. Together we will make "Happy New Years" for all the world. SKYLD

S a n D i e g o C a l i f o r n i a

## LAST SUNDAY AT ISIS THEATER

"The Larger Hope for Humanity."—Point Loma Orchestra Delights Large Audience

A LARGE audience filled Isis Theater last Sunday evening. A special Christmas program had been announced and the Point Loma orchestra rendered several selections which were received with great appreciation by the audience. Two addresses were given on "The Larger Hope for Humanity," by Miss Elisabeth Bonn and Mr. Cranstone Woodhead respectively. From the latter we make the following extracts:

"In venturing to speak of a Larger Hope for Humanity we naturally feel ourselves circumscribed by the very conditions which tend to hide these wider, truer and nobler aspirations from the eyes of our fellow men in these early years of the 20th century.

"Almost everyone will freely admit that there are higher ideals than those which we find actually crystallized in the social and political customs, and the living thought life, of even the most advanced of civilized nations, but there is a wide diversity of opinion as to the best way of promoting a beneficent natural progress into the future.

"In endeavoring to find a clue which shall unravel the myriad lines of interwoven life-growth of man and nature, it is at once clear that no ideal can be of permanent value which is not derived from the actual and living truth of the natural science of things existent. No aspiration can uplift which is not according to the law. No effort for improvement can be effective which is not consistent with the latent possibilities of the world in which we live.

"Moreover, as all that we see and know, in addition to a much greater all, which we neither see nor know, is under the control of the Great Law, which ever works for the permanent good of all Creation, it is well for us to lay aside our petty personal worries as to our trifling share in the great scheme, and take the wider, saner, and much more deeply interesting view of the evolution of all created things, which will alone teach us our proper place in the universe, and bring us wisdom, joy and peace.

"What then is the Larger Hope for Humanity? Where does it lie? What is its foundation? How can we know it and feel it for ourselves?

"These are questions which appeal in the most vital way to every earnest man and woman,—to every aspirant after true progress. Their solution is of the utmost importance to all of us, and no questions of temporal existence are so worthy of serious consideration.

"To the student of Theosophy who has devoted his life to the elucidation of this question, there is one central fact which illumines the whole field of inquiry. It is the long-forgotten truth that "Brotherhood is a fact in nature," and that forgetfulness of self and de-

votion to the welfare of others beget a viewpoint of enlightenment, which clarifies the atmosphere of discernment, and enables the inquirer to form increasingly correct ideas of the world with which he is surrounded, and also of that aspect of it which is represented by his own limited individuality.

"The advent of Christmas-tide is one of those yearly events which the cycles of time bring round in constant succession. From time immemorial the period of the year when the sun stands still in his recession, and turns again towards a coming spring of renewed activity, has been celebrated by the people of all nations as a time of glad rejoicing. The midnight of nature is passing. The dawn is at hand. Verdant and prolific mother earth will bloom once again in all the richness of fruit and flower. The sun is reborn in the Heavens. Such are the outward facts of Nature patent to the senses of physical man.

"But, as H. P. Blavatsky has well said, such events as these have always more than one aspect. It is not only a new opportunity which occurs in physical nature. The whole life of man is affected by the event. There is a shining forth of the inner consciousness also, occurring at this Christmas-tide of the earth,—a light which illumines the more hidden aspects of man's nature, a returning glimpse of the golden age of the past, which breaks forth in an access of joy and gladness and good fellowship and charity to all. This corresponds to the midnight illumination of the soul,—it is the spirit of Brotherhood which draws near at Christmas-tide, and if we will, it may so mold our inner being, that the coming year may bring forth the blossoms of better things, and the fruits of a nobler and higher life.

"It cannot be too often reiterated that the Christmas Festival has historically no connexion whatever with the birth of Jesus the Nazarene. The history, tradition and mythology of all nations speak of this festival from the immemorial past. With the ancient Egyptians it was celebrated under the symbol of a new born child. With the Jews it was called the 'Feast of Lights,' and the lights were understood to represent the light of the world. With the ancient Druids it was kept with sacred ceremonies in their temples at Carnac and Stonehenge. Processions of white robed priests crowned with garlands, and carrying torches represented the ancient mystical idea. With the degenerate Romans it was degraded into a yearly Saturnalia. During the pontificate of Julius I, however, about 350 A. D., it was decided by the fathers of the Romish Church that this ancient and time-honored festival should be adopted into their formal ceremonial, and so the birthday of the Nazarene was thenceforth decreed to have taken place at this period of the year, although this was not actually the case.

"And just as there was a Christmas long before the time of Jesus, so there was a Christ

which we find referred to in ancient philosophic literature many centuries before his birth.

"For of a truth the Christos or Christ principle is in the heart of every man, and may be found by him who seeks diligently for himself. It is not that which can be described by words, nor can any man say 'Lo, here is Christ, or lo there!' It is the divinity within,—the spirit of Brotherhood—the consciousness of the presence of that which is spoken of in all the ancient sacred scriptures, under every sort of allegory and parable as the God in the Heart of Man.

"The Larger Hope for Humanity then, is the fact that he is essentially divine. This fact has been so long forgotten that it is almost lost sight of today in the teaching of the churches. Yet it is the central point in the teaching of their own Master, as it was in that of the Masters who preceded him. Unwise religious teaching has taught man that he is by nature a worm of the dust, wicked, and unworthy of eternal life. Confusing the lower nature, (by the conquest of which he realizes his own true character) with the divine soul of man, teachers of so-called religion have taught that which they did not understand. They have been blind leaders of the blind. They have not realized the teaching of their own Master who taught that we are all 'Temples of God,' and there is 'a Light which lighteth every man who cometh into the world.'

"The Larger Hope for Humanity lies in the recognition of this fact, and its foundation is the discovery of it, each man for himself, as no man can do it for another; nor is it necessary or possible for any priest or minister to intervene.

"One of the principal ways in which this larger hope for Humanity will be realized in the future is by the right education of children. Unwise education has, in the past, too often left children devoid of that proper self-dependence, true self-respect, and self-control which is so necessary for the formation of character. The foundation of the Rajâ Yoga training at Point Loma is the causing of all the little ones to understand from their very earliest babyhood, that they are dual in their nature, and that they can make the higher side of their character take control. This is the meaning of the words Râja Yoga or Royal Union. The results are now well known throughout the civilized world, and educators of children are everywhere seeking light upon the subject.

"It would be well for us if we would look well into this spirit of Christmas-tide which comes about us at this yearly festival and discern somewhat of its inner meaning. If we could hold it as a part of ourselves into the coming year and expand it into a wider toleration, charity and love for our fellowmen, the results would greatly help our discernment of wherein lies our Larger Hope." ## Gustaf Vasa, a King among Kings

(CONCLUDED FROM LAST ISSUE)

GUSTAF at last reached his relatives near Stockholm and was welcomed and hidden away, for they had just received an invitation to the coronation of the king and were about to leave for the festivities. Gustaf begged them not to go, but to no result. He alone remained and soon a servant, bathed in tears, rushed in to tell him the news of the horrible massacre in Stockholm, where the king had foully murdered all the prominent Swedes present, among them being Gustaf's father and near relatives. His mother and sister were imprisoned to be carried away to Denmark. At last the king had shown his real nature for he threatened to make a journey through the country in a way that the Swedes should be unable to lift their heads.

The frightful news spurred Gustaf to immediate action. He turned his steps north to the Dalecarlians, who had previously stood beside Engelbrekt and the Stures in many difficult situations. The story of his adventures during this time, when spies were sent everywhere to seize him, and the wonderful way in which he escaped all dangers, make the most cherished reading of the Swedish youth. Here he was helped personally, but received no answer to his affecting exhortations to save the fatherland. The last place where he spoke was at Mora, when the people came from the church, and his statue on the very same place is now to us an exhortation to work nobly for our country's good. It was Christmas-tide in the year 1520, and Gustaf had received the heaviest of blows, but still calm he walked towards the mountains to reach Norway, hoping to find a place in which he could stay without constant danger of assassination.

Soon, however, came news of the relatives of Gustaf, and also many others who had escaped during the massacre. At last the people clearly perceived their danger and were ready to act. But the only leader to be found was Gustaf, and where was he then? The two best snow-skate runners were sent to follow his track and after some weeks they found him near the mountains deep in the forest. Well can we imagine how he felt it when the silence and the despair was broken by such a message!

Then at last, recognized as Leader, he conducted the operations in a wonderful way. He seemed to have the wit and strength of many men; in his constant journeys from one place to another he was always found where most necessary, and his sharp eye noted the small details which, thanks to his care, often made the victory. Victory followed him in every direction, the king suffered heavy losses, and before the new year, 1521, was ended, Sweden had once more shown the world that it had a deep-rooted life of its own that could not be quenched. The nation was saved. Gustaf was elected Protector and two years later, when the War for Independence was fully finished, King.

The youth who, three years before, had landed at the Swedish coast, standing alone,

in imminent danger, and having nothing but his true heart and strong hand, now sat as king of his country. He had rid it of its outer enemies. This done, the moment had come to think of inner enemies and inimical conditions within its borders, and Gustaf set about this work with the same victorious and unconquerable spirit he had ever shown. He gathered around himself men of the new time, called to the chief church in Stockholm one of Luther's Swedish pupils to preach simply from the Bible, arranged for an excellent translation of the Bible, that people might be able to judge for themselves on religious questions. He did not for many years define his own position in regard to these, but himself stood free, above the fight, and directed it when needed. His good sense and diplomacy are shown by the fact that Sweden had within

Du gamla, du fria, du fjällhöga Nord,  
Du tysta, du glädjerika, sköna!  
Jag hälsar dig vänaste land uppå jord,  
Din sol, din himmel, dina ängder gröna.

Du tronar på minnen från fornstora dar,  
Då äradt ditt namn flög öfver jorden.  
Jag vet, att du är och du blir hvad du var.  
Ack, jag vill lefva, jag vill dö i Norden.

Thou ancient, free, thou Northland mountain-high,  
Thou silent land, delightful, beauty-throned,  
I greet thee, loveliest land in all fair earth,  
Thy sun, thy sky, thy fair and grassy fields.

Enthroned on ancient, glorious memories,  
Wide-honored swept thy name around the earth,  
Thou art and shalt be even as of old  
Yea, in the Northland live I and will die.

(The following note from a Swedish student accompanies the above poem and translation: "It is one of the most beloved of our national airs and has the power to touch the hearts of Swedes the world over. It was written over a hundred years ago.")

six years officially discontinued all connexion with the Pope and had taken its religious affairs into its own hands. The Roman Church ruled in Sweden only 279 years.

Commerce was then almost entirely in the hands of the mighty Hanse-towns and the country was deeply indebted to Lübeck for help in the War for Independence. Gustaf paid all debts fully, though to do this he had to take the plates and bells from the churches. Afterwards he made commerce more free and did not renew the franchises which the Hanse-towns had held for so long a time. The result was a war, but he was victorious as usual and Sweden then came to be recognized as a power in Europe.

Gustaf Vasa had to fight all the baser elements in his country in order to lift his people to a higher level. Many of those who at first stood by his side could not follow him in the rapid development and afterwards turned against him. Thus in reality he stood alone

even as King, always at the head and ever ready to act. Many times the future darkened around him, even in his last years a rebellion came near to tearing his work to pieces, and it looked as if all the powers he had fought had risen to strike a common blow. Old as he then was, he again exerted all his strength and triumphed.

Gustaf Vasa was a highly cultivated man and possessed a most charming manner. He never lost his clear-sightedness and had an admirable way of expressing his thoughts. His stature was royal; in his presence all felt the King and Leader. He was very musical and loved to hear music at night, when he himself played and sang to the accompaniment of his lute.

On his many private domains Gustaf set the people an example in better methods of farming and industry. He inaugurated new methods of tilling the ground and rearing cattle and horses. He was withal the greatest manufacturer in his country. He planned the canal-system, which was, however, not carried out until three hundred years later; he built a system of country roads, beacons the reefs and shoals along the coast and built a new and strong navy, which was destined to play a prominent part as a protection to Sweden long after his death.

Education was his special care and he started many schools; and in spite of being hampered by monks and priests he laid the foundation of the school-system, of which Sweden, not without cause, can be proud. By his order one hour a day must be devoted to music in every school, especially to instruction in singing and the first elements of harmony. In fact there is hardly a department where his initiative genius can not be traced in some way or another. We see him, too, as the father taking care of his household. Touching upon what had been accomplished he said in his last speech: "What good is achieved, it is the work of God and you have to give him your thanks; if some mistakes and faults are to be found in the government, if everything has not been discharged so well as it ought to have been, then I request of you as faithful subjects your forbearance and pardon. God is my witness that it has not occurred from ill-nature or unwillingness, but from human weakness, I have not been able to do it better; moreover, my intention has constantly been the improvement and the welfare of the inhabitants of the country. Well I know that there are many who think of me that I have been a hard King. The time shall come, however, when the children of Sweden will wish to raise me up again out of the earth, if it were possible!"

It is said by a historian, that "Gustaf Vasa belonged to a higher order of men and that he lived for many generations." Time has proved this to be true; we feel the inspiration of his acts and words to this very day. In the present awakening of Sweden his genius plays a most prominent part; the spirit that impelled him to action is once more called forth in the life of the nation of today.

A SWEDISH STUDENT IN LOMALAND

# THE UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l   O f f i c e   P o i n t   L o m a   C a l i f o r n i a

The Headquarters of the Organization at Point Loma with the buildings and the grounds pertaining thereto, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are what they stand for: the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, it unites the philosophic Orient with the practical West.

## Katherine Tingley in Europe

Theosophical Address of  
Katherine Tingley

(Translated from *Algemeen Handelsblad*,  
Amsterdam, November 19, 1907)

IN the great hall of the Concert Building, completely filled by an interested audience of ladies and gentlemen, Mrs. Katherine Tingley, Leader and Official Head of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY (whose headquarters are at Point Loma, California), delivered a public address last evening. The lecture platform was tastefully adorned for the occasion with shrubs and flowers. The Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, the "autocratic but beloved Leader of one hundred thousand Theosophists," as was stated in an interview which appeared in one of the American newspapers, gave an exposition in simple words, coming from the heart, of what Theosophy aims at, what Theosophists are striving for. "For the whole of humanity it is a time of great unrest," she said, "and we wish to bring to it a doctrine that will give peace, that can teach man to use the power which he possesses for good, but of which he is as yet unconscious."

"Humanity is everywhere seeking. Many are discontented with the present systems of education; many feel that there can be done so much more for the happiness of the human race. In the souls of men there are asleep marvelous powers, and we must realize that man is a part of a divine system. As soon as humanity comes to realize this all the higher possibilities of life will open before him. Theosophy does not bring another teaching, different from that which Christ taught centuries ago. But in the course of time much of the real teaching of Christ has been lost. If the teaching of Christ were still known today, if it still found application in the lives of men, Theosophy would not be needed. Now, however, it is much needed, and it will restore to us all that has been lost from true religion."

"In my many travels," the speaker said, "I became acquainted with many peoples who called themselves Christian, but how differently they conceived of Christianity, how much they condemned each other for heresy. But Theosophy will lead humanity again on the right path. It will make a bond of union between all the different beliefs and convictions, and restore the brotherhood of humanity. It will lead humanity to the light which now shines but for so few. If Christ's teaching had been understood would there have been all the divorces we continually hear of? Would there be unhappy lives? No, for the teaching of Christ and so also of pure Theosophy, which again brings the glorious message of love to humanity, would remove all pessimism which now reigns in human life, and restore man's belief in his higher, divine, destiny. What would become of humanity without hope, without expectation for something higher and better? To arouse that hope,

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

to support that expectation, is the aim of Theosophy, which seeks to teach man to feel himself at one with the highest law of life, and so to bring him back to the pathway of life, on which he may walk in eternal light.

"Every man has in himself the possibility of attaining to a higher, a divine life. But many, too many, let pass the precious time and too late they feel how much they have lost."

Mrs. Tingley then touched upon some questions which had been repeatedly asked of her. In answering them she declared that she believed in Reincarnation, in the coming back to a higher and better life, in meeting again one's loved ones, because love is eternal. She closed with an explanation of the divine mission of Theosophy which, she said, "will restore to man the knowledge of his divine nature and destiny, and teach him self-control and self-development. Through ignorance Theosophy has met with much opposition and indifference. Also much has been called Theosophy which is not. Hence there is just reason to criticize severely those who mislead the people. It is necessary also that one should study Theosophical literature, from which it will be seen that Theosophy teaches no new religion, but a new and correct conception of Religion."

Mrs. Tingley's speech was listened to with keen interest, and received hearty applause. Today Mrs. Tingley leaves for Groningen. Thursday she goes to Arnhem, and after visiting Germany, will return via England to America.

## Theosophy

(Translated from *Nieuws van den Dag*, November 20, 1907)

AT a meeting, begun with an organ selection, in the great Hall of the Concert Building (Amsterdam), Mrs. Katherine Tingley, the Leader and Official Head of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, with Headquarters at Point Loma, California, last evening delivered a lecture on Theosophy.

Mrs. Tingley, whose dignified and refined appearance makes a great impression on all who see her, gave an exposition of her teachings before a very large audience. Theosophy, she declared, is quite another thing from what many so-called Theosophists have made of it. It is no new religion which brings new causes for strife. It brings only peace, peace of mind, by making man conscious of his high calling. Theosophy derives its wisdom from all re-

ligions, it is the Truth underlying all religions. The Theosophical Society asks from its members only a search for truth, a sincere endeavor to reach up to higher than material ideas, tolerance for the religious beliefs of others, and an earnest recognition of Universal Brotherhood—the brotherhood of all men. She urged her audience to become thoroughly acquainted with this doctrine by studying the Theosophical writings.

Mrs. Tingley, who spoke with inspiration, was listened to by her audience with keen attention and her address was afterwards interpreted into Dutch for those who did not understand the English language.

## Katherine Tingley

(Translated from *Nieuwsblad van het Noorden*,  
November 21, 1907)

A REMARKABLE personality is this woman, who travels around the world to teach and to bring to suffering humanity, for whom she has the deepest compassion, Theosophy, which she declares to be the only panacea for its ills. You may think about her teachings as you like, the work of this woman, who is recognized and honored as a Leader by thousands around the world, deserves admiration, and one has to admit at least her extraordinary force of character and energy.

The contents of her address, delivered by her yesterday in the Theater, has already been told in brief in our last issue. The theater was filled to its last seat and those present listened attentively to the words of this woman, as with vivid gestures she explained her conviction and spoke about her work, especially the work at Point Loma.

It will be interesting to tell something more of the history of her life. From her earliest childhood she endeavored always to help others. She first became acquainted with Theosophy when she met William Q. Judge, with whom she worked for more than three years, and who appointed her as his successor and the successor of H. P. Blavatsky. Immediately after having taken up the Leadership she started for a Crusade around the world, visited many European countries, Greece, Egypt, India, Australia and New Zealand. In many places she founded new Theosophical centers. On her return to America she began the establishment of the School for the Revival of the Lost Mysteries of Antiquity. In 1898 she founded the Universal Brotherhood Organization, into which the Theosophical Society merged itself, and which she directs with autocratic power. In 1900 she took up her residence at Point Loma, where she built the Aryan Temple in commemoration of H. P. Blavatsky and William Q. Judge, and erected many other buildings. Here she founded the Râja Yoga Academy, built a beautiful Greek Theater, and in the erstwhile desert began to lay out and build a beautiful city.

It is among the children that much of her most

important work is done. They are being educated according to the Râja Yoga system, founded by her, which aims at the harmonious development of the whole nature, physical, mental, moral and spiritual. Râja Yoga Schools already exist in England, Sweden, America and Cuba, and it is her intention to establish them the whole world over.

#### Katherine Tingley Lectures at Arnhem

(Translated from *Arnhemse Courant*, November 23, 1907)

**W**HATEVER one may think about Theosophy and its adherents, all who attended the meeting of Katherine Tingley last evening in the new Concert Hall of Music must have gone home with the conviction that they had heard a rarely gifted woman of great refinement.

Her language was English, and though unintelligible to many of those present, she knew nevertheless how to keep them spell-bound. She held them by her voice, which sounded clear and full to the very rear of the hall; by her face, which at one time was full of pathos as she told of the great battle which her predecessor Helena P. Blavatsky had to fight, then again royal when she predicted the victory of Theosophy, or gentle when she spoke of the little ones at the Râja Yoga School. She kept her hearers spell-bound by her attitude, her gestures,—in one word, one could feel that this woman is a born leader, which she has in reality become as the Head of more than one hundred thousand Theosophists all over the world.

Katherine Tingley spoke of the people of the Netherlands that had already become so sympathetic to her in an acquaintance of only ten days through their hearty laugh, their feeling of independence and brotherhood. After this friendly introduction she began to speak of her work and the work of her students. She spoke of her predecessor, the Russian lady, Helena Petrovna Blavatsky, that gifted woman who brought Theosophy to the Western world, and of the battle that she had had to fight to have her ideas accepted, which, she declared, must achieve ultimate success.

Mrs. Tingley then gave an exposition of the purpose of Theosophy, which, she declared, was no new religion, it does not ruin nor destroy but only seeks to bring men together and to promote a universal brotherhood. She pointed out how Theosophy can be applied to every part of our life and that its practical application is proven by the Theosophical Institution at Point Loma, California. On one department of this grand Institution the speaker dwelt more fully—the Râja Yoga School, the school where some hundreds of children are being educated according to Theosophical ideas.

This education begins with music; the children are taught the beauty of harmony, and then at this school which does not know of punishment, the study of languages begins. Although situated in America, the School is not American, but wholly international. Children from all parts of the world are educated there by teachers of different nationalities. By the inner power which these teachers derive from their knowledge of Theosophy they are able to obtain results which, said the speaker, are unbelievable.

Theosophy is gaining ground everywhere. In Cuba have been established Râja Yoga Schools. In England and in Sweden are to be founded Râja Yoga Schools, and the time will come, so said the speaker, when tens of thousands who are discontented with their present lives will array themselves under the banner of Theosophy.

Mrs. Tingley's speech, delivered in a manner of which she certainly has the secret, was listened to attentively by every one in the large audience, and was afterwards translated into Dutch for the benefit of those who did not understand the English language.

#### Katherine Tingley Arrives in New York

A DISPATCH from New York dated December 15th states that Katherine Tingley has arrived in New York and will be home for Christmas.

Path

### FREEDOM AND DUTY

From *Ode*, by Emerson

**U**NITED STATES! the ages plead,—  
Present and Past in under-song,—  
Go put your creed into your deed,  
Nor speak with double tongue.

For sea and land don't undestand,  
Nor skies without a frown  
See rights for which the one hand fights  
By the other cloven down.

Be just at home; then write your scroll  
Of honor o'er the sea,  
And bid the broad Atlantic roll,  
A ferry of the free.

And henceforth there shall be no chain,  
Save underneath the sea  
The wires shall murmur through the main  
Sweet songs of liberty.

The conscious stars accord above,  
The waters wild below,  
And under, through the cable wove,  
Her fiery errands go.—*Selected*

### "Faith, Reliance and Trust in Karma"

**"P**LACE your Faith, Reliance and Trust in Karma," such are the words of one of the world's great Teachers. Now, it seems to me that we Westerners cannot assert too strongly to ourselves that the universe is under law, governed by law, in all departments of nature—that it is impossible and unthinkable that anything should happen by chance, or in a haphazard way; and then, to come to the kernel of the whole matter, make an individual and personal application of it and realize that it is a vital factor in our life. If it were not so, could we be masters and controllers of our own destiny? Could we even be self-conscious beings with the soul power of free will? Think for a moment what it would mean to us, if there were *not* controlling and guiding Intelligences acting *under* law behind each act of man or nature. We could never be sure what would happen; if we planted peas they might come up potatoes; nor is that a more ridiculous idea than fondly to hope we may escape the consequences of our actions, mental or physical, or of our words or feelings.

Theosophy plainly shows that all alike are under the action of the same great Law of Karma and that therefore justice rules and the balance may be maintained throughout eternity for the whole mighty universe, worlds and their creatures. The simplest and the wisest of us alike bring this law into action with every breath we draw, and the wisest surely are those who have put "their faith, reliance and trust in Karma." They have accepted the law and worked out their freedom under its action.

What are some of the passwords to success that the Teachers have left us? "With what measure ye mete, it shall be measured to you again;" "Self-knowledge is of loving deeds

the child;" "Evil ceaseth not by evil, but by love"; "Be ye perfect"; "Be unto yourselves your Higher Selves;"—and many, many more we can think of for ourselves.

The fact of facts to lay hold of is that at the base of our natures we are Divine, one with the soul of the world, and therefore in our higher natures we can exert a guiding and controlling influence upon the coarser, less developed animal nature which is our present dwelling place and field of operations, and which, alas! we too often confuse with the real man, to our great karmic disability.

For instance, we say, "I eat, drink, sleep, run," etc.; "I am angry, tired, pleased," etc.—when we *should* say, think, and feel, "my *body* or personal nature is so." "Thyself is, in itself, without a body, and either praise or blame affect it not." Being under law and thus identifying ourselves with the lower nature, we go through untold agonies that wiser action and obedience to the precepts of the Teachers would save us from, and thus we continue in the dull rut of mediocrity for incarnation after incarnation.

At the present time the people of the world have the opportunity as never before of breaking off their fetters, for the teachings of Theosophy are world-wide and likewise the demonstration of its saving power from ignorance and pain through the blessed teachings of Râja Yoga. Here may be seen the full beneficence of the Karmic law in action. Children taught to live upon right lines early manifest their divinity and mastership over the lower nature, standing forth as models of what the human race will be when we seriously take heed of the injunction to be perfect and realize it to be an attainable ideal. What humanity owes to the martyred lives of H. P. Blavatsky and William Q. Judge, and the strenuous loving work of the present Leader, Katherine Tingley, it little as yet dreams. They have brought the great bearing of Karmic law on human life and action to the consciousness of many, and working in accord with it themselves have made possible for all men the return to a saner form of life, one of Brotherhood. And for those who are willing to help, the words "Place your Faith, Reliance and Trust in Karma" are a slogan of golden meaning, for the Higher Law never fails. E. I. W.

NOR would the ways of Karma be inscrutable were men to work in union and harmony, instead of disunion and strife. For our ignorance of those ways—which one portion of mankind calls the ways of Providence dark and intricate; while another sees in them the action of blind fatalism; and a third, simple chance with neither gods nor devils to guide them—would surely disappear if we would but attribute all these to their correct cause. With right knowledge, or at any rate with a confident conviction that our neighbors will no more work harm to us than we would think of harming them, two-thirds of the world's evil would vanish into thin air. . . . We stand bewildered before the mystery of our own making and the riddles of life that *we will not solve*, and then accuse the great Sphinx of devouring us. But verily there is not an accident in our lives, not a misshapen day or a misfortune, that could not be traced back to our own doings in this or another life.—*H. P. Blavatsky*

## From "THE SPHINX"

James Russell Lowell

WHY mourn we for the golden prime  
When our young souls were kingly, strong,  
and true?

The soul is greater than all time,  
It changes not, but yet is ever new.

But that the soul is noble, we  
Could never know what nobleness had been;  
Be what ye dream! and earth shall see  
A greater greatness than she e'er hath seen.

The flower pines not to be fair,  
It never asketh to be sweet and dear,  
But gives itself to sun and air,  
And so is fresh and full from year to year.

Nothing in Nature weeps its lot,  
Nothing, save man, abides in memory,  
Forgetful that the Past is what  
Ourselves may choose the coming time to be.

All things are circular; the Past  
Was given us to make the Future great;  
And the void Future shall at last  
Be the strong rudder of an after fate.--- Selected

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

## Question

Recently in the CENTURY PATH occurred the statement: "This soul is the most precious possession we have." Will the Forum please say if this is correctly stated? Is the soul something we possess, or, as I have heard it said by some, would it not be more correct to say we are souls?

## Answer

In Theosophical literature the word soul is used with different significations. Following the classification of man's nature given by H. P. Blavatsky we find that there is the spiritual soul, *Buddhi*; the human soul, or *Manas*; and the animal soul, or *Kama*.

The relation between these three aspects of man is gone into at considerable length in H. P. Blavatsky's book *The Key to Theosophy*. Man himself in his human consciousness is *Manas*. This is the human ego which during incarnation is dual, in its higher aspect reaching up towards *Buddhi* the spiritual soul, and in its lower aspect being attracted downwards by the animal soul with its passions and animal instincts. It will be clear then that properly speaking we should say that man is the soul, meaning by this the human ego. The divine soul or *Buddhi* is the vehicle of pure spirit and in conjunction with it, as *Atma-Buddhi*, is the dual monad, the basis of all manifested life, but this is not an individualized principle. Individuality is the attribute of *Manas*, the human soul. The dual monad becomes individualized only in conjunction with *Manas* when the higher states of human consciousness are reached, and this higher triad, *Âtmâ-Buddhi-Manas*, is the immortal nature of man towards which all human evolution is tending.

So far then as these principles are concerned, since they represent the real nature of man, it must be said from this aspect that he is the soul, not that he possesses the soul. But in regard to the lower nature we can say either a man possesses a lower nature or that he has or functions through an animal soul. Regarding these three aspects H. P. Blavatsky says:

Therefore, soul being a generic term, there are in men three aspects of soul: (1) the terrestrial or animal; (2) the human soul; and (3) the spiritual

soul; these, strictly speaking, are one soul in its three aspects. Now of the first aspect nothing remains after death; of the second, *nous* or *Manas*, only its divine essence, if left unsoiled, survives; while the third, in addition to being immortal, becomes consciously divine, by the assimilation of the higher *Manas*.

Men have become so accustomed to regard their lower nature, the physical and passionate nature, as being themselves that it is no wonder they have come to look upon the spiritual nature as something to be striven after but not yet themselves, and so speak of it as a possession. It is however most important that we should realize that the real man is a spiritual being; that he is this something which we have been in the habit of calling the soul, using the term now in its higher aspect; that this is himself which for ages has been seeking to obtain an instrument through which it can gain experience on earth and manifest its true nature. Regarding spiritual things we need more accurate and clearer thinking.

One of the most important features of Theosophic work, one of its great objects — if not the greatest — is to enable man to know himself, to know who and what he is. Only by gaining this true knowledge can we look forward to a realization of the higher ideals of life. It is the lack of this knowledge that has held humanity back for ages. So long as we regard the lower nature, with its passions and appetites, as our self, shutting our eyes to the existence of a higher nature, it is but natural that we should seek to satisfy the desires of this lower nature. But once we realize that it is not our self and that by yielding to its demands we are binding chains about our real selves, — in other words we are permitting ourselves to be bound and enslaved — once we realize this we have taken the first step towards self-conquest, that is the conquest of the lower self by the higher self, for whatever part of his nature man identifies himself with, that for the time being appears to him as *self* whether lower or higher, and it must be clear that according to the light in which he views himself so will be his actions and his life.

In the *Bhagavad Gîtâ* the distinction and relation between Self and self is made, containing under the play of words a deep teaching as to man's real nature. In the chapter entitled "Devotion by means of self-restraint," speaking in regard to meditation, the following statement is made:

He should raise the self by the Self; let him not suffer the Self to be lowered; for Self is the friend of self, and, in like manner, self is its own enemy. Self is the friend of the man who is self-conquered; so self like a foe hath enmity to him who is not self-conquered.

STUDENT

## Question

What I wish to know is, Does Theosophy help in overcoming one's faults? Does it give any real help? If so it is indeed a godsend. Do enlighten me on this if you can. — (Extract from a private letter.)

## Answer

Most assuredly Theosophy gives help in the overcoming of one's faults. It gives the only help that can be of any permanence — the only true help — namely, the help to help oneself. I say this because each one must overcome for himself, although it is also true that as we overcome we also make the pathway easier for every one of our fellows, or by failing in self-con-

quest or in duty we make their way harder.

Theosophy causes the student to face himself. It does not however say to him that he is "a miserable sinner" or "worm of the dust." It holds up to him not merely his faults and failings but also his inherent nature which is divine, a divinity with all the power of overcoming evil. It gives to man the realization that in his divine nature he is linked with all the good and wise ones of the ages. It shows him his responsibility for the evil in his nature, but also it reveals to him the source of strength by which to overcome it.

In its teachings of Karma and Reincarnation Theosophy gives to man a great hope, in fact the certainty of final victory if he will but make the least effort. If a man realizes that the hardships and evils of the present life are the result of what he has sown in the past, and that his present suffering is but an opportunity to pay off old debts, and if in addition he realizes that the future depends upon the present and that whatever he sows now will bring its harvest, he has in his hands the power to transform his whole life. Outside of the four great teachings of Theosophy — namely, human solidarity or Universal Brotherhood; the divine nature of man; and Karma and Reincarnation, where can man find a sure hope? Where will he find that which satisfies his inherent sense of justice? For in his heart he can never be satisfied to reap a pardon through the sufferings of another. In his inmost heart he demands justice and will be satisfied with nothing else. Theosophy does give this: it reveals man to himself; it shows him that he is what he has made himself and that the way lies open to him to climb if he will to the greatest heights; that in the course of nature he must atone for what he has done and that nature will bring to him a harvest in exact proportion and kind to that which he sows.

Here are all the elements necessary to help man to overcome all his faults and to awaken him to a realization of true life. STUDENT

INQUIRER. One argument more; an argument, moreover, much used by some Christians. They say, "I feel that I am not able to conquer my passions and weaknesses in my own strength. But when I pray to Jesus Christ I feel that he gives me strength, and that in his power I am able to conquer."

THEOSOPHIST. No wonder. If "Christ Jesus" is God, and one independent and separate from him who prays, of course everything is, and *must* be, possible to "almighty God." But then, where's the merit, or justice either, of such a conquest? Why should the pseudo-conqueror be rewarded for something done which has cost him only prayers? Would you, even a simple mortal man, pay your laborer a full day's wage if you did most of his work for him, he sitting under an apple-tree and praying to you to do so all the while? This idea of passing one's whole life in moral idleness, and having one's hardest work done by another — whether God or man — is most revolting to us, as it is most degrading to human dignity.

INQUIRER. Where does a Theosophist look for power to subdue his passions and selfishness?

THEOSOPHIST. To his Higher Self, the divine spirit or the God in him, and to his *Karma*. — H. P. Blavatsky (*Key to Theosophy*)

### The Evolution of a Saint

EVERYBODY knows what St. Catherine's wheels are, but not everybody — one might say not anybody — knows all about the Saint Catherine to whom their name refers. But we know something, and that something is of a very curious and suggestive nature. The Roman Church has several canonized Catherines, and she of the wheels is the earliest and the one of whom least is known.

The oldest reference to her, says a painstaking account in *The Open Court*, is made in the *Menologium Basilianum*, a collection of legends. Indeed everything relating to this lady of the wheels is legendary, vague and capricious. But in this particular account we must be as near as we can get to the truth. It calls her Aikaterina and is as follows:

The martyr Aikaterina was the daughter of a rich and noble prince of Alexandria. She was very beautiful, and being at the same time highly talented, she devoted herself to Greek literature as well as the study of the languages of all nations, and so she became wise and learned. And it happened that the Greeks held a festival in honor of their idols; and seeing the slaughter of animals, she was so greatly moved that she went to the King Maximinus and expostulated with him in these words: "Why hast thou left the living God to worship lifeless idols?" But the Emperor caused her to be thrown into prison, and to be punished severely. He then ordered fifty orators to be brought, and bade them to reason with Aikaterina, and confute her, threatening to burn them all if they should fail to overpower her. The orators, however, when they saw themselves vanquished, received baptism, and were burnt forthwith, while she was beheaded.

In this she figures as a sort of Hypatia of pagan mystical lore; date uncertain, but near the beginning of the Fourth century. Only by inference do we surmise that the writer intends us to believe that at some time before her encounter with the Emperor she had renounced her paganism for Christianity. He was writing several centuries afterwards, in the Ninth, was evidently repeating tradition, and in the innocence of his heart does not see the unlikelihood of the Emperor calling upon fifty philosophers to overthrow one girl's Christianity, and then before burning them permitting them to receive baptism. One begins to suspect that he has gotten it somehow upside down; Joan of Arc and Hypatia float across one's memory, and note too that St. Catherine, like Hypatia, was of Alexandria also; finally one wonders whether the fifty were not *ecclesiastics* who themselves engineered the burning or beheading of a brilliant pagan girl whom they could not convince. In that case the event was antedated a little so as to bring it under the reign of Maximinus. He never was a Christian and could not therefore have been accused by the (supposedly) Christian girl of "forsaking the living God" — a definitely Christian expression. Bring the date on a little, and we have it in the reign of Constantine who overthrew Maximinus and gave place and power to the young religion.

Another version of the legend, that of Marius Sepet, also depicts Catherine as a highly cultured pagan girl, but causes her to be converted at the age of 18. It having been determined that she was to be a Christian saint, she was fitted with a story of espousal to Christ, a piece of inventive symbology peculiarly characteristic of monkish medieval times.

One evening when mother and daughter lay sleeping together, the Queen of Heaven, the glorious Virgin Mary, appeared to them surrounded by a great host of patriarchs, prophets, apostles, martyrs, confessors, virgins, and many other saints, all of whom shone in radiant beauty. The Virgin Mary approached St. Catharine and said to her:

"Look my daughter! all these are kings, and indeed the greatest in the kingdom of my Son, the Emperor of Glory. I know that thou art still unwedded. If thou wouldst have any one of these for a bridegroom choose the one which best pleases thee and I will bring it about that thy desire shall be fulfilled!"

But St. Catharine answered that she did not wish to marry any one of them. Thereupon Jesus Christ himself, the Emperor of Glory, appeared unto her in the presence of his gentle mother and a countless host of angels. Mary, the Blessed Virgin, said to Catharine, "Wouldst thou choose this one for thy Bridegroom?"

And when Catharine beheld his beauty, power, and wisdom, she fervently replied, "Yea! Him do I desire whosoever he may be, — him and none other."

The official account of the Roman Church "goes one better" yet. It credits her with Christian piety from her earliest years!

This Katharine was a noble maiden of Alexandria, who from her earliest years joined the study of the liberal arts with fervent faith, and in a short while came to such a height of holiness and learning, that when she was eighteen years of age, she prevailed over the chiefest wits. When she saw many diversely tormented and haled to death by command of Maximin, because they professed the Christian religion, she went boldly unto him and rebuked him for his savage cruelty, bringing forward likewise most sage reasons why the faith of Christ should be needful for salvation.

This account finishes with the remark that "her body was marvelously laid by Angels upon Mount Sinai in Arabia." The "wheels" with which her name is associated were, in the legend, fashioned by the Emperor and so set with knives that in their revolution the girl was to be cut to pieces. However, by miraculous interposition they exploded and she was otherwise destroyed.

So on the whole it may be said that the successive variants of the story are interesting and suggestive. STUDENT

### In Central Asia

TO the fact that even in quite historical times regions in Central Asia now uninhabitable were seats of large and flourishing populations, the discoveries of Dr. Stein in Mongolia testify. Near the Oasis of Tun-huang on the Kansu frontier, in the early part of 1907, in a country without any pure water, uninhabited, subject to terrific extremes of climate, arctic in winter, malarial in summer, the explorer came on ruined watch-towers connected by a great ruined military wall. These, from documents found on the spot, appear to have been built about two hundred years B. C., and to have been occupied by garrisons for some four centuries. Says the London *Daily Telegraph*:

Thanks to the absence of moisture and the absence of man, the documents that the Chinese had left behind them were found in a marvelous state of preservation. Hundreds of pieces of inscribed bamboo, wood, and silk, were found almost uninjured, even where only covered by a thin layer of gravel or debris. Over 2000 Chinese documents were recovered, mostly bearing on matters of military detail such as the strength, movements, equipment, and provisioning of the troops, military orders of the day

and so forth. Altogether, Dr. Stein succeeded in tracing the course of the wall for 140 miles. The work of doing this was no picnic. Up to the middle of April the icy blasts that swept the country defied all furs and wraps. Then, with the violent change of seasons, characteristic of Central and Northern Asia, before the month was out the party were suffering from heat, glare, and clouds of mosquitoes from the salt marshes. The brackishness of the water, too, was a permanent trouble and difficulty. Besides the Chinese documents, Dr. Stein found in the same neighborhood a quantity of interesting Buddhist remains, including fine frescoes and stucco sculptures similar to those of Khotan, which attest the flourishing condition that the Buddhist cult, imported from India, had attained here on purely Chinese soil at an early period. STUDENT

### Higher Patriotism in Practice

WE quote the following from the London *Daily Telegraph*:

A remarkable ceremony attended the celebration of this year's great autumn festival at the town of Hangchow, when the popular jubilation at the advent of an anti-opium era, was signalized by making a huge bonfire of all the pipes and wooden trays collected from the various opium dens, which were closed some weeks ago by order of the authorities. The forbidden smoking implements were piled in two pyramids on a spur of the City Hill in front of the Treasurer's yamen from which they could be seen by the greater part of the city. Around them gorgeous red banners floated in the breeze. So plentiful were the trays and pipes that each pyramid measured about 6ft. through at the base and about 7ft. in height. The pipes were tied together in bundles of thirty or forty, and the total number must have been 8000 or 10,000. Long before the time appointed for the lighting of the stack large crowds of people had gathered, some taking up a position on the roofs of the houses and other points of vantage, whilst, later, squads of uniformed students, with the banners of their schools, drew up at different spots to witness the proceedings. Lastly, the mandarins began to arrive in their chairs, and as they did so dry straw was piled up round the stacks, and the whole plentifully deluged with paraffine oil. Then, with some ceremony, a torch was applied, and the two piles of doomed instruments quickly disappeared for ever. With the brass lamps collected at the same time as the pipes it is proposed to cast one or more fire-balls, to be hung in one of the public buildings of the city.

Perhaps the above gives as good an illustration of what is meant by the phrase "the Higher Patriotism" as one would be likely to find. STUDENT

### Groping for Truth

WE all know Mr. Punch's solution of the Shakespeare difficulty. The plays were not written by Shakespeare but by another man of the same name. Another critic suggested that they were written by Shakespeare but his name was different. In the same way the Rev. R. A. Torrey, the "evangelist," does not believe in Reincarnation but thinks "we will walk this earth, having bodies similar to the present body, and will enjoy food as now." He appears to be in some doubt on two points: "I don't know what kind of food it will be," and, "It may be that the spirit will not receive a new body as soon as death occurs. It may wait until the time of resurrection."

The Doctor has gotten the idea so vaguely and crudely that we do not suspect him of reading the Theosophical works on Reincarnation. But he evidently did get just a flick from the tail of the real idea. STUDENT

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES

## The Ancient Greeks and the Conception of "Good"

"THE Origin of Good" is the title of an article by William Archer, a well known literary critic, in the *Morning Leader* (London). In it we find some welcome championship of the ancient Greeks as against some of their modern detractors; and, as the CENTURY PATH has often taken occasion to protest against the mean and cynical interpretations of ancient minds given by some modern minds, it is glad to recognize a kindred spirit. Nothing is more disparaging to the modern intelligence than the paltry views which it takes of the ancient intelligence; and one may often trace, in the views which a given mind takes of other minds, the limitations of that mind, thus gaining a means of estimating the amount of good there can be in a character which is able to discern so little good in other characters.

The point on which the article turns is a discussion as to the meaning of the Greek word *Aidôs* (*aidôs*). Says the writer:

### The Sense of Honor

In writing last week of Prof. Murray's "Rise of the Greek Epic," I gave a brief and very inadequate summary of his analysis of the sentiment of *aidôs*, in which he finds one of the leading factors in the moral life of the Hellenic race. *Aidôs*, he says, is usually translated "shame" or "sense of honor." It is the feeling which makes a man refrain from doing something that he can do without any material punishment or disadvantage, because he knows that it will lower him in his own esteem. . . .

But it is not *aidôs* itself that I wish at present to discuss, but a noteworthy remark of Mr. Murray's concerning it—a remark which has, not merely a Hellenic, but a world-wide application. . . . He says: "You will sometimes find writers who ought to know better expressing themselves about these matters in a misleading way. They say or imply that when a Greek spared an enemy, he did not do it from mercifulness or honor as we understand the words, but because it was a part of his religion that Zeus would have a grudge against him and punish him if he did otherwise. This may be true of a given superstitious individual. But as regards the race, it is putting the effect for the cause. It was the emotion of the race that first created the religious belief. If the early Greeks believed that Zeus hated the man who wronged a suppliant, that belief was not based on any observed behavior on the part of Zeus. It was merely that they themselves hated the man who did so, and felt that their god must hate him."

### The Fount of Religion is Within

Mr. Archer points out that the remark applies not only to the Greeks but to half the moralists of the world; for thousands of moralists are teaching us, young and old, that the

moral virtues find their sanction in "observed behavior on the part of Zeus," who will reward or punish people according to their observance or delinquency, in this world or the next. He cordially agrees with the idea that the Greeks did not derive their sense of honor from fear of Zeus, but differs as to whence they did derive it. For what is the origin of "Good"? Is it, as Mr. Murray implies, a feeling of honor and shame among the members of a certain nation? But the Greeks were surrounded by nations alien to themselves, to whom this *aidôs* was unknown. At what point did *aidôs* germinate in the Hellenic spirit? And whence did the germ come a-floating? As we are agreed that the idea was not inspired by Zeus, but that the Greeks bestowed it upon Zeus because they already had it themselves, we have to ask. Whence came the idea of good and bad, the antithesis between good and bad, and the majesty and compulsive power of good?

### Whence the Power of Good?

I do not think the question is unanswerable, if we permit ourselves one assumption: namely, that at the heart of Nature there lies an irrepressible craving for Life, not only in quantity but in complexity and intensity. Granted this metaphysical postulate, it seems to me that the growth of the idea of Good, with all its victories and all its perversions, can be explained in terms of mere biology and psychology. Yes, and in terms of utility. The conception of *aidôs* had its birth in the Hellenic mind because the prehistoric Greek had somehow got ahead of his fellows in intelligence, and saw (though he did not so phrase it) that a certain restraint upon the instincts of the wild beast and the savage enlarged the potentialities of life. He interpreted the principle of the Survival of the Fittest more intelligently than some of its recent exponents.

Not unheedfully did I speak, a few lines back, of the "magic" of the idea of good. Surely it is the most marvelous thing in the world, the establishment of this overwhelming prejudice in the human mind in favor of one order of phenomena and against another. It has permeated language and absolutely dominated thought. Even Satan, in rebelling against it, cannot express himself without doing it verbal homage: he has to say "Evil, be thou my Good." The

### The Force of Good Cannot be Escaped

magic seems slow-working, no doubt; and there are people who question the ultimate triumph of good, because, in the fifty centuries or thereabouts of human record, partial victories have often been followed by temporary defeats; because the brilliant raids of individuals have not perceptibly hastened the advance of the main body; because, in short, the territory of the enemy—that is to say, of the savage and the brute—has had to be conquered inch by inch. For my part, I feel no such impatience. What are fifty centuries in the process of the ages? They are but as the turning of an hour-glass, which

may have to be turned and turned again before the shout of victory can go up all along the line. But the campaign is every day being better organised, under the guidance of a more and more efficient intelligence department. And the ultimate victory was certain from the moment that the idea of good, barbed and ineradicable, embedded itself in the brain-fibre of the race.

Whether we express the universal recognition of Good in terms of biology or utility or any other terms, it amounts to this, that there is universal recognition of a Law—a Law

**A Universal  
Intelligent  
Law**

that is above instinct, passion and self-interest, a Law to which Man is specially beholden by reason of his superior intelligence. This recognition of the Law as being the all-pervading, all-governing, most just and beneficent power, to which all life and well-being are due, is the true basis of morality. When people are so obtuse and animalized that they no longer recognize it, then they resort to the device of terrorism and say that God will reward and punish. It is this latter mean view that some people try to read into the minds of the ancient Greeks, whom they represent as a race of barbarians who had a superstitious fear of Zeus.

It is the aim of Theosophy to bring back to the common consciousness the fact of the higher Law, and to make it a reality, so that people will feel its presence and their obligations to observe it as well as the felicity that ensues from observing it. Instead of trying to reduce the ancients to the level of our own ignorance and superstition, let us try to learn from them some of the things which the world has forgotten; let us try to find in our experience an equivalent for some of the words by which they expressed their sense of the responsibilities of life and its higher privileges.

STUDENT

### Brotherhood the Lost Key

ONE of the Lost Mysteries of Antiquity, which Theosophy seeks to restore, is the secret of true unity; that secret which made mighty peoples of the past so strong and wise, but which became lost to the world through ages of decline.

Nowadays we set great store by what is called "Individualism," or the right of each man to exercise his own initiative *unhampered* by his fellows. A restriction of the liberty of the individual is held as identical with tyranny. As an alternative to this individualism, we can only imagine the one-man power by which, as in an army or an empire, all initiatives are subordinated to that of a single individual. We trace our success to the principle of allowing as much independence of initiative to every individual as possible; but, recognizing that the separate interests will clash, we persuade ourselves that out of that very clashing grows the true progress. Competition, in short, is one of our watchwords.

The word "Brotherhood" has so little corresponding with its true meaning in actual life that it has become a cant word implying insincerity, and stands for a forced attitude of weak and sentimental tolerance out of harmony with our true feelings. The true idea of Brotherhood is that of a condition wherein a common ground reconciles in a single purpose a

multitude of independent individuals. To have Brotherhood, we must have a common ground on which all units are one. This common ground may be mutual interest, in which case we get a fraternal society; or something of a religious nature, in which case we get a sect. But in ordinary beliefs we can discover no real basis for a Brotherhood in the true sense of the word.

Brotherhood must be based on a common recognition of the spiritual unity of mankind,—indeed of all life. This does not mean a mere verbal assent to some ink-and-paper theory or philosophical axiom, nor any mere talk about the fatherhood of God. Still less does it imply a false sentimentalism. It means an actual knowledge, founded on our own experience, of the Higher Nature of Man and of the existence of a common Life in which all beings share, which recognition entails an observance of the universal Law that regulates all Life.

When we talk of modern selfishness and individualism, we are apt to fix too much attention on certain outward aspects of the questions—on the industrial aspect or on that which affects our social status and class privileges. But selfishness is more deeply rooted than that, nor are those its most serious manifestations. It is the personalism and narrow self-interest in religion, aspiration, and ideals of progress that are most to be regretted.

We may claim as a modern ideal the idea of personal salvation, the notion of religious duty as a personal concern, the idea of personal holiness, the ever-present and often relished picture of a contrast between our own holy self and the sinful world, the delusion that it is desirable to be holy in the midst of an unholy world, the ideal of spiritual pride,—in short, individualism in religion. Against this ideal is set in sharp contrast that wherein religion is held a collective obligation and a collective boon, a social tie in which all share, which unites man to man in a common atmosphere which it is the common interest and duty to preserve inviolate. Reading an ancient classical story, like that of Aeneas in Virgil, we do not find the heroes going apart for private meditation or interested in the welfare of their own individual souls. We find them intent on preserving the integrity of a certain sacred atmosphere in which they believed, keeping sacred fires alight, performing ceremonies together, taking part in festivals designed to preserve this collective spirit which to them was such a reality and such a necessity. We may trace, through the history of the decline and fall of great peoples, the gradual introduction of a spirit of narrow self-interest into the idea of religion. The old largeness, reverence, joy of life, sympathy with nature, passed away, and was replaced by monasticism, penitence, personal saintliness, bigotry, persecution, and other forms of meanness.

In all probability the secret which made the ancients so great, as we realize from their architecture, was having a corresponding greatness of spirit. We catch glimpses of this in their portraiture. They lived a larger life; they did not have the petty sordid calculating spirit of later times. They were conscious of their spiritual unity and could work together, thus achieving things which the spirit of competition can never achieve. In our vanity and

ignorance we imagine that they achieved their great works by tyrannical slavery and enforced labor; for we cannot imagine a whole nation of people like ourselves co-operating joyously and willingly in a great plan.

Theosophists believe that there has been this larger nobler spirit on the earth, and that it can be again. The allegory of Paradise Lost and Regained is not confined to the Christian bible and Christian ideas of theology. It is a universal allegory, everywhere found, and relates to the cyclic progress of Man, by which he passes through successive decline and resurrection. Endowed with the Divine prerogative of intelligence and initiative, he follows his own path and brings upon himself trouble; but the Divine Spark in him cannot die, and it enlightens him through all the long pilgrimage, until he is redeemed by its sacrifice. Thus Man wins back by his intelligence, courage, patience and ceaseless aspiration that which he has lost, and rises to a greater height than that from which he fell.

If we could turn our attention away sometimes from the external questions of trade and social status and reflect upon the ingrained meanness and selfishness of our ideals, it would do us good. For, whenever some one does portray a social Utopia, we always find the same meanness of spirit accompanying the men and women in that Utopia. It is always the same question of balanced interests and equal distribution of bread and butter. And religion and all forms of development are questions of *self-development*. The paramount idea is that of *gaining powers or attaining happiness*. Some people even pride themselves on having their own faith, which they say is no one else's business but their own; as if people's thoughts and feelings had no concern whatever for them. All this is buttressed by a most profound ignorance as to the laws of life and the constitution of Nature. The ancients were ever conscious of the unity of all life, and felt the unseen influences that link all together and make human minds dependent on each other and on Nature. Their language we fail to understand, because we have lost their knowledge and prescience, and so we interpret it in our own foolish fashion and call them superstitious savages. But if we had this awareness of the unity of life and the interdependence of all beings, we would not be making such futile attempts to compass personal beatitude and salvation, nor would we desire such a prison of the soul.

Give me an heart that beats  
In all its pulses with the common heart  
Of human kind, which the same things make glad,  
The same make sorry! Give me grace enough  
Even in their first beginnings to detect  
The endeavors which the proud heart still is making  
To cut itself from off the common root,  
To set itself upon a private base,  
To have wherein to glory of its own,  
Beside the common glory of the kind!  
Each such attempt in all its hateful pride  
And meanness, give me to detect and loathe,—  
A man, and claiming fellowship with men!—Trench

True Brotherhood does not mean denying oneself anything worth having. It means leaving off being a *Prig*—one shut up in his own glory and self-admiration, a person who prides himself on his "independence"—that is, on

(CONCLUDED ON PAGE 17)

# Some Views on XXth Century Problems

## The Vicissitudes of the Ghost Story

THE old ghost story left us the ghost. There were footsteps on the stairs, bells rang, and a white figure was visible in the corridor at night. There was of course an explanation, but it did not explain *away* the ghost. On the contrary the poor creature was found to resemble one of the family portraits, and on looking up the history of the original of this portrait, he or she was found to have died in the house under just such circumstances as would naturally ensure the presence and wanderings of his or her ghost.

The ghost story entered upon a new phase. At its new conclusion the ghost became a coat with the moonlight upon it, blown by the wind; the footsteps were rats, and the bells rang because the same animals had built a nest on the wires in the wall.

But all this while science was taking a hand in the matter. Her votaries are still very shy; but on the whole it may be said that ghosts and apparitions of the dying are now permitted to exist. Of course they existed all the time; and telepathy existed; and the public firmly believed in both, but pretended it didn't because that was the orthodoxly scientific thing to do.

So the third phase, which is an improved reincarnation of the first, has now set in. The rats and the coat are no longer demanded. There are novels and plays with legitimate ghosts, and telepathy, and reincarnation, and magicians. And nobody turns a hair. A play in which the ghost of a woman influences a court, "where telepathy and hypnotism," says the *Sun's* account, "play leading rôles; where the mental attitude of 500,000 excited Kentuckians influences a jury shut up in a room" is now drawing full houses in New York. Another turns upon the connexion between the previous and present lives of all its *personae*, and no one finds it extravagant.

Does anyone suppose that the public has gravely followed the investigations and reasonings of science, and, having been inductively convinced of the actuality of ghosts and telepathy, at last permits these to appear in the plays and novels? It believed in them always, in all times and places on earth because it knew of them. A believed in them; B believed in them. But A would not say so lest B, who had attended some science classes in the evenings, should call him superstitious. B would not avow his belief to A lest in his turn he should be thought credulous. Science is merely removing these fears of A and B; they are not yet at the stage where they will own their beliefs to each other; they will merely read the novels and see the plays, and as they leave the theater they will remark to each other: "Of course all that sort of thing is nonsense, but there are undoubtedly some queer things that a fellow can't always explain."

That terrible word superstition! And yet, the beliefs that mind can touch mind without words; that we have lived before but do not remember because we have another brain; and that the physical body is molded upon an ether-

eal prototype which survives awhile when the soul has left and the body is dissipating its atoms — do not seem to have anything essentially foolish or mind-belittling about them. And there neither is, nor ever was, any evidence whatever against them; whilst they explain many obscure phenomena. Why not then, instead of shying from them so timidly, at least place them quietly in the same category as any other similar hypotheses? In such cases the word superstition has no standing whatever. It is in fact itself a specter, which, like other specters should be smiled at and disregarded.

STUDENT

## The History of Consciousness

A MUSICIAN has been objecting to the current dictum that human nature is everywhere at root the same and has not changed with time. Music, he says, expresses the essentials of human nature in their subtler phases. The only way to teach real history, to show the subtler changes in human consciousness, would be to present to the learner the music of successive times, make him enter into it sympathetically until he understood the feelings that it expressed, until it had ceased to seem strange or archaic. The same process must be pursued to understand a foreign people, say the Chinese. Their music must be heard and re-heard until it is understood, until the feelings to which it corresponds are awakened.

We do that already for some peoples. We listen to Hungarian and Spanish dances; we touch Poland through Chopin, Norway through Grieg. And we actually thus come to understand something of the popular inner feeling of those nations. But the Chinese? Has any one of us successfully subjected himself to *that* discipline?

But the formal written music of past centuries does not perhaps correspond to the popular consciousness, but to that of a special and cultured class. To get the popular consciousness we must get the music of the folk-songs, and that is mostly lost. Folk music is disappearing today because the "folk" find their feelings now expressed by the written music of our composers.

And lastly, the music of most ancient peoples has almost wholly vanished.

But there is something in the idea. The dictum that human nature is always the same applies to its obvious and manifest characteristics, not to its subtler phases. It is these to which music appeals. We know that the music of the peoples of today presents marked differences. No one would confuse a Lithuanian dance with an Irish or Scotch dance. No one would confuse Chinese, Japanese or Turkish music with Norwegian. And going back to the past, no one would confuse any of the bits of Greek music that we have, with Spanish. Yet these reflect something essential in the inner consciousness of the peoples. With music as our warrant we can say confidently that human nature is not at all a constant, that though rooted in one spiritual essence it

differs with all peoples and all times. If we only had the music of enough of the past we could develop, each for himself, a faithful and startling picture of the varieties and evolution of consciousness.

## Teaching Literature

PROFESSOR WOODROW WILSON has been complaining, or arguing, that we cannot teach English literature; that though it is a learnable, it is not a teachable, subject. He means that though lists of dates, names and periods can be taught, and though these can be accompanied by samples of the literature thus mapped out, the learning of it all need not be accompanied by any growth of literary appreciation, the *real* learning.

A child learns his native language by hearing it spoken in its present form. If he is English, he does not begin with Anglo-Saxon, go on to old Norman French, take up the forms of Bede and Chaucer, and finally come down to the speech of his day. If his tastes so prompt, he may subsequently go back on his own account to those early forms and roots. But he may become a perfect user of his own tongue without doing so. An almost essential condition for that, however, is that he should hear it perfectly used.

But suppose his earliest acquaintance with his language came from his associations with the gutter, the stable, the factory, the turf and the ring. And suppose he finally graduated in Wall Street and the fashionable club. What sort of English would he talk?

Parallelwise with literature. A child's acquaintance with literature will necessarily begin with what is written in his own time. If he is furnished with the best of that, increasing his range — but always within the limits of the best — as he grows older he may acquire all the culture of his day without transcending the literature of his day. The past is in solution in the present.

But how many children in all social ranks make their first acquaintance with "literature" from the daily and Sunday newspaper, in which it may often be that not a single line is real literature? Counteracting material there may or may not be on the shelves and tables at home. But unless the child has a strong natural bent in the right direction, the counteraction will avail but little. And in addition to the newspaper, pulling mainly directly downwards — from the literature point of view — is the magazine short-story, at best negative, of which the growing child reads hundreds. And so his mind develops — from newspaper to short story, from short story to trashy novel. In nine cases out of ten, by the time of the college lectures he has lost the chance of finding anything in real literature. There is nothing for him but the learning of the lists and the sample extracts in the manuals. In fine, the teaching — in the real sense — of literature must begin at home, and it consists as much in the shielding the child from what he should not read as in providing him what he may and should read.

**The Illustration**

A FULL and valuable account of these Silent Witnesses of Man's Antiquity appears in number 5 of this volume of the CENTURY PATH (Dec. 8th); and as it is obviously impossible to repeat it with each illustration, readers are recommended to obtain that issue.

**The Aryans and the West**

TOO often has it been the lot of the Archaeology page to inveigh against that view which represents our ancestors as primitive barbarians, and which recognizes only the unfolding of powers from matter, without seeing that there must be a corresponding descent of Spirit into matter to cause that unfolding. But sometimes one comes across a specimen of a freer and less scientifically-enslaved view of human history.

For instance, here, in a review of a recent book, one finds that the author has been enthused by his actual contact with man and nature in Arizona into taking a worthier view of humanity. He finds the native-born American superior in strength and endurance to Britons, Germans and Irish; and his inference is that the native-born American, the product of a mingling of different branches of the Teutono-Aryan family, probably represents the old Proto-Aryan ancestor of all more nearly than does any of the other descendants of that ancestor. The man of the Mid-West, of the Wilderness trail, is, more than any other, the typical American.

He is the true man continental. The Atlantic slope is too near Europe. Its people are influenced and tinged by the constant influx of alien blood. . . . With the man of the West, all this is different.

His blood is yearly becoming more purely American, for he is breeding out the inherited types.

It is very encouraging to find a writer speaking thus of our Aryan ancestors and claiming that the highest merit for the man of today is to resemble them. It gives one a lift. How incomparably better than the miserable picture of migrating savages is this vision of a powerful manly race, of which our nations were but the scattered and weakened remnants, but to which we are now once more approximating! We recommend other anthropologists to try a breath of Arizona desert air and a free contact with humanity to get the scientific cobwebs out of their brain attics and become "intoxicated with the spell" of that wicked thing known as enthusiasm, no matter how "bad form" it may be from the "cold-blooded" scientific point of view.

The drama of life portrays many falls and rises; knowledge is won through successful fighting of errors. Throughout history we may trace these falls and rises. We see races plunging deeper into the task of learning, of mastering, and of regenerating nature, being led astray, and rising again by the irresistible power of the human Spirit. We feel within us the impulse of a mighty ancestry. We look back to a glorious past and forward to a glorious future. Humanity is eternal, undying; its path is ever onward through scenes as various and prospects as sublime as those of nature.

But let us not drift into the scientific rut and think of this evolution of a new race in America as being merely a mixture of blood. Mixtures of blood may do anything or nothing. The seed of life is in the ideals which humanity has preserved in its bosom throughout

ages of discouragement, the faith which it never allowed to die, the love, the honor, the duty; all the high, undying qualities that no persecution or mental slavery has been able to kill out of it. These are still in the human breast; it is these that have been borne out to the Arizona desert, there to find a soil in which to germinate anew.

Think of those old Aryan ancestors with their knowledge, their strength, their loftiness of spirit. Think how they transmitted those qualities to their descendants, and of how those descendants kept them faithfully and cherished them lovingly through all the dark years until now, when in the Golden West they are to germinate and blossom forth into a still greater beauty. It is as if the old Aryans had made a vow, pledged themselves to a

mighty sacrifice, undertaken a great crusade, and as if they had won through.

But let us not be too particular about defining the racial stocks, to the glorifying of any one above the others. A name may serve to denote a branch of the human family for some centuries or millenniums, but there are flows and interminglings. We cannot shut out from the future any people because they happen to have been born in a race whose type belongs to a different cycle. A race is an abstraction, but the people in it are human realities. Let us look rather to the character than to the label.

And let us also remember that the Aryan migration from Asia, great and important as it is to us, was not the beginning of things. Other migrations have preceded it. We cannot set narrow limits for humanity in an ocean of time.

Also let us try to get above the idea of depicting for future humanity communistic Utopias based on alleged individual rights and concerned mainly with the distribution of bread and butter; or wonderful schemes in which the future of humanity is deduced from the behavior of molecules in a beaker. There may be things about human life that we have long forgotten since those Aryan days; and the future may come as the awakening from an age-long dream. We are not yet liberated from the tyranny of the ideas instilled into our medieval ancestry: the heresy of self-glorification and self-advantage, both in spiritual and material concerns. Modern learning, built on the decay of theological superstition, holds our minds to an equally narrow and cramping scientific superstition, and obscures the limitless knowledge in our Souls. STUDENT

# ✻ The Trend of Twentieth Century Science ✻

## Nature's "Units"

OF late years, hardly more than months, the plant and animal breeders are using the new biological word "unit." It means some small definite characteristic, not variable, and consequently transmitted along the line of heredity. There are imitation or artificial units, and real ones. Thus the dwarf oak has smallness for one of its units, a real one. Give it any amount of nourishment and cultivation, and it grows no bigger. This unit could be imitated by growing an acorn of a large oak in poor soil and cutting some of its roots. But the acorns from the imitation, under normal conditions, will revert to the grand-parental size.

So far as plants go, the Linnaean system of classification rests on the observation and comparison of external units of form, number and color—so many stamens, such a shape leaf and stem, such a color of petal, such a method of reproduction. Thus we get the classical species, orders, families and so on.

Until quite lately it was not known how these units developed. Since they are sharply defined and permanent once they appear, the idea that they arose and developed by gradual transitions, in the same way as we by selection produce their imitations, was given up. De Vries, studying his primroses and seeing new species suddenly arise, seeing new units suddenly appear and persist, was the first to attack the gradual-transition hypothesis. If, generation after generation, we select the fastest horses, and only them, to breed from, we get at last the race-horse. But his most desired "unit," speed, is artificial and will quickly die away if we cease our interference. Its development under *nature's* hand, according to de Vries and a rapidly increasing number of biologists, would be sudden, permanent, transmitted unchanged, and would consequently constitute a true new species. Quite recently, in respect of plants and some insects, it has been found that nature can be encouraged. If the eggs or seeds are subjected to conditions to which they are unaccustomed, such as extra heat, a rarefied atmosphere, the rays of radium—a considerable proportion, on maturing, are likely to show the possession of new fixed units and are therefore real new species. Sometimes they are retroversions to species long extinct, or are identical with species whose proper home is some other part of the world. De Vries' "mutant" primroses are therefore supposed to be due to the occurrence of some marked, sudden, but temporary atmospheric or other change at a critical hour in the history of the seeds, demanding that they develop at once a new power to meet it.

It is found that these units are like chemical compounds: some will not mix; some will mix without combining; and some will really combine. Upon these last depends all such modern work as that of Luther Burbank, the frost-proof orange of the Department of Agriculture and its new cotton, and the English rust-proof wheat. In the first case an orange possessing the unit *capability-of-resisting-cold*,

but otherwise worthless, is crossed with a good but delicate orange. Care, and enough of such crosses, results in a desirable fruit which only differs from the original in having annexed from the undesirable one the single unit which is wanted.

In the case of units which will not combine but only mix—as, sometimes, when flowers of different colors are blended—we may get one or two generations where the flowers show both colors. After that they separate out again. The units represented by the colors would only temporarily mix, not blend.

So the new view, in its extremest form, is that all living things are made up of an almost infinite number of units variously blended and mixed. No one has yet attempted to make any sort of enumeration of them. They can be looked upon as units of power, function, or adaptation to surroundings. Thus the unit "*power to do with a minimum of water*" is possessed by the cactus, the eucalyptus, the agave, and many other entirely—according to the present classification—different plants. It shows itself through, or works through, a number of subsidiary and usually visible units, or through related unit powers. Among the latter is the power of the eucalyptus to condense dew in a heavy shower; among the former, the thick skin of the cactus, checking evaporation. The power of the eucalyptus might perhaps be transferred to an entirely different tree, giving it a great help to survival and growth. The secret of visible units that will not blend is doubtless that they correspond to *opposed* powers. As the products of the attempted blend cannot have both, they severally make choice and the temporary mixture separates out again.

The problem before biology is to determine what external and visible units correspond to what physiological powers within; and then perhaps to make a new classification from the *power* standpoint instead of from the *formal*. But that requires an infinitely greater knowledge of nature than anyone now possesses. And it would involve a conception of nature as one great inter-related whole.

The *chemical* analogies of the biological unit conception have of course already been perceived. The perception began, perhaps, with the discovery of the meta-elements. It has been found that certain of the bodies we call elements are really compounds of bodies which separately give the same chemical reactions as the group, but have slightly different spectra. But when they are better isolated and subjected to more delicate tests it will doubtless be found that the reactions are *not* identical. Each of them is to be considered as a "unit," a power, of the whole group, and separable from it. Sir William Ramsay has obtained lithium from copper. What is the body *lithium-minus-copper*, we do not know. But it looks as if lithium and the unknown something were compound units blending their powers to make up the properties of copper. Similarly radium yields lead, helium and other bodies. And it is said that platinum has been decomposed.

Considering all these units, mineral, vegetable and animal, as living monads, each having a special keynote in consciousness, grouping themselves about some higher monad whose life purposes they serve, we should have a consistent monadology which may be the scientific philosophy of the future. STUDENT

## The Harmonics of Thought

PROFESSOR MINOT'S researches into the problems of growth and old age, valuable and novel as some of them are, may perhaps have led him into an error. In the case of a growing embryo or young animal the rate of growth of any tissue can be measured by counting how many nuclei out of, say a thousand, are undergoing division, are multiplying. At a very early period, before definite organs have begun to appear, all the cells are multiplying at about the same rate. After this, the later we make the examination, the more differences do we find in the rate of multiplication. Undifferentiated cells can always multiply with ease and rapidity. Muscle cells lose this power, but each cell nevertheless contains a reserve of undifferentiated protoplasm by use and evolution of which it can increase in size. If not, muscular exercise would avail nothing to increase the size of our muscles. Gland cells also probably lose it, but they also contain reserves of raw material. Nerve cells also probably lose it, but in addition they seem to lose at an early age—that is to say, they use up—their reserves. Professor Milne thinks that when a nerve cell has reached its complete growth in size and *visible* organization, it is an adult, whatever the youth of the body containing it. Nothing further can be hoped from it, and its next stage, however delayed, is degeneration and senescence.

Not necessarily, we should say. When a string has been made to vibrate as a whole and yield a note, we can for a while see the oscillations from side to side. Ultimately we neither see nor hear anything more. But we know that while the initial tension is kept up, the oscillations—not of the whole string but of decreasing fractions of its whole length—are continuing with correspondingly increasing rapidity and therefore yielding higher and higher notes far beyond our dull hearing.

May not the same happen with a nerve cell, say of the brain, whose size and *visible* growth in complexity have ceased? May not invisible, inner growth, in delicacy, in complexity, have only then begun? The one function of a muscle cell depends on its visible size and grossly measurable resiliency. But the functions of a brain cell have little to do with the first, nothing with the second, and everything with internal and non-measurable complexity. Nor have we any idea of the ultimate reaches of that complexity, of that possibility of answering to the subtler and subtler harmonics of thought. And we do not know that when the cell's limits in this direction *have* been reached, these harmonics may not be taken up by an order of substance to which the ordinary physical laws do not apply and which does not die with the death of the physical body. LOMALAND: A VIEW IN THE GARDENS

**Sympathetic Nature-Study**

A UNIVERSITY professor of psychology seems to have been observing nature and collecting facts upon which to reason, which is the right scientific way, instead of building upon a few facts dogmatic theories which exclude other facts, which is the wrong way pursued by some scientists. At all events he is described as having gone out to the Tortugas, there to live for many months fraternizing with the birds. He built a hut of boughs, dressed himself in leaves, made himself their friend, and watched them day and night. He found that the sea-gulls lived in colonies, or tribes, gather food in turn and apparently by preconcerted plans, and even converse with one another by means of the volume, tones and duration of their cries—in other words, talk. Some may ask what is a professor of psychology doing, dressing in leaves and fraternizing with sea-gulls; he ought to leave that to the naturalists. But science should be *one*, not in watertight compartments; and this man seems to have had the originality to quit the beaten track and go back to the facts. What a fine thing it would be if other psychologists could get out of their arm-chairs and study nature in its living actuality, in all its crude disregard of what is fitting and correct, in its open defiance of scientific theories! We should not then have so many "dislocations of the normal threshold of consciousness." One is glad, too, to find that, as some people claim we are descended from these creatures, there is something to be said for our ancestry.

Theosophy puts forth a plea for the study

of Nature by means of the human faculty of sympathy, and in the live state. So much more is learned in this way than by first destroying the creature and then cutting it up. Suppose this scientist had killed the gulls, and poked into their dead brain; or suppose he had dissected their brains before killing them. But the worst is that if science is to turn to sympathetic nature study, it may find some very ordinary people ahead of it and able to give it points, which might not suit its dignity.

As to the intelligence of animals, we must avoid extremes. There is no doubt that they have an intelligence which, in many cases, is superior to that attributed to them. There is no doubt that observers who study them sympathetically see more of this intelligence than others, who are not so sympathetic, are willing to believe possible. But still they are animals, and not human beings.

STUDENT

**A Marching Mountain**

MONT Brinquez, near the village of Octon, in the Department of the Hérault, has slid for a distance of 400 yards, destroying everything in its path, blocking the main road, and burying a river-bridge under 30 feet of earth. It began to move on November 14th, and a second movement occurred two days later, accompanied by a thunderous noise audible for miles around. Woods, gardens and plantations were obliterated, as the summit of the mountain collapsed and rolled down the sides. One small plantation of chestnut trees was carried 150 yards, without a single tree being damaged. The phenomenon is thought to be due to the very heavy rains.

**Canary Breeding**

THE breeding of canaries and other cage-birds is an industry extensively carried on in Norwich (England) and the neighborhood, where it is at once a lucrative business and a source of brightness to many homes. The birds are largely shipped to the United States, as many as 3000 having gone in a single shipment. The steamers have a special apartment fitted up near the engine-room, where the birds are in charge of an attendant.

STUDENT

**Wells in Crystalline Rocks**

IT appears that successful attempts to drill wells for water in crystalline rocks, such as granite, have contradicted an old theory that it was useless to expect to find water there. It is true the rocks are very compact, but nevertheless there are tiny pores in them, and these can contain water, though the percentage is very much less than in the case of sedimentary rocks. But more important than these pores are the joints, which occur in all rocks. The water from the surface percolates down the vertical cracks and collects in the horizontal ones. These cracks are narrow, and the yield is seldom more than 10 gallons a minute, though larger amounts have been obtained. Most of the experimental wells tapped water at depths between 50 and 200 feet, and the water is less liable to contamination than that in softer rocks or open wells.

STUDENT

**Black Sands of California**

ATTEMPTS have often been made to utilize the California black sands as sources of gold, iron or platinum. They consist of minute particles of heavy, hard and resistant minerals, originally existing in the rocks that form the gravel deposits in countries where there are igneous and metamorphic rocks. They are found in water-borne sands and gravels, in beach, river, creek, gulch and hill deposits; and form but a small percentage of the gravels. The operations of the gold-miners bring them to light as tailings. In the black sands on the beaches, the same process of concentration has been carried on naturally. The black sands do not exist in sufficient quantity anywhere to be of much use as a source of minerals. In iron they cannot compete with the other sources of that metal in this country, and the quantity of gold and platinum is small compared with the expense of extracting them. The sands are therefore not material for the speculative miner, but might be made the basis of a steady industry as the result of careful study of the most economical ways of extracting the various minerals.

THE Black Tern, an aquatic bird, has re-established itself in Norfolk, England, as a result of bird-protection, and after having ceased to breed for some seventy years past. T.

**C**ONG ABBEY is said to have been founded in 624 A.D. It was to this abbey that the last titular king of all Ireland, Rory O'Connor, retired in 1183, and where, fifteen years later, he died. His daughter, Nuala, queen of Uladh, was also buried here. The abbey stands in the midst of scenery whose beauty has been said almost to rival that of Killarney, and moreover the whole region is full of links with the prehistoric past and is "fairy-haunted." The country-side is dotted over with raths, cahirs and cairns, many of them with caves or "souterrains." On Knockmagh, an adjacent hill, Finvarra, king of the fairies, keeps his court. Under the cairn on its summit, legend says, lies Ceasair, one of the chieftainesses who accompanied the first colony to Ireland before the flood! This would point to an antiquity of more than eleven thousand years, for the minor cataclysm which caused the disappearance of Poseidon, the last remnant of Atlantis, is probably indicated.

Near this abbey was fought the great battle of Moytura (Mag-Tured), between the Tuatha De Danann and the Firbolgs. Sir William Wilde, who lives in Moytura House, near by, holds that Nuadu Argatlam, leader of the De Danann army, pitched his camp on Ben Levi; and that Eochaid MacEirc, king of the Firbolgs, rested with his power on Knockmagh. It is one of the most fully detailed events in remote Irish history and there is no reason whatever to doubt that it actually occurred. Giants and magicians took part in that fight, and its events are described as circumstantially as in the Iliad.

The ancient tradition as to the Tuatha De Danann, when dissociated from a recension which sought to make everything fit in with a false theology and chronology, was that they were the sons of Fire and Light, and "came down from heaven." In other words, they were essentially a divine race. From them

**H**AIL to the coming singers!  
Hail to the brave light-bringers!  
Forward I reach and share  
All that they sing and dare.

The airs of heaven blow o'er me;  
A glory shines before me  
Of what mankind shall be—  
Pure, generous, brave and free.

A dream of man and woman  
Diviner but still human,  
Solving the riddle old,  
Shaping the Age of Gold.

The love of God and neighbor;  
An equal-handed labor;  
The richer life, where beauty  
Walks hand in hand with duty.

Parcel and part of all,  
I keep the festival,  
Fore-reach the good to be,  
And share the victory.

—John Greenleaf Whittier

came the lore of the Druids and the science of the *file* and *ollamhs*. The name means "folk of the god whose mother is Dana." Dana was also called Brigit; she is the mother of the three gods known as Brian, Iuchar and Uar, gods of art and literature. Dana or Donand, also called Brigit, their mother, was the wife of Bress, king of the Formorians; but she belonged by birth to the other divine race, her father being Dagda (fire of god), or the "good god," king of the Tuatha De Danann. She was regarded as the goddess of literature (*Book of Leinster*). Her son had an only son called Ecne, that is to say, "knowledge or poetry" (*ibid.*). Brigit, the goddess of the pagan Irish, was supplanted in Christian times by St. Brigit; and the medieval Irish in some

measure transferred to her the cult their "pagan" ancestors had rendered to the goddess Brigit.

*Brenos*, says Jubainville, was the medieval pronunciation of *Brigentis*, later on pronounced as *Brigit*. When the Gallic conquerors of Rome and Delphi related that they fought under the command of *Brennos*, they uttered the name of the mythic chief whose supernatural power they believed had given them the victory, and he was the first of the three divine beings whom the Irish designated the gods of Danae. He held the first rank in the triad, whether as Brenos, or later on, Brian, of the old Irish Dei Danann. He is pre-eminently the god of Danae; and the old Irish name for the gods of Day, of Light, and of Life, is Tuatha De Danann, "folk of the god of Danae."

Before being reduced to the state of invisible beings the Tuatha De Danann, says the legend, were the visible masters of Ireland. They obtained the sovereignty at the battle of Moytura (at Cong). In this battle they overthrew the triple race of men who were at that time masters of Ireland, namely, the Fir-Bolg, the Fir-Domnann, and the Galioin. In the same battle they also overcame the gods who were associated with this antique race, and who were known as the Formorians, or the Dei Domnann.

The Tuatha De Danann alighted from the north-east in the midst of a magic cloud which rendered them invisible; and when the cloud had disappeared, and the Fir-bolg had become aware of their presence, the Tuatha De Danann had already pushed on to the north-west of Connaught, and had raised the fortifications round their camp at Moytura.

It is related that when the magicians and cup-bearers of Nuadu had declared what they would do in the battle, the Dagda then cried out, "The power which ye boast, I shall yield it all myself." And thereupon all cried out in

answer, "Thou art the good hand, Dagda."

The account of this battle shows that it was not conducted quite in accordance with modern ideas. Nuadu, wishing to avoid hostilities, renewed his proposal to the Fir-bolg, and demanded the surrender of one-half the island. Eochaid Mac Eirc refused. "When will you begin the battle?" said the messengers of Nuadu. And the Fir-bolg replied, "We must have time to make ready our spears, and sharpen our swords; then we should require spears like yours, and you, also, spears like those we have." And so it was resolved by common accord that one hundred and five days should be set apart to prepare for the battle.

After the battle had continued for four days, and the Fir-bolg were being worsted (tradition says one hundred thousand were slain), they

De Danann. With three strokes of his hammer Goibniu fashioned a spear-head, and at the third stroke it was perfect. With three chippings Luchtine made the spear-shaft, and at the third chipping it was perfect. And from the hands of Creidne the rivets were turned out with the same rapidity and perfect finish. When Goibniu had completed a spear-head he seized it in his pincers and cast it at the lintel of the door, so that it remained fast in it, the socket protruding. Then Luchtine took a spear-shaft and hurled it at the socket, and his cast was so powerful and unerring that the shaft never failed to enter it. Then Creidne who was standing by with the rivets in his hand, flung them at the spear-head, and his cast was so sure that they never missed the holes, but passed into the wood; thus, in one

vention if interpreted literally; while symbolically it should rather have been the other eye that the *red-hot iron* destroyed.

Cong, now an obscure village, visited by a few tourists and fishermen, was once a great school of learning, the resort of many students — and not less famous for the skill of artificers, whose priceless work in metal rivals that of any age or country. The gem-studded cross of Cong, with its infinitely fine tracery of drawn metal, is now in the national museum in Dublin.

Coming down to recent times there is a curious tale of a boy near Cong who was stupid and could learn nothing, but spent all his time in the fields; and in a certain field one day he fell asleep with his flannel jacket for a pillow. That evening he came home,

and his father was reading the newspaper. The boy asked for it and read every word. They took him then to the rector, and there was not a book in the rector's home the boy could not read. Then they sent him down into Munster, where the teachers of the classics were, to learn Greek and Latin, but there was no master able to teach him anything he did not know before. And when Queen Victoria was establishing the college in Galway, whom did she send for but the same boy to be the head of it! O'Beirne Crowe was his name. AN IRISH STUDENT IN LOMALAND

### Jottings and Doings

THERE appeared before the Federal Court in Omaha recently an Indian woman attorney, Julia St. Cyr by name, a member of the tribe of Winnebago, and known all over the Winnebago and Omaha tribes. It is generally understood that

whenever an Indian in either of these tribes gets into trouble he goes to Miss St. Cyr for advice, and the fact that probably half of the disputes of the members of those tribes are settled by her without recourse to the law courts at all, speaks well for her character. She is known as a woman of good judgment and intellectual attainments and, though versed in the law, has never lost sympathy with her own people. STUDENT

THREE characteristics of Egyptian babies impress themselves upon the tourist. The first is their beauty; for, although many of them are blind, or nearly so, from uncleanness and ophthalmia, they are all round-faced and exquisitely modeled, their features are classical, beautiful, and their color is exactly like bronze. Self-control is the next most impressive feature about these little folk, for it is a most unusual thing to hear an Egyptian baby cry. Noticeable, also, is these little folks' usefulness. It would take a very indifferent person indeed to fail to notice the infant toilers in Egypt.—*Exchange*

Lomaland Photo. and Engraving Dept.

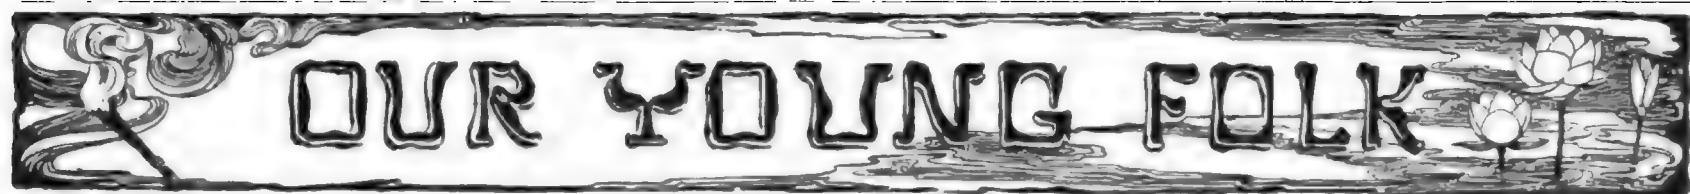

CONG ABBEY, COUNTY MAYO, IRELAND

proposed to the Tuatha De Danann to make an end of it by a small engagement, consisting of three hundred men on each side, the issue of which would decide the fate of the two peoples. But the Tuatha De Danann offered them terms of peace and the province of Connaught. The Fir-Bolg accepted these terms, and abandoned their capital, Tara, and the rest of Ireland, to the Tuatha De Danann.

Some of the events connected with this great battle are of peculiar significance, and like most things in what is called the mythological cycle point to a great antiquity. They are suggestive, in fact, of final Atlantean times. Thus we read that to the astonishment of the Formorians, the weapons of the Tuatha De Danann were always in perfect condition, whereas theirs, for the most part, were unfit for use after the first day. The reason of this was that Goibniu the Smith, Creidne the Brazier, and Luchtine the Carpenter were continually making fresh weapons for the Tuatha

instant, the weapon was finished and ready for immediate use! There is a suggestion of titanic energy about all this. One recalls Siegfried forging the magic sword.

Among the chiefs on the Formorian side was Balor, of the Mighty Blows. The remarkable thing about him was that one of his eyes, which he generally kept covered, brought instant death to everyone on whom his gaze fell. One eye was in the middle of his forehead, and the other at the back of his skull. It was the look of the latter that struck people dead. There is more than symbolism in this fragment. We have here a connecting link with the Cyclopean races of Atlantean days. And as to the symbolism, it is suggested by a tale in which Tory Island, Balor, and one Mac Kineely, a descendant of Balor, figure, and in which, oddly enough, it is the evil eye of Balor which is put out by the red-hot iron — not the other one. This linking of Balor with a medieval personage is undoubtedly a late in-

# OUR YOUNG FOLK

## *The Song of the Nibelungen* As Sung by Osbert the Bard

IT was a wild stormy night; the fir trees tossed their long arms to and fro in the wind and their lithe bodies writhed and twisted like tormented things. A horseman with long dark hooded cloak made his difficult way along the narrow road. At a turning his horse shied violently. The rider with a dexterous jerk drew rein and with a quick movement grasped the sword under his cloak. He peered into the blackness calling out boldly "Who goes there?"

"Peace, friend," came the answer in a singularly melodious voice, "it is I, Osbert the Singer." There was a ringing laugh from the man in the saddle. "Well met comrade, two *nightingales* are we though we look rather like two ravens. I also am a Singer, Wolfram von Eschenbach, at your service, of the household of His Imperial Majesty Kaiser Friedrich. I go to the Kaiserburg to sing at the coming marriage feast."

Osbert drew his mantle closer round the bulky harp that from habit he carried on his left arm, and made answer, "I, too, shall sing at the festival but in the Bauernhof at the sign of the Golden Hammer. There the peasants will make merry and I shall sing at their feast."

The rain had ceased and the wind was abating its fury as the two travelers struck the high road. "Ah, friend," continued Wolfram, as the way became clear, "you will sing of those far off ancient days when gods walked with men. The sons of the soil still love the rough sagas passed on through generations of bards to our time; but in the halls of the Kaiserburg the knights who have but just returned from the Crusade to Jerusalem, hear rather of knightly jousts and deeds of valor. Even our Emperor, as the harp goes round, sings of sunny skies and lands of flowers. We have tuned our lyres to the courtly measures of Brittany, Provence, and Spain. Walther von der Vogelweide sings of birds and the may-time; Gottfried of Strassburg of Tristan and Isolde; while I, I sing of Parzival the maiden Knight and the Quest of the Holy Grail."

Together the two, rider and foot wanderer moved on; together they mounted the drawbridge and passed under the ponderous portcullis that guarded the fortress door of old Nourenberg.

A roar of welcome greeted Osbert as he passed the threshold of the "Golden Hammer." Friendly hands led him to the head of the long table that stretched the length of the room. He was divested of his long mantle and served with viands and drink. Soon a cry went round, "A song, Osbert, a song!" followed by a storm of applause. The Bard arose, he struck a chord upon his harp. "I will sing the Song of the Nibelungen and the Nibelungen Hoard." This was greeted with cries of delight.

Osbert glanced over the eager faces whose

hearts spoke in their eyes. His own heart caught fire. The dark walls widened to a stately hall, the low ceiling vanished, a mighty tree spread its protecting branches from wall to wall, the blue vault of heaven arched over all. Osbert's finger dreamily sought the strings; his voice as it rose and fell, sounded distant and veiled; for he sang of Wotan, the One-eyed, All-Father, who sat under the spreading boughs of the great World Ash. From its roots flowed the River of Wisdom, guarded by the Norns, the fateful Sisters Three. For a draught of its waters All-Father had paid them an eye. High and exultant grew the voice of Osbert as he sang of Brünhilde, the Warrior Maiden, best beloved of the daughters of Wotan.

Then came a series of low rumbling chords. Those who heard felt themselves falling to the mysterious depths of Nibelheim, the cloudy underworld home of the Nibelungen and their ancient hoard of gold. There dwelt Reigen the black dwarf, and Fafnir, the dragon guardian of the ancient gold, both enemies of mankind.

A change came over the singer. His eye lighted, his voice rang out, for now he sang of the race of the Volsungs, the last of the godlike men. To them came Wotan the One-eyed, bringing the Sword of the Gods. Deep in the trunk of their roof-tree, he thrust the magic blade. No one who tried could move it, till Sigmund the Volsung essayed. He but grasped hold of the hilt and the tree gave up its prize. The destined hand had won the Invincible Sword. The singer chanted in triumph. Far he followed the Volsung's wanderings, then came Sigmund's death. Eyes were dim as he sang of the shattered Sword, but through the song one heard the note of Hope triumphant as the broken shards were gathered and saved for the Hero to come.

Surely a child of the gods was Sigfried, Sigmund's son, none other was ever so winning and no child was ever so strong. Reigen, the black dwarf, was his teacher—Reigen the cunning smith. To him when his manhood budded, Sigfried brought the shards of the shattered sword of his father, which the hand of his mother had saved, treasured long years in her bosom—to weld again to their might. Thus sang Osbert the Bard.

The faces of all present were lighted with joy. Sigfried was their hero, the figure of life and light that moved through the vague shadows of that ancient world "when gods walked with men." The voice of Osbert vibrated with high enthusiasm. One could see the glorious young Sigfried ride forth in his might, the regenerated Sword under his hand. With it he kills Fafnir the dragon and wins the Ancient Gold of the Nibelungen. A drop of Fafnir's blood upon his lips gives him the language of the wild. The birds whisper to him of danger through Reigen's treachery. Therefore he kills Reigen, who would have destroyed mankind by killing its savior Sigfried. Then Sigfried bathes in the blood of Fafnir, becoming

invulnerable, save where a linden leaf clings to his back between his shoulders.

The people hang upon the singer's words spellbound. They know what is coming, they are thrilled by the mighty chords. Brünhilde the Warrior-Maiden has lost her place in the halls of the mighty. Through compassion for a mortal she has disobeyed All-Father. Now to expiate her fault she sleeps, a mortal woman, clad in shining armor with spear beside her to betoken her lofty descent, upon a mountain-top, girt round with a living wall of fire. Only the dauntless heart, the hero without fear, can pierce its flaming battlements and release the Warrior-Maiden sleeping there. The hearts of the listeners almost stand still. For the moment they and Sigfried are one! Will he dare the blazing Schildberg? Their hearts leap wildly as he dashes through the flames scathless.

Who is this lying prone upon the ground clad in shining armor? Sigfried approaches. He removes the helmet from the sleeping figure; long lustrous tresses escape. With his sword he severs the lacings of the cuirass, it falls apart. The Being awakes and rises before him. Sigfried sees a maiden robed in flowing white vestments. It is Brünhilde the awakened daughter of the gods.

The voice of the Bard grows clearer, higher, freer; the chant becomes a song. In purest music he sings the morning hymn of Sigfried and Brünhilde as together they greet the rising sun. The Singer paused in exaltation. The high moment has come.

After this although the life of Sigfried is filled with valorous deeds and noble service, and his fame spreads as he fares from land to land, he cannot hold back the Law. The Light is fading from mankind. The Norns guide the hand that presents to him the cup of forgetfulness. The memory of Brünhilde and his plighted troth fades from his heart. He weds Krimhilde of Burgundy, whose uncle Hagen hates him, and by deceiving Krimhilde leads her to mark the vulnerable spot on his hunting cloak. Then in a festive hunt Sigfried receives the fatal wound. The Light fades and dusk falls upon earth, for Sigfried is the last of the godlike race.

Osbert the Bard gropes blindly for his mantle and with saddened heart fares forth.

The storm had abated, the wind was sighing gently like a tired child. Through the hurrying clouds he caught glimpses of the moon sailing high and clear in the sky. A feeling of peace unutterable crept into his heart. He knew that the Light was still burning even though the times were dark. The Sword of the Gods would be re-forged even though the shards were scattered over all the earth. The song would be re-sung by the Bards of a future age, and its end would not be the end of the Nibelungenlied. A higher note in human life would be struck in that far off day, and new harmonies be sung by the hearts of the children of mankind. And Osbert the Bard turned his feet toward the West. STUDENT

# THE CHILDREN'S HOUR

## A Winter in Sweden

**H**OW do Swedish boys and girls like the winter? I wish you could see them gathered together at their games and sports on a clear, cold, sunny day, when everything is covered with the white pure snow, and you would then have the answer. The happy faces with their rosy cheeks, all the cheerful calls and the merry laughter would tell you that these are some of the happiest days in their lives.

It seems to them a great privilege to have two so widely different worlds to enjoy every year.

The beautiful summer is always so fresh because of the long sleep all the flowers and trees have taken under their white cover, which though cold in itself protects them from the still colder winds. To watch the new wild flowers coming forth each day, to greet the birds who are coming back from warmer countries as soon as possible to build their homes in the far North, to adorn the little brooklets with water-wheels and boats of their own invention, to gather wild berries in the woods, and a thousand other things — of course these pleasures of the summer are appreciated and most longed for. But Swedish children do not wish to be without their winter. When therefore the flowers disappear, the leaves turn red and purple and yellow and then begin to fall, and the first snow-flakes float in the air in their merry dance, it is with happy hearts they greet the new world that is coming.

Can you imagine the impression on the mind from having this white soft cover over everything for several months? It is felt as some mystic urging to purify the heart, and he who pays attention to this voice is prepared when Christmas comes to feel every one as his brother and to share his joy with all. And he steps into the new year filled by a new strength and fresh resolves to make the very best of the year.

You see from the picture that Christmas is a time of paying visits to friends and relatives. On such a day when large snow-flakes flit about and alighting on your coat show themselves to be composed of the most beautiful six-pointed stars, not two alike, to sit, warmly wrapped up, in a sleigh drawn by a swift horse with merry jingles, to the home of some playmates, whose hearts like yours abound with joy — indeed this is a happiness that leaves no-

A SNOWY DAY IN SWEDEN

## SNOW SONG

Lucy Larcom

**I** HEAR a bird chirp in the sun;  
He flutters and hops to and fro;  
His tiny light tracks, one by one,  
He prints on the new-fallen snow.  
Little bird, sing!  
Sun, give his wing  
A flicker of gold as you go!  
Make a smooth path for him, Snow!  
I see a child out there at play;  
His footfall is light on the snow;  
His curls catch a swift golden ray  
Of the sun, while the merry winds blow.  
Little child, run!  
Shine on him, Sun!  
Blow him fair weather, Wind, blow!  
Make a white path for him, Snow!

thing to be desired. When arriving you will first of all note the corn-sheaves, the traditional Christmas gift of every household to the birds, who flap about them as if engaged in a merry play. Then through the windows you will see the lighted Christmas-tree, and, oh, such a deep sympathy with all that lives — this sight awakes within! You feel, nay, you know that everything has life and is a part of a great brotherhood, and you wish to be like the beautiful six-pointed snow crystals, with a light in the midst to radiate in every direction!

In the mornings the boys and girls run eagerly to the window to look at the weather. If there is not frost, then they will stay at home making snow-men, grottos and small pyramids of snowballs with a candle within to light at night. And the boys will arrange real battles with soft snowballs as projectiles, each side led by a chosen general.

But if the windows are almost covered with ice-crystals of the most beautiful shapes so

that they can hardly see anything, then they know that there is frost and that new pleasures are waiting for them. They will take their hand-sleds and walk to some suitable hill and they can walk for miles to reach one they especially like. At such places scores of children in red beg-caps coast for hours in a merry company.

Or if the snow is not too thick, they will take their skates to one of the small lakes, which abound everywhere. Oh, how they can play when skating! They try to make the most difficult figures on the ice while keeping erect and firm. They skate

two and two, holding each other by both hands, and sometimes they arrange real dances; but these are very difficult. Skating is a very good exercise, as it must be done with a good carriage and constant attention, and every boy and girl in Sweden learns it as early as possible. The larger boys make sails to carry on their backs and sail for miles on their skates with the greatest speed. There are even ice-yachts for big folks.

Another sport and the best of them all is the sliding on skees. No one who has not practised it can know how beautiful the woods are in winter time when every branchlet bears its little load of snow and the under-bushes are wholly wrapped in a coat of snow, making them look like gracious little fairies. Nothing disturbs the silence and purity, not a trace of a human foot can be seen, and the distant noise from the town or village is changed to a harmonious note, which fits in with nature. In such moments the soul rejoices, for in this harmony it can make itself felt more than at other times. This must be the reason why sliding on skees gives such a pure, bright joy.

And on the nights when the Northern lights sparkle in the sky, what a joy it is to stand watching the vibrating splendor! Or retreating within to the map of the heavens in order to learn some of the brightest stars, and then go out and find them in the sky, where they stand out so clearly as to be quite near. It is felt without any argument that they are comrades to our Mother Earth, with a peculiar life of their own.

Surely winter time has much joy and inspiration in store for the Swedish boys and girls. And everyone, who once has shared in the delights of a Swedish winter, will better understand the national character.

## BEAUTIFUL EVENT IN NEW YEAR'S FESTIVAL

**RAJA YOGA CHILDREN OF THEOSOPHICAL SOCIETY ENTERTAIN IMMENSE AUDIENCE**

**Stage Decorations are Bower of Beauty—Rear Admiral Swinburne and Rear Admiral Folger Among Notables Present**

THE following is a report of last Sunday night's meeting taken from the San Diego Union, and extracts are also given from the papers read:

Isis Theater was crowded to the very doors last night, the occasion being the New Year's Festival given by the Râja Yoga children of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY of Point Loma. Not only was the handsome structure crowded till standing room was at a premium, but large numbers were turned away.

The program, each and every number of which was most appropriate to the occasion, was well rendered and well received by the large gathering, which showed its appreciation with frequent outbursts of hearty applause. It consisted chiefly of musical numbers rendered by the Râja Yoga Orchestra, but two readings, one by a boy and the other by a girl, both of the Râja Yoga School at Point Loma, being on the program.

The decorations were most artistic and beautiful. The stage was a perfect bower of beauty with its bountiful supply of flowers, green plants and palms surrounding the outer edges and with the drop curtain representing a beautiful forest scene for the background.

In the large gathering were seen many prominent people of this city, and in the lower right hand boxes were seated Rear Admiral Swinburne and a party of six. With him were Mrs. Swinburne, Rear Admiral Folger, retired, and Mrs. Folger; Mrs. Uriel Sebree, wife of Rear Admiral Sebree, who is in command of the Pathfinder fleet, now at Magdalena bay, and Dr. and Mrs. Valdenberg.

The musical program was as follows:

Overture to *Egmont* (Beethoven); Râja Yoga Orchestra.

*The Angelus* (Bohm); Râja Yoga Orchestra.  
Choruses, *Lo the Joyful Day is Breaking*, and *I Waited for the Lord* (Mendelssohn).

*Anvil Chorus* (Verdi); Râja Yoga Orchestra.  
*Andante Cantabile* (Tschaikowsky); Râja Yoga Quartet.

March, Op. 101 (Raff); Râja Yoga Orchestra.

"A Glorious New Year's Message," the paper read by one of the Râja Yoga girls was in part as follows:

"Truly life is beautiful when we make it so, and those who find most of the true happiness are those who have been willing to put the greatest unselfish endeavor into their work—living for others and finding in each New Year an opportunity greater than the last in which to help their fellow men.

"Râja Yoga teaches these truths, nor are they new, for they have been known since the world began. Voiced first in one age, then in another, forgotten for a time and then brought to light again when they were needed most.

"A new day has dawned, and with the first rays of the rising sun let us take our stand as guardians of the right, and examples of a sweeter, purer and more ennobling life. May the message of Râja Yoga reach all hearts and as it spreads in ever-widening circles, may the endless ripples of its waves

make known to all men its glorious tidings of a glad New Year."

One of the Râja Yoga boys read a paper entitled "Heralds of the New Year," from which the following extracts are taken:

"The New Year! The very words intone a promise. And year by year at this time there is a promise in all things. When the shortest day is passed and the sun begins again his northern journey, there is a stir of earth's heart under the cold gray mantle of winter. In some fabled, yet perhaps real, early Eden days, man's body was pure enough and sensitive enough to feel these finer thrills of life. But whether recognized or not, they come. They lend their primal force to resolutions made then. They build, and if thought is kept clean and high beyond its usual form, then for a little onward, they will build a purer and stronger and healthier body for the months of the New Year.

"It is never too late to mend. At all beginnings that nature inaugurates there is a chance to turn to better things, to nobler paths, to make worthier fabrics in mind and body. Our bodies are part of the body of nature, and our souls are rays of her soul. We belong to the sun and the sun to us. To hope and to try are the keys." — *San Diego Union*

"What is the New Year, and what does it mean? Truly it is a time to start in the right path, with a determination not to be daunted by anything. And when we listen to the teachings of Râja Yoga we learn that we can do this. Ours is the privilege to bring Truth, Light and Liberation to discouraged humanity, for Theosophy teaches us that we are souls divine, and with that knowledge comes the power to overcome all obstacles. Verily it is our true heritage and as such should be sacredly guarded. Then let us to work and in our smallest acts make ourselves felt as a potent power for good, that our lives may help others, and theirs in turn shed a guiding light along the path for those who follow.

"We have slumbered too long, but now as we listen eagerly to the call and realize that with the dawn of a New Year there is yet another opportunity, our very lives must become a part of our work, that the whole world may be touched by the glow. Then will others and still others realize that they too have a new life before them and may strive again for the higher Truths.

"Indeed our bark is already waiting to begin the voyage; Râja Yoga is the name of our noble ship, with Katherine Tingley at the helm, and with her guidance we know that we may easily pass through all dangers.

"The light has never gone out through all these long ages and now it shines more brightly than ever before, bidding all take heart and renew their strength, for the goal is nearly won.

"The world has never been without its great teachers, nor have they ever failed to give it their aid even though unseen and unknown. But now the time has come for action. Long have we heard the call, now let us answer it, and bear to all our glorious New Year's message."

"All nations, races and tribes throughout the world at the present time hold one day of each year sacred as the commencement of the new-born year, and we cannot help but think that it has always been so. Among many nations, more particularly those influenced by the later Romans, the New Year commences after the Christmas festivities have passed; and surely there could be no better time. Christmas-tide is the period of the year at which the world,

it would seem, ought to approach nearest to the state of Universal Brotherhood. Surely everyone then should be filled with the spirit of self-sacrifice and kindness,—each striving to bring more sunlight and happiness into the lives of others. For a short period the dividing lines and barriers that separate nations would disappear. Each man would find something new and strange within himself, urging him toward higher aspirations and better things.

"It is this period that prepares the way for the birth of the New Year. It is the time when the heralds of the New Year come to each of us bearing the books on which are written the records of time. The soiled and blotted pages of the past year are turned over and the new leaf is ready for the pen, spotless and white as snow! The dark stains that have marred our last year's record are past and we need remember them only so far as their experiences will aid us in keeping the new page fresh and clean.

"And beside the yearly cycle of the sun between his northern and southern limits, are other and greater cycles of more splendid promise to humanity if we will but seize them. Drowned in the swift movement of life, its cares and pleasures and passions, humanity has for ages let these pass by unnoticed and useless. But now it is restlessly looking for something, and the beginnings of new things are upon us—beginnings rosy like the dawn. But the gold will follow, suddenly to flash in the east.

"The herald's trumpets sound at the door of each man's heart, rousing from its sleep that small voice called conscience and bidding us heed it as the only safe guide for our unsteady hand in writing the year's record. And assuredly those heralds blow not in vain, for each seems to see himself as he really is, far more clearly than at any other time. The heralds go before—pointing out the path that each must travel in the end, sooner or later—and bidding us be of good cheer, for all things are possible to those who have courage, faith and honesty. They arouse the sluggard, sleeping by the wayside and start him once more on the upward path. The sound of their bugles puts new life and hope into the hearts of the weak and despairing, making them feel that after all 'Life is Joy.' It strikes harshly on the false notes in the hearts of the dishonest, making them see the folly of their course and the joy to be gotten from a life of single-heartedness.

"It sounds the call for the rebirth in each, even the children, of the Christos which Theosophy teaches us should have the mastery in each one of us. And we feel the glow of new life and the resolves we make come from the heart rather than the mind. But what each of us needs most is the strength and courage to carry out our resolves. This we can only gain by constantly striving for it, in our daily lives. But when we have gained that strength then each day will be as the beginning of a new year and we will live our lives as though 'Each day were a little life; and our whole life but a day repeated.'"

Katherine Tingley arrived home in Lomaland on Christmas morning, and was present at the meeting in Isis Theater. She has announced her intention of speaking in the Theater on Sunday, Jan. 5, 1908 and great interest will attach to this, her first public lecture after her return from Europe. Christmas Day was a day of great rejoicing and happiness at Lomaland both to the older students and the children. Never has a happier day been spent and never a more joyous Welcome than that we gave to our beloved Leader. RECORDER

## Sully Prudhomme

IN early September of this year Sully Prudhomme, one of the world's most charming and beloved poets, passed away. His beautiful and sympathetic verses breathe in many places that deep undertone of Universal Brotherhood, of universal love, which is ever whispered to the hearts of men when they ask their souls to give them the key to the problem of life. He foresaw and proclaimed the advent of universal love, so long hoped for by those who feel the solidarity of every part of the universe:

Un jour les cœurs, tous envahis  
Par le grand flux d'amour qui monte,  
De s'être si longtemps hais  
N'auront plus que surprise et honte.

## On Lake Vettern

(From one of the works of the Swedish author, Verner von Heidenstam, in which he draws a picture of the life of Saint Birgitta, we take the liberty of translating the following excellent description of the singular character of the lake and its environments. A SWEDISH STUDENT)

BELOW the Rökne islets in the north of Lake Vettern stands a single rock, named Skärfvesten, which among the surges marks the frontier between Sweden proper and Gothia.

In no place is lake Vettern more solitary. Not a farm, not a fisherman's hut, is to be seen, and hours may pass ere a sail appears on the void water-mirror. The eastern shore, rising to a considerable height above the gar-

ly and irregularly and sink back without turmoil, without sighs, but with an almost jocund melody of clucking and gently singing sounds. During the whole time there is found a certain re-appearing musical scale down and up and again down, but before quite finished the next hurried wavelet is already there. It fills my mind with longing to hearken to this play of sorrowlessness. Deep in the crystalline water I perceive the large silky rubble-stones, and the blueness of the lake and the upland shores carry my thoughts to Odysseus' insular state in the southern seas.

Over Vettern rests a greatness of contour and a light openness that we seldom meet with in our country. A single summer cloud in front of the sun can, however, suddenly black-

## VADSTENA, SWEDEN

What a pity that one with such a beautiful character, who was such a benevolent man, such a compassionate being, such a noble soul, should never have grasped the purpose of existence firmly enough to find in it the expiation of the conditions which led him only to a hopeless despondency.

J'ai voulu tout aimer et je suis malheureux  
Car j'ai de mes tourments multiplié les causes.  
D'innombrables liens frères et douloureux  
Dans l'univers entier vont de mon âme aux choses.

Ma vie est suspendue à ces fragiles nœuds,  
Et je suis le captif de mille êtres que j'aime;  
Au moindre ébranlement qu'un souffle cause en eux  
Je sens un peu de moi s'arracher de moi-même.

An all-embracing love, when founded on the knowledge of the solidarity and common origin of all existence for the purpose of experience, truly will make the soul feel those countless bonds with the whole universe, but it will also give man the courage and steadfastness to make him a helper and a co-worker in this boundless universal life. He will gladly make of himself a pillar of strength and a conquering Warrior to assist in this great pilgrimage of existence which all must undergo, and *undergo together*. There will be no room for pessimism, no place for despondency, when our poets find the golden key of Theosophy. It is the *open sesame* to understanding and to peace. A FRENCH STUDENT IN LOMALAND

GOD cuts by the mystery of his hands. He dispels the clouds of Seb by the light. He is satisfied when he directs the great ones towards him with the small ones to see the functions of Thoth amidst his mysteries. He makes offerings of thousands of years.

— From the Egyptian Book of the Dead

dens of Grenna, spreads north of the Om-mountain as a lowland, which from a distance appears to be one with the water. In bright days I can discern the castle at Vadstena and the convent-church, the palm-church, which, formed as the shrine of a saint, rises at the horizon as a livid cliff and therefore by the people is named the Blue-church. Sometimes, when the wind is favorable and still, I fancy that I can hear the tolling of bells from Vadstena, but always so low that it is impossible to decide if it may not be only a play of the imagination. The only distinct sounds reaching the ear are the screech of the gulls and the bubbling splash of the water. The fishes in Vettern grow old, wrote a priest some hundred years ago, then the water is pure, delicate and thoroughly worked, and the last term is the only just one as every billow breaks with an abundance of small melodious knocks like those of soft cork-hammers on musical-glasses. Even were I blind and unaware of where I might be, I should at once be able to distinguish the splash of Vettern from that of all other lakes. The waves reach the shore quick-

en the whole lake and make the waves boil. Vettern is like a woman, but a hasty and fighting one, who in the midst of her serenity and cheerfulness is suddenly seized with anger. Then the play comes to a standstill and for some moments a silent expectancy prevails. There is no wind, though the water has begun to be agitated. If a sloop draws near the slack sails hang and flap from one side to the other as the boat rocks. The master cannot use the helm and must put out an oar. He looks around wide awake as if expecting ambush from every side and he answers my call with a dry and taciturn warning and tells about whirlpools and waterspouts and other subterranean prognostications of storm. Thicker and thicker flock the cloudlets in front of the sun as if held by it, and at the horizon, just where Visingsö must be lying, a series of misty pictures appears in mirage, forming themselves into a swimming city with houses and walls and towers. I can not recognize that to be Visingsö, where in August nights, when the lights are burning on the opposite shore, I fancy myself sitting at the entrance to Corinth and almost expect to find fire-flies in the shrubs. It is not merely that Visingsö, from where the peasants carried the dead King Magnus on their shoulders over the ice and which now is sleeping in the solitary inland sea with its great school in ruins. # THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l   O f f i c e   P o i n t   L o m a   C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

## Katherine Tingley in Europe Further Reports of Meetings in Holland

Mrs. Katherine Tingley

(Translated from the *Telegraaf*, Amsterdam,  
November 19, 1907)

MRS. Katherine Tingley, the Leader and Official Head of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, knows well how to hold her audience spell-bound from beginning to end. Does it come from the inspiring expression of her face and strange charm of her dark eyes, which now shine in highest ecstasy and now are covered with a veil of sadness?

Absolute silence prevailed yesterday throughout the large hall of the Concert Building, filled to the last seat by an audience interested and anxious to hear this woman, who is looked up to by thousands and thousands throughout the world. The speaker was listened to with the greatest interest, as with a clear rich voice, in which every one of her moods was reflected, she gave in broad outlines an exposition of the aim and nature of Theosophy.

At her Headquarters at Point Loma, California, said Mrs. Tingley, she was continually receiving letters from all parts of the world showing how much discontent there was in regard to the prevailing conditions of the day.

"The great human family knows no peace," said the speaker, "but Theosophy gives man knowledge of the wonderful power that he unconsciously possesses. It teaches man self-control, and makes him less selfish. Theosophy is the wisdom underlying all the great religions of the world, and the key-note of every religion is that man must respect the sacredness of life.

"Belief in his own power, this is one of the main purposes of the teachings. We Theosophists do not evade the difficulties of life; on the contrary we try to find them, as Christ did and many others before and after him, urged to do so by an unspeakable love for humanity."

Very clearly Mrs. Tingley pointed out that Theosophy has nothing to do with spiritism, hypnotism, or psychic practices, to which the name of Theosophy has been so often misapplied.

"I do not come to Holland," said the speaker, "to add one more to the already existing religions. Theosophy has no dogmas, and one thing we ask of our followers is strict tolerance for the beliefs of others. As soon as people realize that eternal justice governs their destiny they will be able to strive for perfection. We call this Karma, and everyone who accepts our principles will learn to hold more sacred his life, and come to know that he is at the root of his nature divine. Theosophists believe in Reincarnation, for human life is short, too short, to realize all the beautiful, the good, and the true we feel in ourselves, and to make life harmonious with the glorious law of life itself."

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

In breathless silence Mrs. Tingley's speech was listened to and as it ended there burst forth a long significant applause.

## Theosophical Address by Mrs. Tingley

(Translated from *Dagelykch Nieuws*, Groningen,  
November 20, 1907)

WE have heard many speakers on Theosophy, but none gave us that impression which we received from the address of Mrs. Katherine Tingley, revealing as it did such an intense real love for humanity.

Mrs. Katherine Tingley is the Leader and Official Head of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, the Headquarters of which are at Point Loma, California. She is the autocratic but beloved Leader of one hundred thousand Theosophists, as we read in an interview published in a well-known American paper.

The large platform was artistically adorned with palms and flowers, and Katherine Tingley, by her words, the tones of her voice, and her expressive gestures, charmed her audience from beginning to end. An inexhaustible inspiration goes out from her face and speaks of life and energy; there is expression in the least of her movements. Small wonder then that there was perfect stillness in the completely filled theater; small wonder that even those among her audience who did not know the English language yet understood the sense of her words. Even they felt that it is she who has received the Truth of all ages from her predecessor William Q. Judge, and which had been handed on to him by Madam H. P. Blavatsky, the courageous Russian woman of noble birth, who was taught philosophy by the Sages of the East for its promulgation among the people of the world. And there were none present who did not feel sympathy for the work that is being done at the Headquarters at beautiful Point Loma, who did not feel a deep interest in the education that is being given there in the Rāja Yoga Schools in the glorious environment of southern California.

Mrs. Tingley is at this time, we are informed, on a propaganda tour through Europe. She has already been to England, Switzerland and Sweden, and is now visiting some of the cities in the Netherlands.

At the beginning of her lecture she explained clearly and in simple words the purpose of her coming here. Repeatedly she receives at the Point Loma

Headquarters letters from all parts of the world which go to show how discontented many people are with the prevailing conditions.

"The great human family knows no peace," said the speaker. "Unrest prevails everywhere. It is our aim to bring to it a doctrine which will give peace, which teaches man the power that he possesses for good, but of which he is as yet unconscious.

"Humanity is everywhere searching for something. Many are discontented with the present system of education; many feel that much more can be done for the well-being of the human family. In the soul of man glorious powers lie sleeping; man must become conscious of those powers, conscious that he is a part of the divine plan. As soon as man has acquired this knowledge, the highest possibilities will come to him. Theosophy brings the same message that Christ taught centuries ago. But in the course of the ages much of the teaching of Christ has been lost. If the teaching of Christ were still known, if it still found application, this new presentation of Theosophy would not be needed. But now it is greatly needed, and it will restore to men what has been lost from true religion.

"The wisdom of Theosophy is the wisdom of the old religions, also it is the wisdom of Christianity which, as also is the case with the other religions, has been so much misunderstood. Theosophy teaches the sacredness of marriage. There would be no divorces if Christ's teachings had been understood. A higher education of the children who go to make up the future citizens of the world will result if parents will take hold of the Theosophical teachings. The greatest enemy of man is his own pessimism, his lack of confidence in himself. Pessimism controls the world; against this Theosophy places its optimism, it gives something to live for, something to die for. What would become of humanity without hope, without the expectation of something higher and better? To evoke that hope, to support that expectation, is the aim of Theosophy, which teaches man to feel himself at one with the higher law of life, which leads him back to the path on which he may walk in eternal light. But many, too many, let pass the short precious time, and too late they feel how much they have lost."

Mrs. Tingley then touched upon some questions which had been frequently put to her. She declared that she believed in Reincarnation, in the return to a higher and better life, in the seeing of loved ones again, because love is immortal. She closed her lecture with an exposition of the divine wisdom of Theosophy, which, she declared, will restore to man confidence and true brotherhood and teach him self control and self development.

"Theosophy has been misinterpreted," said the speaker, "by connecting it with hypnotism, spiritism and psychic practices, and because some professed leaders have advised their students to experiment

along these lines. How may one acquire the knowledge of true Theosophy? Simply by having the courage to study Theosophical literature; to accept the teaching of Karma and to sin less against one's divine nature. This is the first step, and by a little study one will comprehend that Theosophy does not aim to bring forward a new religion."

Mrs. Tingley's speech, which was most impressive, was received with hearty applause, and was afterwards briefly interpreted. At the beginning there had been an announcement made in Dutch that the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY is not affiliated with any other body calling itself Theosophical which does recognize Katherine Tingley as the Leader and Official Head. No admission was charged to the lecture, as the speaker is traveling at her own expense. Donations, however, might be given for the founding of Rāja Yoga Schools.

Today Mrs. Tingley leaves for Groningen. Thursday she will visit Arnhem, afterwards Germany, and then, *via* London, return to Point Loma.

It is our hope that her visit to Europe may have been in every way successful.

#### Katherine Tingley

(Translated from *Provinciale Groninger Courant*,  
November 20, 1907)

**B**EFORE a crowded audience, which yesterday evening filled every seat in the new theater, Mrs. Katherine Tingley, Leader and Official Head of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, which has its Headquarters at Point Loma, California, delivered an address on Theosophy as had been previously announced. After a short explanation by Mr. A. Goud on the subject of the evening, Mrs. Tingley appeared on the stage, which was tastefully decorated with shrubs and flowers.

By her every movement, her friendly face, her eyes beaming with compassion and flashing with power, and her melodious convincing voice and impressive gestures, she kept her interested audience spell-bound.

In an extensive exposition the speaker made clear what Theosophy really is. It teaches man self-knowledge, self-control, and therefore makes him less selfish. It is opposed to pessimism now reigning so widely in the world, and replaces it by optimism. It gives man something to live for and to work for, and above all, brings him peace. The wisdom of Theosophy has its source in the foundation truths of all the ancient religions which have this especially in common, that they tend to reveal man to himself and inspire him to respect the sacredness of life.

Mrs. Tingley pointed out with emphasis that many people have a wrong idea of Theosophy, thinking that it is connected with spiritism and hypnotism. Theosophy has no dogmas, it asks a strict tolerance for the opinions of others. The UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY wishes every one of its members to be wholly free. The teaching of eternal justice rules in Theosophy, and Mrs. Tingley declared also that she believed in Reincarnation and in the seeing again of one's beloved ones.

The loud applause which followed showed how strong an impression her inspiring words had made upon the audience. At the request of Mrs. Tingley, Mr. Geertsema, though not himself a member of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, gave a concise and clear summary in Dutch of her lecture, which had been given in her native language. Afterwards Mrs. Tingley accorded an interview in the foyer of the theater to those who desired to meet her.

#### Mrs. Tingley in Nürnberg

FROM Holland, Mrs. Tingley went to Nürnberg. She lectured in the Kultur Verein, the finest hall in the city, where the same scenes were re-enacted as in Holland and Sweden. The Hall was crowded, with not even standing room, and numbers turned away. The audience listened with an interest that was at times breathless, and though many did not understand English, nevertheless it was plain to see that they understood her meaning. RECORDER

### The Music of the Spheres in Hebrew Poetry

Praise ye the Lord.  
Praise ye the Lord from the Heavens:  
Praise him in the heights:  
Praise ye him all his angels:  
Praise ye him, all his host.  
Praise ye him, sun and moon:  
Praise him all ye stars of light.  
For he commanded and they were created;  
He hath also established them for ever and ever:  
He hath made a decree which shall not pass away.  
Praise the Lord from the earth,  
Ye waterspouts and all deeps:  
Fire and hail, snow and vapor;  
Stormy wind fulfilling his word:  
Mountains and all hills;  
Fruitful trees and all cedars:  
Beasts and all cattle;  
Creeping things and flying fowl:  
Kings of the earth and all peoples;  
Princes and all judges of the earth:  
Both young men and maidens;  
Old men and children:  
Let them praise the name of the Lord;  
For his name alone is exalted:  
His glory is above the earth and heaven.

*Psalms cxlviii*

**T**HE psalmody which forms so large a part of public worship seems to owe its rise to the belief that God is gratified by listening to his creatures singing in his praise. To thoughtful minds this seems quite incompatible with any worthy concept of divinity whose glory rather should consist in ceaseless service of the whole with no derogatory afterthought of recognition, and still less applause!

To appreciate this Psalm properly we must imagine the creative Power as dwelling in all forms of life and even present in the crystals and the rocks, so often foolishly considered to be "dead." The Rosicrucians taught that the whole universe was one vast instrument of music and that the breath of God sweeping the strings wakens a melody which rings for ever through the fathomless abyss of shoreless space. In times still further distant from our own Pythagoras had spoken of the music of the spheres. Though quite inaudible to ears of flesh this is the so-called "Word" of God. Everyone nowadays has heard of the suggestive work of Mrs. Watts Hughes who by the singing of sustained notes over a membrane covered with wet paint, has actually created pictures of the flowers and trees by the vibrations of her voice alone. Thus she has amply proved that sound both underlies and is the producer of form.

The ancients taught that through cosmic melody are creatures brought to birth; that by its support they are sustained in life and that death itself is due to the disintegrating power of that eternal, wordless song. The writer of the psalm would scarcely call upon the hills, the waterspouts, the trees, and "stars of light" to join in vocal harmony, so that

perhaps he had in mind that inward melody to which the atoms dance and whose majestic measures lead the planets in their mighty rounds.

Although the public in those ancient days knew nothing of the music of the spheres, it should not be forgotten that the Mysteries have never ceased, nor have they ever been denied to persons qualified to use that knowledge well. And on the other hand, the poet may have written wiser than he knew, helped quite unconsciously by some clear intuition of the Soul. Lit by a sunny ray from that same source perhaps, our Shakespeare penned these memorable lines:

There's not the smallest orb which thou behold'st  
But in his motion like an angel sings,  
Still quiring to the young-eyed cherubins;  
Such harmony is in immortal souls,  
But while this muddy vesture of decay  
Doth grossly close it in, we cannot hear it.

STUDENT

### Missing Opportunities

**A** LITTLE poem in *Our Dumb Animals* describes how pious worshipers were venerating a God of mercy in the church while a man of sin came along outside and loosed the reins of the carriage horses. This illustrates the overlooking of what are called *small* duties and opportunities, while occupied in looking for so-called *greater* duties and opportunities.

It is a familiar aphorism of Occultism (in the real sense of the word) that the time for action is always Now and Here; and like such aphorisms it is too simple to seize the attention of most minds. Most people find it easier to act Then and There, because that kind of action wastes itself in the realms of the imagination and so demands less effort. Also they prefer to do *many* things rather than one, and to generalize rather than come down to particulars. All these are dodges to avoid the actual and practical. Hence Occultism may be called the only truly practical way of life.

One who has not the strength for the small duty will not have it for the large; while he is waiting until he is strong enough to cut down the tree at one blow, the patient man will have felled it with a penknife. How many of us pass years waiting to begin, yet missing all the opportunities, like a man eternally walking around a fence, looking for a gate, when he might climb it at any point.

Instead of praying for grace, there is thus a simple direct way of getting it, by cultivating it; but it is too simple and direct for most people. Perhaps they are not looking for grace after all, but for something else.

And occult powers! What power can be greater than the power to do the duty of the moment? What power leads, when practised, to greater results? Those know who have tried. To be simple, practical and to the point is the essence of Occultism. E.

ONCE grasp the idea that universal causation is not merely present, but past, present and future, and every action on our present plane falls naturally and easily into its true place, and is seen in its true relation to ourselves and to others. Every mean and selfish action sends us backward and not forward, while every noble thought and every unselfish deed are stepping stones to the higher and more glorious planes of being.—H. P. Blavatsky

## ODE

**B**ARDS of passion and of mirth,  
 Ye have left your souls on earth!  
 Have ye souls in heaven too,  
 Double-lived in regions new?  
 Yes, and those of heaven commune  
 With the spheres of sun and moon;  
 With the noise of fountains wondrous  
 And the parle of voices thundrous;  
 With the whisper of heaven's trees  
 And one another, in soft ease  
 Seated on Elysian lawns  
 Browsed by none but Dian's fawns;  
 Underneath large blue-bells tented,  
 Where the daisies are rose-scented,  
 And the rose herself has got  
 Perfume which on earth is not;  
 Where the nightingale doth sing  
 Not a senseless, tranced thing,  
 But divine melodious truth;  
 Philosophic numbers smooth;  
 Tales and golden histories  
 Of heaven and its mysteries.

Thus ye live on high, and then  
 On the earth ye live again;  
 And the souls ye left behind you  
 Teach us, here, the way to find you,  
 Where your other souls are joying,  
 Never slumbered, never cloying.  
 Here your earth-born souls still speak  
 To mortals, of their little week;  
 Of their sorrows and delights;  
 Of their passions and their spites;  
 Of their glory and their shame;  
 What doth strengthen and what maim.  
 Thus ye teach us every day,  
 Wisdom, though fled far away.

Bards of Passion and of Mirth,  
 Ye have left your souls on earth!  
 Ye have souls in heaven too,  
 Double-lived in regions new!—*Keats*

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** The Theosophical doctrine of Karma seems hard and cold. Is there nothing in the teachings of Theosophy which corresponds to the forgiveness of sins?

**Answer** Suppose there was a world where the law allowed every man to have everything he chose to make his own—fame, fortune, knowledge, natural beauty, artistic surroundings, harmony, health of body, power of mind, warmth of heart and the lasting love of friends,—in fact every desirable thing. Would you blame the law if the majority of persons usually chose the things which at best could give but transient pleasure, while they ignored the things giving lasting happiness and peace? Would the law seem hard and cold if, throughout ages of bad choosing it daily offered a weary and unhappy race opportunity to begin over again, so that by selecting the best in nature and in human nature humanity might create for itself an ideal world?

These are the conditions in which we live and such is the working of the beneficent law of Karma. The suffering which warns us that we have selected the wrong things is no more unmerciful than are the insistent lights flashing along a rocky coast to warn the mariner of danger.

Suppose that each man had a dual nature, that he was a god in an animal body, and that by surrendering his will to the lower nature he denied and grievously wounded his better

side. Whom would his repentance concern more than his dual self, which included the offender and the offended? Who could forgive the wrong he had done in crucifying the divinity within except his own soul? If he came to be at peace with the inner Christos, and that was a part of the Christ principle in every other being, would not that unity become the necessary atonement?

It is this duality of man's nature which St. Paul refers to in saying: "for ye are the temple of the living God." Jesus taught men to say, "Forgive us our debts as we forgive our debtors." Forgiveness was assured to sinners provided they were repentant sinners, because repentance meant a turning away from sin to the higher nature. The great faith which healed the palsied man was dependent upon the Christos principle in himself recognizing the divine nature of Jesus. "Not one jot or tittle shall be abated until the law shall be fulfilled," is the Karmic law, no less inflexibly taught in the Bible than in the Bhagavad Gītā.

Suppose the offender was counting upon vicarious atonement and expected that some Savior would forgive his sins. What common ground for fellowship could ever exist between Elder Brothers who had developed the richness and beauty and strength in their natures and weak, beggarly men who were content to live upon spiritual charity because they were too indolent to claim their divine inheritance? The consciousness in man has long since outgrown the form of a jelly-fish and he cannot go back. He has spent ages building up a backbone,—a physical symbol of the moral stamina he normally ought to possess. Nature has led him along until he was able to stand upright on steady feet, with skilful hands and free will wherewith to choose. He has eaten of the tree of knowledge: he knows good and evil and takes what he will. Life is a voluntary development in an eternal process of becoming gradually united with the spirit of truth in each heart—that which knows all things.

In the modern Conflict of the Creeds one might endure agonies of doubt lest he accept the wrong Savior; but the ancient truth of Theosophy mercifully shows each man that as the rightful ruler of that kingdom of heaven which is within, he is always the dictator of his own destiny under the Karmic law. L. R.

**Question** What is the distinction made in Theosophy between the terms higher and lower self and higher and lower ego?

**Answer** These terms are often used more or less loosely, but it is well to bear in mind the definite meaning given to them by H. P. Blavatsky, and this should be adhered to as much as possible. The inquirer is advised to read *The Key to Theosophy* by H. P. Blavatsky in which special attention is given to the definition of these terms. We cannot here quote all that is said, but the following will make clear the special significance attached to each.

H. P. Blavatsky translates "literally from the Occult Eastern terms their equivalents in English." These she gives as follows:

THE HIGHER SELF is *Ātmā*, the inseparable ray above, more than within, us. Happy the man who succeeds in saturating his *inner Ego* with it!

THE SPIRITUAL *divine Ego* is the spiritual soul or *Buddhi*, in close union with *Manas*, the mind-principle, without which the former is no *Ego* at all, but only the *Ātmic Vehicle*.

THE INNER or HIGHER "Ego" is *Manas*, the "fifth" Principle, so-called, independently of *Buddhi*. The Mind-Principle is only the Spiritual Ego when merged into one with *Buddhi*; no materialist being supposed to have in him *such* an Ego, however great his intellectual capacities. It is the permanent *Individuality* or the "Reincarnating Ego."

THE LOWER or PERSONAL "Ego" is the physical man in conjunction with his *lower Self*—i. e., animal instincts, passions, desires, etc. It is called the "false personality," and consists of the *lower Manas* combined with *Kāma Rūpa*, and operating through the physical body and its phantom or "double."

To understand the meaning and right use of these terms fully one must study the complex nature of man from the standpoint of the "Principles." It will however be clear from the above that the terms Higher Self and Higher Ego are not identical. The Higher Self is as it were the root and foundation of all Being, the spiritual essence so to say, that by which man is one with the infinite life. As H. P. Blavatsky says also in *The Key to Theosophy*:

Our God *within* us, or "our Father in Secret" is what we call the "HIGHER SELF," *Ātmā*.

and then goes on to say:

Our incarnating Ego was a God in its origin, as were all the primeval emanations of the One Unknown Principle. But since its "fall into matter," having to incarnate throughout the cycle, in succession, from first to last, it is no longer a free and happy God, but a poor pilgrim on his way to regain that which he has lost.

The terms lower self and lower ego are practically synonymous as will be seen from the definition given above.

It is very important if we desire to make full use of our study of Theosophy that we should have clear ideas in regard to the terminology, and a constant reference to *The Key to Theosophy* is suggested to all students. On the fly-leaf of the volume is the following:

Dedicated by H. P. B. to all her pupils, that they may learn and teach in their turn.

It is a book that will bear reading and re-reading and well repay the deepest study.

STUDENT

INQUIRER. You speak of Theosophy and Occultism; are they identical?

THEOSOPHIST. By no means. A man may be a very good Theosophist indeed, whether *in* or *outside* of the Society, without being in any way an Occultist. But no one can be a true Occultist without being a real Theosophist; otherwise he is simply a black magician, whether conscious or unconscious.

INQ. What do you mean?

THEO. I have already said that a true Theosophist must put in practice the loftiest moral ideal; must strive to realize his unity with the whole of humanity, and work ceaselessly for others. Now if an Occultist does not do all this, he must act selfishly for his personal benefit; and if he has acquired more practical power than other ordinary men, he becomes forthwith a far more dangerous enemy to the world and those around him than the average mortal. This is clear.—H. P. Blavatsky (*Key to Theosophy*)

## Brotherhood the Lost Key

(CONCLUDED FROM PAGE 3)

his littleness and isolation; but no one wants to rob him of it or share it with him! Verily Theosophy is the gospel of freedom—freedom from everything that is narrow and sordid and bound up; liberation to the light and expansiveness of great Nature. Humanity has gone through a great deal of discouragement and disillusionment, and its alternating moods are of cynical doubt and extravagant superstition. But neither cynicism nor fanaticism is very comforting, and both are destructive forces. Hence the need of restoring bygone faith and joyousness based on knowledge of Man's Spiritual powers and on the genuine experiences of true Brotherhood. LIFE is what the world needs; spasmodic energy is not enough; we must have life that lives in the silence as well as in the whirlwind. And this depends on the ability to recognize fulness where emptiness is generally found, and to feel that the Light of the Universal Spirit, in which all beings share, is never absent from us. STUDENT

## Can the Bible Claim Pre-eminence?

IN a sermon reported by a religious paper (*Unity*), the preacher, whose subject was the Twentieth Century value of the New Testament, endeavors to maintain a position which many will regard as impossible. He tries to regard the New Testament and Christianity in the broadest light possible, and yet at the same time to give them a pre-eminent place among religions and bibles; he recognizes that all religions are derivatives of a common parent, and yet endeavors to give to Christianity a paramount position. This attempt to bestraddle all the diverging steeds of modern thought and drive them with the one pair of Christian reins is often witnessed nowadays. It is little better than a desperate game of bluff.

The preacher first tries to regard the New Testament as one of the world's classics, dependent for its value and interest on the minds of the men who wrote its various books, and not on any divine inspiration. And he tries to believe, that regarded purely in this light, it will be found to have such merits that people will study it enthusiastically and value it above their Plato, Emerson, Aurelius or Shakespeare. People have been set against it, he thinks, by the too great claims made for it in the past, and diverted from its study by the fertility of the modern press; but a time is coming when they will turn to it as a great source of inspiration in daily life.

It was grown out of hearts, coined out of the bitter experiences and deathless hopes of a people who had passed in succession under the persecuting hands of Egypt, Assyria, Babylon, Persia, Macedonia and Rome; a people whose thoughts had been colored by the lore of Assyria, Media and Greece, the wisdom of Egypt, the philosophy of Greece, and the politics of Rome, etc.

But the higher criticism, he says, has only endowed it with fresh interest. We no longer talk about the theology of the New Testament, for it does not exist; but about the theology of the various schools and writers—the teachings of Jesus, the teachings of the Twelve, the teachings of Paul, the later Apostolic teachings, and so forth. He upholds the humanity

and present-life aspect of Jesus' teachings, as against the metaphysical dreams of theology. He speaks of the universal aspiration towards higher ideals of life which is "in the air," the tendency of the positive religions towards universal religion, outdoing on this last point Professor Pfeiderer who defines the "positive religions" as those which claim a monopoly of truth, a pre-eminence of excellence, and ultimate formulas and faiths; and adding that

The devotees of all these, Christianity included, are slowly tending towards the consoling, relieving, inspiring fact that what they hold in common represents the lasting truth, and what they hold in difference—their peculiar tenets, doctrines, their miracle and creeds, their would-be special saviors and saving ceremonies—are transient and passing. They are going to tie up the elements they hold in common, the sense of an increasing purpose running through the ages, the consciousness of a divine immanence molding, shaping, guiding life, and above all the power of incarnating the law of the universe in human life, etc.

But, we are told—

when in this kindly synthesis the universal religion formulates its Bible, catalogues its heroes, collates its texts and parables, this book we call the New Testament, the Jewish, Christian classic, will stand unquestionably as the matchless handbook, not the only, but, perhaps, all things together, the most satisfying and comprehensive text book of universal religion. When the special, the unique, the exceptional, the incredible are eliminated, cross out the miraculous story of blighted fig trees and insane swine, the incredible fables of immaculate conception and bodily resurrection, aye, eliminate, if you please, for argument's sake, the hero story, that of the alleged deeds of the Man of Nazareth, leave standing only the Sermon on the Mount with its high faith and simple worship, the parables with their lessons of trust and tenderness, and you have that which will satisfy the soul in hours of doubt, console it in times of bereavement, inspire it in crises of dismay and discouragement.

This is too much: to prune away the bible and the religion until only the Sermon on the Mount is left, and then claim that this will be found so superior to all else among the world's religions and philosophies that everybody will recognize it as the future supreme bible!

It is a vain hope. The scholarly study of the New Testament and its origins, which the pastor proposes to inaugurate among his flock, can only result, if pursued in the broad spirit which he himself advocates, in a recognition that the book is but a collection of fragments which can be found in much greater fulness in their sources; that the Jesus of the gospels is but one among the Saviors and Helpers of Humanity; that the Sermon on the Mount is paralleled in the far more ancient Bhagavad Gita, the Zend Avesta, and others of the World Scriptures too numerous to mention; and that, in general, the great Root-religion, like Euclid's "whole," is greater than any of its parts.

Of course it is hard for people to tear themselves away from associations endeared to them for generations; but let us remember there are untold ages before and behind the human race, and that we are not destined to be for ever tied down to a particular episode in the history of religious thought such as that represented by the Jewish Bible and Christianity. Or at least, if we wish to cling to those narrow ideas, we cannot at the same time en-

ertain the wide prospects which science and discovery are opening out; the two are incompatible. The truth which the preacher has so boldly affirmed, that the true Religion is that which is common to all religions, cannot be proclaimed with impunity; it sounds the death-knell to bigotry. The aim of one proclaiming it must be to recognize the truth of the Sermon on the Mount and apply it; but not to set up that particular scripture on a pinnacle of authority. STUDENT

## Another Chatterton

MAN'S soul will always try to save him from the terrific mistake of suicide, if he will but listen to it. But it is not often that its admonition can take so dramatic a form as did that of the Poet Francis Thompson. His recent death has caused the story to be somewhat wonderingly told.

He was a waif in the streets of London, selling matches and earning a few pence as best he could. The best was not much; he was starving; a garbage pile in Covent Garden fruit market was his bed. What that means to a poet, and to a poet reared gently, we can hardly imagine. He tried to submit his poetic compositions to editors; but as they had to be written on pieces of dirty paper picked up in the gutter, they had small chance of even a reading. One editor, however, did read some and tried—vainly, until it was almost too late—to find the addressless poet.

In the meantime the starving youth had resolved on suicide, slowly saving up pence enough to buy a lethal dose of laudanum. Having achieved this he retired to his rubbish heap to bid farewell, as he thought, to earth. He drank half of his draught and paused a little while before finishing it. About to resume, he felt a touch upon his arm, and, looking up, believed that he saw that other youth, poet, and suicide, standing beside him. Then as he looked he remembered that Chatterton had starved neglected, and had actually committed suicide; and that on the very next day arrived the letter which, had he waited, would have brought relief. "And so with Thompson," says Wilfrid Blunt; "for after infinite pains the editor had that very morning traced him to the chemist's shop where the drug was sold, and relief for him was close at hand."

Then cared for and helped, his genius ripened, producing a few poems which in their way are as fine as anything in English literature. But the bloom was short-lived; it faded away inexplicably; and as a poet Thompson became well-nigh extinct. His death came recently, after some years of silence.

What was the figure? The "subliminal self," telepathically conscious of the coming of the benevolent editor? The soul taking the form of Chatterton because the fate of Chatterton was burned deep into Thompson's memory—or because, perhaps, the two poets were one and the same entity, each incarnation marked by the same Karma and moving towards the same end? But this time the soul was successful. STUDENT

DURING the severe Atlantic storm early last month the navigating bridge of the *Lusitania*, which is seventy feet above the water line, was struck by the seas at times so heavily as to bend the iron stanchions fixed thereon. J.

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogenesis

Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES  
IS THROWN OPEN TO ALL

## Archaic Ethnology

NEWSPAPER science is not always in accord with textbook science, as is shown by a paragraph which says that a Professor, "instead of going to geology and physical geography to throw light on zoology, has reversed the process." The textbooks on geology say that we glean information about the order of strata and the past configuration of the land largely from a study of the fossils; so one fails to see what new thing the Professor has discovered. As a fact, geology and zoology are studied together, inferences being drawn in both directions.

The Professor also said that the fact that the same fauna is found in widely separated regions, and the fact that different faunas are found in adjacent regions, shows that what is now separated was once conjoined, and that what is now conjoined was once separated. That too one seems to have heard before. He thinks that there was a connexion between Japan and the United States, and that the East and West of North America were separated. All this is very old; on such indications, Wallace and others based their views about the Lemurian continent in the Southern Ocean, while the existence of dried inland sea basins is of course well known.

But we must not theorize too narrowly on such data. As all geologists will be ready to admit, the distribution of land and water has altered very many times since the beginning of the sedimentary deposits; and, if we are to draw maps of the world at different ages, we must draw them differently for each age. But what is most needed is to study the bearing of the human question on this geological question.

There are seven ROUNDS in every manvantara; this one is the Fourth, and we are in the Fifth Root-Race at present. Each Root-Race has seven sub-races. Each sub-race has in its turn seven ramifications which may be called Branch or "Family" races.

This classification is symbolized by a tree whose main stem represents the Fifth Root-Race, its seven branches the seven sub-races, and the seven twigs on each branch the seven family races in each sub-race, there being therefore 49 of these last. Then, changing the symbol to a cactus, the spines on the leaves are taken to represent the nations and tribes of humanity.

The average duration of a "sub"-race is stated to be about 30,000 years (see *The Secret*

*Doctrine*, ii, 435). Our fifth race is said to have been in existence as an independent Race for 1,000,000 years. These figures are sufficient to give an idea of the scale on which esoteric chronology is built, a scale commensurate with the lapses of time denoted by geological formations. The geologists place Man very low down in the scale of creation, for they regard only his physical structure and therefore endeavor to place him at the near end of an evolutionary scale of animal types. But esoteric teaching states that Man in this Round preceded all mammals, including even the anthropoids; having first appeared in physical form as a colossal pre-tertiary giant, 18,000,000 years ago. It may seem strange that man should precede the mammals, but it is of this present

Fourth Round alone that we are speaking. There were three other Rounds before it; the Man of this Fourth Round ("by 'Man' the divine Monad is meant, and not the thinking entity, much less his physical body"—see *The Secret Doctrine*, ii, 186) had already during the preceding Rounds passed through the lower kingdoms; and the mammals of this Round did not form part of the same human cycle of evolution. The scheme, though orderly, seems complex when viewed in the incomplete way in which it has to be viewed here.

Now in view of the fact that Man has been on the earth so long, that so many Races and their subdivisions have lived and died, and so many geological changes taken place, it is clear that ordinary investigators will arrive at a multitude of conflicting theories when dealing with such a complication of facts. They will elaborate one theory explanatory of a certain

range of facts, only to find it inadequate to account for other facts; and so will go on modifying and enlarging their hypotheses. That they will

ever succeed in approximating the truth by such a method alone is in the highest degree improbable. Even the 30,000 years assigned above as the average duration of a family-race is large as compared with historical time; and, when we remember that there are seven family races in one sub-race, and seven sub-races in one Root-Race, it becomes evident that the scale with which ordinary science deals, in the case of human history, is absurdly small. Such vast vistas might well fill one with dismay at the thought of human insignificance, were there not also the grand truth of Reincarnation, by which Man is represented as a Soul, living throughout the cycles in successive physical environments.

STUDENT

## Education Among the Ancient Mexicans

SEVERAL of the ancient painted scrolls of the Mexicans which have been preserved, contain some series of illustrations of the training of children, both boys and girls, from the earliest years on to manhood and womanhood. And quite a good deal has been preserved by the earliest writers—those who knew and went among the people before their civilization was overwhelmed—in all of which they give the most unstinted praise to the thoughtfulness and care of parents, and the admirable results. Among these early writings is one giving the instructions of a father and a mother, which derive tenfold value from the assurances we have that they were *taken seriously*, both by parents and children. The picture they make is one full of dignity, and worth quoting from. The father is described as saying:

Scorn not him whom you see fall into some folly, but restrain thyself, and beware lest thou fall into the same error which offends thee in another. Go not where thou art not called, nor interfere in what does not concern thee. In conversation do not lay thy hands upon another, nor speak too much, nor interrupt. If thou hearest any one talking foolishly, and it is not thy business to correct him, keep silence; but if it does concern thee, consider first what thou art to say, and do not speak arrogantly, that thy correction may be well received.

If thou becomest rich, do not grow insolent. Support thyself by thy own labors, for then thy food will be sweeter.

A lie is a heinous sin. When it is necessary to communicate to another what has been imparted to thee, tell the simple truth without any addition. Speak ill of nobody. Do not take notice of the failings which thou observest in others, if thou art not called upon to correct them.

Stay no longer than is necessary in the marketplace.

When thou art offered an employment, imagine that the proposal is made to try thee; then accept it not hastily, though thou knowest thyself more fit for it than others.

And to the daughter the mother said:

Be orderly and take pains to manage the economy of thy house. Wherever thou goest, go with modesty and composure.

If another is called by thy parents and does not come quickly, come thou; hear what is ordered and do it well. Never offer thyself for what thou canst not do. Deceive no person, for the gods see all thy actions. Live in peace with everybody, and love every one sincerely and honestly, that thou mayest be beloved in return.

If thou seest anything presented to another, give way to no mean suspicions; for the gods, to whom every good belongs, distribute everything. Guard against evil, which pollutes the mind as mud does water, and once harbored is difficult to expel.

And the following paragraph is worthy of special note in the picture of *well-balanced character* which it shows:

When thou art married, respect thy husband, obey him, and diligently do what he commands thee. Discredit him not before others. If any one comes to visit thy husband, accept the visit kindly, and show all the civility thou canst. If thy husband is foolish, be thou discreet. If he fails in his administration of wealth, admonish him of his failings; but if he is totally incapable of taking care of his estate, take that charge upon thyself, attend carefully to his possessions, and never omit to pay the workmen punctually.

There were many schools and seminaries, for both sexes (separated), and for both nobles and plebeians.

The courses were of work and study combined, such as suited the future of the pupils. Both boys and girls fulfilled the practical tasks and craft-work, each helping in the care of their school surroundings. They studied the stories of the gods, and their influence on the lives of men, history, painting, letters, music, mathematics, athletic exercises, feats of arms for the boys, weaving and domestic duties for the girls.

Acosta, in his work, says:

There is nothing that gives me more cause to admire, nor that I finde more worthy of commendation and memory, than the order and care the Mexicans had to nourish their youth; for they knew well that all the good hope of a common-weale consisted in the nurture and institution of youth. The zeal they manifested for their education, and many of the lessons they taught, might serve as instruction to us, seeing that we Christians do not that which the children of darkness did, wherein we forget our duties.

And Clavigero says, after commending both the public and private economy of the Mexicans, their zeal for justice and love of the public good, that "the education of youth, which is the chief support of a State, and which best unfolds the character of every nation, was among them of so judicious a nature as to be of itself sufficient to retort the supercilious contempt of critics upon themselves, who believe the empire of reason to be circumscribed to the boundaries of Europe." G.

## Homeric Civilization

THE geographer of the future, describing country after country, giving their population, size of army and navy, revenue and other customary details, will have to add one more—average amount of haemoglobin! The reader knows of course exactly what that is, but in case he may have momentarily forgotten, we will mention that it is that constituent of the blood in which the iron thereof resides. The blood of the Iclander, it appears, contains more of that desirable element than that of any other countryman of Europe. As to America statistics are not given.

In the *National Geographic Magazine* an Iclander sings justifiably the praises of his country, putting in the haemoglobin touch as a finisher. Longevity is another index to the general health. That health the people get by living close to nature, physically and mentally; and by having provided themselves with an ancestry which for many hundreds of years did the same. They combine the nature life—necessary to earn their living—with high culture dating back to their origins, which of course were Teutonic and Celtic. From the ninth century the nation began to produce the great poetic literature known as the Sagas, once more than a hundred in number. About a third survive and the Iclander of today, whatever his status, knows them by heart. He makes them his mental foundation and then builds thereon. In the autumn afternoons and winter evenings he recites them to his fellows, and there are even traveling troubadours who make that their business.

But the culture does not stay at that. It is not popular medieval; but, with that foundation, entirely modern. It reaches both ways. There is "a pastoral and Homeric civilization" in, and also of, the twentieth century. Every child at twelve can read.

In no country in Europe are so many books printed and sold, in proportion to the population. A population of only 76,000, scattered in many hamlets, has 12 printing presses, . . . ; about 100 books annually, 14 newspapers, and 8 periodicals are produced to satisfy the literary needs of this little nation.

To get the right perspective on these figures, we should remember that our population is about 1100 times as large. Say a thousand times, and then add three ciphers to each of the figures. That, for example, makes 12,000 printing presses and 100,000 books a year. Possibly these people may look down on our culture. "Can the lowest farm-laborer," they may ask, "recite his Shakespeare, his Chaucer, or even his Longfellow and Tennyson, by heart?" Yet they *can* recite their Sagas and they also know *our* poets and philosophers and historians!

STUDENT

## The Polar Cap

GEOGRAPHIES do not as a rule contain the name *Beaufort Sea*, and even the modern edition of Macaulay's appalling schoolboy, if there is a modern edition, need not blush to find that there is one thing he does not know. It stretches westward from Greenland to Alaska, and northward to the Pole, and is called a sea because geographers think it is one. We can draw a sort of circle round the Polar water, filling in gaps between the extreme north coast of Greenland, the Peary Islands, Bank's Land, Alaska, the islands known as Wrangel Land and New Siberia, Siberia itself represented by the North-East Cape, Franz Josef Land and Spitzbergen. From this circle a sort of sunken shelf runs out for about 60 miles. Then the water suddenly deepens, how much we do not know. And it is assumed that from the edge of the shelf northward, clear water surrounds the Pole. According to Theosophy, however, not so. There is land around the Pole, not to be submerged during man's *this-time* sojourn on earth:—for, still according to Theosophy, he has been on earth *cyclically* three times before, and will come here *cyclically* three times more. H. P. Blavatsky says:

It is averred in Occultism that the land or island, which crowns the North Pole like a skull-cap, is the only one which prevails during the whole Manvantara of our "Round." All the central continents and lands will emerge from the sea bottom many times in turn, but this land will never change.—(*The Secret Doctrine*, Vol. II, p. 400).

STUDENT

## Some Inland Waterway Projects

THE Inland Waterways Commission advises the construction of canals and river improvements to unite the great lakes with the rivers of the Mississippi Valley and to connect the rivers with each other, thus securing unbroken communication from Hudson's Bay to the Gulf; to connect the mouth of the Mississippi with all the ports on the Texan coast and with the Rio Grande; to connect the Mississippi with Mobile Bay, and with the Atlantic seaboard by way of the Suwannee River and a canal across Florida; to connect Delaware Bay with Chesapeake Bay by improving the present Delaware and Maryland canal, and with Raritan Bay by a canal across New Jersey; and to cut through the isthmus of Cape Cod, thus providing a direct route from Long Island Sound to Massachusetts Bay and Boston Harbor.

T.

## Some Views on XXth Century Problems

### Stage Pictures

MR. GORDON CRAIG, son of Ellen Terry, proposes to do away with the actor on the stage and substitute moving puppets. The scenery will be as we have it now, perhaps prepared with greater care and beauty, perhaps movable with greater ease and frequency because of the absence of human players on the boards. It could in fact change a little from minute to minute to suit the progress of the piece. It could be arranged to show perspective, and the diminution in size of the puppets to correspond with their apparent distance would greatly heighten the illusion. The puppets will be dolls, exquisitely posed and dressed; those in the front, of life size. They will not gesticulate, but have at most one or two poses for each of their appearances as the piece goes on. The audience will be supposed to divine what is going on, or to learn it from a program. Mr. Craig does not say whether he would have an endless musical accompaniment Wagner-wise.

This he calls a reformed stage; but it is obviously the substitution of another art. It is the pictorial art; the piece will be a set of pictures, in three dimensions, and changeable instead of fixed.

The stage needs this radical reformation, he thinks. It is true that we have a few, a very few, great actors, capable of sustaining the illusion of their part. But their work is totally marred by their ungeniused supporters, who break the illusion whenever they speak or even move. Since a whole company cannot have genius, the only remedy is to abolish the spoken element altogether. Thus Mr. Craig's position is exactly opposite to those other people who want to simplify or even abolish the scenery and leave the audience to concentrate their entire attention on the players.

The evil constituted by the "star" and lesser stars is very real. But may it not be due to the star himself and to the people who flock to see *him* instead of the play?

It is now several years since Katherine Tingley in her dramatic work began to teach her students to play their parts impersonally and anonymously, no names being announced or known to the audience. She saw with perfect clearness the evil upon which Mr. Craig dwells, but saw another remedy. The remedy is that each performer shall concentrate his attention upon the piece as a whole and upon his own share as only contributory to the total perfection. The star, if there be one, knows that he will gain no *personal* fame from the result, and therefore does nothing to call attention to himself. He is not half-hypnotized into his own personality by the unnatural focussing of public attention which the present system involves, and in which egotism grows like a weed in the sunlight. The others have no sense of being overshadowed, of being mere setting and fillers; and can give their work and their imagination to the whole picture.

We would commend this reform to Mr. Craig; he will find the results beyond his imagining. He will find that a company of

secondrate actors, doing their best *for the piece*, will give a far better presentation than if they had an ambitious, self-conscious egotistic star or two in their midst. They will be easily trained and lend a harmonious co-operation of work and imagination which it may safely be said, will be quite new to him. It is not true, or very partially, that the great actor is born not made. If from the first—as in the Rāja Yoga system of education—children are trained *away* from personality and egotism, it will be found that they are all actors. They show a free and natural imagination which makes the art easy. The very youngest children tell each other vivid fairy stories, and enact them amongst themselves with extraordinary vividness and livingness? What is this but acting? And why should the art be lost with the passing of the early years? STUDENT

### Partial Civilizations

UNTIL we give a broader meaning to the word civilization, or at least furnish it with an adjective, we shall never understand the meaning of history or see a correct picture of the world today. As man is a compound of powers, the general high cultivation of any one of these is a variety of civilization.

When we speak of our own civilization we call up a composite idea of an innumerable number of mechanical inventions and of the science upon which they rest. Our own is *the* civilization of mechanical invention. In that mental power and its use we regard ourselves as pre-eminent. Our own is not *the* civilization of spirituality; for in that we have been surpassed by earlier nations. Nor of philosophical speculation, for in that we have been surpassed. Nor of art, for in that we have been surpassed. At each epoch some one thing was regarded as supremely important, and that became the keynote.

Nevertheless a perfectly balanced view is practically impossible. We are intimately acquainted with our own civilization because we live in it, just as we are intimately acquainted with our own continent because we live on it. To compare our civilization with any past one is like comparing our continent with one submerged whose peaks only remain upstanding above the surface. We cannot exactly compare the average man of today, his mind, his interests, with the precisely corresponding man of the past. We can overhear the conversation of one in the streets of London and New York; we cannot hear that of the other in the streets of Memphis and Athens and Babylon. Some touches the Greek and Roman poets and dramatists have given us; but they are but the peaks above the water. Imagine the savant of three thousand years from now looking back at us; he will appreciate what we are no better than we appreciate what was the man three thousand years ago in Greece.

But if we cannot fully know the old civilizations we can at least know that in each of them the one human spirit was working out some power, carrying some special power one step further. That which has been achieved

may be overlaid; it may go into temporary abeyance whilst some other is brought to the front for *its* next step. Nothing gained is lost; all the past is in us. And in our own civilization, or in some one to follow, all the acquisitions of the past will come to light, all the sleeping powers will awaken and function with greater sweep than in their special days. With greater sweep, for the special failings of each of the successive phases will have been outgrown. Only the ripened fruit and not the parasite will be in that harvest. With the attainment of full self-consciousness as souls, an utterly new path will then open before all men.

### Unhampering the Criminal

AN Italian scientist, Baron Garofalo, thinks he has found a sociological argument for capital punishment. It is summed up in the sentence: "Any organism reacts against any violation of the laws that govern its natural functions." Society is an organism. The criminal interferes with its order and progress, and introduces confusion into the ideal harmony. It must therefore extrude him. If his criminality is not absolute, but may be cured by a term of extrusion or by punishment, he may be allowed to return after a reasonable presumption of reform. If his criminality is innate and a necessary part of his being, he must be removed finally—killed. Not, however, vengefully or in this case curatively, but that a disturbance may cease to be.

But if chopping off his head or hanging him does *not* make him cease to be, but on the contrary makes him more of a social disturbance than ever? If his criminal mind and desires are now freed for a career of extraordinary activity?

Many artists and thinkers use tobacco for the reason that in slightly dulling sense activity and the more prominent physiological changes they think it leaves the mind freer for its creative work. In judicial killing these changes are suddenly reduced down to nothing before they have, either slowly and normally, or quickly by disease, run their cycle. The mind cannot return for rest into its higher nature, for it is still full of an energy that can only find satisfaction in the prolongation of its common activity and in the continuance of its previous chains of feeling. What these chains of feeling are in the case of an executed criminal may perhaps be imagined. Is he then such a being as we want in our terrestrial atmosphere, a freed focus of the worst feeling and impulse, an intensely productive center of crime pictures? Are we any of us so strong in our own thought current as to be wholly unsusceptible to suggestion and coloring from such a source? Are not some, prospective mothers, children unborn, weak and negative natures, permanently or temporarily pre-eminent susceptible? But whilst the criminal is alive we can keep his mind busy, awake desires in which his criminality is not involved, and perhaps enable him to reach a new level of life.

# Archaeology Palaeontology Ethnology

## The Red Man and Ancient America

**R**ESPECTING the hastiness of our conclusions about past races, derived from a consideration of their remains, some writer has said that we discover a skeleton and immediately picture to ourselves a naked barbarian, hideous and grinning like the skeleton; then perhaps we find a stone axe near the skeleton, and forthwith imagine the grinning savage armed with the axe. The discovery of other bones is certain to suggest murderous rage on the part of the aborigine with the hatchet. Similarly an article in the *CENTURY PATH* once threw cold water on the idea that the ancients were all stiff-jointed and sat on stone chairs, and suggested that they were actually alive like us and used cushions.

There is a good deal of truth in this. All that would be left of the greatest modern scientist or divine, after a few millenniums, would, under the most favorable circumstances, be a grinning skeleton, or possibly a dry mummy; while, in the case of an unburied person, we might also find a few buttons, the horn of a pocket-knife, and other mysterious odds and ends suggestive of primitive barbarism.

Rev. J. A. Easton, in the *Ohio Archaeological and Historical Quarterly* (October), says that our favorite childhood pictures of painted warriors attacking frontiersmen or torturing their victims, prevent us from having a just idea of the North American Indian. We think of him as a blood-thirsty rover, without more fixed relationship in life than the beasts of the field. But the scalping scene is no more the true picture of his life than the bayonet charge is of ours. In his descendants we can see the taste and skill and the fine qualities of mind and character; and in Ohio there are remains which prove that he had no mean mathematical knowledge and engineering skill.

Another point, continues this writer, is that archaeologists are too ready to imagine that each different kind of mound, etc., was built by a different race; whereas there is no reason to suppose that the people in those times were not able to build several different kinds of buildings, or that they had no differences of taste, or that a single race might not have been divided into different groups and classes. In short the ancients were not only alive and decent, but they varied in tastes and types among themselves just as we do. Continuing the parallel between old and new, he quotes the following remarkable statement:

"As to origin, Beard well observes, in reference to the 'New World': 'It is quite as old if not older than that on the other side of the globe. Ages before it was known to Europe, successive civilizations arose, flourished and decayed, and, as far as anything is actually known on the subject, it is just as possible that the Old World was discovered ages and ages ago and was peopled from America, as that the native inhabitants, the forefathers of our Indians, came from the Eastern Hemisphere, for America is a very ancient land. Of course no one thinks this is the case, but really nothing at all is known about it.'"

The writer then gives an epitome of the dwellings, household customs, brotherhoods, marriage customs, myths, etc., of the Indians. He supposes these people to be variants or divergences of a single stock; and, though he calls them barbarians, he endeavors to give a nobler idea of their character and attainments than many people entertain concerning them. Theories of derivation or origin are let alone; and one does not gather whether the Indians are supposed to have been progressing, retrogressing, remaining stationary, or doing all three alternately.

Commenting on the above, one might ask, What of the builders of the temples and pyramids in

Central America? What of the Incas and of the pre-Incal civilization that erected the colossal walls on the mountains in Peru? Were these also Red Indians? If so, the stock has degenerated from a great height. It is strange how archaeologists seem to pass over these greater remains and dwell on the remnants of comparatively lowly races; it is because they have a leaning towards the barbarian theory of human origin, a leaning due both to theological and to scientific ingrained ideas. But between the two extreme theories, that each kind of building was built by a different race, and that they were all built by one race, there is ample scope for a more moderate view. Taking the analogy of the Old World, one would infer that as there have been and still are many races and nations therein, so it must have been in America. Ordinary thinkers are, however, met here by a preconceived idea which limits their minds. It is the idea that humanity originated in the Old World,—after all, simply one of those insular prejudices which people so often have about their own particular country or race or times. But why should humanity have originated in the Old World rather than in the New? Can it be because we ourselves belong to the Old-World stock and know a little Old-World history while being ignorant of what may have happened in the New during the same periods? Can it be that in the New were found only comparatively uncivilized peoples and that therefore the people in the New must be in an earlier stage than those in the Old? This will not do for two reasons: first, the people in the New World, instead of evolving, are dying out; second, there are evidences of greater civilization in the past—the greater the further back we go. Clearly, then, the evidence goes to show that the New is older than the Old, since its civilizations are over, whereas those in the Old are still going on. So perhaps, after all, we might more reasonably infer that mankind originated in America, passed on his civilization to the Old World, and then entered on a decline in America.

But perhaps mankind may have originated in Africa, or in Australia? He may have originated in the Arctic Circle or the Antarctic, for there have been times when these were warm. Also, so geologists say, there were times when parts of the present ocean-floor were dry land supporting animal and vegetable life. Perhaps mankind originated on one of those submerged continents.

But speculations of this kind are endless and various according to the limitations of those speculating. It will be comparatively unprofitable to study all the views put forward by scientists who have made special studies of some particular race or country or branch of science. The views theological, views biological, views anthropological; the views of archaeologists in Turkestan, biologists in Java, anthropologists among the Red Men; the views conservative, liberal, independent, practical, mystical, etc., etc., are so plentiful that the future student will argue that there must have been a great many different races on our soil, for one race could not have so many views.

The races at present on the earth are like a few leaves of some tree. The leaves come from twigs, the twigs from branches, and the branches from a stem; and there are other trees. We are trying to piece together these sundry remains. It is much as if a zoologist were to try to build an animal out of the mixed bones he might find on a scrap heap. Some bones might belong to the same animal, others to totally different animals. To trace the affinities between the various races now found on the earth, it would be necessary to go much further back in time than our speculations extend. We must go back to geological epochs; for all that vast drama of

rising and sinking lands, of denudation and upheaval, did not take place merely for the benefit of the trilobites and lamellibranchs. Man did not appear at the end of the Quaternary age, nor even at the beginning. He is far older.

If one were to attempt to state definitely in a few words the state of the case as regards the relative antiquity of the different continents, one would certainly cause misunderstanding; because the question is not so simple as that. It is complex, just as other kinds of history and science are complex. The continent of America is indeed older than the continent of Europe. It is properly the continent of the Fifth Root-Race, though Europe and Asia Minor, which appeared somewhat later, have been regarded in the Old-World sacred histories as being the continent of the Fifth Root-Race. Hence America, in common with Europe and part of Asia, was peopled from the older continent of Atlantis, now submerged. The races that peopled it consisted partly of the highly progressed Atlanteans, who passed on their spirit to the newly-coming Fifth Race, and whose wise Initiates still live in tradition in America; and partly of the degenerate part of the Atlanteans, who subsequently degenerated still further. The language of these latter was agglutinative, and its relics are still found in America.

Thus, as in the Old World, we must look for a long and complicated history of races of varying origin, resulting in the present mixture of degenerated stocks. And, though it is a great advance to have portrayed the "Red Man" as the writer has done, instead of as a cruel ignorant barbarian, the idea of a "Red Man" is still far too narrow. One has only to think of similar phrases with different colors, such as the White Man, the Yellow Man, or the Black Man, and it becomes evident that inclusive terms like these only mark the superficiality of our knowledge concerning the things to which they are applied. When we have fuller knowledge, we abandon the inclusive term. But there are accessible authorities who represent the past history of America as one of migrating races and successive waves of civilization of different kinds, just as in the Old World.

To complete the picture of ancient humanity, derived on both continents, from still more ancient stocks, it remains to call attention to the perpetuity of the human Soul. This will prevent any pessimistic ideas founded on the supposed futility of civilizations rising only to fall and be extinguished. The outer appearance is only the passing shell, the temporary abode, of the indwelling Spirit. Races die as bodily organisms die; but that which is within remains. The universal law of Rebirth applies to races. The civilizations of ancient America have had their day and fulfilled their purpose. The Souls of the people have passed on into other races, or are waiting to do so.

The tremendous energy of Americans and a frequently remarked resemblance in feature to aboriginal types, are not due merely to the influence of climate, but are also accounted for by the fact that the strong men of old are reappearing on their native soil. But so far this energy has been chiefly expended along lines of material development. It is rapidly bringing to a head all the tendencies of modern civilization and bursting old forms. If it were not for the influence of Theosophy, to direct it into new and wider channels, this energy would become a destructive force threatening the ruin of our civilization. But under the guidance of a truer wisdom and insight, it can become a potent energy for progress, enlightenment, and freedom in the best sense of the words. Let us, then, try to keep before us a nobler and worthier idea of that ancestry to whom we are heirs, and of our possibilities. STUDENT

# ✧ The Trend of Twentieth Century Science ✧

## Right and Left

IN the *Medical Record* Dr. Gould tries another shot at the problem of right-handedness. But though he gets a little nearer the mark he can by no means be said to have hit it. We are right-handed, he thinks, because primitive man in battle used his left or shield-bearing hand to cover his heart, while with the right he actively brandished a spear.

"Next to fighting and synchronous with it was the need of barter, and the fundamental condition of bartering was counting with the low numbers, one to ten. The fingers of the free or dextral hand" — the other holding the shield — "were of course first used . . ."

This second reason therefore depends on the first. But if, accordingly, we are to make battle the primary cause, and admit that as the left hand must stay at home with the shield defending the heart, the right must become the more active: we must also admit that the opposite would be the case with the legs. It is upon the left leg that the work of throwing the active and aggressive right side of the body forward would fall. The left leg would therefore as much stimulate the development of the right side of the brain as the right arm the left side of the brain.

But that apart, it is clear that the left hand is selected to defend the heart *because the heart is on the left*. And why that is the case is unexplained. Embryonically, and on the lower animal levels, the heart is in the middle. Why, as development advances, does it shift to the left?

Another step may be taken when the body is recognized as in some sense a magnet with poles right and left, and also as another with poles above and below. We know already that when the two hands are held near each other and the muscles of the one put on tension, a current passes across to the other. The active hand becomes electrically positive to the other. That the right is the positive pole of the lateral magnet may have made the use of that hand easier than the opposite and so have generated left-brainedness. But we still do not know *why* the right was initially positive nor why the heart shifted over from the middle toward the region of the left pole.

## The Central Sun

PROFESSOR Tarrida del Marmol, moved by a letter he has received from an eminent Russian astronomer, Baron Stackelberg, arguing that Alcyone of the Pleiades is the center of the solar system (a Theosophical teaching) breaks a lance against that view. He goes further, maintaining that our system has *no* center of rotation. "So my conclusion is that all the evidence is against the theory of the sun describing a closed orbit in space, and that we ought to dismiss such hypothesis once and forever." We have known of more than one hypothesis dismissed "once and for ever" having had the temerity to return and even compel its universal acceptance!

The Professor examines several possible

centers. Of some we know the mass; of others not. Given the distance of that star or group which is our rotation center, we can from our mass deduce its mass. The stars named by the Professor, whose mass we know, turn out not to have enough. There remains Alcyone and the Pleiades group. If they are to be our center they must have, we are informed, a total mass 9,000,000 times that of our sun. The mass of Sirius is supposed to be known, and the light he sends us. *Assuming* that the light received by us from any body must have a definite ratio to the mass of the body emitting it, it follows that the Pleiades group must send us 1000 times as much light as Sirius. As it does not, it cannot have the mass required for our center at that distance, and is therefore not our center.

But the argument is vitiated by the assumption. The Pleiades, or any other star or group, may be radiating any quantity of force which does not reach us as light, perhaps belonging to higher octaves of which we have no cognizance whatever. The Professor's conclusion might be therefore more modestly expressed: "So my (provisional) conclusion is that all the (present — 1907) evidence is against the theory of the sun describing a closed orbit in space, and that we ought to dismiss (suspend) such hypothesis once and for ever (pending further facts)."

## The Facilitation of Life

FULLER reports are now to hand of Professor Yves Delage's experiments on "artificial production of life," to use the words of an English *scientific* paper! They consisted in exposing the mature eggs (unfertilized) of the sea-urchin to sea water containing a little tannic acid. The development of an egg into an organism consists first in the single cell becoming two, each of these two becoming two others, and so on. The theory upon which Delage worked was that for the division to occur it was necessary for the cell wall to liquify so as to allow half the contents to escape and form the second cell. When they had done so and the matter that was to become the second cell had fully separated, its boundary had to coagulate to form a new cell wall for it. In its turn this boundary had to liquify for the next division — and so on, the whole process being regarded as a succession of liquifactions and coagulations. These changes were found to take place in the presence of the tannin as well — apparently — as if the cell had been normally fertilized. The word *apparently* is very necessary: from thousands of eggs only four reached maturity; of these four one died; the remaining three turned out to have no stomachs and could not take food!

But what, exactly, would it be proper to say that the tannin had done, if it had acted perfectly and the creatures had properly developed and matured? Surely at most that it had acted as a stimulant. Less than that would probably be the truth — that the chemical actions it had set up had cleared the way

for the essential and vital work of the egg.

The assemblage of the right conditions clears the way for vital work, or enables a vital monad to incarnate and work among them. But science wants to have it that the right conditions, once assembled, *will of themselves* work vitally.

STUDENT

## Geological Orthodoxy

THOSE who wish to hold heterodox views on geological subjects may take comfort from the extreme diversity of the orthodox and official pronouncements. So great indeed is this diversity that heterodoxy is not to be easily achieved. How old, for instance, is the earth's crust? How old is the earth as we know it? Lord Kelvin has estimated that at its first formation the crust had an average temperature of 7000°; Professor See, after some discussion of the question, has finally settled down upon 2000°. The latter, reasoning from his view, gives the earth's age as 8,302,210 years. Fisher finds this too much and allows only 5,262,170 years. Professor Sollas, on the other hand, wants 20,000,000; and Lord Kelvin 101,673,000! Read, however, writing 30 years ago, wanted five times as much as Lord Kelvin; Darwin three times as much. Amidst all these, Theosophy not only feels herself not heterodox but even fairly modest in asking 300,000,000 years since the beginning of sedimentation, being glad to find herself in accord with Darwin. Professor See thus finishes his recent remarks:

In contemplating this result we are again confronted with the question of the cosmical significance of radium. Several years ago, when the enthusiasm over the radium discoveries was at its height, there were those who admitted a terrestrial history of a thousand million years. . . . It is a remarkable fact that the more we study radium, the less we seem to really understand the part it plays in cosmical processes.

In other words all reasonable speculations are in order; nothing is known; there is even no orthodoxy and therefore no heterodoxy. The data are altogether too few. Some scientific Providence may have sent us some radium by way of a hint not to nail any theories to the mast, a hint that discoveries are close at hand which will belate every textbook. STUDENT

## A Tedious Journey

PROFESSOR Thomson, recently lecturing on radium, remarked that it was quite true that a pinch of it would give out energy enough to carry a ship across the Atlantic. But it would do it so slowly (dying, as radium, in the process) that the passengers must be prepared to give two thousand years to their journey. For our own part we should find it tedious after a very few centuries.

When the chemist-engineer who ran this ship reached New York or Liverpool and opened his pill-box to look at the fuel, he would find that in place of radium there were small quantities of lead, helium, and eight or ten short-lived elements with no name. But whence came all this energy? STUDENT

## Nature

## Studies

## To Help Nature or to Ravish?

**N**EAR Spitzbergen there is a group of islands, including one called Bear Island, to which no nation has yet laid claim, and which, as a consequence, are exposed to the carelessness and rapacity of irresponsible visitors. They are plentifully stocked with game and have valuable mineral deposits; but the game are killed at all seasons of the year, and killed wantonly. One visitor last summer reports that a party of tourists killed 100 reindeer, leaving their carcasses where they fell and only taking away a few of the finest heads and antlers for mounting. The eider duck is so unsophisticated that it can be lifted from the nest while the down and eggs are stolen. In Norway stringent laws have been enacted to protect this bird. The walrus is nearly extinct, the white whale is becoming scarce, and the number of seals is greatly reduced.

One is glad to see protests against wanton destruction; but the feeling is somewhat modified by finding that the protests are grounded more on economy than any more chivalrous motive. The cry is that the animals are being wasted and it is accompanied by a description of the profits that might be made if the exploitation were done systematically by a government or other body. It would be more gratifying to find the vices of greed, rapacity and barbarianism condemned for their own sake, instead of being merely used as arguments to enforce a plea for industrial economy. To be merciful because it pays is only a second best.

One would be glad to see a nation take charge of the islands and keep out the free-lance vandals; but one can only regret that the nation should step in for practically the same purpose as the vandals—namely, to exploit the place for its mineral and animal wealth. Supposing some Government could step in solely in the interests of order and protection, without any design of profit; would not that mark a new era in progress?

One would imagine that if a Government, or alliance of Governments, having a prior claim by reason of proximity, should step in and take charge, no valid obstacle could be opposed by any other power. And such a body might lead the way to a new order of things by showing that the desire for increased wealth was not its leading motive, but that a reverence for the earth and its creatures and a desire to protect them were dominant incentives.

We are not prohibited from utilizing natural resources, but there are varying degrees in

## WINTER AND JANUARY

From Spenser's *The Rolling Year*

**L**ASTLY, came Winter clothed all in frieze,  
Chattering his teeth for cold that did him chill;  
Whilst on his hoary beard his breath did freeze,  
And the dull drops, that from his purpled bill  
As from a limbec did adown distill:  
In his right hand a tipped staff he held,  
With which his feeble steps he stayed still;  
For he was faint with cold, and weak with eld;  
That scarce his loosed limbs he able was to weld.

**T**HEN came old January, wrapped well  
In many weeds to keep the cold away;  
Yet did he quake and quiver like to quell  
And blow his nails to warm them if he may;  
For they were numb'd with holding all the day  
An hatchet keen, with which he felled wood  
And from the trees did lop the needless spray;  
Upon a huge great earth-pot stone he stood,  
From whose wide mouth there flowed forth the  
Roman Flood.\*

\* Aquarius, from whose pot flowed the Po.

which our utilization may be mingled with greed or with forbearance; and, if our motives cannot be wholly unselfish, they can at least contain a larger admixture of the nobler sentiments. The earth may be regarded as a mine or hunting-ground; but it may also be regarded as a garden. With some the forests are game-preserves; with others they are temples. Even the continents have been regarded as fields for destruction and devastation by hordes of militant barbarians. Those who still perpetuate these tendencies go forth inspired with the desire to see if there is anything they can kill, knock down, deface, or carry away. Others of nobler mold may feel the desire to let things alone, to lend a helping hand to Nature instead of thwarting her, and to encourage her willing bounty rather than to try to tear out her heart.

STUDENT

## Effect of Trees on Rainfall

**T**HE effect of forests on rainfall has been carefully studied by Dr. J. Schubert, of the Prussian School of Forestry, who, after five years' observations, finds that the forest stations show most precipitation, the ones at the forest edge less, and those in the open least; due allowance being made for difference in wind and other conditions. T.

## The Weather Bureau

**T**HE warnings of the Weather Bureau have been proved to be a profit to the people of the United States, says the *National Geographic Magazine*. A skeptical insurance company, determining to investigate the problem, found that the country saves every year some \$30,000,000 as a

result of the warnings; and as the Government spends \$1,500,000 annually on the Bureau, the profit is equal to a dividend of 2000 per cent.

Congress has recently given a sum of money for the erection of a solar observatory for the study of the connexion between the sun and the storms which sweep across the continent. The site is an unnamed peak in the Blue Ridge, 65 miles from Washington; and it has been christened "Mount Weather." STUDENT

## Pigs Naturally Clean

**O**NE has heard it claimed that pigs are really cleanly animals, being rendered dirty only by the close quarters in which they are kept. A certain breeder has tried the experiment of providing his hogs with a bath; they like it, and the only trouble is that they all want to use it at once. They use it so often that their skins are always clean. Pigs will not soil their nest unless compelled by man to do so, and take great pleasure in being provided with new straw. If this is true, then the charge of compelling an animal, against its will, to lie in its own manure, must be laid on the shoulders of man. T.

## Do Serpents Need Live Food?

**T**HE belief that certain serpents, kept in the Zoological Gardens, required to be fed on live animals, appears to have been a mere superstition; for the superintendent of the Gardens in London announces that he has been for six months feeding the serpents on dead rabbits, pigeons, fowls and goats, all of which were eaten with avidity. Even the great pythons, which had always been fed on live goats and rabbits, readily took those animals dead. Perhaps even the wildest creatures are amenable to reform. H.

### Alvastra in Sweden

THE Swedes have from olden times been known for their deeply-rooted religious feelings; and when Christianity began to spread in Sweden and the first monastery was built, a spot that may truly be called unequalled for the purpose was selected. Nature itself invites to devotion and meditation. Situated at the foot of the mighty forest-covered Omberg, looking westward towards Vettern, the beauty-lake of the North, and eastwards towards most fertile land as far as the eye can reach, it must fill every heart with a sense of the beauty and joy of life. Alvastra was the place where St. Birgitta received her first revelation which made clear to her the grand work she was called upon to achieve and from which, in all the years to come, she never shrank in spite of obstacles.

The church, the only ruin left of the many buildings, was founded in 1180 and is constructed in a simple, refined Gothic style without any unnecessary ornaments, thus well agreeing with the simple beauty of the landscape. In itself it is generally regarded as the most beautiful of the many ruins in Sweden.

It has been the resting-place for several kings and for many of the most prominent men of the twelfth and thirteenth centuries.

### The Higher in Education

### JUNE ON THE MERRIMACK

Extracts from the poem-prophecy by JOHN GREENLEAF WHITTIER, on the beautiful River Merrimack which winds about the foot of "The Laurels," near Newburyport, Mass., the childhood home of Katherine Tingley and where, as a child, she met the Quaker poet.

**O** DWELLERS in the stately towns,  
What come ye out to see?  
This common earth, this common sky,  
This water flowing free?

As gayly as these Kalmia flowers  
Your door-yard blossoms spring;  
As sweetly as these wild wood birds  
Your caged minstrels sing.

You know full well these banks of  
The upland's wavy line, [bloom,  
And how the sunshine tips with fire,  
The needles of the pine.

Yet, like some old remembered psalm,  
Or sweet familiar face,  
Not less because of commonness  
You love the day and place.

And not in vain in this soft air  
Shall hard-strung nerves relax,  
Not all in vain the o'erworn brain  
Forego its daily tax.

The lust of power, the greed of gain,  
Have all the year their own;  
The haunting demons well may let  
Our one bright day alone.

A sacred presence overbroods  
The earth whereon we meet;

These winding forest-paths are trod  
By more than mortal feet.

Yet here no evil thought finds place,  
Nor foot profane comes in;  
Our grove, like that of Samothrace,  
Is set apart from sin.

We walk on holy ground; above  
A sky more holy smiles;  
The chant of the beatitudes  
Swells down these leafy aisles.

Thanks to the gracious Providence  
That brings us here once more;  
For memories of the good behind  
And hopes of good before!

And if, unknown to us, sweet days  
Of June like this must come,  
Unseen of us these laurels clothe  
The river-banks with bloom;

And these green paths must soon be trod  
By other feet than ours,  
Full long may annual pilgrims come  
To keep the Feast of Flowers.

The matron be a girl once more,  
The bearded man a boy.  
And we, in heaven's eternal June,  
Be glad for earthly joy!

the air *pro* and *con* higher education for woman. As an address given by a woman before an association of women, some of whom had been her fellow students and others, pupils who had won their degrees under her tutelage, it has some special interest and one can overlook the personal tone of many allusions in view of the intimately fraternal character of the meeting. Many women who have thought on these lines have reached similar conclusions,

and even though they be but half-way stations on the path, they are none the less advance-steps. The real solution and victory will never come until the light of Theosophy is thrown upon the problems of woman and education as well, or, better stated, the soul and education, for to discuss this subject without reference to its broader aspects and the deeper soul-needs of humanity as a whole is futile—as we have seen again and again.

There is a science of education, and it is being exemplified in the Rāja Yoga Schools at Point Loma and elsewhere. In the meantime, a glance backward at the conditions depicted by Miss Thomas must serve to awaken in all a deeper sense of gratitude to the three Leaders, Helena Petrovna Blavatsky, William Q. Judge and Katherine Tingley, who have solved the deeper and real problems of education for all humanity, for all who seek the light.

Anniversaries like this, which compel us to pause for a moment and review our progress, come with a peculiar significance to women of my generation.

I doubt if the most imaginative and sympathetic younger women in this audience can form any conception of what it means. . . . The passionate desire of the women of my generation for higher

education was attended through its course by the awful doubt, felt by women themselves as by men, as to whether women as a sex were physically and mentally fit for it.

I cannot remember the time when I was not sure that studying and going to college were the things of all others which I wished to do. I was always wondering whether it could be really true, as everyone thought, that boys were cleverer than girls. Indeed, I cared so much that I never dared to ask any grown-up person the direct question—not even

my father or mother—because I feared to hear the reply. I remember often praying about it, and begging God, if it were true that because I was a girl, I could not successfully master Greek and go to college and understand things, to kill me at once, as I could not bear to live in such an unjust world.

When I was a little older I read the Bible entirely through, with passionate eagerness, because I had heard it said that it proved that women were inferior to men. Those were not the days of the higher criticism. I can remember weeping over the account of Adam and Eve, because it seemed to me that the curse pronounced on Eve might imperil girls' going to college; and to this day I can never read many parts of the glorious Pauline epistles without feeling again the sinking of the heart with which I used to read the verses referring to women's keeping silence in the churches and asking their husbands at home.

I searched the Bible, and all other books I could get, for light on the woman question. I read Milton with rage and indignation. Even as a child I knew him for the woman-hater he was. The splendor of Shakespeare was obscured to me then by the lack of intellectual power in his greatest women characters. Even now, it seems to me that only Isabella in "Measure for Measure" thinks greatly and weighs her actions greatly, like a Hamlet or a Brutus.

I can well remember one endless, scorching summer's day, when, sitting in a hammock under the trees, with a French dictionary, and blinded by tears more burning than the July sun, I translated Michelet's famous—were it not now forgotten, I should be able to say infamous—book on woman, *La Femme*. I was beside myself with terror lest it might prove to be true that I myself was so vile and pathological a thing. Between that summer's day in 1874 and a day in the autumn of 1904, thirty years had elapsed. Although during those thirty years I had read in every language every book on women that I could obtain, I had never chanced again upon a book that seemed to me so to degrade me in my womanhood as the seventh and seventeenth chapters, on women and women's education, of President Stanley Hall's *Adolescence*. Michelet's sickening sentimentality and horrible over-sexuality seemed to me to breathe again from every pseudo-scientific page. But how vast the difference between then and now in my feelings, and in the feelings of every woman who has had to do with the education of girls! Then I was terror-struck lest I, and every other woman with me, were doomed to live as pathological invalids, in a universe merciless to women as a sex. Now we know that it is not we, but the man who believes such things about us, who is himself pathological, blinded by neurotic mists, unable to see that women form one-half of the kindly race of normal, healthy human creatures in the world; that women, like men, are illumined and inspired by the same great traditions of their race, by the same love of learning, the same love of science, the same love of abstract truth; that women, like men, are immeasurably benefited, physically, mentally and morally, and are made vastly better mothers, as men are made vastly better fathers, by subordinating the distracting instincts of sex to the simple human fel-

lowship of similar education and similar intellectual and social ideals.

It was not to be wondered at that we were uncertain in those old days as to the ultimate result of women's education. Before I myself went to college, I had seen but one college woman. I had heard that such a woman was staying at the house of an acquaintance. I went to see her with fear. Even if she had appeared in hoofs and horns, I was determined to go to college all the same. But it was a relief to find this Vassar graduate tall and handsome, and dressed like other women. When, five years later, I went to Leipzig to study, after I had been graduated from Cornell, my mother used to write me that my name was never mentioned to her by the women of her acquaintance. I was thought by them to be as much of a disgrace to my family as if I had eloped with the coachman. Now, women who have been to college are as plentiful as blackberries on summer hedges. . . .

Mr. Havelock Ellis found that in Great Britain

Lomaland Photo. and Engraving Dept.

ALVA STRA, SWEDEN

women of genius formed only one-twentieth of the whole number. Professor Odin found that in France women of talent formed precisely the same proportion—also only one-twentieth of the whole number; but that women furnished 29 per cent of eminent actors, and 20 per cent of all prose writers of distinction. In Great Britain likewise 53 per cent of all women of genius were authors, and 30 per cent actors. The explanation is clear. Women of genius and talent had more opportunity to come to the surface in these two professions. In all probability, the same proportion of women of genius and talent were born, with aptitude for scientific research or for productive scholarship, but were crushed by their unfavorable environment.

To advance the bounds of human knowledge, however little, is to exercise our highest human faculty. There is no more altruistic satisfaction, no purer delight. I am convinced that we can do no more useful work than this: to make it possible for the few women of creative and constructive scholarly genius born in any generation to join the few men of genius born in any generation, in the service of their common race.

Theosophic as is the ring of a few sentences, notably the last paragraph and the appeal for "simple human fellowship" with morbid and pathological conditions eliminated, one feels great mental limitations, of which the speaker's estimate of Shakespeare is but one example.

The article has its value because so faithfully reflecting the highest and most advanced college or, so to say, current educational ideals. The gage is the intellectual one with here and there, in the cases of strong and unselfish women like Dr. Thomas, gleams of heart-light breaking through because, in the nature of things, they had to. But it is a great mistake to hold that our higher educational institutions are the actual leaders in human thought and life. They are not. The gage has too long been the intellectual one and today, with the new awakening felt by the heart-life of the world, when tested by the *real* demands of the new time, it is plain enough that they merely follow.

The next decade will demand of our colleges, for women especially, the soul estimate of things—not the platitudes that are as warming as any reflected light, and no more so, but the real thing, the living, life-giving rays from the Sun of Truth itself—and then the world will turn to Theosophy. In that day—and, if Katherine Tingley's recent tour be any sign of the times, it is already dawning—those who for so long have been called our teachers will seek of their own accord their true and glorified places as learners at the feet of the Law, students of the divine philosophy of life.

#### Jottings

OLD Aguida has passed away. She was one of the few still remaining San Juan Capistrano Indi-

ans and one of the landmarks, one might almost say mile-stones, of California. Nearly one hundred and eighteen years of age, according to the Mission records, she was baptized in 1790. The mission history of California reads like some tale of ages long past, so pitiable are the disclosures it makes, so out of tune and, so to speak, anachronistic was it in every way, so gladly do all who love America and who live in the dream of a great future for the state of California, forget all about it. Yet old Aguida saw the founding and building up, and then the decline and decay, of about half the missions erected. She remembered well when the old chapel, which was destroyed by the earthquake of 1812, was built, and when the missions were secularized she was well past the prime of life. Up to within a very few weeks of her death, she had been able to take care of herself without any special attention. H. H.

MANY titled women in European countries are taking up business pursuits, some for financial gain, others because they are worn out with a useless society life. Two who have recently undertaken such enterprises are Lady Gordon Lenox, who has established a fruit-canning industry on her estate, and an Irish countess, who is managing a farm. H. H.

# OUR YOUNG FOLK

## The Piano

"DO be quiet," said the Tonic C, a key who occupied a very commanding and central position among his comrades, "you make such a rattle."

"That means you," "and you," "and you," said all the keys in succession as the scale died away in a lower octave.

"We are all in the same box and have been equally the victims of that noisy little Adolph," said G, who shared the command under C, "I am sorry for you all for today has been a bad day."

"None of you got such a bad time of it as our Captain, the Tonic," said D the Super-tonic, "Heinrich just thumped him over and over again before he hit me once, and then he was back belaboring the Captain again as if he never could get started anywhere else."

"Did you see Miss Smart clap her hands to her ears and leave the room? To think that such treatment should be allowed, when such delicate and tender sounds can be called forth from us, even by a little child who is sympathetic," said A earnestly. "When Elsie played to her sick mother yesterday though she only struck one note at a time her fingers were full of ministering love and they made beautiful music."

"I feel so tired," went on the poor little Sub-mediante, "when Lizzie plays she seems to hang the weight of her whole body on me!"

"That delicate little hand ought not to need to support itself on us," said G. "At this rate it will be long before it can give pleasure to others. How could anything great and beautiful speak through those weak and nerveless fingers?" Tonic gave this as his final opinion on the subject.

"That reminds me," said B, who took the lead in opening up a new topic, "have you all noticed the great reward that comes to those who make careful preparation?"

"Yes indeed, I have," said E. "For a long time I was puzzled when Ernest used to come every day and strike me with such precision, while he took the greatest care about the position of each finger. There was nothing unpleasant about it, I am far from complaining, but it seemed to take such a long time. I used to get exhausted with keeping my attention fixed so steadily for I felt bound to keep up with him, he was so determined."

"Not like the most of them," interrupted D.

"Week after week passed and his touch became gradually more friendly. He never took liberties nor became familiar, and he never strummed."

"And now his visit is the one hour that we all look forward to," said Dominant G.

"Yes, there is no one else who has a touch like Ernest," responsively continued Sub-dominant F. "If people only knew how differently they play upon us!"

"Ernest has not been today, nor indeed for several days. I wonder why."

## LOOK UP TO THE HILLS

LOOK up to the hill to the light of their gleaming!  
Look up to the hills to the mist of their dreaming!  
Look up to the peace and the joy of the hills  
Green guarding the valley, the winding sweet rills!  
Look up to their glory and grandeur and wonder,  
Their feet in the fields and their head in the thunder!  
Look up to the hills and behold how they stand  
Rock-rooted and stalwart and steady and grand?  
Look up to the hills and beyond to the gleam!  
That leads to the peak and the star and the dream!

—Selected

"I don't care who comes today, there is no pleasure in it. The fact is you are all out of tune, and the more out of tune a key is, the more he is determined to be heard above the rest," said C.

Just then the cover was lifted by a masterly hand and a few chords struck. "This instrument really needs tuning," said a firm voice; and then the keys made up their minds for a bad time. Some wanted taking down a peg, while others had to be screwed up to the right pitch, but they knew the tuner was right, so they tried to do their best to help him. First he tuned two notes together into a perfect octave, and from these he adjusted the other tones to form the related harmonies. Many were the knocks they had to endure before the final testing pronounced them true.

"Well, that's over," said the Leading Note, relapsing into the unsettled condition following a strain. "My comrades, there is only one thing that would compensate for all our suffering — if Ernest were to play upon us!"

"What a joy it is to lend oneself to the hand that is inspired, the hand that knits us to its owner!"

"When he plays," continued the Mediant, "I am passive no longer. Every thought and

feeling of his genius is communicated to me. And would you believe it, I can hardly tell where my ivory ends and his finger tip begins! Something encompasses me and I feel and know strange and wonderful things of a new world, because I am part of the instrument that is bent and swayed by this great flood of harmony."

"I heard the master say it was the Soul," said another key. And as they talked they were entirely of one mind, their voices blended more and more harmoniously, each one supplying a link in the thoughts that were expressed. The writer listened rapt and fascinated, for — my readers, have you guessed? — Ernest was playing.

A Teacher has said:

Disciples may be likened to the strings of the soul-echoing Vina; mankind, unto its sounding-board; the hand that sweeps it to the tuneful breath of the Great World-Soul. The string that fails to answer 'neath the Master's touch in dulcet harmony with all the others, breaks — and is cast away.

Hast thou attuned thy heart and mind to the great mind and heart of all mankind?

—(The Voice of the Silence)

## Facts Worth Knowing

THERE have been many boy-inventors, the most wonderful of all being the Italian lad Guglielmo Marconi, who after seeing a conjuror using electrical apparatus in the performance of tricks, started to experiment, and soon achieved the result he sought — wireless telegraphy.

His apparatus was very simple — tin biscuit boxes fastened to poles at different heights, one connected with a transmitter and the other with a receiver both of which he made himself. He was only fourteen when he began his experiments, and when twenty-one he found his way to London and laid before the great scientists there his great discovery.

IN one town in France, Mézin, in Gascony, there are thirty-five cork factories, and they turn out five million corks a week. Gascony is said to have the best soil in the world for cork trees.

MUCH of the tortoise shell that is sold is made from the horns of animals. The best tortoise shell comes from the Indian Archipelago, and from the coast of Florida also we get a good quality. Fifteen pounds of shell is the largest quantity that can be gotten from a turtle.

THE "Iron" Crown with which Charlemagne was crowned, and with which Napoleon crowned himself in 1805, was made by the order of the queen of the Lombards in 591, and presented to the king. It is made of gold and precious stones set in a thin ring of iron, supposed to be an iron nail that had been used in the cross of Jesus Christ.

# THE CHILDREN'S HOUR

## THE FROST

Hannah Flagg Gould

THE Frost looked forth, one still, clear night,  
And whispered, "Now I shall be out of sight;  
So through the valley and over the height,  
In silence I'll take my way:  
I will not go on with that blustering train,  
The wind and the snow, the hail and the rain,  
Who make so much bustle and noise in vain,  
But I'll be as busy as they."

Then he flew to the mountain and powdered its crest;  
He lit on the trees, and their boughs he dressed  
In diamond beads---and over the breast

Of the quivering lake he spread  
A coat of mail, that it need not fear  
The downward point of many a spear  
That hung on its margin far and near,  
Where a rock could rear its head.

He went to the windows of those who slept,  
And over each pane, like a fairy, crept;  
Wherever he breathed, wherever he slept,

By the light of the moon were seen  
More beautiful things---there were flowers and trees;  
There were beavies of birds and swarms of bees;  
There were cities with temples and towers, and these  
All pictured in silver sheen!

But he did one thing that was hardly fair;  
He peeped into the cupboard, and finding there  
That all had forgotten for him to prepare---

"Now just to set them a-thinking,  
I'll bite this basket of fruit," said he,  
"This costly pitcher I'll burst in three,  
And the glass of water they've left for me  
Shall 'tchich!' to tell them I'm drinking."

## A Sicilian Tale

ONCE upon a time there lived a beautiful girl named Catherine. She was the daughter of a wealthy merchant and had everything that heart could wish for.

One day there appeared before Catherine her Fate, in the form of a tall beautiful lady, holding a wheel in her hand. Of course this Fate was nothing more or less than her good and bad deeds in the past, and the wheel was the wheel of Karma.

"Catherine," said the lady, "when would you rather enjoy your life---in youth, or in old age?"

Catherine was so surprised that for a few minutes she could make no answer. Then she thought: "If I say in youth, I may have to suffer in my old age; if I am to have sorrows, I can bear them better now, while I am young." So she answered: "I would rather enjoy life in my old age."

"Be it so," answered the Fate, and turning her wheel once, disappeared.

In a few days news came to Catherine's father that all his ships had been wrecked in a storm. This was followed by other misfortunes, and within a few months, he had lost all his riches, and died of grief, leaving Catherine all alone in the world and almost penniless.

Catherine remembered her Fate, and realizing that to sit down and repine would be useless, she resolutely determined to seek a place to earn her living. Starting out, she walked until she came to a city. As she was going along the street, a kind lady, noticing this beautiful girl all alone, inquired where

she was going. Catherine told her she was looking for a place to earn her bread. The lady immediately engaged her to work for her.

For a short time, Catherine was very happy. Work was new to her; but she was willing, and performed her duties to the best of her ability.

One day, when the lady was away, Catherine sat sewing, when the door suddenly opened and her Fate appeared. "Well!" cried the Fate, "I have found you, Catherine! Do you think I will leave you in peace here?" and going to a closet where Catherine's mistress kept all her finest gowns, she dragged them out and tore them in a thousand pieces.

So afraid was Catherine to have her mistress come home and find her gowns in such a condition, that she fled from the house; thereupon the Fate put all the pieces together again and hung the gowns in the closet. When the mistress came home, everything was in order, but Catherine was nowhere to be found.

No, poor Catherine was wandering far away to another city, where another kind lady employed her. For a few days only, Catherine was again happy; then again her Fate appeared and destroyed everything; so that, in despair, Catherine again fled. As before, the Fate again restored everything whole, to its place.

For seven years the Fate followed Catherine, everywhere causing her to flee. Sometimes she was almost driven to despair; but she had learned that not only she, but everybody was struggling with burdens their Fates had put upon them, and that serving and helping to lift the burdens of others made her own burden easier to bear, so she struggled bravely on, with unconquerable hope.

At last a lady engaged her on condition that she would go daily to a high mountain and carry a large board covered with fresh bread. After she had called out three times, "O, my mistress' Fate!" a lady would appear and take the bread. Catherine performed the task and her mistress became very fond of her.

One day, noticing that Catherine looked sad and tearful, her mistress asked her what troubled her. Catherine then told her story. Her mistress at once said, "Oh! I know what to do. To-morrow when you go on your errand to my Fate, beg her to tell your Fate that next time she pursues you with misfortune you will not flee, but will stay and abide by the result. I will remain your friend even should the Fate come here to destroy my property, for I see that you are willing to help others."

Next day when Catherine went with her offering to her mistress's Fate, the latter led her to her own Fate who was covered with seven coverlets. Her Fate gave Catherine a small skein of silk, simply remarking that it might prove useful to her. It was only a little thing, apparently very insignificant, but Catherine carefully kept the skein.

Some time after it happened that a beautiful garment was being made of rare costly stuff for the young king of the country, and no-

where could be found silk of the same color. So the king proclaimed throughout the land that whoever brought such silk to the court should be greatly rewarded.

"Why, that is the color of your skein, Catherine," said her mistress. "Take it to the king and you will receive the reward."

Catherine arrayed herself in her best gown and appeared before the king. She was so beautiful that the king could not keep his eyes from her face. When Catherine offered him the skein of silk, he declared that she should have its weight in gold. But when they came to weigh the silk, no matter how many gold coins were put into the scale, the silk was always the heavier. The king threw all his treasures in the scale, but the silk still weighed more. Then he threw in his crown, and lo! the scale sank and weighed exactly as much as the silk.

The king demanded to know where she got the silk, and Catherine told him the story of her life.

At the court there lived a very wise woman, who said: "Catherine, you have suffered much, but from this time you will be happy; for that it took the crown to balance the silk is a sign that you are to be a queen."

"And so she shall!" exclaimed the king, "for I will make her one."

So Catherine was married to the king, and lived happily all the rest of her life. Her seven years of suffering made her more compassionate towards all others who suffered, and she was enabled to do a great deal of good.

C. H.

## "Quien Canta los Males Espanta"

THESE Spanish words mean that nothing can harm you when you are singing. Their exact meaning is "Whoever sings frightens away the evil ones."

A great many little folks know of some one thing that makes them feel afraid. Some of these things are imaginary, they do not exist at all but for the fear that is in someone's mind. But none the less little hearts quake and little feet hesitate to go here or there, and little folks are startled and frightened very often---especially if they happen to be alone. Now this Spanish proverb says that singing is a cure for these foolish fears.

So remember, children, to try this charm for chasing fear away. Straighten yourselves up, take a long breath and sing boldly. You see music belongs to the Good Fairies---they don't shoot their enemies or kill them with swords or sticks or stones, but they just charm them with music and flowers and dew and sunshine and things like that, and then, unless they're very wicked, they become Good Fairies too. And I'll tell you another secret---often the things you fear are really the friendly fairies just pretending and playing, to see if you can be scared, and then if you sing, sometimes you can just catch a glimpse of them as they laugh or wink at you and change back.

But be sure you take a long breath and sing out loud.

## KATHERINE TINGLEY SPEAKS AT ISIS THEATER

### The Theosophical Leader Gives an Address on Her European Tour

Enormous Crowd Packs the Isis Theater on Sunday  
As Many Turned Away for Want of  
Room as Were Admitted

NO greater evidence could possibly be shown of the interest taken in the work of the great international organization — the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, and in the movements of its well-known Leader, Katherine Tingley, than was shown on Sunday evening last when a great body of San Diego citizens and visitors blocked the sidewalks and street for almost an hour, waiting for a chance to gain admission to the theater, to hear the Leader's first address after her return from her European tour.

When the doors were thrown open at about 7.45, the crowd of men and women simply hung to one another and surged in. Here and there could be noticed babies held up high to prevent any possibility of harm through the crush. Every seat in the beautiful theater that is the city home of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, was filled. The private boxes too, were filled; people stood wherever they were permitted, and it looked as if as many as those who filled the theater were turned away from the doors because there was no room for them.

Prefacing her address regarding her European trip, Mrs. Tingley said that she was delighted to be back again where she had first started in California in an effort to make clear to all with whom she came in contact the spiritual life found in the teachings of Theosophy.

This new and beautiful country, California, afforded many facilities for such work, but in the beginning there was much indifference to any outside thought. Only a few were interested at the start, then more began to think and then still more. There was, too, all sorts of unbrotherly opposition, some from the churches, some from other quarters, but most of it from a neighboring town. Then the work began to attract attention around the world, and she had received invitations and appeals to visit other countries and tell them of the Theosophical Movement.

Seven years ago she had visited England, and on this last visit she saw much change. There was in England now more confusion of thought, more vanity, more pride, more selfishness, but there was also an under-current of broadening in the people's mind, and she saw much evidence of the spread of the work begun at Point Loma. During her visit she had not only everywhere introduced San Diego but the whole western coast to the people of England. San Diego was already well known in England and a marked interest taken in its progress.

Long ago, Mrs. Tingley said, she had declared that San Diego would some day be a

seat of learning and many had then doubted. Now, in the New Forest, just two hour's ride from London, there was going to be a beautiful second Point Loma, a center from which light will shine not only for England but for other countries.

In the low places and the high places she had had much unusual opportunity to study human families and she had realized that the unrest of the age was pushing very many thousands into lines of endeavor in searching for the truth.

America, she said, could absolutely excel in fads and isms. Where one foolish and erroneous system sprang up in Europe there is a dozen in America.

Studying the people had brought home to her the meaning of human life, and if she had been able to bring home to the people the real meaning of human life, then her teaching had not been in vain. To her large audiences she had called attention to the doubts and despairs of human life and showed them that the great truths of Christ had been obscured, that the light had not been shining in accordance with the higher laws. Then she told them that Theosophy had come again to point out to man his godlike possibilities. The audiences at the beginning were half-interested and doubting, but they became interested when she told them of the life at Point Loma with the beauty and sublimity of nature resting in the sunshine of all that was beautiful. She brought Madame Blavatsky's life before their eyes, showed how this noble woman had left a home of luxury in Russia for the purpose of teaching the truth. She told them of the work of W. Q. Judge and showed how these great Leaders came, not with contribution boxes, nor seeking salaries, but ready to lay down their lives that the heart of humanity might be touched.

Her experiences in England were repeated in Sweden, Germany, Finland and Russia. The people were prepared by the unrest of the world and by doubts and they were favorable to something that had the touch of humanity without creed and form.

When Reincarnation was dwelt upon, the minds of the people responded to the touch in places where seven years ago had she advocated Reincarnation she would have been hooted. Now the optimistic touch of Reincarnation — the hope of the world — seemed everywhere to take hold of her audiences. In Europe she found some of the so-called divine teachers just stepping out a little from the church, feeling that if they must keep up with the times they must move on, but these were taking Theosophy just where it suited their purpose, and this only served to obscure the real truths. Mrs. Tingley held her audience interested while she dealt with her tour through the European countries, and with her observances of the progress of Theosophy everywhere.

Comparing journalism in Europe and in the United States, Mrs. Tingley said that there was much more dignity and conservatism in

European than in American journalism. In Europe journalism had to bend the knee to Church and State, but here it bent to the dollar, and this was a far worse form of slavery than that to the Church and State. (Applause) There were, of course, many sitting at journalistic desks who would like to give out their knowledge, but they were hemmed in by false conditions. Free speech was not before the world. The light was obscured all along the way.

In concluding her speech Mrs. Tingley made a strong plea for a newer spiritual life in this country that would prevent corruption and bring about a condition of light, truth and freedom. — San Diego News

### Tells Results of Work in Europe

Katherine Tingley Speaks to Audience that Crowds Isis Theater—Says Hundreds are Seeking New Light

AN audience that filled the Isis Theater to the very doors greeted Katherine Tingley last night on her first public appearance since her return from Europe. Hundreds were turned away because of lack of space. Rear Admiral Goodrich and a party occupied a box, and a second box was occupied by Rear Admiral Swinburne and party. The loges were filled with other naval officers.

The address of the evening was given by Mrs. Tingley, the talk in the main being an account of the results of her work in Europe and an exposition of some of the main points of Theosophy. Her address was a strong one, and held the attention of the audience to the very last. In the course of her remarks Mrs. Tingley referred to the great changes which seemingly had come about in the world. While there was a great move in direction of worldliness and vice, she said she also saw an undercurrent of broadening thought among the people with whom she came in contact.

She further stated that in her addresses throughout Europe she always brought out the beauties of California, San Diego, and Point Loma, using them as a word picture and a background for her addresses, after which she introduced to her hearers Madame Blavatsky, the famous Russian noblewoman who gave up her life to the teachings of Theosophy. . . .

After studying the human family she stated that she had come to the further conclusion that people could not live on faith and faith alone. They must have knowledge, and knowledge absolute.

Mrs. Tingley then dwelt at length upon the work which had been accomplished in Sweden and Holland, especially in the former country. A brief history of the foundation of Theosophy and its subsequent spread was related, after which she told of the wonderful effect it had on King Oscar. His wonderful ability, increased by the touch of Theosophy, was dwelt upon, and in conclusion she stated that there were hundreds of others fully as noble as the late king, but they were held down by the general conditions. . . . — San Diego Union

# Art Music Literature and the Drama

## From a Student Traveler's Notes on the Work of Titian

**T**IZIANO VECELLIO, commonly called Titian, was one of the greatest of the Venetian School of painting, to which the famous names of Bellini, Giorgione, Veronese and Tintoretto also belong. Not a gallery or collection in Europe but has its examples of the work of this productive genius, who lived and painted for nearly a century, dying of the plague finally in his 99th year.

Titian's life is in striking contrast to that of his great contemporary Giorgione, that rare genius, the very spirit of the Venetian School, who died so early and most of whose work has perished — but whose imprint was stamped

Maria de Frari, Venice, and it was at the foot of this picture, under a plain slab of black marble, that Titian was buried. The picture is now in the Belle d'Arte in Venice. The figure of the Virgin is the embodiment of robust and purely human womanhood, with nothing sentimental or ethereal about it as are so many of the Madonnas of the old Masters. There is such a whirling, wholesome uplift about the whole composition that it raises the beholder with it and makes him think of Goethe's immortal lines, "the woman-soul leadeth us upward and on."

Titian painted many charming symbolic pictures in the romantic style, such as his *Sacred and Profane Love*, shown on this page. His

TITIAN'S "SACRED AND PROFANE LOVE" (BORGHESI GALLERY)

indelibly upon the work of his contemporaries and followers. Titian's pictures exist by the hundred but Giorgione is known to us by very few. *The Concert* in the Pitti Palace, one of the few if not the only picture that is unquestionably his, is one of the most priceless things in the world of art today. There is a tradition that all the work which at his death Giorgione left unfinished in his studio, was completed by Titian and signed with Giorgione's name, notwithstanding the fact that their friendship had changed to rivalry and enmity because of Titian's unblushing imitation of the greater artist. Perhaps it would be fairer to call it emulation, for how many great artists, writers, etc., at the beginning of their careers, imitate the work of some admired and recognized master until their own style is developed and established!

Titian was exceptionally great as a portrait painter, especially of women, his beautiful daughter Lavinia being his favorite model. The portrait called *La Bella*, in the Pitti Palace, is one of his finest, and every one is familiar with his *Flora*.

Perhaps the greatest of all his works is the *Assumption of the Virgin*, painted for Santa

**W**HOEVER you are, come forth! Or man or woman, come forth!

You must not stay sleeping and dallying there in the house, though

You built it, or though it has been built for you,  
Out of the dark confinement!—Walt Whitman

paintings are full of rich and glowing color, with glints of golden light interwoven and permeating everything — garments, flesh and atmosphere.

Richness and splendor characterize the Venetian School just as mysticism, somberness and thoughtfulness do the Florentine School. The Venetians cared for beauty and grace of form; the Florentines for that inward beauty that shines through outward things. The same contrast existed between the cities themselves: Venice, through its constant contact with the East, brilliant, sparkling, golden and Pagan in spirit and appearance; Florence the cream of medieval culture, serious and meditative in tone, even its architecture being massive and solemn. One feels this about the character of the two places today as much as ever, and to visit and enter into the spirit of either one, but enhances the charm and interest of the other. All hail to both!

STUDENT TRAVELER

cern the dragon-heads crowning the gables of the fishermen's huts, ere the towers begin to lean and the buildings disappear in a brownish smoke. This rolls forward along the shore and out from the moving misty pictures I can successively elicit all the visions that please my fancy.

Well I know the whole time that it is a mere play which is trying to imitate the capriciousness of the sorrowless splash of the waves, and that I really am thinking about something else and am sitting in expectancy, full of longing and at the same time of something like awe. The first gust of the wind has already keeled the sloop, making the foam whirl about it, and everything tells me that now she is approaching, the old severe woman, who still sits in her veil in the arms of Vadstena and who to Vättern is the same as Gustaf Vasa is to Siljan. As the storm increases her figure approaches on the ash-colored water and hurriedly I take in my sails and seek shelter under the lee of Skärfvesten.—(From a description of Lake Vättern by the Swedish author, Verner von Heidenstam, translated by a Swedish Student whose childhood and youth were passed upon the shores of classic Vättern.)

# THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l   O f f i c e   P o i n t   L o m a   C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

## The Public Conscience and the Churches

RELIGION is a bond which binds people together in a common recognition of their obligations to the eternal spiritual laws. These laws are not conventions, but actual fixities as much as the laws of nature as recognized by science. As we get knowledge of the laws of physical nature through the channels of our senses, aided by the mind, so we get knowledge of the laws of spiritual nature through the channels of our inner senses, those senses by which man has always been able to distinguish between right and wrong. Hence religion is a formulation of man's convictions, and like all formulations, must change from time to time as his knowledge increases. But religions, as also scientific theories, tend to become ossified and to acquire a binding force that checks the growth within. Then there is a struggle ending in the disruption of the hardened shell.

Outside the religion again stands the church, an embodiment of religious belief, as religion is an embodiment of people's convictions. This in its turn also becomes hidebound and an obstacle to growth. Everywhere today we see that people within the churches are insisting on the fact that they and they alone are final arbiters and that both religion and church are their ministers and not their masters. If God made the church, say they, that is all the more reason for thinking that the ecclesiarchs did not make it; and other devout people besides those who arrogate to themselves the power may feel that they are competent arbiters of the divine will in the matter.

In England not a few prominent churchmen are speaking out strongly in this sense. For instance a Bishop, whose diocesan address is quoted in the *London Spectator*,—

Regretfully notes, that while the parliamentary annals of the last half-century furnish abundant evidence of the rapidly deepening and widening gulf that is fixing itself between the English Church and the English nation, multitudes of Churchmen are steadily playing into the hands of the adversary by still further sectarianizing the Church and fomenting quarrels within their own ranks.

Speaking of the "Deceased Wife's Sister" Act, he says:

When Holy Scripture has left us free, and the national conscience, as declared by its elected representatives, is favorable to these marriages, is the

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

Church going to bind where God has not bound? . . . As far as I am able to judge of the position of members of a national Church, no canon is binding either on clergyman or layman if its spirit is contrary to the law of the realm, so long as the law of the realm is not contrary to the law of God.

Which means that the law of the realm is quite as well able to interpret the law of God as the Church is. How does the question of Church and State stand now? What need has the State for a Church at all?

The evolution of a national, or rather public conscience, and its self-assertion as against the ecclesiastic conscience, is a great sign of the times. Compare with the above the following, taken from a review in the *Spectator* of "What we want: an Open Letter to Pius X from a Group of Priests."

To the ordinary Protestant this letter, indited by priests, is simply amazing. The Holy Father is taken to task and taught his duty in a manner so unsparing as to suggest that the writers have already arrogated to themselves in full the Protestant right of private judgment. Yet they are, they say, true Roman Catholics, with a great fear of Schism, and no tendency to that misty neo-Catholicism which reduces religion to an indefinable emotion. In their eyes "religion, far from being a vague mystical feeling which soothes the spirit and isolates it in a barren egoism, is a Divine reality, which kindles into life and exalts the souls of men, and, knitting them together in a bond of common brotherhood, directs their life towards a supreme and common goal." . . . They maintain and ask leave to teach that other religions outside Roman Catholicism, outside Christianity even, are also revelations of God to the human soul.

And so on. Is it not abundantly clear that there are in the churches, Protestant and Roman, a very large body of people who are striving earnestly towards the light, but find themselves encumbered by formalism and bigotry? Theosophy has nothing but sympathy for people who are striving towards the light and anxious to recognize the brotherhood of all men as founded on a common revelation of Divine truth to the human heart, where the professions are thoroughly sincere.

Evidently the public judgment recognizes a court of appeal higher than any church, and is conscious of an innate knowledge and authority as to matters of belief and conduct. It feels that the universal Spiritual Life and Law, which it calls "God," is revealed to man through his own faculties of inner perception; and that those ideals and standards

which commend themselves to the ripe judgment of the best and noblest minds constitute the nearest practical approach to the truth.

Protestantism claims the right of private judgment, and it has been argued that the conceding of such a right will result in innumerable sects and (as an extreme case) in as many beliefs as there are men. The answer to this objection is that there is such a thing as a collective opinion, the result of the consensus of many minds, which, in so consenting, lose their individuality and become one mind. Man attains to a perception of the truth in proportion as he rises above the plane of personality. Hence brotherhood is the key; the more unity there is, the more unanimity there will be.

It is important to recognize that the Truth may be an object of direct perception recognizable as the Truth by its own inherent qualities and therefore needing no endorsements. It is important also to notice that while there are necessarily many different ways of looking at things and many differences on minor points, there are always certain main truths on which there is general agreement. Many heads, one heart.

Now mark: It is alone the Theosophical teachings as to man's nature that clear up these questions. For Theosophy teaches that beyond the individualized minds of men there is the higher Mind, which constitutes common ground on which all men are at one. And Theosophy bases its teaching of human solidarity on the recognition of this common factor, the recognition of our spiritual unity. Hence in Theosophy knowledge and duty are indissolubly blended and religion and science are one.

The laws of Spiritual nature are absolute laws, and as real and inviolable as those of external nature; and when they speak, canons and dogmas, if contrary to them, must give way. It is well that men are recognizing the existence of these laws and their own ability to interpret them. It is well men are realizing

Students'

Path

that human welfare depends on a general observance of these laws. It is well men are finding out that there is a spiritual unity binding together all men independently of superficial differences, and that the recognition of this spiritual unity must be the basis of our future world polity.

## SONNET

James Russell Lowell

A POET cannot strive for despotism;  
His harp falls shattered; for it still must be  
The instinct of great spirits to be free,  
And the sworn foes of cunning barbarism.  
He who has deepest searched the wide abyss  
Of that life-giving Soul which men call fate,  
Knows that to put more faith in lies and hate  
Than truth and love, is the worst atheism:  
Upward the soul forever turns her eyes;  
The next hour always shames the hour before;  
One beauty at its highest prophesies  
That by whose side it shall seem mean and poor;  
No Godlike thing knows aught of less and less,  
But widens to the boundless Perfectness.—*Selected*

## The Powers of Man

IN current literature the "Powers of Man" are being considered with more than ordinary care and thought. There have been given a number of interesting facts in human nature which are generally known but little thought of. These show that in the human organism there are reserves of energy, seldom drawn upon, which are evident by what is known as the "second wind."

It is further pointed out that there is not merely a "second wind," but a third and a fourth; and these not merely in the physical nature, but in the mental, moral and spiritual as well, all of which may be drawn upon at will. The existence of these reserves of energy is shown by reference to instances in actual life, but few people are so barren of experience that they have not verified the facts for themselves. Most of us, however, habitually rest before we overcome the first feeling of fatigue; but if we practised going beyond we would acquire a correspondingly higher and higher "efficiency equilibrium," to limits that are indeterminable. Man thus habitually "energizes below his *marimum*, and behaves below his *optimum*."

Putting these two together he will find that a very pretty practical problem of national economy, as well as of individual ethics, opens upon his view. In rough terms we may say that a man who energizes below his normal maximum fails by just so much to profit by his chance at life; and that a nation filled with such men is inferior to a nation run at a higher pressure.—(Professor James in the *American Magazine*)

We are here confronted with a situation which demands the solution of two problems:

(1) What are the limits of human faculty in various directions?

(2) By what diversity of means in the differing types of human beings, may the faculties be stimulated to their best results?

It is not enough, we are told, that these dormant energies be called forth and raised to their highest power. Something more than excessive jumping in unco-ordinated ways should be cultivated. They should be brought to their "highest qualitative levels," and "trained to their most useful pitch of energy." Here it may be asked, What is to be the standard of usefulness? and, What is the ultimate object of their use? We are given examples of degrees of qualitative levels: "Writing is higher than walking; thinking is higher than writing; deciding is higher than thinking; deciding 'no' is higher than deciding 'yes.'"

As a general proposition, why should deciding "no" be regarded as a higher qualitative level than deciding "yes"? Some of us had decided that the mental attitude, "I will do" is as much higher than the determination "I will not do," as creation is above negation.

When the sum total of all the faculties of every unit, muscular, emotional, intellectual, moral, and spiritual, have been energized to their utmost limits, on their highest qualitative levels, and trained to their utmost useful pitch of energy,—what is the *Purpose* of it all? The nation, we are told, will be run at a higher pressure. But what of that? Why should anyone care whether the nation's pressure be high or low? And as a corollary, whence comes the deep-rooted conviction that we should care? What also is the meaning of profiting by a chance at life? After death and dissolution has overtaken all, where is the profit and who has profited?

These are the most vital questions of life, and many earnest souls are striving to get them answered; but few will be satisfied with pragmatical negation. They seek a philosophy of life which will answer every call for light. Such a philosophy did guide the lives of men in the golden ages which now live only in tradition and as a faint memory in the hearts of men. But that philosophy has long been lost to the world at large and forgotten, and Theosophy alone can bring it back, for Theosophy first gave it birth. Who can measure our indebtedness to that courageous soul and ceaseless worker for human progress, H. P. Blavatsky, who, single-handed opened the way and called our attention to its sublime truths? and to her worthy successor, William Q. Judge, who held open the Portals until she should come who is now showing us how to fashion our lives by it—Katherine Tingley.

Theosophy is in no sense a cult, a dogma, a doctrine, a religion, a philosophy, or a science. It is that out of which *all these* spring.

Theosophy is the Infinite Ocean of Eternal Truth, which has been garnered by the great Souls of the Universe throughout Eternity. Its beginning is inconceivable for the gods have always existed. Its limits are incomprehensible for the gods are everywhere. It is therefore, in its infinitude, the solution of every problem in the manifested Universe. To it there is no unsolvable mystery anywhere. Its existence is as obvious as that of the objective Universe. Parts of both can be seen, and the wholes are equally self-evident, for Theosophy is the Wisdom of the Soul of the

Universe, from which all Souls proceed as the branches of a tree. All are indeed one united whole.

Theosophy may be found by every earnest, sincere and selfless soul, who seeks with modesty, and whose heart is full of devotion to the truth. To all such the Helpers of Humanity are ever near; but such qualities of soul are as necessary to find Theosophy truly, as a bright intellect is necessary to find the mathematical calculus. And although Theosophy gives the fullest scope to the brightest intellect, yet a baby can begin its first lesson the moment it is born.

Theosophy teaches that the nature of man is dual. He is an animal and a god. At first the animal prevails, but man may be found in all stages of evolution between these two.

Some of the characteristics of the animal nature are—instability, limitation, ignorance, weakness, egotism, selfishness, desire, passion, love, hate, hypocrisy, moral cowardice, slavery to objects of sense, delusion, seeing all things separate and itself separate from all else. To speak of characteristics in relation to the Divine is to circumscribe the Infinite. It is Omnipotence, Omniscience, Absolute Compassion. Its nature is Universal Law. But some of the qualities by which the godlike is reflected in man are, immortality, wisdom, power, modesty, selflessness, dispassion, equal-mindedness, rectitude, moral courage, freedom, discrimination, the power to recognize that the whole Universe is an organism and that Itself is a ray from the Soul of Universal Being.

The purpose of life through Reincarnation, is to purify the lower nature, so that it may become a fit instrument for the use of the Higher Ego in helping the progress of all creatures. Before this purification is accomplished the lower nature cannot respond to the touch of the higher. If some degree of purification has not been made at a certain period of life, it may become impossible for that incarnation. That life will then be wasted and lost so far as progress is concerned.

STUDENT

Now, as shown, we gather from the latter that man was not "created" the complete being he is now, however imperfect he still remains. There was a spiritual, a psychic, an intellectual, and an animal evolution, from the highest to the lowest, as well as a physical development—from the simple and homogeneous, up to the more complex and heterogeneous; though not quite on the lines traced for us by the modern evolutionists. This double evolution in two contrary directions, required various ages, of divers natures and degrees of spirituality and intellectuality, to fabricate the being now known as man. Furthermore, the one absolute, ever acting and never erring law, which proceeds on the same lines from one eternity (or *Manvantara*) to the other—ever furnishing an ascending scale for the manifested, or that which we call the great Illusion (*Mahâ-Mâyâ*), but plunging Spirit deeper and deeper into materiality on the one hand, and then *redeeming it through flesh* and liberating it—this law, we say, uses for these purposes the Beings from other and higher planes, men, or *Minds* (*Manus*), in accordance with their Karmic exigencies.—*The Secret Doctrine*

## DREAMING AND DOING

From Lowell's *To the Future*

OH, whither, whither, glory-wingéd dreams,  
From out Life's sweat and turmoil would ye  
bear me?

Shut, gates of Fancy, on your golden gleams,---  
This agony of hopeless contrast spare me!  
Fade, cheating glow, and leave me to my night!

He is a coward, who would borrow  
A charm against the present sorrow  
From the vague Future's promise of delight:

As life's alarms nearer roll,  
The ancestral buckler calls  
Self-clanging from the walls

In the high temple of the soul;  
Where are most sorrows, there the poet's sphere is,  
To feed the soul with patience,  
To heal its desolation

With words of unshorn truth, with love that never  
wearies.---Selected

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** Will the Forum kindly help me in the following? What answer should be made to one who after listening to a lecture on Theosophy, and who had also read some of our literature, remarked: "Oh yes, it is all very beautiful, but why don't they tell us what to do?"

**Answer** Evidently the one speaking expected a formal set of rules for every circumstance of life, catalogued and numbered, which could be referred to for any event that might arise. He would like a *recipe* for the elixir of life, which, taken at regular intervals, will insure happiness and a solution of all problems, a free entrance into Heaven.

We open our mouths like young birds, expecting them to be filled, with only the trouble of swallowing; and yet the world has had hundreds of years during which specific instructions regarding life and what to do, and especially what not to do, have been preached from every pulpit. One may well ask of what avail has been the injunction of Christ, "Little children, love one another"; or the Commandments of Moses, "Thou shalt" and "Thou shalt not." Do we find love the controlling power in Christian countries, and do we find that those offenses which Moses specified have not been committed? We might also cite many instances of specific instructions being asked and given, as the story of the rich young man who came to Jesus asking, "What shall I do to inherit eternal life?" He received the reply, "Go and sell that thou hast and give to the poor, and come and follow me." It is recorded that he went away very sorrowful, for he had great possessions. How many are ready to follow directions which demand the conquest of their greatest weakness?

When the great Naaman was told by the Prophet to "go and wash" in order to be cleansed of his leprosy, he went away in a rage. Yet he had the wisdom of later listening to good advice and so was cleansed.

From actual experience it may be stated as a general proposition that those who are most insistent in asking for specific instructions are the ones least likely to follow them. And yet Theosophy does in the plainest language tell each one what to do—and what especially is of the utmost importance, it teaches the main principles of right action. Instead of giving a specific *recipe* for every circumstance or

event, or a different key for each and every door he may come to, it supplies man with a master-key which will open all doors. And the use of this master-key is after all so simple; for, as Katherine Tingley has often said, the path of right action is the line of least resistance; once depart from it and man finds himself lost among the tortuous windings of an interminable labyrinth. Let us then look at a few of the specific directions that Theosophy gives.

To live to benefit mankind is the first step; to practise the six glorious virtues is the second.

Here is one of the master-keys of life, that which unlocks the portals that lead to the Temple of Wisdom itself. The statement is plain enough, and yet how many are willing to follow it? and how many others excuse themselves by saying that they do not know how to benefit humanity? In other words, they plead ignorance and inability to understand the statement. They ask, "How can we benefit mankind?" And yet a child could teach them. Let us look at the contrast. What is the opposite of benefiting mankind, of living for others? It is living for oneself, pure selfishness. If they wish to know how to live to benefit mankind let them cease to be selfish if they can do no more; but there is not a man, woman or child living who cannot do something for others. Let them watch their own thoughts and see how often they think towards themselves, that this or that may be for *me*, that *I* may be benefited, etc., etc. But it needs no argument, the thing is plain if once we set our minds thinking.

But some may ask, "Why should it be said that this is the first step, and to practise the six glorious virtues is the second? Should we not practise virtue first of all?" To answer this let me quote from Paul in the Christian scriptures. In that wonderful chapter, I Corinthians, xiii:

Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal. And though I have the gift of prophecy, and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not charity, I am nothing. And though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing.

To practise virtue is assuredly better than not to practise virtue, yet it avails but little unless there is the supreme virtue of what is above translated "charity," the supreme virtue of living to benefit mankind. Indeed without this supreme virtue all the others however much they may be talked about, are but a mere show, a cloak, so long as selfishness lurks in the heart. But where there is the service of others, then in truth the virtues shed a radiance over life that is *glorious* indeed, because they are for all and not for self.

Here is another injunction teaching the same as the above, merely expressed in different words:

Know all that you can, but at the same time teach, preach and practise a life based on a true understanding of Brotherhood; this is the true way. (William Q. Judge)

But we exclaim with Naaman, "I thought

the prophet would bid me do some great thing." No, it is all so simple, the way to true happiness is so plain; it lies right at our very doors, and yet we will not walk therein. Because we will not conquer the selfishness of our hearts we call out for that which shall give us occult power; we wish to learn the intricacies of higher mathematics before we can add two and two; we wish to be given power over the forces of nature before we have gained power over our own lower selves and the animal within.

Innumerable instances might be quoted of what Theosophy tells us to do, and no earnest student who studies our philosophy can fail to find them. It is not necessary to say more than has been said above, for the practice of unselfishness is the key to it all. William Q. Judge has said that a life of altruism will bring us in future incarnations to the place where all the powers of nature will be ours by right. STUDENT

**Question** Shall we always continue to make Karma? Is there no end to this process of sowing and reaping?

**Answer** Did the questioner ask himself the meaning of Karma? If he had it does not seem as though this question could have existed in his mind.

Karma is the law of cause and effect: of action. As long as there is a cause there will be an effect, just as long as there is action there will be reaction. It is for us to make the sowing such that the harvest will be good.

William Q. Judge says, "Karma is an un-deviating and unerring tendency in the universe to restore equilibrium. It operates incessantly."

A person's life may be going on uneventfully, but that does not necessarily mean that Karma has ceased to act. For the uneventfulness is itself the result of Karma and may be the means of a needed rest. It may be too that a great mass of Karma remains unexpended, awaiting the proper environment. But when the proper time comes the delayed effect will be just as strong as if it had reacted at once. It may be stronger, for he may have added more deeds to the one already done.

William Q. Judge has said:

Karma is an unfamiliar word for Western ears. It is the name adopted by Theosophists of the nineteenth century for one of the most important of the laws of nature. Ceaseless in its operation, it bears alike upon planets, systems of planets, races, nations, families, and individuals. It is the twin doctrine to Reincarnation. So inextricably interlaced are these two laws that it is almost impossible to properly consider one apart from the other. No spot or being in the universe is exempt from the operation of Karma but all are under its sway, punished for error by it yet beneficently led on, through discipline, rest, and reward, to the distant heights of perfection. It is a law so comprehensive in its sweep, embracing at once our physical and our moral being, that it is only by paraphrase and copious explanation one can convey its meaning in English. For that reason the Sanskrit term *Karma* was adopted to designate it. . . . Theosophy views the Universe as an intelligent whole, hence every motion in the Universe is an action of that whole leading to results, which themselves become causes for further results. Viewing it thus broadly, the ancient Hindûs said every being up to Brahma was under the rule of Karma. I. S.

### The Taint of Old Teachings

ONE of the standard liberal religious publications prints Julia Ward Howe's *Hymn for the International Congress*, and then, on the same page, denies its broad spirit of brotherhood in the following paragraph:

An eminent philosopher gives as a reason for preferring imprisonment for life to capital punishment that, so long as a man lives, there is hope of repentance and reform. To which our answer would be that we would rather trust a human soul in another life than in any state's prison we ever knew or heard of.

The philosophy of this kind of tolerance must be rather puzzling to the criminal "brother," who perchance in his youth attended Sunday School and learned that the Mosaic law was repealed 1900 years ago. In case a guilty but penitent man wanted to work out his salvation—they are all human—he would find little incentive to begin ante-mortem reformation in a belief which made capital punishment the initiation to a world of peace and love.

Evolution is a slow and painful process with reluctant humanity, and the taint of the old teaching of vicarious atonement and of the blind faith that justified ready-made opinions has left its influence even in liberal religious circles of thought. Salvation by character can only come from a recognition of the Christ principle impelling every soul to incarnate that it may gain experience whereby to perfect itself in knowledge on earth as it is perfectly conscious on a spiritual plane. The executed murderer who had failed to recognize his brother because both were disguised in "coats of skin," would have no chance to learn the lesson of unity in a heaven where there was nothing to contrast with the pervading harmony and love. His own legal murder, in depriving him of his body, would leave him like his victim, with the unexpended force of the passions and desires of the lower nature ready to attach themselves to any susceptible body; and the developing psychic sense of humanity is rapidly increasing the number of sensitives. The immortal side of the nature which had sought earth experience to gain knowledge of nature's forces and to help to raise matter is deprived of its vehicle by death—legal or illegal—and the lesson is suspended until the return to another earth life.

Only the heredity of blind faith could be satisfied with the idea of progression after death in some vague, far-off, unknown time and place. The logical inference is that each man must rehearse his part and ultimately learn to play all the parts, in the human drama, over and over, until he has learned it perfectly. When he murders the lines, injuring himself and others, he may need a period of seclusion wherein to meditate and study; but he is even less prepared to appear upon some other stage among another company of actors than he was in the familiar surroundings of earth-life. "All the world's a stage," wherein Nature has provided opportunity for every possible human need of development, and each one has free will with which to choose the part he will play, always reaping what he has sown—and where.

It is merely begging the question for society to evade its moral responsibility by thrusting

into a supposedly better world the citizens who are considered unfit for this one. If the method of the State in conducting her prisons is not calculated to arouse a man's higher nature, it is a social duty to find a better way of guiding the criminal's misdirected force, which can be conserved into other channels, but cannot be suppressed even by electrocution.

We are divine souls, overshadowing our bodies and incarnating in proportion to our success in conquering the animal nature. If every religious teacher had a living faith that his brothers were veritable "sons of God," it would not be so hard to make the criminal work out his salvation by confidently appealing to the divinity within him. In so far as society regards him as hopeless, it is to that degree responsible for his acceptance of the social estimate.

L. ROSS, M. D.

### A Chinese Romanist Church

A MEMORIAL has been addressed to the Foreign Office at Peking asking the Chinese Government to send a mission to the Pope with the request that he appoint a Chinese archbishop and bishops to govern Christianity in China. The writer is a Manchu censor and imperial clansman, and his earnest appeal is made still more earnest by being written in his own blood.

His complaint is that the two religions, Roman Catholicism and Protestantism, are governed in China by foreign governments acting through their missionaries; for, though religion and politics are separate in principle, in practice they are not. At a conference between the Bishop of Peking and the Pope, the Pope ruled that religion and politics must for the future be kept separate; but he also said that in the event of hostilities against missionaries, European governments would have to interfere. Also the Pope has not yet answered the respective appeals of Germany and Italy (so it is stated in the memorial) to be given control of missionary work in China. From these circumstances the memorialist infers that the Pope intends China to have control of her own Christianity, and accordingly he appeals for the appointment of a Chinese cardinal and episcopacy, to unite all sects and have control over the whole.

It is evident that if the Chinese Church is to succeed where foreign Churches have failed, it will be by presenting the non-Christian population with ideas of Christianity considerably different from the impressions conveyed by the missionaries. Hence the Pope will have a hard task to keep this lively and opinionated body in line with the rest of the Church. It is not easy to see how the Pope could, by an edict, place all foreign Protestant missionaries under the control of a Chinese cardinal; and the memorialist does not seem to have an adequate conception of the seriousness of the sectarian question. But, as regards Roman Catholic missionaries, the scheme would certainly eliminate the complications due to the interference of various governments in protecting their own missionaries. The trouble would, however, still prevail as regards Protestant sects; and, as said before, the Roman See might find it difficult to digest a Chinese Romanist Church.

The incident affords one more example of the perplexities that attend the career of med-

ieval institutions in their endeavor to keep up with modern progress without abandoning their ground. It is one thing to introduce Christianity into the East; but quite another to keep control of it there. The Church may find that it has harpooned a big whale and be glad to sever the lanyard, or that it has caught a (Manchu) Tartar who will capture his captor. So great is the mass of China that it is by no means inconceivable that a Christianized China might preponderate in the matter of authority, and the Roman See find a new home in Peking! Again, what new and strange aspects would not the controversy between dogmas and modern ideas assume in the hands of the brainy Chinamen! H.

### Another Shakespeare Crank

THERE is going the rounds of the press the description of a new theory of the authorship of Shakespeare's works, by an English school teacher named Nicol. This man asserts that the author was Henry Wriothelie, Third Earl of Southampton. He has devoted years of patient labor to a minute study of the 1623 Folio edition of Shakespeare, the outcome of which has been the alleged discovery of a cryptogram, revealing not only the authorship but the whereabouts of the original manuscripts supposed to have been burned in the fire at the Globe theater. Some of these manuscripts he says are somewhere at Crosby Hall, an ancient building in London; but regarding the main part of his secret he says that he does not see why he should reveal for nothing the results of his labors, and he therefore calls for some government or wealthy individual to finance him.

The following quotation gives an idea of the kind of argument used:

In the 1623 Folio edition of Shakespeare—or what we call the works of Shakespeare today—there is a verse, followed by a large engraving of a face. This face always has been considered by commentators to be the image of Shakespeare, but as a matter of fact, the very engraving itself is a wonderful cryptogram. If one will look at this image through a glass—"with the eye aided," as one of the cryptic readings tells you to do—he will see that it is not a regular engraving, but is nothing more nor less than a mechanical drawing. Careful study of many of the lines on this drawing will reveal the writing of various words. There are letters buried in the lines all over the drawing. The lines of the forehead were evidently drawn with a compass. Through this engraved cryptogram the writer of the plays endeavored to reveal his message, written in cipher, but with all his elaborate work he failed to say all that he wished. Therefore in the verse describing this engraving, he admits that he failed to convey to the world his meaning, and advises the student not to pay too much attention to the engraving, but to look on the book itself.

On every page, almost, of the great Folio you will find letters showing that "H. W. S." wrote the plays, and these three cryptic letters denote the name of Henry Wriothelie, Third Earl of Southampton, who was the actual author of the plays and poems so long and so erroneously attributed to the man of Stratford, who was merely a blind, and was actually in the pay of the Earl of Southampton. I do not deny that there was an actor named Shakespeare, but I can prove that he never wrote the works attributed to him.

One cryptographist was enough, but two is one too many; and there may be more to come yet. But a little more unanimity among them would be more convincing. E.

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

### Theosophy and Christianity

ONE of the attitudes adopted by many Churchmen, in face of the broadening of ideas, is this, — that religion is universal and adaptable to all times, but that Christianity is that universal religion. Hence it behooves them to show that Christianity is the king of religions, and that there is something exclusive and special about that particular system.

A good example of this attitude occurs recently in a sermon in the London *Spectator*. The preacher says that though Christ claimed the highest authority for his teaching, yet in several matters of moment he tacitly or explicitly disclaimed authority for himself, in particular as regards political and social policies. He left people free to exercise their judgment as to how best to apply to particular cases the general teachings upon which he insisted, exclaiming on one occasion, "Who made me a judge or a divider over you?" The preacher commends this liberty of judgment and says:

#### The Surrender of Dogma

No system which absolves men from the duty of thinking can ever be profitable to them, can ever make them into full men. It may save them from much pain, and so may paralysis. No doubt it satisfies a craving which exists in the human mind, but it is a craving for stupor — like that which lends attraction to narcotics — not the craving Christ sought to stimulate for more abundant life. It is self-control, not obedience, which is the moral goal of man. No teacher who tried to cross the purpose of evolution could ever be rightly regarded as divine. In Christ's renunciation of authority lies his divine authority. His spirit is the spirit which leads us to the light by the hard path of liberty, and to that spirit he sacrificed the exercise of a lordship such as he warned his disciples to avoid. The spirit of truth coming forth from God was, he said, alone sufficient to guide the world, and as he meditated on that "power from on high" he was able to say: "It is expedient for you that I go away."

The preacher thinks that the most miraculous thing about the religion of Christ is that, "as he taught it," it takes into consideration, as no other religion has done, the unceasing

#### Essential Unity Throughout Changing Forms

change of circumstances which must nullify the efficacy of every schedule of rules but which is powerless to destroy the dynamic force of certain moral principles. He speaks of the changing standards of goodness. He admits that new theologies and forms of worship will spring up; but so long as people conceive the Deity as fulfilling their highest ideal, and cleave to that ideal, they will fulfil the com-

mand of Christ. And he goes so far as to counsel the Church to imitate its founder by refusing to pass judgment when appealed to on social questions.

Once more comes the demand for a judgment. "Speak to my brother, that he divide the inheritance with me," cry the multitude. Has the Church strength to answer according to the example of her Master: "In such a matter I have no judgment to give"? On her strength to refuse judgment depends her spiritual prosperity.

People, he thinks, may all be actuated by the principles laid down by Christ, yet come to very different conclusions on social questions; and the Church ought to refuse to make a pronouncement.

#### The Silence of Knowledge — or of Ignorance

From the above we see that it is maintained that the eternal universal spirit of light, progress, and goodness, which actuates mankind and survives all changes of opinion, custom, and belief, is due to the teachings of Christ. "Christ" is not defined, but we may take it that the Galilean Jesus of the Gospels is meant. If not Jesus but the "Christ idea" is meant, then what becomes of Christianity as such? But the crucial question is: Can the world be made to believe that its eternal moral spirit is due to the teachings of Jesus the Galilean? Can even modern Westerners be made to believe it, let alone the millions of other races to whom the personality of Jesus and his gospel are less than nothing? It will not do. One admires the preaching of breadth and tolerance, and the decrying of authority and bigotry; but how can such a broad universal spirit be grafted upon such a stock? It is a desperate attempt to ride two divergent horses. But it is interesting to observe how the spirit of moral responsibility, self-dependence, intellectual freedom, etc., is forcing itself upon everyone, and compelling them to show their credentials or be left behind. The Church seems anxious to disown dogmas upon which its authority is actually founded, and at the same time to keep that authority by trying to base it on imperishable truth.

#### The Growing Force of Freedom

Be it so, then, and the issue is plain. That Church, having renounced all dogmatic claims to authority and having undertaken to rest its claims upon unchanging truth and moral efficacy, has itself accepted the challenge to make good its undertaking. Let it show that the acceptance of Jesus Christ and the profession of Christianity are essential to the maintenance of a right attitude in life. Let it prove its own right and power to continue existing as a Christian Church. If it cannot do

this, what will prevent it from disappearing?

One might ask what would be the attitude of the Church, as defined in the above sermon, towards Theosophy. On what grounds would it refuse to accept Theosophists as members of its communion? Theosophists champion the very same broad ideals of truth and freedom. No objection could be made to them on the score of controverting the teachings of Jesus the Christ; and, if such objections were made, Theosophists could claim that the objectors were presuming to judge on one of those points which Jesus left free; for the teachings of Christ are, by the definition given above by the preacher, those teachings alone which are absolutely general and universal and which are applicable and adaptable to every change of intellect and opinion.

Supposing the objection were made that Theosophists teach Rebirth, the existence of Masters of Wisdom (Perfected Men), the Spiritual powers in Man, and other things not in the Gospels, or alleged to be not in the Gospels. Then the Church would be setting up a dogmatic standard, the very thing here explicitly disclaimed. Jesus, we may say, left our judgment free on the question of Reincarnation, it is one of those points in which he was careful not to interfere by the weight of his personal utterance with the rights and duties of private exercise of the intellect. Shall his Church, then, presume to interfere or arrogate to itself a power which its Master disclaimed? To quote the preacher's own words; "On her strength to refuse judgment depends her spiritual prosperity."

The teachings put forward by Theosophy as to the nature of man, the laws of the universe, the doctrine of cycles, the seven principles of man, the after-death states, etc., may justly be claimed to be of the class described in the sermon as knowledge arrived at through the exercise of man's powers of thought *under the guidance of the spirit of truth*; knowledge which, we are told, Christ admitted would come, and on which he was careful not to pronounce a judgment. The Church, if maintaining the attitude described, could not object to Theosophists on that ground.

But perhaps the Church would object to Theosophists because they do not accept Jesus as the sole or supreme Christ and Christianity as the supreme religion. What did Jesus say on that point? Was that one of the general principles upon which he insisted or one of the specific points which he refused to discuss? It does not matter which way the answer goes, for it comes to this — that unless Christ and Christianity are to rest upon dogmatic sanction, they must rest on their own intrinsic and demonstrable merits. Hence the fact that Theosophists do not believe in Jesus as the sole or supreme Christ or in Christianity as the supreme religion is no ground for the Church's rejection of Theosophists. The church cannot give this as a reason for rejecting them, without deviating from the attitude defined above.

Therefore it comes to this. In order to

maintain the above attitude, the Church must be prepared to recognize Theosophists as "Christians" and to accept all their beliefs as perfectly religious and legitimate. And the question as to whether Jesus and Christianity are supreme, or whether other Saviors and religions are equal and perhaps greater, will have to be decided on their merits; as will also the question as to whether Christianity or Theosophy is the most efficient power for good in the world.

Doubtless the preacher whose sermon has been criticized will not like to have the points which he has left so conveniently vague brought out into clear light. It is not unusual to find in sermons ideas expressed so vaguely, by a dexterous use of language, that they convey a momentary feeling that all has been satisfactorily settled. But the audience must realize, when they get home, that the preachers have imitated their master in leaving a good deal to be settled by their disciples.

There are many Theosophists who have been brought up in Christian Churches, some of them even as sons of the clergy of the Church of England. They have of course a natural love of the cherished traditions in which they were brought up, and a feeling of patriotism for their country, its institutions, and its faith. But they are able to recognize that other nations and races have the same warm feelings towards their respective antiquities, and that such feelings, though commendable in their spirit, are limited in their scope, being destined as we outgrow our limitations to broaden into more universal sentiments. They recognize the noble spirit of the principles attributed to Jesus; but they cannot shut up that spirit within the barriers of a creed that would exalt the Christian tradition above all the religion and lore of the world. They are compelled by the very breadth and freedom of that spirit to recognize the claims of other religions and philosophies. They have arrived at the conclusion that Christianity is no more than a branch of the universal Religion, as English is a branch of some ancient root-language. They have reason for thinking, from their studies of the world's records, that there is a universal fundamental Science of life, to which has been given the names of Wisdom-Religion, Theosophy, Secret Doctrine of Antiquity, etc.; and that the various religions are derivations from this. Hence they have sought to go beyond the religions to the eternal source of the religions. They believe, with these churchmen, that the divine spirit in man, to whose guidance Jesus the Christ (as said) left man, is indeed the source of all his true progress; but they believe man had this guidance for millenniums before the Christian era, and has it now in lands where Christianity has no influence. Nor do they consider that a knowledge or acceptance of the Christian tradition is in any way essential to a full manifestation of this spirit. In short, they carry out to their logical conclusion the arguments used above by the clergyman quoted; as many of his audience will probably do. H. T. EDGE, B. A. (*Cantab.*)

## Human Nature in the Caves

AN Englishman has just translated for us — from the Syriac — some very curious human documents known collectively as *The Paradise of the Fathers*. It amounts to a history of Egyptian monasticism for the early centuries of the Christian era and was written by Athanasius, St. Jerome, Palladius and some others, each contributing as much as he knew.

Palladius, afterwards Bishop of Helenopolis, was desirous of leading the saintly life as then conceived, but finding that his unregenerate human nature was apt to be too much for him, decided that a course of asceticism under some recognized and expert technician in that line would do him good. At that time the deserts of Upper Egypt, the neighborhood of Alexandria, and parts of Syria and Palestine were dotted with the caves and extemporized habitations of solitary anchorites striving to subdue the flesh and become pleasing in the eyes of Heaven. The regular Monasteries in the neighborhood of Alexandria were also well stocked, apparently containing upwards of two thousand "great and strenuous men." These were the first objective of Palladius on his quest. Afterwards he wrote an account of them as well as of the solitary anchorites farther out in the desert, calling his work the *Paradise* in allusion to the spiritual garden which the monks seemed to him to be inhabiting. But he kept his eyes open, noting touches of primeval human nature here and there and not scrupling to record the same. Neither does he spare his own weaknesses. First he went for three years to "the blessed priest" Innocent, on the Mount of Olives. Why he left there we do not know. Maybe the discipline was too severe. His next visit was to Isidore, an Alexandrian, so holy that he "never washed." This visit was not of great length and though presumably Palladius also abstained from washing, he did not find the measure sufficient for the extenuation of his passions. So he transferred himself to the cave of the anchorite Dorotheus where that holy man had lived for sixty years and was able to maintain life on six ounces of bread a day and a handful of green stuff. Things were prospering (spiritually) with Palladius now, but his health gave way and he had some trouble in building it up again. As soon as he had done so he enthusiastically wrecked it again among the monks of Upper Egypt and went to some more monks in Palestine to restore it. Ultimately he was satisfied; either his passions were subdued sufficiently for all practical purposes or he recognized that he could do no more with them by that mode of treatment. He had evidently noted that the extremest austerities were not always fully successful. Thus the "blessed priest" with whom he first stayed was in the habit of stealing from the other brethren to give to the poor, a thing which seemed to Palladius to be "lacking in sense." The great St. Jerome was so full of "envy and evil-eyedness" that no one could live anywhere near him.

The monks never seemed to understand that a man can be just as envious and spiteful in a desert cave as in the city, and that while the latter place is as good as the former for struggling with your failings and seeking God, it is far better for that highest mode of serving God which consists in serving man. STUDENT

## Some Views on XXth Century Problems

### Retrograde Spirituality

THE correspondence of natural and spiritual law, so far as it goes, has often been noticed; and a book published a few years ago achieved some fame by its attempt to work it out. If we did that for the laws of physical exercise we might find an explanation of some of the tragedies of human life.

In the usual attempts at the improvement of physical health, some part of every day is given to muscular exercises. At last the muscles fall into the rhythm and call for the work to which they have been accustomed. At the expected time they begin to accumulate energy from the body's inner stores, from the air and the sunlight, supposing that they will as usual be allowed to expend it in maintaining and bettering their tone.

But if they are not led out to work, a set of degenerative changes sets in. The fuel that should have been fully oxidized retrogrades into poisonous products and there is a general sense of muscular uneasiness. If the exercises are entirely discontinued there may be rheumatism; there will be decided loss of health, physiological unbalance while the muscles are returning to their original poverty. During this period it is common for serious illness to occur. Although good health is impossible if no exercise is taken, it is safer to have never taken any than to have started to take much and then have suddenly renounced the habit.

Somewhat the same law obtains in respect of hard and healthful mental exercise. The products of its discontinuance—one often sees them in men who have retired from active business life before they are worn out, replacing the customary mind work with nothing of the same kind—are whims, snarls, unrest, illusions, crankiness and a host of other degenerate spawn which may go on to imbecility or insanity.

And again the same, with worse results, spiritually. Whoever has begun to make spiritual effort daily, who has set apart some hour of the day to bare his heart to the light, to find his soul in the silence of aspiration, must go on if he would not risk more than he knows. He is in a sense pledged now to the light, pledged to win it, to keep on until he has achieved unity, until his work is henceforth its and its his.

If he gives up after this divine habit is established, and his nature now knows its need of, and craves, the crown? If he has awakened a part of his nature which must now be fed like the rest, and he ceases to feed it? "The gods are fed by our thought," and every man has the sleeping god within him. Doubt, despair, scepticism, may come; loss of compassion, loss of interest in any work for humanity which he may have previously entered upon; finally even a total change of character. There may be a sinister antagonism to all that was once recognized as noblest, to his own better nature with its admonitions, to every form of activity at work in the world that he

once respected, loved, and co-operated with.

All pleasure in life may vanish and in the attempt to recover it, any way but the right may be chosen—dissipation, search for fame, search for power of any and every kind. And for a time the stored spiritual energy, descending to the intellectual and personal levels, may give the mental powers an unaccustomed stimulus so that they attract attention and a following. But this stimulation has its time limit; it is artificial and time will weaken and diffuse it to nothing. Then the character is wrecked for that incarnation—unless even at that hour the despair and pain suggest their own cure.

There have been not a few examples of all this in our own time. Even the Theosophical Society has had its members who failed, relics here and there along its path who for a time have had their deceived following, and who, when the force that backed their ambition had vanished, had become exhausted and could not be replaced, gradually became extinct. But the very bitterness of their experience will ultimately, in some life, be their curative.

### The Back Door to Utopia

"CONTROL all people with hypnotism and you are on the way to Utopia." Control a mere two hundred and you are on the way to omniscience.

The first of these sentences is the *reported* utterance of a New York physician. The second may be taken as an abstract of some recent glowing forecasts which he has made respecting a monster (and monstrous) experiment. "Two hundred persons," says the newspaper report, "have just been formed into a class in this city"—New York—"to serve as subjects for the greatest investigation into the mysteries of hypnotism ever projected." The experimenter is the physician above referred to and the report adds that the Psychical Research Society is interesting itself in his work.

The matters upon which the brilliant lamp of hypnotism is to cast its benign light are very numerous. The great problems of human life are to be dark no more. The light will fall upon

the mental phenomena known as metempsychosis [we never heard metempsychosis referred to as a mental phenomenon before] clairvoyance and psychometry. In our inquiries thus far we have found a woman who while hypnotized has passed beyond the delimitations of her present life and into previous existences. . . . We gave her a stone from one of the pyramids, and she told us *all that we had ever known* about the ancient Egyptians, and many more things that we are *trying to verify*. . . . Likewise she carried us back to ancient Roman days, the Caesars and conquests of the Northern tribes. . . . We shall some day thus reveal all the unknown of human life in the past. [Italics mine.]

We learn that it is the "sub-conscious mind" which is the storehouse of all this wisdom. It "is the soul of man." Criminality lies in the impulses of the other mind, the conscious or normal one. By "arousing" the

first, and laying the second—by means of hypnotism—we can remove criminality and often cause the cure of disease. Hence; "Control all people with hypnotism and you are on the way to Utopia." A hypnotizes B into a shining and perfect character, and then B very properly reciprocates and makes a perfect character of A. How slow are the ways of poor old blundering nature compared to this! This is evolution while you wait. You go round to your physician, conscious of one or two flaws in your spiritual make-up, and come back in time for dinner with a halo round your head.

They don't seem to know much about the "subconscious" mind yet. They don't know that when its *guardian*, the soul, is cut off from it by hypnotism, it no longer knows truth from falsehood, will accept any suggestion, and, reading the deeper layers of memory and thought and expectation of the operator or bystanders, will return to them in plausible garb just what it finds there. This mind is not the soul and is not spiritual but animal-psychic. The normal mind is the intermediary between the "subconscious" mind and the soul, and the paralysis of the normal mind by hypnotism is therefore the temporary severance of the link. Any morally elevated utterances during the hypnotic state are either remembered phrases pieced together, or read from the mind of a bystander. Let it be noted also that the latent immoral can be silently read—and subsequently acted on as a potent unspoken suggestion—as well as the opposite.

But New York is not likely to heed any warnings. The idea is out. Hypnotism is the path to knowledge. Why should not Brown, Jones and Robinson form classes as well as the physician above referred to? What hinders the thing from becoming immensely popular and New York in a year or two from containing thousands of naturally susceptible minds once and for all thrown open to every current of evil suggestion that may blow? "It must of course," says the physician, "be done scientifically, and by men who have made the subject a life study." But the immorality of it remains unaffected, and the subsequent New York crime lists will be an instructive lesson.

The mind of man is really triple, not dual. If we are to call one part of it the subconscious, we must call another the supra-conscious. But the words are not good, for they imply that these two degrees work—one animally and one spiritually—in unconsciousness until they happen to break into the field between, that wherein the man as he knows himself habitually lives. Each of these two poles has its memory. At death the whole stores of the lower are turned out, and then the essence of what has been experienced in that life, its lesson, passes into the eternal memory of the other.

The psychometric experiments concerning the "ancient Egyptians" will furnish the physicians with a mixture of what they knew before, scraps of the victim's own ideas, and some unreliable astral gleanings. STUDENT

## The Illustration

**T**HIS arch was built by Ptolemy IX (Euergetes II), and the view looks outward along the avenue, formerly lined with sphinxes, leading to "Luxor." The temple to which the pylon belongs, built by Ramessu III, was dedicated to Khonsu and was constructed on the site of an older temple of the period of Amen-hetep III. This pylon is a fine example of the Greco-Egyptian or Ptolemaic period.

## Egypt: Extent and Power of the Early Dynasties

**L**AST season's work of the British School of Archaeology in Egypt has been "of unusual value," says the British correspondent of the *Scientific American*.

It has brought more evidences of the "earliest" eras of Egyptian civilization.

It has demonstrated the existence of this civilization over a wide tract of country.

Hitherto the early kings had been traced only at Abydos in Upper Egypt; now their works have been found near Cairo.

It establishes conclusively the uniformity of this civilization of Egypt over the country early in the First Dynasty, put here at 5400 B. C.

During a period of several thousand years a common government, ideas, habits and standard of art prevailed. The details of pottery and stone-work are the same 300 miles apart.

The country excavated was about a mile south of the pyramids of Gizeh. Here fifty-two graves sur-

rounding a royal tomb were found. The age of the relics in them is determined by a clay seal with the name of King Zet, the third monarch of the First Dynasty, and by seals of the Second Dynasty.

In a tomb of the Third Dynasty were found about sixty-five small stone marbles of milky quartz, brown quartz, and carnelian, evidently used for games.

At Rifeh, near Assiut in Upper Egypt, was excavated a large cemetery which had been buried by gravel washed down from the hills. In this were found "soul houses," little residences placed on the graves "for the accommodation of the liberated soul." They vary from a tent-like structure with a single room, to more elaborate dwellings with staircases, porticoes and furniture.

In commenting on the above, let it be said that the narrow limitations of space and time fixed by historians have to be gradually abandoned; the terms "Theban" and "Memphian," as applied to the Empires, are losing their meaning. Likewise we can

Lomaland Photo. and Engraving Dept.

TRIUMPHAL ARCH, TEMPLE OF RAMESSU III, KARNAK

trace no regularly ascending scale of advancement in knowledge; for these last discoveries include a great many objects of art which there is no space to enumerate.

Let us also bear in mind that archaeologists now admit that the Egyptians started their dates all over again at the beginning of each Sothic period (when 1461 Egyptian years of 365 days each, coincide with 1460 years of 365¼ days); and that when we find a date, there is not always any reason for assuming that it belongs to the latest Sothic period or to any one Sothic period rather than another. Hence there is ample facility for adapting the dates assigned by archaeologists to those given by H. P. Blavatsky.

Maspéro says: "Every time I hear people talking about the religion of Egypt, I am tempted to ask which of the Egyptian religions they are talking about. Is it of the Egyptian religion of the 4th Dynasty, or the Egyptian religion of the Ptolemaic period? Is it of the religion of the rabble or

of that of the learned men? Of that which was taught in the schools of Heliopolis or of that which was in the minds and conceptions of the Theban sacerdotal class? For between the first tomb of Memphis . . . and the last stones at Esneh under Caesar-Philippus the Arabian there is an interval of at least 5000 years. Leaving aside the invasion of the Shepherds, the Ethiopian and Assyrian dominions, the Persian conquest, Greek colonization, and the thousand revolutions of its political life, Egypt has passed during those 5000 years through many vicissitudes of life, moral and intellectual."

Clearly, then, when we are dealing with a stretch of at least 5000 years, we must not try to take too unified a view of it. How old is our present civilization? And think of the foreign influences during 5000 years! Evidently Egyptian religion is a complex and elaborate study. The old Initiates were unable to pass on their teachings after a certain date, owing chiefly to the want of worthy successors; and then came the adaptations and perversions of the Secret Doctrine. ## "Early Europe Rivalled Egypt and Babylon"

**T**HE latest discoveries at Knossos, resulting in the discovery of an entirely new layer in the Palace site, were described in the CENTURY PATH, number 3 of this volume. The explorer, Dr. Evans, upon whose shoulders the expense of exploration has hitherto fallen, in appealing to the public for subscriptions to carry it on, says that this

new discovery belongs to a period anterior to that of the Cretan Palaces and possibly represents the tombs of pre-Minoan kings. The London *Times*, in publishing this appeal, says:

"Dr. Evans is fully justified in claiming that the work already accomplished has supplied a wholly new point of view for the origins of our European civilization, and shown for the first time that its earliest phase rivals in antiquity that of Egypt and Babylonia, while in some respects even surpassing the artistic achievements of the ancient East."

Naturally the thoughtful reader will ask whether it is worth his while to base final conclusions upon any given stage in the progress of archaeological discovery, and will prefer to keep his judgment fluid in anticipation of still more revolutionary disclosures about past history. The *Times* speaks of the "earliest phase" of European civilization; but it would obviously be wiser to pause and to call it the earliest-so-far-discovered-by-science. STUDENT

## A Seismological Sense

A FOREIGN REVIEW collects a mass of the evidence that animals have some prevision of earthquakes, without, however, speculating very far as to what is the sense that gives them their knowledge. This sense is possessed by animals that live in the air, on the ground, under the ground, and probably in the water. And it manifests itself from an hour or two up to *five days* before the event, whilst as yet the seismographical instruments are giving no indication. It is therefore either a sense of which we practically know nothing, or it is a susceptibility to premonitory vibrations so fine as to be imperceptible to instruments.

On February 20, 1835, *the day before* the earthquake at Concepcion, in Chile, at ten in the morning, great flocks of sea-birds, mostly gulls, were seen to pass over the city landward, a phenomenon not to be explained by any stormy condition of the weather.

The uneasiness of cattle, horses and dogs, for some time, even a whole day, before an earthquake, has often been observed, and man sometimes takes practical warning from their behavior.

Aelian mentions that in the year 373 before Christ, five days before the destruction of Helike, all the mice, weasels, snakes, and many other like creatures, were observed going in great masses along the roads leading from the place.

So they knew not only that something was to happen but the dangerous spot from which they should go.

By way of a hypothesis we can suppose that there *are* extremely faint premonitory vibrations even as far ahead as five days. Or we can suppose the sense to be of the nature of a general abnormal feeling, comparable — except for its abnormality — to our own (and the animals') general feeling at the touch of spring. We cannot say where or how we feel that; but we do feel it. And we know that our own dulled organisms do often sense something for a while before an earthquake. We speak of "earthquake weather," but though there is a peculiar atmospheric stillness, we have added to it, or read into it, our own feeling. Earthquakes must certainly be preceded by as yet unmeasured changes in the earth's superficial and deeper currents.

STUDENT

## An Astronomical Plant

PROFESSOR NOWACK'S extraordinary plant is hardly attracting as much attention among the general public as one would expect. Its behavior, though now amply evidenced, is nevertheless nearly incredible. That a plant should clearly and definitely correspond to changes going on upon the sun's surface, and that either may be read for the other, and that reasonings based upon the plant's information should give meteorological and terrestrial changes days, weeks and even years in advance, are a set of facts which like the canals of Mars need time to digest. In 1892 the Professor furnished several English scientific bodies with a chart on which he had

marked a number of atmospheric and seismic disturbances up to 1918. So far as we have gone, all have come out right. In that same year he told the King of Italy that Sicily would be shaken by great earthquakes following some volcanic eruptions. The prediction was of course justified. Two years later he warned the Sultan of an earthquake due the following day near Constantinople; later, he predicted the 1895 earthquake of Adrianople, the 1902 earthquake of Salonica, and, three months in advance, the 1903 earthquake of Constantinople.

A specimen of the plant is "at work" at Kew Gardens, and those who wish to take the trouble can go and study astronomy at its feet when they will.

Does it not seem possible that if we looked carefully we might find other plants corresponding with equal fidelity to other heavenly bodies, to the moon for instance, or some one of the planets? If the suggestion seems a little extravagant we can recall the famous Palolo worm, that little West Indian creature which keeps accurate *lunar* instead of solar time in which to perform its rôle of life changes. So far we have only this and Professor Nowack's plant, but they seem to give enough of a hint to encourage us to search.

STUDENT

## Pragmatic Astronomy

THE French mathematician Poincaré has been ingeniously puzzling his fellow scientists — if also himself. He is to science somewhat as the pragmatists are to philosophy, with the difference that if he would go a step further he would get on towards the truth.

Discussing astronomy, he takes up the position that there is no such thing as absolute physical motion. The motion of bodies amongst each other is only the mind's way of explaining to itself in terms of sight that which it successively cognizes. A metaphysician might say that the mind, in gradually passing from the spiritual in the course of its evolution came to imagine as objectively outward what is really spiritually inward; then from this imaginatively created material it called to itself the elements of sight, of eye; and then set to work to explain the changes in the scenery. But Poincaré does not go as far as that.

If there were only one body in space, it would not be possible to say of it that it moved; it could not have a to or from. Suppose another appeared; both could now have motion, each relative to the other. Suppose an astronomer on the second sees the first to move all around it and he accordingly represents what he considers the fact by drawing a circle around a point on a piece of paper. An astronomer on the first would draw the same figure but with *his* globe as the center and the other turning around it the same way. Each picture would be an exact expression of visible fact. Carry the same principle on to almost infinite complexity, and we have Poin-

caré pointing out that the geocentric conception and pictures of the universe will "explain" the visible facts as well as any other, but with such immeasurable complexity that we do not use it. We take the simplest and call that "true." Any of the millions of bodies may be regarded as still and the others moving with respect to it. Yet if any of these supposedly moving ones were suddenly left alone in space it could not be called moving at all. There he leaves the matter; no real knowledge is to be had. We are merely drawing pictures and calling one of them true.

But to say that astronomy does not express real truth is one thing; that it has *no relation* to real truth, another. Every material change, from the greatest to the least, is an index to a movement conscious and purposive of the living universe. With every such movement, though we do not recognize it, our consciousness is in touch. When man does come to this recognition — and from time to time some few do — not only will every fact of material science find its spiritual explanation, but each fact of the vast stores will lend itself to serve the better comprehension of the spiritual trend and modes. The spiritual and material will be keys to each other's secrets because of the correspondence.

STUDENT

## Playing Pranks with the Brain

A RECENT and half-proved theory of drowning throws a good deal of light on the mischievous teachings about deep breathing that we read in almost every journal devoted to the culture of health. The author of the theory examines the usual views as to the causes of sudden death in the water, cramp, syncope, and what not. None of them satisfy him. Paralysis of respiration is in his view the real trouble in most of the cases. The breathing center in the brain and cord does its best but has to give up.

Du Bois Raymond has already shown that the effect of simple immersion in deep water is to increase the energy output necessary for respiration by about 10 per cent, while the very active muscular exercise attending the act of swimming greatly augments the tax on the respiratory muscles, which are then called upon to do at least 50 per cent more work than when the body is at rest on land.

If the stomach is distended, the diaphragm — one of the chief respiratory muscles — cannot do its work, makes greater and greater efforts, and at last exhausts the center which supplies it with energy.

In the deep breathing exercises the respiratory amplitude is often greater than this, more than 50 per cent in excess of the normal. The center grows to meet the demand and is ultimately altogether out of ratio with the neighboring great organic centers, those for the heart, vessels, etc., and with the real needs of the economy; and by its inductive action on the other centers is a continual focus of disturbance. Any attack of serious illness, weakening the muscles upon which it acts, leaves it congested with a head of force it cannot use. It is a race-horse with no one to take it out to let off its stored energy.

AT THE HEAD OF THE LAKE

## Forestry Notes

**I**N December the President signed a proclamation creating two new additions to the Prescott National Forest in Arizona, thus adding 320,000 acres and bringing up the total of the forest to 1,063,256 acres. The country included is in the central portion of Yavapai County, between the boundary line of the present forest and the Baca grant, and occupies a part of the divide between Williams Fork and the Verde River. The Santa Maria and Juniper Mountains are prominent features of the territory, and stock-raising, agriculture, and mining are the principal industries.

The tracts will be put under Forest Service administration and protected from fire, theft, and waste; and thus the wood will be preserved and the flow of small streams which supply ranches protected. There are about 70,000,000 board feet of yellow pine on the additions, which in some places reaches 10,000 feet an acre, and in others is reduced to 1500. Parts are covered with a scattered growth of willow, cottonwood, ash, and box elder; and while these areas are valueless for lumber production, it is important that they be protected from fires and destructive denudation.

Forestry in France was mentioned in Vol. x, no. 49, it being there stated that the Gov-

ernment, after the Revolution, began to dispose of its 12,000,000 acres, and by 1874 had disposed of four-fifths, after which it began to buy back. It was also said that even private owners could not cut timber without complying with regulations.

A recent consular report, however, represents France as worse off than the United States in respect of forestry, as the forest is only one-ninth of the area of the country, and the Government owns and administers only one-eighth of this; whereas one-third of the United States is classed as forest land (a considerable portion of this, however, having been cut or burned), and the Forest Service administers nearly a fourth of it. This report also states that the privately owned timber in France is badly administered, often being sold to speculators who waste it for immediate profit. Owing to this, resinous trees are fast disappearing, the ash and the acacia can scarcely be found, and poplars and chestnuts are becoming rare; while the famous oak forests no longer supply the national demand.

Japan has been in advance of the United States in the matter of forestry, for the forests have been managed by the Imperial Government for many years, and the first school of forestry was established in 1885, fifteen years

before one was started in the United States. There are now sixty-two of such institutions in Japan. The national forests cover an area of about 30,000,000 acres, or rather more than one-half the total forested area. Nine model forests are to be established in Korea, and a Korean school of agriculture and forestry has been founded.

STUDENT

## A New South American Niagara

**A** TELEGRAPHIC report from Georgetown, British Guiana, recently stated that the director of the New Essequibo Exploration Company discovered a waterfall rivaling Niagara in height. It was on an affluent of the River Ireng, close to the Brazilian boundary, at about 5° N., and 60° 9' W. The wall of the cliff over which it rushes is slightly convex, showing red highly-polished jasper in places. At the base there is an oval basin, which empties, about a hundred yards from the first fall, over a second fall some 30 feet in height. There is plenty to be discovered yet in South America. These coast countries look very small on the map, and it is surprising to hear that so much even of them is unexplored. What then must be the case with regard to the vast expanses of the inland regions of Brazil and Bolivia? II.

We have many evidences that woman has moved all too far  
away from her real place in life.—Katherine Tingley

#### Memories of Mystic Vadstena

**V**ADSTENA is one of the oldest towns in Sweden, most beautifully situated upon the shore of Lake Vättern; and its winding streets, the convent-church dating from Saint Birgitta's time, the castle and the idyllic small houses embedded in green, bring the mind of the visitor back to long past days and events. When there it is hard to believe oneself to be in a place sharing in the turmoil of this age, yet with memories of the past still lingering over the little town, giving it the atmosphere of a summer night of such color and quiet that one would sit half listening, half slumbering, held by the strange voices of intuition.

There are many curious tales about the place which are told even today by old people. It is said that they have been handed down from the seers of remote antiquity. One of them declares that there will, sometime in the future, grow up seven beech-trees from a common root, and that seven kings will arrive from seven kingdoms and fasten their horses, one at each tree; that under the crowns of the beeches they will conclude an everlasting Peace-Alliance between the seven kingdoms which they represent, and that this will come to pass at the end of the present age. Another legend tells us that a bird will hatch seven young in the convent-church, perhaps alluding to some future consequences of Saint Birgitta's life and work.

It is the old memories which give the town most of its peculiar charm, and no wonder when for centuries royalty and the most prominent persons of Europe journeyed there on pilgrimages as to a holy city. In the convent lived many members of the highest families from abroad, and it was a true center of learning, not only a preserver of records, but a powerful promoter of useful knowledge in all departments.

Another of its memories dates from the days

of Engelbrekt, the great liberator and leader of Sweden in the Fifteenth century. The Lords' Diet had met at Vadstena and seemed disposed to make an alliance with the enemies, when suddenly Engelbrekt appeared at the head of the peasants, and, through his plain and manly challenge to consider well the best interests of the country, made the tables turn, and had the councillors join his rightful cause. The humble house in which this happened is still preserved by the government.

The castle, erected in 1545 by Gustaf Vasa, (see illustration) is so strongly built that it

**AS** the Harmony dwells within the Flute  
Even so does the Spirit unseen in the Body;  
No man can see the Music, yet it is there,  
Even so can no man see the Spirit, yet it is there.  
*From The Book of God.—Enoch*

may stand for many centuries yet. Only a small part is used as a library today. It is said that the king on one of his journeys arrived at Vadstena and one day was lying asleep among the stones on this place. In the dream he saw the castle with all its details. Upon awakening he began at once preparations for the realization of his dream, and the whole architectural plan was carried out on these lines. Note the wide canal-like strip of water almost surrounding the castle, really an inlet from the lake in which large ships may anchor.

The fair little town on the beautiful lake is bringing the spirit of many ancient and important events of Swedish history over into the dawn of the new age that is lighting the way for our country. Saint Birgitta has passed away but the golden environment which she created and the higher patriotism of which she was the inspirer yet live, awaiting the Leader of today. All hail to the golden future of our beautiful North-land! A SWEDISH STUDENT

#### What Will Theosophy do for Women?

**H**OW strongly and subtly we are influenced by an eagerness for gain or benefit, is shown in the very wording of the question. Unconsciously this consideration enters into everything that comes within our experience. The business man figures it in his profit and loss account, and throughout the varied phases of human life we are continually balancing the question as to how much benefit or comfort we shall be able to claim from this or that.

Let it first be understood that Theosophy is not a thing which may be applied as a cloak to keep us warm, or as a potion to cure our mental and spiritual aches. It may with truth be said that Theosophy cannot be defined; but to our limited consciousness it must come with some definition, and the highest definition we are capable of at present lies in the word itself, which, as you may know, means Divine Wisdom. Wisdom is not something that a man may seize, label, and store away for future use; not something upon which he may hang his "no trespass" sign and deny others the right to enjoy it; but rather is it an atmosphere which surrounds our consciousness as the air surrounds the earth: a golden power which man cannot confine to his own private treasury: a power of which he may take only so much as he is able to use *for others*.

And you ask what this Wisdom—Theosophy—will do for women? Why not ask what life or opportunity will do for women? The gain from either depends entirely upon the use to which it is put. What do I receive from an opportunity that I allow to pass unheeded? Of what value is breath to the new-born infant who will not take hold of life and master and use it?

Theosophy will give woman only that which in the light of truth she is capable of receiving. Her capacity for action and understanding depends upon her own experience. This will, I

think, be accepted without dispute. We know that the work of one experienced in a given trade or art is superior to that of one lacking such knowledge or experience. We naturally put more trust in the physician who has a long record of successful practice than in the student who has just received his diploma. Theosophy does not limit experience to a meager three-score-years-and-ten, but asserts that the soul has known many lives, and will know as many more as is necessary for its perfection in this eternal process of becoming. To the soul awakening to a realization of the higher meanings of life and of womanhood this message comes as a flame of hope and inspiration. We are not here as the result of chance. We are that which we *have become*, and the future lies before us to serve us *as we know and will*. When women begin to live by the teachings of Theosophy their own burdens assume a different aspect. Instead of being regarded as having been imposed upon them by some far away God of Vengeance, or by a so-called "stronger sex," the latter are seen to be things which have been allowed by women themselves to develop and accumulate, and for the suffering entailed by which they are responsible.

When women come into the truths of Theosophic teaching the question of "Woman's Rights" will become a question of woman's responsibility. Let women once rise into a realizing sense of their responsibilities and there will be no power strong enough to withhold from them their opportunities and rights.

Life is not limited by the narrow circle of our immediate surroundings, but is boundless as consciousness; and through it runs a thread of common experience, which links the life we know to all that is past and all that is to come. When we truly endeavor to live in harmony with the law of life, which is the law of Universal Brotherhood, we soon begin to realize how closely our hearts are attuned to those of our kind.

No sorrow that we have known but has come to some other weary heart. There is no joy which sheds light upon us that has not entered some other life. Our most secret ideal may be the dream of thousands who bear the marks of toil. How often have the words of a friend expressed our own half-formed conviction!

We are not so different from the many we pass in the crowded street. Our opportunities may differ, our environments may vary; but the same fire burns beneath it all. When we realize this there will not be such a readiness to condemn one who has done something which we are not tempted to do, or which we lack the moral courage to attempt. When women come to realize the one-ness of life there will be more of compassion, and less of criticism.

Surely the way to wisdom and compassion is by the broad road of experience and it is just this experience that so many women seem to stand in fear of. If we are comfortable our sole aim is to remain so. Why should not our hearts be wrung if it is by suffering that we shall come to understand the pain of other hearts? Why are we afraid to venture upon life—afraid to differ from the opinion of

our neighbors and friends, when it is life—experience—and more life that our souls are calling for? Many are eager to help to redeem the world, but aside from a few dogmatic statements of religion, or a cramped idea or two as to what redemption means, what have they to give those who are struggling with forces which they have never touched? If a man be drowning, it is the swimmer or one who knows the process of resuscitation who will be able to save him—not one who can merely give a learned discourse upon the chemical composition of water. In affliction we know that there is more comfort in the mere presence of one who has suffered as we suffer than in beautiful words or tears of pity from one who has never known grief or loneliness.

gress of whole communities. An understanding of Theosophy will open the minds of women to the higher and purer meaning of life, and to a realization of the vast importance and responsibility of bringing a child to an understanding and mastery of his own nature. When motherhood becomes glorified and ennobled of women, light will begin to dawn in other departments of life.

These are but a few of many things that an understanding of Theosophy may help women to accomplish, not for themselves alone, but for all with whom they come in contact. With increasing understanding, new and broader ways are opened, and there is no limit set upon what women may become. Theosophy can only point out the way. Each

VADSTENA CASTLE, SWEDEN

We desire the pearl of truth, but are unwilling to pay so great a price. We should like to be strong, radiant characters, but we shrink from the fire that burns between us and the goal. Suppose we are scorched—what soldier is ashamed of his battle scars? If we believe in life, let us follow the light as the warrior follows the battle flag.

Our Leader declares that Life is Joy. How can life be joy in the midst of sorrow? It does sound a bit paradoxical; but may we not have a misunderstanding of what life is? Surely it is not a calm fruitless waiting for death! Life means action and experience. It is by experience and living that the soul learns. Why then should we flee from that which the soul sent us forth to seek?

When women better understand the message that Theosophy brings, there will be better art, broader education, higher government, freer life and nobler men than our modern civilization possesses or has even dreamed of.

In the broad and conscious training of her children a mother may exert an inestimable influence for good. Through her ignorance or indifference she may be a hindrance, not only to her own children but to the real pro-

one who would reach the goal must travel the road that leads to it.

Theosophy bids women nobly to cut the ties of meaningless conventionalities and superstitions that have bound them to brain-mind limitations; to let the fire burn if it will; to let the heart ache if it must; but to courageously and joyfully follow the Warrior Spirit which dwells within. Let us dare to live the life that the soul is calling for, dare to shoulder the responsibilities that belong to us and push on toward the light *for humanity's sake*. M. R. F.

### Jottings and Doings

A NOVEL form of recuperation known as "kite cure" is being tested by certain overtaxed society women in England. The golf links are used for the purpose of flying the kites, each woman holding one by a slender thread, running over the turf as the breeze carries her kite higher and higher into the air. It is said that devotees of this mild form of exercise may be seen out flying their kites even very early in the morning! Naturally the health improves under such a régime. It is to be hoped that the strength gained will be used in the service of suffering humanity. H.

# OUR YOUNG FOLK

## We Are All Brothers

"BROTHERS!" said Ben, "I wish we weren't." He did not say "We are not," because he knew better. He had not heard that a wise Teacher once said that "It is as bad to run against a fact as a pitchfork," but he felt it, and in this instance Brotherhood was the pitchfork.

"Dave is as disagreeable as a—well, a mule," he said and felt rather proud of himself—at least he thought it was himself until his conscience spoke:

"Perhaps Dave did not want to stay away himself; how would you like the boys to think mean things of you if someone else had stopped you from coming?"

"He needn't have spoiled the game," his shadow man began again, but it was the feeble comment of a losing side, and already his thoughts were kinder: "I wonder why he wouldn't give a reason?"—and he left it at that.

It so happened that several others could not come and so the game was postponed and Saturday afternoon found Ben wondering what he could do with himself, when his mother asked him if he would take a note to one of the aunts with whom Dave lived.

It was an old fashioned cottage in which they lived and they were old fashioned ladies who did not hold with "new fangled notions," and to whom Dave was a thorn in the flesh.

Finding the front gate locked, Ben went round to the back entrance and bursting in with his usual impetuosity, came suddenly upon Dave in the little lean-to, turning a mangle. The boy flushed up to the roots of his hair, but he stood his ground and the rattle and squeak of the turning wheel vibrated in the silent pause that followed the discovery.

"You are not winding it very straight," said Ben, "if I hold the end and feed it, it will go better." Ben was all attention where machinery was concerned.

To understand the situation it will be necessary to say that Dave was a newcomer and the only boy in the school not in prosperous circumstances, while Ben was the richest of all his companions, and, as Dave thought, had a lordly disregard for all personal responsibility in connexion with home duties. But Ben had a heart and an imagination which gave him sympathy; besides his mother knew a little of Theosophy and Ben took the *Rāja Yoga*

## A TRIOLET

H. C. Bunner

A PITCHER of mignonette,  
In a tenement's highest casement:  
Queer sort of a flower pot---yet  
That pitcher of mignonette  
Is a garden in heaven set,  
To the little sick child in the basement---  
The pitcher of mignonette  
In the tenement's highest casement.

*Messenger*, and it made him think for himself.

"Where are the old ladies?" he asked. "Out," replied Dave briefly. "I have brought a note from Mother and have to wait for an answer," continued Ben, "so if I feed and you mangle, it will be done in half the time, and then you can show me your pigeons. You have some, haven't you?"

That afternoon laid the foundation of a friendship that has never waned, while the bond of sympathy is rounding out the characters of both and making the promise of a noble manhood a certainty. ETHNE

WHEN the Marquis of Lorne was Governor of Canada, he stood shivering, wrapped in furs, on one occasion on the shores of one of the great lakes. It was the depth of winter, and a Canadian winter is winter indeed. An Indian chief was also there, taking his splendid

strides over the icy ground, wrapped in a single blanket. The Governor was so struck with the discrepancy of clothing between himself and the Indian, and with the latter's apparent comfort, for the chief was quite indifferent to intense cold, that he asked the Indian how he managed to keep warm. "You do not cover your face," was the reply. "No," said the Marquis, "but I am used to that." "Good," said the Indian, "me all face."—*Selected*

# THE CHILDREN'S HOUR

## The Ten Fairy Servants

**A**MONG the Swedish fairy tales is the following story:

Once there lived a family of peasants who had an only daughter named Elsa. Wishing to give her the best opportunities they could afford, her parents sent Elsa to the city that she might learn sewing and the city ways of doing things. When she returned home, she was filled with false pride and affected to scorn housework or any useful labor; in fact, she had learned little excepting how to adorn herself.

It was not long before Elsa was married to a young, industrious farmer, who naturally expected her to be his helper as well as companion.

All went well until the novelty wore off, and then, one morning, at a busy time of the year, Elsa was thinking what she could do to amuse herself, when two servants appeared and said their master wanted them to go to the woods and had sent them to her to get their luncheons ready. Before she had time to answer, the grocery man came to get his orders. Then the maid-servant came to find out what she should cook for dinner. Then her husband sent word that he would like her to see that the calves and the chickens were fed at noon as he had to go to the blacksmith's and might not be home in time.

This was too much. Elsa ran to her room and threw herself on her bed, crying. "Oh dear!" she moaned, "who would have thought I should ever become such a slave. Oh! what can I do? Who can help me?" and she felt very sorry for herself.

Suddenly she heard someone say, "I can help you." Looking up, she saw through her tears a queer, little, old man.

"Who are you?" she asked, "and how can you help me?"

"I am Old Man Hoberg," he answered. "I have known your family from the tenth and eleventh generation. It is I who have given them all the gold and silver they have, but little good has it done them! so I am going to give you a better treasure."

"What is it," she asked in amazement.

"Here," said the old man, shaking his cloak; and out hopped ten tiny creatures which bustled about and began setting the room in order.

"Give me your hands," said the old man, and then called: "Here, Hop-o'-my-thumb; Will-o'-the-wisp, and your companions: hie to your places!"

Immediately the ten little creatures hastened to the old man and disappeared in the ends of Elsa's fingers. Before Elsa had recovered from her astonishment, the old man had disappeared also.

In a few minutes Elsa's fingers began to tingle, and then she thought of how much there was to do, and she hurried out, and oh! what a pleasure it suddenly seemed to do the work she had scorned before.

A SUNNY DAY FOR GATHERING GUAVAS IN LOMALAND

## WAVE YOUR HAND TO CARE

Frank L. Stanton

**G**ET out into the morning  
And breathe the blessed air;  
Light up your soul with sunshine  
And wave your hand to care!

Go where the streams are singing---  
Stand where the skies are fair;  
God's bells of joy are ringing---  
So wave your hand to care!

From that time no one was more diligent than Elsa; and instead of her duties being irksome, she wholly forgot herself in the performance of them, and in the joy of helping.

## A Dog Hero

**H**IGH up in the Alps at the St. Bernard Hospice, the monks train dogs to rescue mountain travelers who may be overtaken by storms and lost in the snow. Barry is a dog who has won many laurels for his bravery in rescuing such travelers. But for Barry seventy people would have lost their lives. He seems to be a dog with unusual intelligence, a noble nature, always alert for danger to his human friends. At one time he was gone three days and when at last discovered was found crouching over a half-frozen man, doing his best to keep life in him by covering him with his own warm fur. The man's life was saved through the dog's intelligent care. E. N.

PEPITO ARRIOLA is a little Spanish pianist, only nine years old. When he played in the Albert Hall in London the immense audience rose in amazement at his skill, and cheered. A special piano having narrower keys has been built for him. When not playing, Pepito is like other boys of his age.

LIONEL OVENDEN is the name of an English boy twelve years old who is said to play the piano and the violin to perfection. For four years he has been studying in London. When he has once performed a piece of music he never forgets it. Lionel can pay attention.

## A Blind Musician

**T**HIS is a true story about a woman musician who had such rare perseverance that she did great things under unusual difficulties. When you hear all that she accomplished you surely will never allow yourselves to feel discouraged when your music seems hard; because then you can think of the trials this young girl must have had, for when she began to study she was blind.

Marie Therese von Paradis — do you not think that is a pretty name for a musician? — was born in Vienna in 1759. When three years old she became blind, but in spite of this showed such remarkable talent for music that her parents allowed her to take lessons from the best teachers. The Empress Maria Therese, who was her godmother, became much interested in this gifted child and gave her as much money as she needed for her education.

The work of the little blind musician must have seemed very slow and discouraging at first as all the music she learned had to be memorized; but she was such a brave girl and worked so hard in spite of her affliction, that in a few years she was a splendid pianist and gave a concert. Every one was delighted with her beautiful and sympathetic playing and soon she was famous all over Europe. Queen Marie Antoinette invited her to Paris to give concerts, and later she went to London where she played for the King, Queen, and Prince of Wales. She then made a concert tour throughout Europe, being welcomed at many courts and everywhere meeting with phenomenal success. Mozart was so pleased with her performances that he wrote one of his great concertos and dedicated it to her.

Marie Therese was not only accomplished in music, but in many other studies as well. Later on she also did much teaching and composing and here had more difficulties to overcome. Each piece she composed she was obliged to have written by some one else while she dictated note by note. For her teaching she had to use a special system of notation which one of her friends kindly invented for her. Do you not think, dear children, she must have been a very patient and careful teacher? for she had to cultivate those qualities in order to learn herself. She composed many beautiful pieces which have been produced in Europe and which are much admired by musicians.

The life of Marie Therese von Paradis shows how much perseverance and love for one's work will accomplish, and that even the greatest obstacles can be overcome if one really wishes to do good in the world. What encouragement it must give to all to read of a little warrior such as she! To conquer difficulties — ah! that is to invite the soul of music!

A RĀJA YOGA MUSIC TEACHER

# The Theosophical Forum in Isis Theater

S a n D i e g o C a l i f o r n i a

## LAST SUNDAY AT ISIS THEATER

### Pupils of the Râja Yoga Entertain Delighted Audience

THE evidences of the superiority of the training of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY at Point Loma were surely made plain to the large audience who gathered at the Isis Theater on Sunday night to hear and enjoy the high class musical treat that was placed before them by the Râja Yoga pupils. . . .

Katherine Tingley was present but the educational entertainment of the people was in the hands of her "little missionaries," and these never fail to convince the people, even those who are "doubting Thomases," so far as Theosophical principles are concerned, that there is something new to the world in this Râja Yoga system of handling the human intellect when it is in its youth.

The rendering of last Sunday's musical program was finer even than the intellectual treats that have been given the public on previous occasions. The Râja Yoga Orchestra, in two overtures, *Die Musikanten* (Flotow) and the Inauguration March from *Boabdil* (Moskowsky) rendered music that was inspiring and beautiful. About twenty girls, mostly well under fourteen years of age, gave nicely two vocal choruses, *Snow*, and *Fly, Singing Bird, Fly*, (Elgar).

A string quartet rendered *Finale* from the quartet in E flat (Schubert) and the audience listened as if entranced. A violin solo, *Mazurka*, by Rex Dunn, a Râja Yoga student, was also a treat.

Special features of the evening were two piano renderings, — a solo, *Berceuse* (Chopin), by a very small girl, and *Minuet* from E flat Symphony (Mozart) by a trio of little maids, who seemed to be under seven years of age.

The work of these little students specially appeals to the intelligence of open-minded audiences of the class that fills the Isis, and free and honest appreciation is always shown.

A boy student read an exceptionally good paper written by Mr. Kenneth Morris entitled "Some Thoughts on the Crusade of 1907." — *San Diego News*

The above paper is here given in part, and will be concluded in next issue.

### Some Thoughts on the Crusade of 1907

"At any crucial period in history it must be difficult to realize the particular value of each of the passing days and events. Afterwards the historian and the philosopher are able to piece together the whole record and show how history was made. They can say: This action nullified that conspiracy: this step taken led to that result: so and so went to such a place and said this or did that, which led to such and such action being taken, which bore fruit in this, which ultimately resulted in that — and hence the rise of this or that nation to greatness, or the breaking of the chains of this race of slaves. But when the events were going on, or even for decades after, no one found traces of any plan, pattern, or intent. Actions, movements, personalities stood out, but they were separate and each on its own

ground; only the passing of time would give them co-ordination.

"So that we rarely suspect the importance of the things that are doing now. We give due meed to Marathon, Bethlehem, Domrémy; and hold that they can have no kinship with anything in our own time. The days of miracles are passed, we say; but that is only because we are not capable of recognizing in the present what the future is sure to regard as portentous. For the world stands in need of a hand on the helm today as much as at any time in the past. Immense forces are at work now, titanic upheavals of thought and feeling. This movement and that go on gaining impetus; nations which have slept for ages stir and begin to assert themselves; psychological waves, national and international, that have been stored and accumulating through centuries, are breaking their bounds, and without the direction of a master-hand, who shall say what territories might be submerged by their overflow? It is with such thoughts as these that one comes to the consideration of Katherine Tingley's Crusade of 1907.

"Here is the great modern whirl and confusion of ideas and conflicting aims; and here in the midst of it, this steadfast light of Theosophic activity. Its end is the brotherhood of man, and its foundations are on the basic principles of human nature — not any materialistic or brain-mind formula, but the essence of life itself. Human brotherhood, because of the potential divinity of each individual; international unity, because of the separate divine mission of every nation. Men not machines, not brutes nor naturally degraded or savage, but having fallen from great heights, and able to reach those, and greater heights again. This is a part of the message Katherine Tingley carried through Europe — one grand clear note sounded out amid the darkness and clamor of our time.

"England, Sweden, Finland, Russia, France, Switzerland, Holland, Germany, Wales — all these lands were touched by Katherine Tingley. Teutons, Finns, Slavs, Latins and Celts all received some part of her message. History will declare that what was done for each was the immediate thing which that race needed. Theosophy is as wide as the sea, and meets the needs of all. As each nation has played a somewhat different part in the past, giving its quota of good and evil to make the whole what it is now, so the jewels in the crown of the future are to be the higher selves of every race. The sapphire will be sapphire, the beryl, beryl; the Swede will be Swede and the Frenchman French; but the one light and spirit and glory will shine through all. So Theosophy does not proselytize, nor impose dogmas, or raise shibboleths, but enlarges the mental vision, directs everyone to the place where the Light can be seen — to his own best self. It shows the higher patriotism — belief in the higher self of the nation and in its power to serve humanity — to be a necessary part of internationalism.

"Symbolic of this aspect of Theosophy were the touches given by the Teacher to the various nations she contacted during her Crusade. For instance, in England and Sweden she founded Râja Yoga Schools, to be in times to come the spiritual centers of those two lands. Consider for a moment the places chosen for this purpose. The New Forest is surely the most English spot in England, still "Merrie England" there. In the Forest are the yew-woods of which the bows were made that won Cressy, and the oak-woods whose forebears furnished Drake and Howard with the ships that drove

back the Armada. It is all still much as it was in the spacious days of great Elizabeth, still much as it was in the time of England's Henrys and Edwards. Nay, we may look back farther, and question whether, after all, it was much changed by Norman William himself. There never were Saxon villages nor tilled lands where the bog-myrtle and the bog-cotton are growing now, and most of the forest hollows are still bogland. We may doubt if the Norman did more than lay an embargo on future private ownership of what was even then forest. He made it *tabu*, to be virgin land forever. The stories of villages laid waste and homes and churches destroyed were only monkish tales, and the monks had a grudge against William. So that the Beeches of Berry are probably the children of the children of beeches that held lordship of the same hills and hollows in Druid days; and the ponies that drew the war-chariot of Cassivelaunus may have been foals among the fern of the same forest, and ancestors of the forest ponies of today. Briton and Roman and Saxon and Norman, probably the same kind of scenery was there for them all, and the same music among the tree-tops. The old race and the old language were swept away from it, or what tales of heroes and fairies and prophets would be lingering still among the trees! Its beauty, except where the fenced plantations have been set, is altogether unspoiled and exquisite. This, of all England, is the worthy place for Râja Yoga, and that Râja Yoga has come to it means, that here will man grow up as perfect in manhood as nature is in her own state. All that was good in English life will blossom here without the possibility of being spoiled. The children will grow up with the knowledge of beauty and the scorn of meanness in them, and their influence will become so strong that England's merry and golden days will return, and her fearlessness and pertinacity and freedom will be spiritualized, and there will be no dark stains on her national life.

"This is to look forward — but one is justified in looking forward, when one considers the results of Râja Yoga at Point Loma. One must be optimist when one sees what has already been done. The world will come to know in time — is coming to know day by day — and as knowledge goes on taking the place of ignorance, the sum of human hope grows.

"And as the New Forest is unique in England, so is Visingsö in Sweden. The one is an island of primeval land, of wonderment, of fairyland, set in the midst of fat and prosaic south of England scenery, as much apart from its surroundings as though oceans isolated it. The other is an island in Lake Vättern, which was, before old Sweden rose above the waves. Even its geological formation is all its own, most ancient, and like nothing else. As in the New Forest, the surrounding land is government property, and Visingsö is even of greater historical interest than the English site.

"Two schools already established as result of this Crusade; and others to be founded in time in Holland, Germany, Wales, Geneva — the seeds of them sown, so to say, and to bear fruit as the right moment for each country arrives."

(CONCLUDED IN NEXT ISSUE)

PUBLIC Theosophical Meetings are conducted every Sunday night in San Diego at 8:15 at the Isis Theater, by students of Lomaland assisted by children of the Râja Yoga School. Theosophical subjects pertaining to all departments of thought and all conditions of life are presented. Excellent music is rendered by students of the Isis Conservatory of Music of Lomaland, and Theosophical literature may be purchased.

# Art Music Literature and the Drama

## Another Evidence of the Wide-Spread Influence of Theosophical Ideals

A CONTEMPORARY gives some space to what it terms "an interesting experiment" which is to be tried the coming season with the New York Symphony Orchestra, and observes:

The idea of a world-famous organization departing from the usual custom of playing in the full view of the audience, to playing behind a screen, is not unique, but it is almost, if not absolutely, without precedent in this country. . . . Whatever the result, it is a departure from usual customs which is being watched with interest on all sides.

The statement but serves to recall a number of other instances in which this or that advanced idea or departure is announced as being "absolutely new," "unprecedented," "a great advance step" and the like, by guileless writers who, not knowing that the "new ideas" in question are identical with those put forward and practically applied by Katherine Tingley years ago, quite willingly write down what they are told. Upwards of ten years ago, when Katherine Tingley began her work in music and classic drama, she inaugurated the then absolutely novel custom of having the musicians play behind a screen. Vine-hung, bowered and beautiful, it always was, for as those know who have ever attended any of her great meetings, concerts or dramatic performances the world over, no pains are spared to give the whole stage that touch of nature and beauty that the old Greeks so loved. Yet hidden the performers always were. That was insisted upon, and it is still the custom at all Universal Brotherhood and Theosophical Society meetings the world over, except in certain cases where children or young students appear solo or ensemble, and when Katherine Tingley feels that they need and should be permitted to have the experience of the usual platform appearance.

Probably few of the many innovations made by Katherine Tingley have aroused comment more general and more wholly favorable among the cultured classes than the one referred to. Undisturbed—one comes very near writing "undismayed"—by the personality of the performers, with naught appealing to eye and sense save that beauty which Nature holds forever secure from the possible and wretched rivalry of counterfeit, with naught save the impersonal and the beautiful between the soul of the hearer and the soul of the music itself, the listener is lifted into a new world of feeling and aspiration. One writes "*new world*" advisedly. Those who have heard the Point Loma orchestra, or the younger organization now so modestly wearing its own laurels, our Rāja Yoga Orchestra, at the usual Sunday night meetings in the city—just a wealth of measured sweetness coming from somewhere behind banks of palm and blossom—have invariably said, "What a revelation! A method superb in its results, daring in its conception, too, in these

days of personal bidding for applause!" Tourists have come here from all over the world, musicians of highest standing not alone from Boston but New York as well, cultured and traveled Europeans, all have echoed the cry, "It is a revelation! Yet who would dare to try it in the world? Would our best musicians submit? Would they not feel that they were being obscured? And would the curiosity-seeking part of the public be satisfied?" and so on.

If anything were needed to prove the existence, so to speak, of Marconi messages on the mind and soul planes, constantly recurring evidences such as the step about to be taken

Lomaland Photo. and Engraving Dept.

VIKTOR RYDBERG, JÖNKÖPING, SWEDEN

ONE who never turned his back, but marched breast forward,  
Never doubted clouds would break, [triumph,  
Never dreamed, though right were worsted, wrong would  
Held, we fail to rise, are baffled to flight better,  
Sleep to wake.  
No, at noonday in the bustle of man's worktime,  
Greet the unseen with a cheer!  
Bid him forward, breast and back, as either should be,  
Strive and thrive! cry "Speed,—fight on, fare ever,  
There as here."—*Browning*

by the Director of the New York Symphony Orchestra would be sufficient. As Katherine Tingley has pointed out to her students again and again, these high and impersonal Theosophical ideals are in the very air we breathe and those whose hearts and minds are attuned, even to a degree, to humanity's deeper needs *will sense them*. But is it not time for those who by their writings reach many thousands, to post themselves a bit as to the aims and activities of the UNIVERSAL BRO-

THOOD AND THEOSOPHICAL SOCIETY, not only in Point Loma but all over the world? Within the month a magazine containing an account of a certain Agricultural and Industrial School for boys in Italy found its way to the editor's desk. The author of the article—who is, by the way, an American—closed by commending this plan to the good people of California, that state so like Italy in its climate and skies, and suggesting that a similar school be started here (!)—all in serenest ignorance of the fact that in her Forestry Department at Point Loma Katherine Tingley has long been carrying out the very plan suggested, with the difference of its being comprehensive, thorough, and scientific!

Some benevolent person should start a "Traveling Fund for Writers," or perhaps a new kind of "Correspondence Bureau," so that those who have to do with the education of the public will not continue to give so many evidences of their limited knowledge. The American reporter is often termed ubiquitous, yet there would seem to be many places into which his mind has not wandered, to say the least.

But are not all these things signs of the times? Are they not prophecies of a newer, richer, more golden, *because less personal*, age? Theosophy is rising, a giant-rayed sun, to the very zenith of the great mental sky that overarches the world of the physical, and the result is that a new day is dawning and those who are climbing towards the heights, by whatsoever path, are among the first to see it. And to all such we bid "God speed!" STUDENT

## A New Note in Music Criticism

PHILIP HALE, the Boston music critic whose writings are quoted by the music journals of two continents, gives the following sympathetic and scholarly critique of Maud Powell's recent rendering of the new Sibelius Concerto. Hardly any work has been less understood, both by its admirers and by those who declared it iconoclastic and unmusical, than this heroic new work of the Finnish composer, Sibelius, which was played for the first time in America by Maud Powell.

As revealing some of the higher qualities of criticism the following paragraphs are of special interest to Theosophists, and to all, for that matter, who are tired of the usual music critic strain. Behind some of the lines is almost the ring of the *Kalevala*. To quote:

Thirty years ago Thomas Hardy declared that haggard Egdon Heath appealed to "a subtler and scarcer instinct, to a more recently learned emotion than that which responds to the sort of beauty called charming." He questioned whether the exclusive reign of orthodox beauty was not approaching its last quarter. "The new Vale of Tempe may be a gaunt waste in Thule: human souls may find themselves in closer and closer harmony with external things wearing a somberness distasteful to our race when it was young."

(CONCLUDED ON PAGE 17)

# THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

## Man His Own Savior

Heimweh

HAVE you not heard of the land where  
Beauty and Love are eternal,  
Where from the fullness of life  
nothing is ever withdrawn,  
Save that a clear pure stream, with  
imperceptible current,  
Glides through the Lake of Peace  
into the Ocean of Joy?  
Here, on this bloodstained Earth,  
that land has never existed:  
Here is no lake of peace, here is no ocean of joy;  
And if the rivers flow, they move to their own  
destruction,  
Lured into stormy seas foul with the wrecks of the  
Past.  
Not in a group like ours, one sun with his handful  
of planets,  
Riding obscurely alone, lost in a corner of Space,  
Nor in such nobler worlds as the gorgeous suns of  
Orion,  
Nor in those uttermost orbs ne'er to be noted or  
known;  
Not in all these is the land where Beauty and Love  
are eternal,  
Where in a dream of delight spirits united abide.  
For there is never an orb but is molded of change-  
able matter,  
Shaped by the lapse of time, bound to its own little  
curve,  
Fused into form after form, one mode succeeding  
another,  
But, whatsoever it be, dead as the heart of a stone.  
These cannot yield us our quest, the limitless life  
that we long for,  
These cannot offer a place meet for the souls of the  
just:  
Nay, we may search with our eyes through the  
splendid expanse of the heavens,  
Roving from star to star, wistfully seeking a home;  
But there is none to be found, nor can be, in such  
a Creation,  
Made but of tangible stuff, drifting like us to its  
doom.  
Look to the light of God, the core of ultimate Being,  
Safe from the thralldom of sense, not to be touched  
with decay:  
There, only there, is the land where Beauty and  
Love are eternal;  
There is our haven of rest; there is the home of  
the soul.— (From the *London Spectator*)

The above poem gives a curious idea of the universe and its relation to Deity. One cannot help speculating as to the possible meaning of such a vast creation, with its systems upon systems of worlds so beautifully described, if no home is ever to be found in "such a creation." Indeed the words just quoted seem to imply a rebuke to God; his

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

creation is described as a cynical materialist might describe it, and yet we are told to look to his light for our home. Man himself is "drifting to his doom," and yet is a prospective partaker in the eternal bliss.

It is impossible to blame the poet of so dreary a universe for longing after a beautiful heaven; but one cannot quite grasp the metaphysics which places the "core of ultimate being" where cores are never found—outside the fruit. It is an extraordinary dualism which places the core of ultimate being apart from the whole manifested universe, which is regarded as a sort of gigantic and beautiful mistake.

To other poets this universe has seemed the vesture of the Eternal Power; for them the rivers have not flowed to their own destruction, lured by a malicious sea, nor the distant suns and their planets pursued a lonely futile path in space. They have found in the world something more than "tangible stuff."

A Theosophist would humbly suggest that we can look to the "light of God" in this world and seek in the core of our own being for a "haven of rest" and a "lake of peace safe from the thralldom of sense."

It is a voice of almost despair, speaking of great discouragement in life. And does not literature, whether in history or science, encourage such dark and angry views of the universe? But surely some poets have sung a more heroic strain than this supine and discouraged attitude before life. Such an attitude is not worthy of Man, "created in God's own image"; and many men, feeling their divinity, have chosen to regard themselves as vicegerents on earth of the Eternal Power, with a mission to bestir themselves and do what they can to make it a "home of Love and Beauty." Man has the eternal Will and Intelligence, infinite in its potentiality, however imperfect its present actuality. What is he to do with this prerogative? To lay it down like a fainthearted warrior? Well, be it so; but then what about the "Land where Beauty

and Love are eternal"? Will eternal Beauty and Love fall into the lap of the fainthearted warrior who declines the combat? Other poets have sung that Beauty and Love are the reward of the brave, and even orthodox Western religion has a saying, "No Cross, no Crown."

The human soul has oftentimes to be pressed very hard ere it

can be roused to dare and to declare that, come what may, it will make for itself a haven of peace which naught shall avail to destroy. Yet many poets have sung of the invincible might of the Will, the infinite resources of the Soul, and the empire which man has in himself. The only way to invoke Eternal Power is to call it forth into action in our own being, not to lie down and expect it to manifest itself miraculously from without. Shame that the repining soul should ever allow itself to be beguiled by voices that seek to charm away its self-dependence by fixing its longings on a visionary reward—not now but then, not here but there! The time for action is always now; the place HERE. The eternal Home of Love and Beauty is no place for people who cannot fulfil their purposes in this world; unless indeed we are to imagine a home of comforts and potted flowers for spiritual invalids.

It is the opinion of Theosophists that the doctrine of looking upon this world as a place of sorrow, destined merely as the prelude to a life of eternal bliss, is both the effect and the cause of human weakness and misery; for it deprives Man of all sense of worthiness and all incentive to noble effort. Its worst results have been seen in the monastic seclusion which withdraws men altogether from the duties of life, and it is like the fanatical austerity which leads to unnatural vice by disparaging healthy and natural enjoyment. Nowadays we have, like Milton's Satan, created, as it were, a world of our own out of this dreary mass of revolving dirt upon which God has cast us—the world as known to science; and the above poem represents this scientific brain-created world in sharp contrast with the world of harmony from which the poet seems to have been cast out.

Theosophists believe that the eternal home of Beauty and Love is within the human Soul, where it was originally placed by the Divine Powers that breathed their spirit into human clay. They believe that it is to be found there;

Students'

Path

that it must be won by effort, fought for; and that it is worth winning and fighting for. And besides Beauty and Love, they recognize the existence and value of certain sterner virtues, without which the panoply of the Soul would be incomplete. They realize that everything that has ever been achieved was achieved by people who had the courage to act here and now, not by dreamers who wait for things to come to them; and that the planets may well go on whirling in their orbs indefinitely, and nothing come of it, so far as Man is concerned, unless Man, the highest manifestation of Divinity on earth, takes up his task and determines to comport himself like a Man. They recognize fully the weakness of humanity as it is at present, but they recognize also the never-dying Divine Spark in humanity; and they believe that from that Spark can grow a Power and Light that will transform the world. The universe is infinite in its potentiality; its outward seeming is simply what we make it. That we can see so little of it is due to the limitations we impose upon our minds. There is infinitely more in life, and more in the universe, than we have yet discovered; for it is the container of all; and it needs but the awakening of the Soul-life in humanity for these hidden beauties to be brought to light. Therefore Theosophy exhorts man to cherish his highest ideals of Beauty and Love, of Strength and Purity, and to use his God-given powers in the unceasing endeavor to realize those ideals in the circumstances in which he finds himself. In fact it teaches Duty to the Truth, loyalty to one's best, the study and practice of human perfection; and, instead of longing and repining, the cultivation of Divine Harmony and Joy within the sanctuary of the Heart—the Temple of Deity. STUDENT

#### "The Balance Principle in Man"

IN Theosophical teachings man is spoken of as a "seven-fold being," our composite natures from spirit to body consisting of seven principles or divisions. Of these the Higher are three: Spirit, Soul, and Mind; and the lower four: the desires, physical life, invisible model body, and the outer shell or physical body that we see. These four lower principles are often taken to be the man, and the chief activities of earth-life confined to the satisfaction of the desires in connexion with objective life and the gratification of the senses. Indeed, the desire principle in its lower aspect is the ruling factor with the vast majority at this stage of evolution. "Behind will stands desire," is one of the wise sayings of the ancients.

Listen now to the words of that true Teacher of Theosophy, William Q. Judge:

This fourth principle is the balance principle of the whole seven. It stands in the middle, and from

it the ways go up and down. . . . The desires and passions therefore have two aspects, the one being low and the other high. . . . The low is that shown by the constant placing of the consciousness entirely below in the body and the astral (model) body; the higher comes from the influence of and aspiration to the trinity above.

And with man himself, the immortal Ray, the Thinker and Mind in man, who incarnates in the vehicle provided by the lower four, lies the power to purify and raise the desires and carry humanity onward and upward to the status of Gods.

William Q. Judge likens the balance principle to Libra in the path of the Sun, the latter representing the real man, who, reaching the zodiacal sign Libra, trembles in the balance; should he recede worlds would be destroyed, but going onward the upward sweep of progress is maintained. So it is with man; but our choice, bewildered among the desires grown strong with exercise, is often feeble and faltering, and the many knocks that fall to the lot of the uncertain shuffler are often ours before we take a strong and certain stand for the unselfish against the selfish life.

How hopeful then is Reincarnation, how cheering to know that our failures to live up to our higher possibilities are not final if we aspire to do better; death is but a rest from effort for a season to gain strength for the completion of our task in the next earth-life, or those succeeding it. It is the transmutation of desire that opens the door to freedom and makes man one of the Elder Brothers, the Saviors and Spiritual Teachers of mankind. It is the great dragon that must be slain before the prince is freed from enchantment and comes into his kingdom as joint heir with the Christos principle which overshadoweth all men. E. I. W.

#### A Chattering World

VERILY is ours a civilization of babble. We talk and talk forever upon everything, and then complain that we have no nerve energy. Building, whether of continents or brain cells, is done in silence, and there is no silence anywhere in town or country. We cannot even have silence with ourselves; the chatter of mind is even then more insistent than that of tongue. A newspaper is a picture of our minds, a welter of shrieking nothings. We are the very incompetents of the ages.

It is an age of doubt. Why should it not be? We cannot hold our minds still long enough to know anything, cannot hold any thought steady enough to sink it down on to truth. When shall we learn that truth does not arise from the mind, does not originate there, but enters like rays of light in the momentary pauses of chatter? Only in mental silence can the soul speak.

Our bodies are prematurely worn out by the ceaseless rattle of mind. Brain cells give way; we have no memories. We are universally victims of neurasthenia, insomnia, headache, and in the front of us is always the abyss of drug-taking.

All our ways and behavior show our servitude to our incompetent but dominant minds. We walk hurriedly, uncertainly. We surround ourselves with an ever increasing perplexity and profuseness of possessions, the suggestions of ceaselessly acting minds over which we

have utterly lost control. Our food must have a hundred flavors, and we need ten dishes where one would suffice. Dress becomes more complex, and its fashion changes weekly. We read in our magazines and newspapers of all things on earth, understand nothing thoroughly and remember nothing. We patronize and invent a thousand time-saving devices, and do nothing with the time saved. We rush upon schemes to make money, and do not know what to do with it when it is made.

In a word, it is an insane civilization. It is a civilization that has lost control of mind; and mind uncontrolled, mind dominating, is mind insane. Judgment and will are not of the mind; they have a higher source.

We must teach our children silence—if we are too far gone to learn it ourselves. They at least can be led to understand that real truth comes into mind listening to its own central voice, not into mind chattering with itself, making plans, throwing up the débris of memories, or racing forward along the blind paths of anticipation. They can learn from the silence the forgotten art of holding the mind upon what they will, holding it until it sees, until it unfolds all the implications and connexions of that on which it is placed; of making it an instrument of understanding, a lens, a mirror, instead of a screen with a thousand changeable and delusive iridescences of its own. Thus they can *know* where we fitfully *hope*, be assured where we doubt, and drink spiritual life in the waters of the silence that to us is nothing. L. R.

#### Hoarded Benevolence

IGNORANCE of one of the laws of human nature often keeps back fairly well-meaning and unselfish people from some of their best work. A man who invests money does not expect to get an instalment of interest the very moment he has posted his check. Yet these people will not invest a right action or a right mental effort because the return of result delays. They will not return good for evil, not because they themselves feel very evilly, not because they cannot forgive, not because they do not know the inner peace and strength that forgiveness brings; but because the evil-doer appears to be unchanged in the hardness of his evil. He goes on as before. The policy of non-resistance appears to them to be futile and forceless.

The law they might have used, but do not, is partly known to science. To forgive a man is a piece of work done on his nature, a bit of capital invested *for him*. So is any act of returning good for evil. So is any piece of self-sacrifice in anyone's best interest. So is any kindly thought of a man now or usually in a bad temper or habitually hard and unjust. So is the mere silence of mind and lip in the face of an injury or insult.

The results may appear tomorrow, or in a year, or in another life. But they are absolutely sure, for work has been done, capital has been put to interest in an unfailingly honest quarter. Practice increases, of course, this divine power of help; and its strength is not only in proportion to the depth of the inner life, but its every use develops that life.

Those who will not throw good work into the world, or any fraction of the world, whenever opportunity offers, are starving themselves and tying their own hands. STUDENT

## REBIRTH

DEATH, so called, is but old matter dressed  
In some new form. And in a varied vest  
From tenement to tenement, though tossed,  
The soul is still the same, the figure only lost:  
And, as the softened wax new seals receives,  
This face assumes, and that impression leaves,  
Now called by one, now by another name,  
The form is only changed, the wax is still the same.

— Ovid, Dryden's translation

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** Please explain what is meant by the term "Sûtrâtma," which I have noticed several times as describing man's individuality.

**Answer** The best answer to this will be found in the *Key to Theosophy*. Sûtrâtma means literally thread-soul, and the imagery means that as beads are strung upon a thread so are the many lives of man strung upon Sûtrâtma, the golden thread of immortal life. It is the real individual, and the following is said regarding it by Madame Blavatsky in *The Key to Theosophy*:

In the Hindû sacred books it is said that that which undergoes periodical incarnation is the *sûtrâtma*, which means literally the "Thread Soul." It is a synonym of the reincarnating Ego—Manas conjoined with *Buddhi*—which absorbs the mânasic recollections of all our preceding lives. It is so called because, like the pearls on a thread, so is the long series of human lives strung together on that one thread. In one of the Upanishads these recurrent births are likened to the life of a mortal which oscillates periodically between sleep and waking.

It is furthermore taught in Theosophy that at death those who have lived good and noble lives see this golden thread and the pearls which are strung upon it.

Very good and holy men see, we are taught, not only the life they are leaving, but even several preceding lives in which were produced the causes that made them what they were in the life just closing. They recognize the law of Karma in all its majesty and justice.

As further explanation we will add one more extract from *The Key to Theosophy*:

The spiritual Ego of man moves in eternity like a pendulum between the hours of birth and death. But if these hours, marking the periods of life terrestrial and life spiritual, are limited in their duration, and even if the very number of such stages in Eternity between sleep and awakening, illusion and reality, has its beginning and its end, on the other hand the spiritual pilgrim is eternal. And so the only reality in our conception is the hours of man's *post-mortem* life, when, disembodied—during the period of that pilgrimage which we call "the cycle of rebirths"—he stands face to face with truth, and not the mirages of his transitory earthly existences. Such intervals, however, their limitation notwithstanding, do not prevent the Ego, while ever perfecting itself, from following undeviatingly, though gradually and slowly, the path to its last transformation, when, having reached its goal, it becomes a divine being. These intervals and stages help toward this final result instead of hindering it; and without such limited intervals the divine Ego could never reach its ultimate goal. I have given you once already a familiar illustration by comparing the *Ego*, or the *individuality*, to an actor, and its numerous and various incarnations to the parts it plays. Will you call these parts or their costumes the individuality of the actor himself?

Like that actor, the Ego is forced, during the cycle of necessity, which continues up to the very threshold of *paranirvâna*, to play many parts which may be unpleasant to it. But as the bee collects its honey from every flower, leaving the rest as food for the earthly worms, so does our spiritual individuality, whether we call it *Sûtrâtma* or Ego. Collecting from every terrestrial personality into which Karma forces it to incarnate, the nectar alone of the spiritual qualities and self-consciousness, it unites all these into one whole, and emerges from its chrysalis as the glorified Dhyân Chohan. So much the worse for those terrestrial personalities from which it could collect nothing. Such personalities assuredly cannot consciously outlive their terrestrial existence.

STUDENT

**Question** It is so often said that Theosophy is for all men, and yet there are comparatively but few who declare their acceptance of its teachings. What would you say, then, to a man who asked "What is there in Theosophy for me?" and gave that as his excuse for taking no further interest in it?

**Answer** It is well to remember the position that is taken by the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, that it does not proselytize or seek to make converts of any against their will, but presents the message of the teachings of Theosophy to all, and by the lives of its members and by their work seeks to set an example that shall be a living demonstration of its truth.

The question "What is there in it for me," is indicative of the pervading spirit in the world today, selfishness, which, as Katherine Tingley has said, is the insanity of the age. Men look for profit, for personal gain in all that they do, and the money standard or its equivalent is, in the majority of cases, that by which they judge even the most sacred things of life.

This is not the only age in which this attitude has prevailed, but it would seem to be more accentuated now than at any other time, and where one finds a few earnest seekers after truth for the sake of the help that they may render humanity, we find a hundred others who seek for knowledge only that they may gain a power over their fellow men and use it for their selfish ends, who take the teachings of Theosophy and peddle them out as their own, demanding money in payment, holding classes for "spiritual" instruction, for which they charge a fee or exact contributions that they may fill their own pockets. Alas for poor humanity that it should be so imposed upon! Alas that it has so little discrimination and knows not that the things of the spirit can never be bought or sold.

The beautiful appeal of the old Hebrew prophet comes to mind:

Ho, every one that thirsteth, come ye to the waters, and he that hath no money; come ye, buy, and eat; yea, come, buy wine and milk without money and without price. Wherefore do ye spend money for that which is not bread, and your labor for that which satisfieth not?

Truly that which the false teachers offer is not bread, for though they may use the words and the books of the ancient wisdom, the life-giving spirit is not there; it is only the form, the semblance, the letter. The living spirit must come from the heart of the teacher, and can never reside in the heart of

him who seeks for gain or teaches for a price.

Perhaps after all for the man who asks "What is there in Theosophy for me?" it may be there is nothing but a warning, whether he heeds it or not, namely, that he must reap what he sows. Perhaps he is not ready to take up the study, and needs more of the bitter experiences of life to burn their impress upon his soul until at last he shall cry out for light. Perhaps from his present view-point Theosophy might appear to menace him with the loss of what in his present condition he holds most dear—of all that gratifies his selfish desires. He cannot yet see that "he that saveth his life shall lose it; and he that loseth his life for my sake, the same shall be saved."

The life that we are so afraid to lose is the lower selfish life, the life of personal desires and gratification or of personal ambitions, sometimes taking the most subtle and refined forms of intellectual attainment and pursuits. So long as we hold these so dear and as the chief things in life, we are blinded to the incomparable joy and beauty of the higher life. To reach the new and promised land we must leave the old, we must be willing to set out across the ocean, not skirting the shores, not clinging to the old land, but away from it, steering out into the open, until not the faintest vestige of even the highest peaks of the old land can be seen. If we keep our eyes but upon the water it is indeed trackless, yet if we look up we know we are not without a guide, for the whole heaven is studded with stars by which we may guide our course to the promised haven.

Theosophy only has a message for those who will listen. For those who will not, Nature teaches in other ways. Yet we know that the man who today exclaims "What is there in it for me?" will one day return and ask for its guidance. There is, however, another side to this subject, and that is, our responsibility as students of Theosophy to such a man, and to all who are indifferent. It is that we show by our lives that there is in Theosophy in very truth something *for us*, and make our lives an example of the truth of its teachings.

STUDENT

INQUIRER. But how did this system come to be put forward just now?

THEOSOPHIST. Just because the time was found to be ripe—a fact shown by the determined efforts of so many earnest students to reach *the truth*, at whatever cost and wherever it may be concealed. Seeing this, its custodians permitted that some portions at least of that truth should be proclaimed. Had the formation of the Theosophical Society been postponed a few years longer, one half of the civilized nations would have become by this time rank materialists, and the other half anthropomorphists and phenomenologists.

INQ. Are we to regard Theosophy in any way as a revelation?

THEO. In no way whatever, not even in the sense of a new and direct disclosure from some higher, supernatural, or, at least, *super-human beings*; but only in the sense of an "unveiling" of old—very old—truths to minds hitherto ignorant of them—ignorant even of the existence and preservation of any such archaic knowledge.—H. P. Blavatsky in *The Key to Theosophy*

### The Gem of the Seas

BACK of material causes which produce progress, or are responsible for non-progress, are the immaterial ones, the ethical and psychical. Back of these latter are those which are still more subtle. The most material are the most easily traceable; the less material less so.

The exercise of the higher qualities will result in outer well-being just as surely as in internal development. The grandeur and glories of past civilizations were due, in their inception, to the existence of spiritual elevation and the working of beneficent forces. The deceptive display of those civilizations, preceding their extinguishment, was the inevitable resultant of the misdirection and misapplication of the knowledge which had been attained and the forces which had been made operative before deterioration set in.

What is true of the past still holds good. In some sections there is a lurid flare, mistakenly imagined by some to be a true enlightenment. In other sections a true enlightenment is indeed becoming manifest. This enlightenment attracts less attention than the evanescent glare; yet, nevertheless, it already begins to furnish incentives, knowledge, and conditions, the results of which are observable in budding material prosperity.

From Cuba, so appropriately called the "Gem of the Seas," come reports of most satisfactory advances on all material lines. Those who know her inner story know something of the finer forces there at work. Points brought out by *The Havana Post* are substantially as follows:

#### CUBA'S POPULATION INCREASED 29 PER CENT IN EIGHT YEARS.

Official Census Report shows that the island has a population of 2,082,282.

Pinar del Rio leads in per cent of gain since last census, with Oriente (Santiago) a close second. Pinar del Rio is at the western extremity of the island; Oriente (Santiago) at the eastern extremity. The former gained 39 per cent in population; the latter 38 per cent. Pinar had 173,083 population in 1889; now it has 240,781. Santiago, in 1889, had 327,716 population; this year her total is 453,782.

Santiago's increase in population is considered as a great "boost" for the mining industry in Cuba, showing its growing importance. Iron ore in large quantities has been discovered in Santiago province and while there has not been a great deal of noise made about it, the fact that the province is only outdistanced in the per cent of its growth by Pinar argues much.

Pinar del Rio, as is well known, is the great tobacco-producing section of Cuba and the greatest in the world. Tobacco being so staple a crop and the returns so sure it would naturally follow that development and population should increase there more surely than elsewhere.

Tobacco by no means deserves all the credit for attracting settlers to Pinar, however, for that province has developed wonderfully during the last few years in fruit-growing.

Large tracts of land have been developed by land companies and individuals and many persons have settled there to make their homes. The continual growth proves the actual value

of the land for fruit-cultivation. Lumber and cattle as well as mining have had a large share in bringing Santiago to the front.

Cuba is in the Torrid Zone, but being in the northern portion of it, and being favored with cooling sea breezes, the climate is not oppressively hot. Per contra, the cold air currents from the North, which might blow down during the winter months, are inhibited by the Bahamas, so that frost is unknown. The palms, the bananas, the cocoanuts, and the other growths, unfamiliar to those bred in northern latitudes, add their own individual charms to a landscape abounding in all attractiveness.

Anent the foregoing it is interesting to note that the Râja Yoga Schools in Cuba had their inception in Oriente (Santiago), and that they were next inaugurated in Pinar del Rio, they being established there at the most urgent solicitation of its people. Curiously, the names of the places where the Râja Yoga Schools were started in the United States and in Cuba, are almost identical. In the first country they were started at San Diego, sometimes called Port Orient; in the second at Santiago, now called Oriente. Is this accident? Or is it due to the touch of those benign but hidden promptings which are ceaselessly operative for the uplifting of humanity and have so much to do with even material well-being? H. T. P.

### The Bélin Process of Telephotography

M. EDOUARD BÉLIN has invented a process which transmits photographs more perfectly than that invented by Professor Korn. The description is as follows:

First the variations in shading of the photograph are translated into variations of surface relief. This is done by making what photographers call a carbon print of the photograph. In this carbon print the shades stand in greater or less relief according to their intensity in the original photograph. Although the variations of relief are almost too small to be felt by the touch, they are large enough to move the short arm of a lever which is caused to travel all over the carbon print, following a spiral path in which the lines are one-sixth of a millimeter apart. The stylus of this lever has a fine sapphire point, and thus follows the variations of relief very accurately. The long arm of this lever of course multiplies the amplitude of the oscillations of the short arm; and this long arm actuates a rheostat, which is an instrument for producing variations in the strength of current in an electric circuit. In fact the long arm of the lever winds and unwinds a bobbin of wire, thus throwing more or less wire into the circuit and varying the resistance and hence the current strength. Having thus translated the variations of shading in the photograph into variations of strength in a current, these variations of current strength can of course be sent along a wire to the required distance, and the next question is how to translate them back into variations of shading, thereby producing another picture corresponding with the original. To effect this we must have a sensitive paper in a dark chamber, and over its surface must pass a point of light. This point of light must vary in intensity correspondingly with the shading of the original picture, and must pass over the sensitive paper in the same spiral path as the

sapphire point passed over the original picture. All this is effected by the fluctuating electric current. This current moves, through an electro-magnetic apparatus, a small mirror which reflects a beam from a Nernst lamp. The reflected beam falls upon a sheet of glass tinted in graduated colors from end to end; and according to the varying position of the beam it passes through different parts of this color-scale, thus acquiring greater or less intensity. A lens brings back the beam always to the same point on the sensitive paper. Finally an apparatus moves the paper about behind the beam, in the aforesaid spiral path, and the picture is reproduced. T.

### A New Note in Music Criticism

(CONCLUDED FROM PAGE 13)

The violin concerto of Sibelius, and in fact the symphonies of this composer, recall this saying of Hardy. The somberness of this Finn is not an affectation; it is not worn as a costume for a masquerade; it is constitutional; it is the color of his natural speech. It is not the expression of a peevish pessimist; it is broad and deep and elemental. There is something titanic about it. It is as though the composer were still under the spell of the old Northern mythology. There is the thought of the rhapsodic bard; there is the suggestion of the Saga. Look at the face of this composer. Mark the firmness, the determination, the grimness of the expression. Would you expect genteel phrases, sugared sensuousness, irresistible appeals to palpitating ladies from such a man?

The first movement is as a Bardic improvisation. It is in a sense emotional, yet its emotional effect on an audience will be slight until the audience is accustomed to this strange language. The second movement is one of grand and constant beauty. The long melody is as the large utterance of an early goddess. It is shot through with emotion of the noblest kind. This mood is established at once and it is not changed or lessened. There is no reminder of composer or interpreter.

The music is not laboriously invented, it did not come to Sibelius by accident as he was asking for a theme. The finale is not a perfunctorily brilliant ending written because no concerto should be without a finale. It has marked character, a character consistent with what has gone before. In the aggressive lightness of the opening measures there is the playfulness of a cave man, rude exultation at the sight of more friendly nature after long hibernation.

No mere virtuoso greedy for popular favor would choose this concerto for personal display. Madame Powell has never been in the habit of setting applause traps. I know of no violinist now before the public who is better entitled to respect and admiration. In whatever she has undertaken in the course of her long and honorable career, she has been true to herself and to art in its highest form. No merchant ever trafficked in her heart. To speak of her mechanism at this late day would be an impertinence, for her abilities have long been recognized by two continents. . . .

The concerto is not a concerto in the ordinary meaning of the term; it is rather a symphonic poem with a violin obbligato.

The task appointed for conductor and orchestra is also one of extreme difficulty, yet the ensemble performance was of such a nature that the composer was glorified and the occasion made memorable.

### Electric Light in Mahomet's Sanctuary

AN Imperial Irade has been issued ordering the establishment of electric lighting in the sanctuary of the prophet at Medina. This brings up a curious mixture of ideas; but strong lights are being turned on in many an ancient corner nowadays. T.

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES  
IS THROWN OPEN TO ALL

THE THEOSOPHICAL PUBLISHING CO., Point Loma, Cal.

# ISIS UNVEILED

A MASTER-KEY TO THE  
Mysteries of Ancient and Modern Science  
and Theology

By H. P. BLAVATSKY

2 Vols. Royal 8vo., about 1400 pages, indexed; cloth.

With portrait of the Author

NEW POINT LOMA EDITION, WITH A PREFACE

by H. T. Edge, B.A. (*Cantab.*) an old student under H. P. Blavatsky and now a member of the Staff of Professors at Point Loma, California.

Vol. I treats of Ancient and Modern Science  
Vol. II treats of Ancient and Modern Religion

The reprint of this invaluable work is in answer to a constant demand, which shows that the book is *alive* and is needed by the liberated spirit of the age.

Postage prepaid

\$7.00

THE THEOSOPHICAL PUBLISHING CO., Point Loma, Cal.

# The Key to Theosophy

Ethics, Science and Philosophy of Theosophy

A Clear exposition in the form of  
Question and Answer of the

Exhaustively Indexed. With a Copious  
Glossary of General Theosophical Terms

by H. P. BLAVATSKY

THE KEY is a remarkable Compendium of Theosophical teaching.  
The incessant call for this work has exhausted the earlier editions.

It is the book of books for beginners and higher students

## Christianity's Chances in Japan

THE Christian experiment in Japan would be much more instructive if it were conducted under other conditions. The extant conditions do indeed appear to be right enough on the Japan side; it is from the Christian side that the confusion of the issue arises. Some months ago a contemporary published a remarkable article by a highly cultured Japanese in which the complexities of the problem are thrown on the screen with extraordinary clearness. He points out that Japan has for half a century been refashioning and readjusting herself politically and socially faster than spiritually.

Thus the social changes on their moral side have hardly kept pace with the political. . . . Spiritual transformation, as may easily be inferred, has been even more delayed than the social. It is true that the old feudal ethics, *bushido*, has been tempered into modern patriotism and loyalty, so brilliantly exemplified during the late war by the entire nation. This invaluable moral treasure of Japan, however, is not designed to satisfy all the spiritual needs of man. . . . The national education and the actual conditions of society have not, in a word, been of a nature to furnish the individual with a spiritual motive in time of peace.

## The Transit to Wider Illumination

There is, he thinks, a general subconscious sense of something wanting, prevailing most acutely among the middle classes, and reaching an even dangerous point among the students. The old moral landmarks tending to be submerged, *what now?* The danger is lest the coming to full consciousness of the question should mean the coming of the bleak and sinister answer, *nothing*. And especially are the students, deeply affected by imported Western methods and ideas, beginning to enunciate this answer before they are mature enough to have seriously asked the question.

Those of the coarser grain give themselves up in bravado and sentimentalism to that false heroism [preached by Nietzsche] which sees little reason to be ashamed of itself in this society of chaotic individualism. . . . Students of finer sentiments seek satisfaction in a form of art and literature [clearly from the West] and a sort of love so sentimental and trite as to be almost pathetic to behold. There are, however, those of nobler instincts who consciously and violently call for truth through whatever channel it offers itself. No more eager listeners and sharper critics has the Christian minister of Japan met than these students. [Bracketed words mine]

## The Touch of Coming Fire

Christianity offers itself for the difficulty. What are its chances? Could it in any case

fill the bill? And if so, are its propagandists able enough, and united enough to present it properly? The writer gives us its history in that country so that we may know what the people are likely to be thinking of it.

In the sixteenth century Japan contained a very active body of Jesuits whose teachings were making considerable headway.

It was at this point, however, that the Jesuit expansion was marred by that intolerance and love of power above which men of the sixteenth century knew not how to rise.

They were expelled for meddling in politics.

The chief reason for excluding European trading ships was the danger that they might bring missionaries and tracts. Investigation leaves little doubt that the political conduct of the Catholics was to a large extent responsible for the extension of the policy of seclusion from religion to trade.

## Political Effects

And so matters stood for three centuries. In 1872, however, toleration was re-established, and in 1889 was made absolute by a clause in the Constitution. Any Japanese may believe what he likes. "The ground was cleared for a free competition of the religions."

Christianity then began to be represented by its propagandists as the foundation of that Western civilization to which Japanese eyes were turning. The author, however, comments on this contention as "one of the most serious intellectual errors of the Church."

No student can concede, but the idea still obtains among well-meaning missionaries, that Christianity is the spirit of the entire body of Western civilization. The examples are too many to be cited to show that the so-called progress of the West in philosophy and art, in law and constitution, even in science and industry, as well as in commercial veracity, is ascribed to the influence of Christianity. A little reflection will make it clear,

it is superfluous to say, that, while much of this progress is owing to religion, some of its important phases have either been independent of Christianity, or have even arisen as a protest of the mind against the enthralling Church; while some others have developed from so diverse and still obscure sources, that it would be wide of the mark to attribute them all to Christianity.

## Western Civilization non-Christian

Nevertheless the contention was made, was accepted, and in no long time met its Nemesis—its Karma. After the war with China, Japan suddenly found herself face to face with some of those Powers whose civilization she was imitating and whose religion she was being urged to adopt. Europe appeared to be an over-strong bully keenly a-grab for whatever

he could see. This brought a new view of things and there was a great reaction,

a reaction against Europeanization in general and against Christianity in particular. All the important arguments once urged by the church now recoiled on itself. If Christianity was the motive force that had inspired occidental civilization and differentiated it from the oriental, was it also responsible for the materialistic and grasping tendencies manifested by the Western Powers, and their subjects among themselves and in the East?

#### Riding Two Horses

The answer was ready, of course:

The Christian would now fain modify his old position so radically as to say that his religion was born in Asia, and that, in Europe and America, it was fighting valiantly with the evils of their civilization. Such an idea, however, was as yet ahead of the time, the general trend of thought being that Christianity was as much foreign to the time-honored culture of Japan as to the rising spirit of intense patriotism of her subjects.

This answer from the Christian side took a good while to soak in, may not have soaked in yet. For two other difficulties have arisen:

The perils of reaction from the outside world were unfortunately aggravated by the internal discord among the Christians themselves. The rise of the scientific spirit in historic and theological studies in the West was loudly re-echoed by the more susceptible of Japanese Protestants. The idea of evolution as applied to human society and religion had a charm for the spirit which had triumphed over the traditions of the long past. . . . The Unitarian and the Universalist, as well as the German Evangelist, found ready listeners in Japan, and were even surprised by the rise of thinkers more liberal than themselves. It was not long before this state of things provoked a spirited opposition of the conservative churchmen. One is appalled to read today the missionary letters of those days, and find the opprobrious epithets flung at their liberal friends by some of the conservative missionaries. The former were "agnostic" and "atheistic," and their ideas were calculated to disturb the peace of the church and increase the number of renegades. . . . One looks in vain for that overflowing energy and freedom and that co-operation, through which alone Christianity might cope with the spiritual crisis of the Japanese nation.

#### Internal Discords

What ails the Christian workers? What deters them from hearty co-operation, and chills their individual ardor? There is little doubt that the general coolness of the European and American public toward Christianity finds here a reflection. . . . For one seldom meets foreign visitors, or Japanese students who have studied abroad, and who are not ministers, who do not tell him that the church in the

#### A Church Behind the Times

West is continually in danger of being left behind the outside world, which, they think, it serves less, and which regards it less highly than at any time since the Reformation.

This is the first difficulty; the propaganda is not united; the teachings of the schools are too diverse, equally urgent, yet contradictory. The Japanese does not know how to get any clear idea out of it all. *He cannot learn what Christianity is.*

And the second is that the missionary propagandists seem to be in general not equal to their task. They cannot put their case so as to solve the problems of a subtly intellectual and philosophical body of inquirers touched

now with a Western scepticism which even in the West is gaining ground against the ablest and most strenuous defense.

The reasons for the waning of the missionaries' influence must be many, one being that they do not count among themselves so many winning personalities and great intellectual minds as one might perhaps expect from their number. . . . Sermons of the ordinary missionary are not admired as they once were, and sometimes church members frankly ask their minister to bring them any visiting preacher but a missionary. Young men, whose expectations are probably inordinately high, often express their wonder that the missionary dares preach with so little fire and so coarse an intellect. These may refer to extreme cases, but it remains a fact that while the church has been graced with the coming of several missionaries of extraordinary moral power, there have appeared few during the last forty years whose minds seemed subtle enough and trained enough to make them authorities on Japanese history and civilization. . . . If we remember that the present is a time calling as much for men of spiritual insight as of moral force, we cannot but regret the want of great intellect among the missionaries.

#### Lack of Force and Intellect

*If Christianity is to have its case properly stated for the Japanese mind—and it will—this must be done by a Christian who is also a Theosophist. If the Japanese thinker is asked to believe that divine light was fully shown to men for the first time 2000 years ago, he will either take no further notice of Christianity (unless he meets with a saner and truer presentment), or come to believe that there is no such thing as divine light. The teachings of Jesus the Christ must be shown in their intimate relation to those of other Teachers; the Teachers must be shown in unbroken line down the ages, not beginning with Jesus nor to end with him; men who had achieved unity with the Divine, who taught that all men may do the same, and taught from one or another aspect of the one divine wisdom—Theosophy—what was most fitted for their time and people.* HERBERT CORYN

#### Modernism in the Thirteenth Century

UNDER this head a correspondent to the *London Times* narrates a struggle between the Church and scholarship, which has analogies with that at present going on.

Early in the Thirteenth century the University of Paris, the chief theological school, was invaded by a spirit of innovation. Its weapons were the recently discovered physics, metaphysics, and psychology of Aristotle. In the year 1209 a provincial council at Paris forbade the public or private reading of Aristotle's *Natural Philosophy* or of any commentary thereon. In 1215 the University ordered the Logic to be read but forbade the physics and metaphysics. As the prohibition was ineffectual, in 1228 the Pope intervened. His letter, which may still be read, is full of the usual commonplaces. He is grieved at heart to learn that some of the Parisian masters, inflated with the spirit of vanity, are forsaking the waters of Siloam, which go softly, for the headlong streams of natural philosophy; they thereby destroy faith, for "faith has no merit when human reason furnishes it with proof": they dress up in sordid rags of philosophy the

spouse of Christ, who should go forth in royal apparel; and so on. But in three years the Pope shifted his ground; and, although ninety years of age, was open to new impressions. He commissioned three masters of Paris to examine the forbidden books. "We understand," he writes, "that the books of natural philosophy, forbidden by the provincial council held at Paris, are said to contain both useful and useless matter." Therefore they are to be carefully revised and pruned, so that without delay and without offence they may take their place in the studies of the future.

But the times were moving fast under the influence of the Scholastics; all censures were withdrawn; and within thirty years of Gregory IX's condemnation of Aristotle, Thomas Aquinas was lecturing at Paris and citing Aristotle's *De Anima* as an authority hardly inferior to the apostolic writers.

In later years scholasticism itself became the head of an exclusive orthodoxy, the assault against which we are now witnessing. Thus does the march of knowledge drag along the Churches in its wake. E.

#### The Mystery of Incarnation

THROUGHOUT the middle ages and down to quite recent times, no subject has been more frequently chosen by the great artists of all countries than the divine mystery which underlies the incarnation of the human soul into earth-life. The most celebrated painters of Italy, Germany, France, Spain, and Holland, have left upon canvas their ideal of this, in their symbolic pictures of mother and child. They portrayed the highest which they could conceive of this ideal, each in the type of his own nationality.

It is somewhat remarkable that *not one* of them is known to have painted a Jewish mother with a Jewish infant, as would certainly have been the case if they had intended only to represent the infancy of the Great Teacher who proclaimed himself as sent to the lost sheep of the House of Israel.

Their view was much broader than this, inasmuch as they must have known more or less consciously, the great Truth now once more openly proclaimed by Theosophy—that *all men* have within them a potential divinity, and that every human infant born into the world is a divine incarnation. STUDENT

#### Language Study in Japan

SOME interesting statistics appear in the Tokyo newspapers of the returns of the Language School there. The first graduation ceremony of that institution took place in 1900 and the languages which were then most studied were English, Chinese, German and Russian in that order. In the three other languages which were taught, namely, French, Spanish and Korean, there were only three graduates for each. In 1902 the number of graduates in English had doubled, those in French had increased from three to eighteen, those in Chinese had diminished slightly. In 1904 and 1905, however, graduates in Chinese had more than doubled, while those in English were fewer. This year the order is as follows: English with 30 graduates; Chinese with 27; Russian 21; French 20; Spanish 19; Korean 16; German 13; Italian 4. STUDENT

## Some Views on XXth Century Problems

### The Methods with the Criminal

A PHYSICIANS' club and a Law club of Chicago recently put their wisdoms together in order to solve the question of the treatment of criminality, the elimination of it from society. Two methods, both of which will doubtless strike the normally constituted reader as themselves distinctly inhuman are reported to have been advocated. The advocacy occupies most of the newspaper reports: if there were saner counsels we have not seen them reported. Here are the words in which one of the methods was phrased:

A child is a savage. If he continues to improve slowly he has a chance to outgrow his tendencies before he is 30. Before that he should be given all the care possible. But when a man commits a crime after 30, he may be set down, as a rule, to be morally bad, with no hope of improvement. For the mature criminal [that is, the man who commits a crime after the age of 30] I would advocate permanent segregation, either by the penal colony or the cemetery.

Then came the other method—the sterilization of the criminal so that he should not propagate his like. "We must prevent the criminals from breeding criminals. The great bulk of criminals inherit arrested development."

So when a man over 30, who has previously led an upright life, gets crushed against the wall by our social system, sees no prospect of work and every prospect that his wife and children will starve, and yields to some wide-open temptation to theft—he is to be regarded as a habitual criminal, sent to the penal settlements for the rest of his life, or chloroformed to death! According to the formula of this speaker (and we have seen no report that any other took exception to his doctrine) his children will also be criminals and, we presume, are to be now sterilized as a preliminary to slaughtering them after they are 30!

For this one man who, tempted to desperation, yields, there are perhaps a hundred left behind who have not done his crime for the mere reason that temptation has never pressed them. In most of the essentials of a fine character he may surpass them all and be a more desirable member of the community. And we are going to risk mentally torturing the elements of humanity out of his consciousness, maddening him not only by the treatment served out to himself but by the thought of that which he will know awaits his girls and boys.

That the children of such a man, or of nine-tenths of the criminals, are born degenerate or with the streak of crime is biologically false. The true criminal degenerate may because of ignorance and neglect of certain laws be born in almost any family of today; and if the children of criminals are themselves inclined to crime and to that physical under-development which predisposes to crime, it is because of their rearing, of neglect, of gin while their age is to be counted in months, of their surroundings, and of example.

Of the second method a proper criticism is

in this place impossible. We can only say that to the community which tolerates it, it will be more brutalizing than would be a return to the system of capital punishment in public. While affecting some who are hardly criminals at all save for some solitary break-down, it would leave nine-tenths of the real criminals unaffected. A report comes from one State that 300 criminals have voluntarily submitted to this method. Assuming this to be true, we should be glad to know *the nature of the assertions and assurances made to them.* STUDENT

### "Christian Psychology"

A BISHOP of one of the Christian Churches in this country is treating the sick, so it is reported, by "Christian psychology." One patient had a disease of the eyes and had been partially blind for years. The Bishop told him that he had two minds: the conscious mind with which he ate, talked and walked; and the "subconscious mind" which had absolute control of the nervous system. The subconscious mind could, if properly directed, order the nervous disorder, causing the eye-trouble, to vanish; in fact, said the Bishop,

it is right now sending healing thoughts to the nerves which control the eyes. There is nothing the matter with your eyes that can not be cured by this psychic suggestion. The power is in you. I am merely directing it along the right channels. I can see that you are feeling better right now. Your conscious mind is clearer and is directing your subconscious mind in its curative work. Your will is becoming stronger and you are commanding your nervous system to obey.

Then the patient confessed to feeling much better. It is added that, though the treatment is purely mental, the Bishop will not treat any patient until his case has been thoroughly diagnosed by a physician.

The Christian ministry can, as successors to the apostles, claim the right to heal diseases, in accordance with the promise of their Master. But why have they waited to be taught by modern "mental healing"? For it is perfectly evident that this healing is not the original prerogative of the Church, but simply an adaptation of the theories and practices of the mental healers, and that the Church is following, not leading.

The power of the mind over the body extending to the cure of certain complaints depending on the nerves, is of course admitted. The fact has always been known. But this "subconscious mind" is a very dangerous thing to meddle with without knowledge. To invite its aid is to do what the ancient Britons did when they invited the Saxons to help them drive out the Picts and Scots, or the ancient Romans when they allied themselves with the Teutonic barbarians. It is to invoke a power that is likely to assume control. By our physical nature we are shielded from the latent forces of the lower psychic nature, the seat of desire and animal life. Normally these forces keep within safe bounds and do their work of directing the vital functions. But when they

are aroused, by the directing of attention and mind upon them, they assume a new power, and threaten to overwhelm the mind and will. Thus, when any one has aroused any of these forces, and perhaps relieved himself of some ailment, he will find that he has a new foe to reckon with. That this is so is not merely matter of theory, for it has been amply demonstrated by facts, as those who have dabbled much in mental science and such things will confirm.

The reason is quite simple. Occult forces must be controlled by *knowledge* and a pure motive, otherwise they will convert themselves into slaves of the desire-nature. And this desire-nature is very strong; it contains the stored-up energy of a long heredity. The man who arouses it may awaken dormant energies for evil which he will be unable to control. The right path for man is to develop the good and moral forces of his nature and to refrain from prematurely arousing the lower forces before he is able to withstand or direct them.

Our civilization is very infirm in many ways, and is to a great extent victim to disorders arising from inability to control the animal nature and vital functions. Hence the arousing of latent powers is necessarily fraught with sure danger. There is no way of preventing the knowledge from getting into the hands of the unscrupulous, the weak, and the ignorant. Unfortunately the conviction that one's motive is good is not a guarantee that one is fitted to act as a healer; for ignorance or weakness may more than counterbalance the good motive.

Theosophy has always insisted most strongly that all aspirants to knowledge must begin by qualifying for its attainment; they must seek to render themselves worthy and competent candidates for it. This means that they must enter upon a study of their own nature with a view to eradicating the source of evil—selfishness—and to placing their whole life on a basis of altruism. This rule is indeed the original and universal rule of Occultism and Theosophy. Never arouse occult forces prematurely—that is, before your will is strong enough and your motives pure enough to control them.

"Seek first the kingdom of heaven"; the rest will develop in good time.

The history of psychic movements is affording, and soon will afford more, illustrations of the truth of these remarks and of the necessity for the above rule. People who try to "influence" other people, and who live in dread of being themselves "influenced," are not to be envied; nor are those unfortunates whose infirmities have been increased by awakening dormant tendencies in themselves.

This is the kind of thing to which the Christian Churches, in some cases, have thought fit to lend themselves. But there is surely an opportunity for them to stand forth as champions of the true healing—to keep one's moral and mental life strong and sweet and clean; for bodily diseases, to call in a doctor; and to let the subconscious mind alone. ## The Berbers

A NEWSPAPER paragraph says:

How many have heard of the white race of the Atlas Mountains in Morocco? Its people have features like ours, and some of them have blue eyes and red hair. Many have rosy skins and complexions so fair that if dressed in European clothes they would not be out of place in London or Paris. Others are darker, from their admixture with the Arabs and Moors. This race is scattered through the mighty mountains of Northwestern Africa. It is composed of the Berbers, or Kabyles, who are numbered by millions and are found everywhere in these hills. . . . The Berbers were here when Athens was in its infancy and when Rome was yet to be born. There are records in the Egyptian temples dating as far back as 1300 years before Christ, which speak of them as having rosy cheeks, blue eyes and red hair. And there is a dried specimen of one in the British Museum.

The best known branch of the Berbers is the Kabyles, a number of tribes in the Algerian region. In 1864 the number was estimated at 2,200,000. It is generally admitted that the Berbers form the main aboriginal element in the north of Africa, that at various times they have occupied the whole region from Egypt to the Canaries, and that they are still represented by tribes which have become more or less blended with the Arabs. Ethnologists are at variance as to their origin. Some class them as Semitic, others as Aryan; some think they are descended from European migrants, some identify them with the Vandals; some think them an aboriginal fair-skinned race, others regard them as the dolmen-builders from Europe. Physically they are not very different

from the Arabs, both races being fair at birth and becoming darker with maturity. A proportion of the Kabyles maintain their fair hair, ruddy complexion, and blue or gray eyes. Yet the contrast between them and the Arabs is striking and suggestive of racial affinities with modern Westerns. While the Arab cultivates only cereals, the Kabyle has figs, olives, vines, vegetables and tobacco. The Kabyle dwells in houses and villages and has industries and manufactures; he travels and may enlist in the French army or become a foreign workman. Jewelry work and wood carving are carried to considerable perfection. The order of society is democratic, the political unit being the village or commune.

All that is not Arabic in the kingdom of Morocco, all that is not Arabic in the French provinces of Algeria, and all that is not Arabic in Tunis, Tripoli and Fezzan, is Berber. The language also of the ancient Cyrenaica, indeed the whole country bordering the Mediterranean, between Tripoli and Egypt, is Berber. The extinct language of the Canary Isles was Berber; and finally the language of the Sahara is Berber. The Berber languages, in their present geographical localities, are essentially inland languages. As a general rule, the Arabic is the language for the whole of the sea-coast.—(Dr. Latham)

The Berber nation is of great antiquity, and from time immemorial has occupied the same territory; in various localities it is known by various tribal names, such as Kabyles and Tuaregs.

In *The Secret Doctrine*, H. P. Blavatsky writes that remnants of the later Atlantean races were shut up in Africa, where they continued to exist for hundreds of millenniums

without fresh transfusion of blood, until they differentiated into widely divergent types.

Nowhere does a more extraordinary variability of types exist, from black to almost white, from gigantic men to dwarfish races and this only because of their forced isolation. The Africans have never left their continent for several hundreds of thousands of years.

## Ancient Jewish Discoveries in Egypt

EGYPT is not only a repository of secrets concerning the ancient Egyptians proper, but it is continually revealing unsuspected history about the other nations with which the Egyptians were associated in the later periods of their career. We are thus in a fair way to discover new facts about early Christianity and about the Greeks and Romans, not to mention others. Facts about early Jewish history have been discovered of late, and if they continue we are threatened with revelations about the Hebrew religion which must upset Old Testament Christianity.

Professor Clermont-Ganneau, who in 1868 discovered the Moabite Stone, belonging to the Ninth century B. C., in which Mesha, King of Moab, describes how he threw off the yoke of the Israelites, and which is written in a language almost identical with that of the Old Testament, has given a description of the results of similar discoveries on the same lines on the island of Elephantine on the Nile. These prove the existence of a Jewish temple of Jehovah in that place under the XXVIIth Dynasty, Sixth and Fifth centuries B. C., when Egypt was a dependency of Persia.

The French expedition finding a German expedition already at work on the island, was driven to a locality where, after two months of nothing but Greek and Egyptian discoveries, it came upon quantities of *ostraka* bearing Aramaean inscriptions on both sides. These have not been fully deciphered yet, but enough is known to show that they are of the same time, writing, and language as the papyrus rolls discovered at Elephantine in 1904, which consist of notarial acts concerning the Jews of Elephantine and Syene, with concordant dates of the Egyptian and Aramaean calendars between 470 and 410 B. C.

Meanwhile the German expedition had found new papyrus fragments with important Aramaean inscriptions. One is a petition, dated from the reign of Darius Nothus, addressed to the Persian Governor of Jerusalem by Jedoniah and his fellow-priests of Elephantine, complaining that their temple, built by their fathers to the "God of Heaven," has been pillaged and destroyed by the priests of the god Chnemu. It mentions names that occur in the Book of Nehemiah.

# ✻ The Trend of Twentieth Century Science ✻

## A New View of Cancer

**D**R. ROBERT BELL, for eighteen years senior physician to a Glasgow hospital, has been taking the medical profession to task for undue modesty. The other members of it say they do not know the cause of cancer; Dr. Bell says they do. Disregarding this knowledge, they have been looking with the microscope for a germ, and no germ has presented itself. Nor have they detected an animal parasite.

He maintains that it is often a general disease with a local manifestation, and that its real causes are similar to the real causes of other diseases—namely continued infraction of hygienic law. Surgeons confine their attention to the local manifestation, or nearly so, and thus miss the chances of real cure. In other cases, where the origin is really local, following an injury at that point, general measures are still to be relied on—since, as in other local diseases, general health will permit of the throwing off of local disease. Moreover the injury would not have resulted in so formidable a manifestation of local resentment if there had been previous perfect health.

To give point to his remarks, he said that throughout an experience of many years as an operating surgeon he was unable to credit himself with a single success in the surgical eradication of cancer. But by general and dietetic treatment he had greatly benefited many cases and entirely cured some. The diseased cells, though they had started on a vicious career, had been reclaimed to the right path.

There is no doubt that this is commonsense. Dr. Bell's cures by a hygienically perfect life were doubtless those in which the stream of heredity was not very bad. But there are many other cases in which this is very bad, and for such—indeed for all—there is the objection to the help of the surgeon *plus* the general therapeutic and hygienic measures?

A "perfectly hygienic life," one might remark, means a good deal; and a physician must do a great deal of extremely close questioning—based on more knowledge of the laws of life than some of them have—before he could find out all the ways in which a patient was mis-spending his vitality. The advice of some few doctors is occasionally even directly mischievous in its countenance of current habit.

## Varieties of Variations

**A** RECENT book, *Darwinism To-day*, by Mr. Vernon Kellogg, attempts to give us the present standing of Darwinism, the light it is now thought to throw upon the problems of biology. In a general way Darwin's view still holds, and will hold; but in giving us the advances of opinion since Darwin's time Mr. Kellogg does not say quite all that he might.

Darwin thought that variations were anyhow, in all directions from the exact parental type, and that they were very slight, nearly imperceptible. The more modern view is that variations tend to run along a definite line; and, according to the school of de Vries, they

are not imperceptible and indefinite, but quite sharp and fixed: not shadings away but new sub-species from the first.

But again, there would seem to be two varieties of variations. There are variations which, while not implying an advance of structure inner or outer, are a mere change in it for the adaptation of the organism a little better to its environment, or accomodating it to changes in the environment itself. But there are other variations, which however include some of the first sort, which adapt it to a larger sweep of environment or give it a correspondence with more of the forces of nature. Among such would be an advance of intelligence, any power of doing something more. The first set are in fact merely variants of structure, as for example a thicker fur to suit a colder climate, meaning no real advance upward in the scale of life. It is the second set that constitutes the moves of universal progress from lower types to higher.

But there is also an entirely invisible progress. If every form remained absolutely fixed from age to age, the incarnating, indwelling, monads of life might be invisibly passing up the scales behind the scenes, from time to time leaving forever one set of forms whose possibilities they had outgrown and learned, and entering another. That too we get in man. In the course of a lifetime he may outgrow the level of heredity of the family into which he has been born and at his next birth select one which is higher in every respect. If its supporters had but seen it, the old doctrine of the special creation of fixed types, demonstrably *untrue* as it was, allowed ample room for evolution.

## Natural Baths and Waters

**I**T appears that it is by no means the same thing to drink mineral waters at their source, and when bottled, at a distance of time and space. And still less when artificially concocted by solution of their saline ingredients. A French medical academy has commissioned three physicians to make certain tests of some natural springs. The waters of all of them were found to be radio-active and to contain radium emanation. They also gave off the rare gases neon, argon, and helium. The sediment had the same properties; so had the surrounding soil; and so of course had the air in the neighborhood. But within four days after removal the water had lost half of its emanation; after a few days further it had lost it all. In lesser degree it is probable that the same facts obtain for all spring water.

We do not yet know the therapeutics of radium or of the gases when taken in this way; but it is very probable that they contribute to the beneficial effects of the natural waters drunk at their source. One investigator has suggested that as all soils at a little depth are probably radio-active and yield a little of their mineral contents to water, no one who can get outside a city need be without his elixir. He can dig up some soil three or four feet below the surface, extract it with water and drink away. Mud baths of course

owe their efficacy to a good many factors, to increased action of the skin, to the absorption of medicinal ingredients by the skin, and so on. But one of these factors may be the radio-activity of the soil. And according to Professor Milne, of the Isle of Wight, the soil has what might be called its moods. A photographic plate exposed to the side of a cliff exhibits curious lines, dots, and other markings showing the passage of obscurely luminous currents; and all these vary in quality and intensity from night to night. The "mud" of the baths must therefore be fresh! whilst at times it will probably be more effective than at others.

M. D.

## The Golden Ocean

**T**HERE are people still working at the problem of extracting the gold from sea-water. It is undoubtedly true that there is a good deal there, but it is less in amount than is contained in the waste water running away from the cyanide works. That still contains somewhere around two grains per ton of gold, and the content of sea-water is at any rate less than one and one-half grains. The enthusiastic inventors would therefore do better to beg the refuse water of the cyanide works.

If we could attune our eyes rightly, however, the ocean would look like a lake of gold. Its one and one-half grains or less per ton represent molecules uncountable, or almost so; the point of a needle just dipped into sea water would touch molecules of gold on every side.

Regarded as medicine, of course every other metal and element in the earth's crust must also be present, so the medicinal effects must be somewhat confusing. There are, however, people who believe that their health is improved and sustained by a daily dose of it. It was, after all, in sea water that physical life on earth began.

## The De-Salination of Water

**I**T is said, on apparently good authority, that if a stream of saline water be forced through a length of severed tree trunk in the direction taken by the sap, the saline matters are absorbed by the wood on the passage and the water comes out at the other end nearly as pure as if distilled. Great pressure is necessary and the passage is very slow; but the process is reported as rapid enough to permit of the use of the method by sea vessels.

A discovery of this sort has long been in the air, and there is more than one investigator working with electricity with the idea that water may somehow be thrown into an electric condition which will render it temporarily unable to hold any saline matters in solution. These are to be thus precipitated and the water removed. Possibly the secret may lie in high frequency, a rate peculiar to water being employed. With the discovery and cheapening of such a process the problem of irrigating desert tracts to which sea water could be led or pumped would be simplified and perhaps made feasible.

TURTLE HOLE IN THE WOODS

**The Fountain Tree**

A TRAVELER'S Tale, smiled at for two or three centuries, occasionally takes to vindicating itself. A correspondent of *Knowledge*, noting the recent examination of dew ponds, was reminded of a passage in Sir Thomas Herbert's *Travels*, published about 1628:

Hiero, or Ferram, appeared very high land as we past by it, and bears S. S. W. from Grand Canaria. Gomera is 6 leagues from Teneriffa, and above 8 leagues long; Palma is about 12 leagues from Gomera, and in circuit towards 20 leagues. Hiero is 10 leagues from La Palma, and not above 6 leagues in compass. Famous is Hiero in one tree (for it has but one such), which (like the miraculous Rock in the Desert) affords fresh water to all the inhabitants. The Natives call this tree Garro; Santo, the Spaniard. Some part of the Day 'tis darkened with a cloudy mist, which casts a Dew upon the Leaves that distills in clear sweet drops, streaming into two large Stone Cisterns, capable for the necessary use, not only of the people, but of all the Cattel in that Island. Sylvester gives it this true and vive description :

In the Isle of Iron (one of those same seven Whereto our Elders Happy name have given)  
The savage People never drink the Streams  
Of Wells and Rivers, as in other Realms.

Their Drink is in the Air! their gushing Spring  
A weeping Tree out of itself doth wring,  
A Tree whose tender bearded Root being spread  
In dryest sand, his sweating Leaf doth shed  
A most sweet Liquor; and (like as the Vine,  
Untimely cut, weeps (at her wound) the Wine  
Impearled tears) incessantly distills  
A royal Stream, which all their Cisterns fills  
Throughout the Island; for all hither hie,  
And all their Vessels cannot draw it dry!

What this Tree was we do not learn, nor whether it is. But we have one of our own, the Eucalyptus, which will do something like that, and whose power yet demands complete explanation.

STUDENT

**Deep-Sea Diving**

IT would appear impossible for divers to descend below a certain very moderate depth, unless we can devise apparatus perfect enough to reproduce all the atmospheric conditions of the surface, not only as to quality of air but as to pressure. The danger is that the great pressure of the air breathed causes some of it to become dissolved in the blood, and a good deal of this dissolved air is of course the inert nitrogen. The presence of bubbles in the blood naturally stops the flow

in the finer tubes. There is also a poisoning by exhaled carbonic acid, which, under the increased pressure, is absorbed by the system. About 30 fathoms marks the limit for even divers of the greatest fitness. *Shipping Illustrated* recounts the salvage of some boxes of specie lost off the Canaries from the steamer Alfonso XII, in 1885. The depth was 160 feet. The Marine Insurance Company sent out three divers who got up nine out of the ten boxes with their contents intact. One of the divers suffered from paralysis of the internal organs, but recovered under treatment. The most successful of these divers received \$20,000, being regular wages, 5 per cent on the value recovered, and a bonus of \$250 per box. The tenth box was never recovered. T.

**United States Mineral Production for 1906**

ACCORDING to the best available statistics of mineral production for 1906 in the United States, coal was the most valuable, with iron a close second. Third came copper; fourth, clay products; fifth, gold; sixth, petroleum. Of the States, Pennsylvania contributed 30 per cent of the mineral value, Ohio 11, Illinois 6; California contributed 2.5 per cent of the total. H.

### The Annunciation

**I**N *The Annunciation* (see cut on the opposite page), the young Swedish sculptress, Miss Sigrig Blomberg, has sounded a rare deep note in behalf of a nobler, albeit simpler, conception of the woman and mother. Europe can scarcely boast of lovelier treatment of this pure ideal than the statue so strongly, yet so lovingly, wrought by the young Swedish woman artist. It has all the sincerity and simplicity of Chapu's *Joan of Arc*—and something more.

To those who may have imagined that the well-known pseudo-classic conventionalisms of the Danish sculptor, Thorwaldsen, were typical of Scandinavian plastic art this must come as a delightful surprise. And yet it does not stand alone. There is today a strong and well-schooled group of young artists in Sweden who, uniting the serious technical study which we always associate with student-life in the great art centers of Europe, with the pure and strongly-tender ideals of their home land, are producing works which will stand the test of time because they speak to the heart, not to the brain alone. And this is one of them. The marble of it now stands in the National Museum at Stockholm.

### The Memoirs of Adelaide Ristori

**I**T was not long before her death last year, at the age of eighty-four, that Adelaide Ristori, the noblest Italian actress of her time and one of the noblest women of any time, completed her autobiography. Her first appearance in America was made in the city of Mexico where she was received enthusiastically by practically the whole city, her way being literally strewn with flowers. Later, she described her visit to the Queen of Italy, of whom she writes:

Her Majesty tells me that she will never be contented or call herself acquainted with the world until she has had a glimpse of America, and "those good

Americans, your friends, of whom you are so justly fond."

Most interesting to those who know Theosophical purposes and ideals concerning the races sometimes so ignorantly called "uncivilized" is Ristori's description of her audience with the King of the Hawaiian Islands, whom she had previously always believed to be, although royal, none the less a "savage."

Still escorted by our kind consul, we entered a beautiful garden, where two aides-de-camp of the

### THE MAID OF ORLEANS

Schiller, metrical translation by Lytton

**T**O flaunt the fair shape of Humanity, [It trod.  
Lewd mockery dragg'd thee through the mire  
Wit wars with Beauty everlastingly—  
Yearns no angel—and adores no God—  
Views the heart's wealth—to steal it as the thief—  
Assails Delusion, but to kill Belief.

Yet the true Poetry—herself, like thee,  
Childlike; herself, like thee, a shepherd maid—  
Gives thee her birthright of Divinity,  
And lifts unto the stars thy starry shade.  
Thy brows receive the aureole of her sky;  
The Heart created thee—thou canst not die.

The mean world loves to darken what is bright,  
To see to dust each loftier image brought;  
But fear not—souls there are that can delight  
In the high Memory and the stately Thought;  
To ribald Mirth let Momus rouse the mair,  
But forms more noble glad the noble heart.

king were awaiting us. They were blond, fine looking young fellows, wearing a uniform like that of European soldiers, adorned with silver embroidery. The doors of the reception hall were open, two domestics clad in blue livery trimmed with silver braid held back the drapery while we entered a large room upon whose walls hung the portraits of all the monarchs of the world. King Victor Emanuel, from the height of his frame, seemed to welcome us. Quickly our expectations of meeting savages were shattered. When His Majesty Kalakaua moved forward, graciously holding out his hand,

our ideas of grotesque savages were dispelled. The king, who was somewhat dark in complexion, was rather tall, wore a Prince Albert coat, and had side whiskers like any Englishman. He had a pleasant physiognomy and the simple manners of a perfect gentleman. He spoke to us in correct English and one of the first questions was whether we liked the two-step better than the old-fashioned waltz! The luncheon was served on fine Sevres porcelain tableware, and the cutlery was of the finest silver.

When lunch was over the king offered me his arm for a tour in the garden, where all the rest of the guests followed us. In the garden there was a pavilion from which we heard the strains of our national royal hymn. I was moved by such kind attention. How sweet are such remembrances of our fatherland, in far away countries!

Rarely has greater honor been paid to man or woman than to this greatest of Italian actresses. On the occasion of her eightieth birthday the inhabitants of all Rome united to do her honor. The editors issued special editions of their papers and special medals were coined bearing the following inscription:

TO ADELAIDE RISTORI, THE GLORY OF ITALIAN  
DRAMATIC ART AND OF THE ITALIAN NAME, ON  
HER 80TH BIRTHDAY, THE MINISTER OF INSTRU-  
TION OFFERS THIS MEMORIAL.

No fewer than 3000 congratulatory telegrams were delivered to her on that happy day, among them being those from virtually every sovereign in Europe. The government conferred upon her special honors and the King of Italy paid her a personal visit at her home. To few, indeed, in this world is it given to reap so golden a harvest in the sunset time of life.

The services rendered to humanity by Adelaide Ristori were great, for the drama, that erstwhile mighty educator, has had its higher ideals well clouded by churchly condemnation, no less than by the careless living of some of its exponents. Ristori not only shed upon it the luster of genius but the benediction that ever follows a stainless private life. STUDENT

### Joan of Arc

IN reviewing a new book dealing with the lives of five of the famous women of France, at the head of which is placed Joan of Arc, the writer, imbued with a beautiful and reverent conception of this supremely great life, points out that to class it with the lives of the other four women, which though great in their way were lived on such a different plane, really destroys the continuity of the book. Only a few lines are devoted to Joan, but those brief references sing in the memory like a beautiful refrain, long after one has forgotten what was said of her brilliantly intellectual companions in the book. It would seem as though only to approach this great life in the spirit of a reverent appreciation conferred a touch of immortality; another version of "Let me but touch the hem of thy garment."

Joan is spoken of as a supremely beautiful soul living in the clear heavenly air of heroism—*waiting on the will of God*. There lay the whole secret of her power—power to mold the destiny of her country, power to thrill the souls of those who speak or think of her, centuries after, to a nobler conception of life; to tip with gold the pen of those who write of her. From her childhood she "waited on the will of God"—the Divine, Universal Will—lived her simple life, performed her humble duties, took her innocent pleasures, always listening for that Voice that spoke in her heart.

Could any sermon be more eloquent? When one recalls also the words of a recent editorial in this magazine, speaking of the Light that lighteth every man that cometh into the world—showing how when a man has once realized its presence in his heart, henceforth he lives two lives: one with the inner Light, one, outward, as ordinary men—one sees as by a searchlight what a simple thing it is after all to make life the grand, in-

spiring thing it should be. No need to retire to forests or monasteries; no need to make a sacrifice of all that is human and sweet; if we resign ourselves utterly to that Light we shall find that it leads us through many pleasant places—it may be to enjoy fine music, noble drama, to love and be loved; in short, to go through all the experiences necessary to the

by sickness, disillusionment and loss? Absolute reliance on the Law—what a heaven of peace, of joy, of an ever-present Light, an unceasing Song in the heart, it opens up before us! It is the lesson, the epitome, of Joan of Arc's heroic life. F. A. SHURLOCK

AN Indian was recently conducted through New York and the marvels of the white man's science and the triumphs of invention were paraded to excite his admiration and his awe. As the extended tour drew near its end, the guide quite complacently inquired of him which of all the wonders he had seen had most impressed him. "*Little children working*," said the red man solemnly. The practice of deriving profit from child labor is unknown among those tribes we call barbarous. STUDENT

A CONTEMPORARY relates the following of the great Norwegian musician, Grieg, who has just passed away. A few weeks before he died he attended a concert in London, at which Mme. Teresa Carreño played his Concerto. "Bravo, bravo," he cried from the box. "No one ever played it better." The pianist did not recognize him, but responded graciously to the recall, after which the old musician rushed up to her, saying, "Madame, I am not mistaken. I ought to know, for I wrote it myself!"

Mme. Carreño has been well known as a great pianist for two generations, the world over. But it is not so well known that she composed the Venezuelan national hymn. She is a South American, born at Caracas, her father, a musician, being her first instructor. Later, after long study with Mathias (a pupil of Chopin), she spent a number of years in the studio of Rubinstein himself. Her musical talent was discovered when she was but three years of age, and when but ten she made her first public appearance. STUDENT

# OUR YOUNG FOLK

## Râja Yoga Magic

TO see things transformed, always interests everybody whether it be persons or places that experience the transformation. We all remember with delight the magic shifts of form and person by which the heroes and heroines in the old tales were often rescued from danger, just in the nick of time. The more sudden and striking the change the more it delights us; it is no strain upon our imagination to follow the hero from boy to hare, hare to greyhound, hound to fish, fish to bird, bird to grain of wheat and thence to a child blessed with wisdom and great good fortune. The wonder is, after all, that there are not more transformations.

Part of the magic of life in Lomaland is the great number of transformations that take place. Sometimes it is the places that are transformed, so suddenly, so unexpectedly, that only the magic of brotherly hearts and willing and skilled hands could possibly bring it about.

One of the places that has experienced this many a time is the Rotunda of the Academy. You see it in the picture; the Râja Yoga pupils are taking part in a musicale. If you had been here on Christmas night you would have seen it arranged with beautiful scenery and what looked like miles of green garlands, to look like the palace of Santa Claus, with Lotus Mother in the center and the children close around her, their hearts still throbbing with welcome, for Lotus Mother came home to Lomaland on Christmas Morning.

After the New Year, it soon became evident that the holiday festivities were not over but that still another interesting performance was going to take place. In Lomaland when there is a stir in the air that surely means a festival or gathering of some kind, the people—grown-ups and children alike—refrain from asking "What is it going to be?" "What now?" They have found out the delight of being surprised. It is a good plan to take a surprise when you can, for everyone's turn comes to be in the secret and then he can't have a surprise.

When the invitations were received from the Râja Yoga children every one accepted them, and it was a goodly audience of parents and teachers, friends and visitors, as well as children, those who were not in the play—it was a play!—who filled the Rotunda and admired the beautifully arranged stage that had been carefully built by some of the teachers and the big brothers, with curtain, wings, and footlights.

The stage was built, yes, and the stationary scenery arranged, and the orchestra played two numbers, but everything else was done by the Râja Yoga girls themselves. They wrote the play, a dramatization of a favorite story, made the costumes, planned the scenes and the apparatus by means of which certain wonderful occurrences came about, taught the performers their parts, took charge of the properties, shift-

Lomaland Photo. and Engraving Dept.

IN THE ROTUNDA OF THE ACADEMY AT POINT LOMA

ed the lighter scenery, managed the curtain, and besides all this provided a program of vocal and piano solos, recitations and dialogs which filled the intervals between the acts.

The play showed the stages by which the transformation of children, and also of parents, takes place. Nowhere in the world could parents and children in an audience have followed so appreciatively the scenes of this play, because here old and young continually see these very changes going on. From the moment when the king, seated, crown on head and scepter in hand, cries out in despair over his naughty, selfish little daughter, "Haven't we given her every mortal thing she wished for?" to the close of the play when the little Princess returns from her long schooling at the Wise Woman's, sweet and lovable, a Princess now indeed, every one listened with deep interest. They had, most of them, found in Râja Yoga the training that the Princess Rosamond received in the magic dwelling of the Wise Woman.

Parents and children were indeed one in their interest that evening in a very significant way. For Theosophy comes to no man or woman, and Râja Yoga comes to no boy or girl, without bringing the Wise Woman in some guise, giving them the opportunity to begin to know themselves, as she did to the Princess and the shepherd's daughter in the play. It was easy to recognize the hard places that have to be fought through, in the experiences of Rosamond and Agnes and their parents. Read about it and see if it is not so, in "The Double Story" by George Mac Donald, the Scotch poet, story-writer, and lover of children, who in this story lays before us deep truths about human nature.

For instance, how many can remember well that as spoiled and petted children, they were wholly unaware of their own selfishness, cruel-

ty, and uselessness? and also remember the disgust they felt for themselves when the mirror was held before them and they at last learned the true state of affairs? Râja Yoga teachers have only to look around to recognize how many hearts of gold there are among young folk and little folk, long covered over by their awful faults, which no one had yet been wise enough to teach them to overcome. Selfishness, imperious or merely complacent disregard of others' happiness, cruelty, bursts of temper, sullen moods, laziness, distrust of any but indulgent kindness—how many young people, and old ones too, are perishing in misery because no one taught them how to transform themselves by overcoming these faults! But the Founder of Râja Yoga Schools is now doing what the poets have written about.

A strong appeal is needed to awaken the hearts of young folks so that they will themselves ask for help, will themselves knock at the door of the magic house, will have courage as had the Princess Rosamond to brave failure in the mood-chambers, and learn to look with love instead of with fear into the eyes of the teachers who are wise enough to know that firmness, even what seems severity to the self-indulgent, is at times the force that will help to break away the icy sheaths that cover the golden heart.

The Wise Woman, the magic dwelling in the wood, the enchanted picture gallery, are you not familiar with them all, dear Râja Yogas? And more, do you not know the joy with which the Princess Rosamond looked upon the Teacher who courageously challenged her Divinity? Do you not know the thrill of compassion which stirred in the Princess's heart when having gone a few steps upon the way, she gladly took the hands of her blind loved ones to lead them towards the Light?

GENTIAN

# THE CHILDREN'S HOUR

## The Story of Narcissus

LONG ago there lived a boy named Narcissus who was very beautiful to look at, but I am sorry to say he was as selfish and cold-hearted as he was beautiful, in fact, he seemed almost incapable of loving anything or anybody.

He did not know of his great beauty for a long time, for his mother had once asked a wise man if her boy would grow to manhood and the wise man had answered: "If he never recognizes his own features." The mother did not quite understand what the wise man meant then, but loving her boy dearly, she took great care that he never got a chance to look into a mirror. Now it happened that Narcissus often went to a beautiful wood where there were young deer and wood-nymphs and birds of all kinds. These all loved Narcissus because of his beauty, but Narcissus paid little heed to them, he was only thinking of what he could do to amuse himself.

One day he was wandering in the woods when he came suddenly upon a little brook hidden among the trees. The water was clear as crystal. Narcissus stooped over to get a drink, and in the water he saw the most beautiful face he had ever seen. It was his own reflection. So fascinated was he by it that he stayed all day gazing at himself in the water. In the evening his mother found him and wished him to go home, but the moon had risen and shone on the water, and so taken up was Narcissus with looking at his own face that his mother could not persuade him to leave the spot. He refused even to eat, and, day and night, remained gazing into the water.

Just as anyone who, intent upon gratifying the wishes of the personal self, becomes more and more deaf to the calls of the Higher Self, so Narcissus, thinking only of his own face, was unmoved by the entreaties of his mother and his companions.

Soon he began to grow thin and pale, and in quite a short time, died. The wood-nymphs and the water-nymphs and the young deer all mourned his death for, living in the woods, they had watched over him all the time he was so madly fascinated by a mere reflection.

When they went to carry his body away, they found it had vanished altogether. Instead there was a beautiful flower growing where he had lain so long by the brook.

To this day, the beautiful flower, called the *narcissus*, may be found near quiet pools, gazing at its own reflection in the water.

## Lomaland Hills

THE sun had just disappeared in the sea like a great ball of fire, leaving a golden sky behind it. Perching on the top of a new tent on one of Lomaland's hills, a very old linnet gazed about in dismay and exclaimed

Lomaland Photo. and Engraving Dept.

TWO DUTCH LOTUS BLOSSOMS

## DUTCH LULLABY

Eugene Field

WYNKEN, Blynken, and Nod one night

Sailed off in a wooden shoe—

Sailed on a river of misty light  
Into a sea of dew.

"Where are you going, and what do you wish?  
The old moon asked the three.

"We have come to fish for the herring fish  
That live in this beautiful sea;  
Nets of silver and gold have we,"  
Said Wynken,

Blynken,

And Nod.

All night long their nets they threw  
For the fish in the twinkling foam,  
Then down from the sky came the wooden shoe,  
Bringing the fishermen home;  
'Twas all so pretty a sail it seemed  
As if it could not be; [dreamed  
And some folk thought 'twas a dream they  
Of sailing that beautiful sea;  
But I shall name the fishermen three:

Wynken,

Blynken,

And Nod.

Wynken and Blynken are two little eyes,  
And Nod is a little head,  
And the wooden shoe that sailed the skies  
Is a wee one's trundle-bed;  
So shut your eyes while Mother sings  
Of wonderful sights that be,  
And you shall see the beautiful things  
As you rock in the misty sea  
Where the old shoe rocked the fishermen three:

Wynken,

Blynken,

And Nod.

"Where, oh! where are all the shrubs and bushes gone?"

"Oh, do you not like it?" asked a lark who was also gazing about, but with great satisfaction.

"Like it! alas! to have my dear old shrub, that I have built my nest in year after year—for I don't know how long—torn up by the roots and simply vanish, just because I was away for a few days."

"Well, I am sure it would have gone just the same if you had been here," answered the

lark drily. "If I guess rightly, this hill is to be put to much better use than growing shrubs and sage-brushes."

"Now don't say anything against them," quickly interrupted the old linnet.

"Certainly not, my dear linnet," politely answered the lark. "Of course we know that our old friends have preserved and enriched the soil by covering the ground for years with their leaves; I doubt if richer soil could be found in the world, but you know that without change there is no progress. Our beloved shrubs have but prepared the soil for trees and flowers such as we see on the flat below by the sea."

"And do you think that maybe the children will come and play under the trees as they used to come gathering wild flowers that grew among the shrubs," asked the linnet, forgetting for a minute her sorrow for her old friends.

"They will, you may depend on that," answered the lark positively, "and we shall build our nests in the trees and watch them and sing to them, and they may sing to us. It will be much better than shrubs, I assure you. Besides, you know where there are lots of trees, there will be more rain and then the shrubs on the other hills will be green all the year round."

"You certainly make me feel more cheerful about it, with your bright pictures of the future," answered the linnet. "I am very old and maybe a little set in my ways; but I shall make my home on the hill beyond the cañon and watch the trees grow."

"That's right," cheerfully answered the lark. "Things move swiftly at Lomaland, but I guess that hill will keep its shrubs yet awhile. I admit I am fond of shrubs and sage bushes myself. Come, let us go there now."

Away they both flew and settled for the night in an old sage bush, where naught could be heard save the roar of the waves and the crickets singing their nightly lullaby.

"Ah!" said the lark, "this majestic old hill always makes me think of eternity, of the ages past and the ages to come."

"It does indeed," answered the linnet. "It is the nicer hill after all. I have been on the other hill for so long I thought there was no other place. It is so peaceful here, away from human habitation—just alone with nature."

Then they both went to sleep. AUDREY

COURAGE is a virtue which every man should possess; but too much courage can easily become dangerous, as it seduces us very often to desire obtaining everything by force; and then things go ill with us generally. Rightly says the proverb: a hard thing is easily broken. Therefore one obtains better results through gentleness and generosity than by vehemence and recklessness. — *Iyēyasu*

## LAST SUNDAY AT ISIS THEATER

Professor H. T. Edge Gives a Very Interesting Address on "Theosophy and the Bible"

A LARGE audience greeted Mr. H. T. Edge last Sunday evening at Isis Theater, San Diego. The speaker made a most interesting address on the Bible, and announced that he would continue his subject on the Sunday following. The following is a synopsis of the speaker's remarks:

The Bible, as everybody knows, consists of two parts, the Old Testament and the New. The particular collection of books contained in the Bible is called the Canon. When this particular selection of books was finally made in its present form we do not exactly know; we only know that from time to time in history, books were added or excluded, until at some unknown date the collection assumed its present form. The New Testament Canon was not finally closed until some centuries after the Christian era.

In addition to the books contained in the Bible, there are a good many similar books which were not included; these are known as the Apocrypha and the Apocryphal New Testament, and many of the books in them are equal to those in the Bible, and some are better than some that are in the Bible. Then again there are various translations of the Bible, differing more or less from each other.

What reason have we for believing that these particular books are inspired? Some will say, the authority of the Church. But, while I do not profess to have gone very deeply into Church history, so far as I have gone into it, I find that it is even more uncertain than the history of the Bible. We cannot trace any definite line of connexion between the authority of the Church and Jesus or the Apostles; besides which there are several different Churches, each claiming sole authority.

Others will answer that we must base our belief in the Bible on the internal evidence furnished by the value of the books themselves. This may be a reasonable argument, but the claim will be very difficult to establish for anyone whose acquaintance with sacred books extends further than the Bible. In fact the Bible is but one out of a multitude of sacred books.

The clergy who try to support Christianity in face of modern criticism take various attitudes; and any one of these attitudes is excellent, considered apart from the others. But they conflict with each other; one bases Christianity on the man Jesus, another throws over Jesus and bases it on the Christ spirit; another bases it upon the Church.

I cannot be accused of lack of sympathy with the feelings of those who reverence the Bible, because I am the son of a clergyman of the Established Church of England, and was brought up to reverence the Bible and Christianity. I was always religious, and I cannot feel that in becoming a Theosophist, I abandoned the ideas of the Eternal Spirit or God and of the divinity within myself, that I always had. I merely broadened the ideals of Deity and man's divine nature. It cannot be called a derogation of the ideal of God to give up the absurd things which are often taught about him.

Modern criticism makes a great fuss about the Bible being derived from Chaldaea. But why make such a fuss about Chaldaea, when many of the Bible stories can be traced as common to Chaldaea and India and Egypt and the Norse Eddas, and even to the ancient Americans? The story of Jesus Christ finds a parallel in the story of Siddhārtha. The

Massacre of the Innocents is found in the Brāhmanical conditions concerning Krishna. The Immaculate Conception is found in India, Egypt, China, Persia, Greece, and among the Mayas of ancient America. Some of the Church Fathers admit that the Christian sacraments were copied from the "pagan" Mysteries, and Augustine says that "the thing we call Christianity is not new" but has existed from all time. Prescott in his *Conquest of Mexico* gives accounts of Aztec baptisms and holy communion rites similar to those of the Christian Church, yet dating from times too remote for there to be any Christian origin for them. Instances might be multiplied endlessly, but I must not weary you with more quotations.

The reason for this universal similarity among the doctrines and rites all over the world is that they are all derived from a parent religion—the Wisdom-Religion or Secret Doctrine, as Theosophists call it—which was a common parent, just as languages are derived from a parent language and races from a parent race.

It is indeed necessary that we should enlarge our religious conceptions to keep pace with our enlarged knowledge in scientific and historical subjects. Geology and astronomy introduce us to stretches of time counted by the hundred million years; and archaeology is showing us the records and achievements of great civilizations that existed in prehistoric times. With all this, it is absurd to go on holding such narrow views of religion.

The Wisdom-Religion was once universally known, but an age of spiritual decline succeeded to the more enlightened times of antiquity, and the knowledge was withdrawn from publicity, to prevent it from being profaned. Besides this, there was a wave of destruction that swept over the earth soon after the Christian Era, during which bigots thought it their duty to destroy all traces of a knowledge which in their ignorance they considered pagan.

Next Sunday I propose to consider the story of Creation and other stories in Genesis, with a view to showing how, properly interpreted, they contain the teachings of the Wisdom-Religion, now called Theosophy.

OBSERVER

### Some Thoughts on the Crusade of 1907

(CONCLUDED FROM LAST ISSUE)

"Another aspect of this crusade was the press campaign. Most of us have watched the performances of Japanese ju-jitsu men. A brawny Occidental attacks the slight and meek-faced professor. Why, the man a champion wrestler, a great hero of the music halls, a few minutes ago—now something has flung him across the stage, he is a mere doll, quite beaten. 'Quite simple,' says the ju-jitsu man, 'you have only to use your opponent's strength. I did not fling him, but caused him to fling himself.' Was there a kind of ju-jitsu about this press campaign? A rumor of Katherine Tingley's coming began to patter on the sheets of the press in England about a fortnight before she arrived; a drop, that is, a notice, here and there, like the beginning of a thunder storm. On August 17th, when she reached London, the storm came on, and there was not, you may say, a dry paper in the land. It was amusing to go about London that evening and see the blazing posters, and hear news-boys' yells. The rain (of press notices) kept on for weeks, and the weather is distinctly showery yet.

"It reminds one of the Cave of the Echoes, in

H. P. Blavatsky's story. You whispered a word or two in at the mouth of that cave, and what you said was repeated by echo on echo, each louder than the last, until the little word you whispered thundered and boomed and crashed through the mountains, and you feared the world would be riven by the great volume and tumult of sound. So it was with the press. Mrs. Tingley refused to be interviewed on Euston Station, or during the first afternoon at Avenue Road. With each moment of delay the press men became more insistent in their demands, and when at last the few facts were spoken—why, the whole cave was crowded with echo demons from everywhere, lungs filled, mouths stretched, frantic with waiting to shout and shout and SHOUT!!! How the sound went round the world, too, when they began! Here is the bare framework of their news items:

- (a) That Katherine Tingley had come to Europe
- (b) To establish Rāja Yoga Schools
- (c) on land she had acquired in Sweden,
- (d) on land she had been given in England
- (e) by the Hon. Nan Herbert, etc.—
- (f) on the lines of the Institution at Point Loma; and
- (g) That the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY has no connexion with any other society or body calling itself Theosophical and not recognizing Katherine Tingley as the Leader and Official Head of the Theosophical Movement throughout the world.

"It must not be supposed that even the greater part of the press were unjust or romantic. All the reputable London papers gave fair and favorable reports; excellent articles appeared in not a few of them, with copious illustrations, of the Leader, of Lomaland, and the Forest. But also there was the Yellow Peril—Press, we mean. There were eyes in fine frenzy rolling, and airy nothings innumerable were given local habitation and name. Those seven items above were a foundation on which were built marvels of phantasmal architecture. Strange young reporters were about headquarters those days taking notes and seeking weird information. 'Is it true,' said one of them to Katherine Tingley's representative for the Press, 'is it true that Theosophists have a creed?'

"'No, my dear sir, it is *not* true; and it is not true, either, that Theosophists have no moral code, or that they believe in the transmigration of human souls into animals, although there are those, doubtless, who will tell you these things, and say that they are Theosophists, and "ought to know." Do you wonder any longer at that last item in the lay figure of crusade news above, that about Katherine Tingley and her students refusing to identify or associate themselves with the 'other societies calling themselves Theosophical'? The greatest malefactors in the world are, absolutely, brothers to all of us, and no one can escape from the law of human unity. But while a man is sane, he will not associate himself with—well, there are many people he will not associate himself with, in work of humanitarian or spiritual reform. In other words, Theosophy does proclaim and exact the highest moral code, and whatever thing or person does not, is not Theosophy or Theosophical. Right over the world the press proclaimed this dissociation, and right over the world it was a fair and proper thing that this should be proclaimed. Many of the most inimical papers were the ones that proclaimed it most insistently—which is what reminds one so much of the ju-jitsu principle."

## The Architecture of India

OUR illustration shows a portion of a characteristic modern Hindû Temple of the pagoda type. The chief feature of such structures is the high pyramidal tower, which is built in this case on the wedding-cake style of composition, though there is a certain lightness and elegance which must not be overlooked. Its flimsiness is in great contrast with the solidity and extremely massive construction of the antique temples of India, which occasionally rival the Egyptian in the size of some of the stones.

There is much obscurity about the origin of Indian architecture, and the best Western authorities differ greatly as to dates, the effort of many being to minimize the length of a civilization powerful enough to have produced such works. Indian architecture has been classed under two heads: 1st, the constructed buildings, those built up in the ordinary way; and 2nd, the cave temples and those that are hollowed out of the solid rock. The latter are so cunningly worked that in many cases—such as in the seven large pagodas at Maivalipowgram—they appear to be really built of separate stones. The caves of Elephanta are truly caverns and their age is not ascertained satisfactorily; but they are obviously immensely old. Robertson, a leading authority, says it is worthy of notice that "several of the figures in the caverns at Elephanta are so different from those now exhibited in the Pagodas as objects of veneration that some learned Europeans have imagined they represented the rites of a religion more ancient than that now established in Hindûstan."

The most perfect pagodas are found in Southern India where they have escaped the fury of Mahometan zeal. They consist of sundry enclosures with few or no windows. They are sometimes of immense extent, such as at Seringam, on the Coromandel coast, where the outer walls are four miles in circumference. The interiors of these mysterious edifices are usually extremely dark and artificial light is necessary. Although the interiors are richly decorated, and in many cases blazing with jewels, those who have been permitted to penetrate a short

distance within have generally reported the chambers and passages to be unclean, owing to the smoke of the lamps and the presence of numerous sacred cows.

Hindû architecture is noted for an extraordinary exuberance of detail, rivaling the Egyptian hieroglyphic decoration or the flamboyant Gothic in this respect; but there is one

tail of the most overwhelming nature. For instance the great and noble Indian epic, the Mahābhārata, when compared with the calm, steady-moving dignity of Homer, resembles nothing so much as a wild carnival of tumultuous phantoms. Nevertheless the ancient Aryan philosophic works contain treasures of wisdom and the temples possess a picturesque beauty all their own, but in both the average European is bewildered by the abundance of detail. The Mahometan style of architecture, which was introduced into India comparatively lately, is very different; the details, while of exquisite beauty, are completely subordinated to the main design, giving to it a peculiar breadth and dignity. STUDENT

## French Literature

A MEETING has been recently held at the Sorbonne, Paris, under the aegis of the French Foreign Office, to organize a movement for the establishment of centers in the United States and in Great Britain where the works of the best French authors may be exhibited and sold. This is in order to counteract the bad impression of French literature prevalent in English-speaking countries, owing to the large circulation of "Parisian" works of fiction which misrepresent the French character and which, it is said, are produced mainly for foreign consumption—for people who like that kind of reading. The first center will be in New Orleans and will be followed by one in New York. STUDENT

## Greek and American Indian

A N American artist who has devoted considerable time to the study of our North American Indians declares that in the finer types among

them we have a worthy substitute for the ancient Greeks. For some years Indian subjects, in the different forms of art, have been gaining in popular favor, showing that we are awakening somewhat to the picturesque beauty of the Indian model. "Not only do our Indians, where not ruined in health by 'civilization,' approach the Greeks in dignity and beauty of form," he says, "but there are also their interesting myths and their feeling for the poetry that lies in elemental forces." H. H.

difference between the Indian and most other styles that seems deeply rooted in some fundamental temperamental distinction of character. In western Europe the decorative forms, and in Egypt the hieroglyphs, never interfere with the broad effects, but in India the principal form is lost in the multiplicity of ornaments encrusting the whole building; they decompose it and too often leave a restless impression. The same thing is observable in Indian literature. Even the finest teems with minute de-

# THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

Central Office Point Loma California

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West.

## The Crusade of 1907

WHO is the right one to judge of the historical importance of any event? Something happens, seemingly a trifle; something results from it, perhaps a dozen in the world perceiving the relation between the effect and its cause; that effect is cause for something greater, that for something greater still, and presently an empire falls or is born, a whole section of the human race moves forward into the light, or is driven back for an age or two into the darkness. Which was the more important—the final splendor or ruin, or the first unnoticed act which was the seed of it?

If Katherine Tingley's students exult over the work she has done during her recent crusade in Europe, they have all history for their warrant. The only question is, whether humanity is all helpless clay, or whether there is flame to be found somewhere to inspire and purify it, and a possibility of the angel in man overcoming the demon until the world is free from its burden of ills. It is faith in this latter possibility that makes Theosophy a power to uplift and a power to reckon with. This faith, and the belief that we have now in the Rāja Yoga system of education established by Katherine Tingley, with all its marvelous results, the spiritual Archimedean lever *in actu* at last.

In thinking of this crusade, we should do well to remember that however great is the seen, it is the unseen which is of the most importance. The ice mountain towers above the sea; all its height and beauty and glitter are only indications of the vast mass beneath the surface, which cannot be seen. This oak is imposing enough now, but thought of as the mother of a hundred thousand acorns, progenitor of the forests of a continent, how much more so! The apparent and immediate results of the crusade, the only ones which can be spoken of, were by no means small. They were great, indeed startling. A rumor of it went round the world and caused a stir in the Press of four continents. Thousands, millions, have been enabled to learn that Theosophy is *not* connected with astralism, hypnotism, clairvoyance and the like; that Katherine Tingley and her students are quite well aware of what they are doing, in repudiating the Theosophy of those who endorse these and worse things.

One great object of the Crusade would seem to have been to bring a few such facts as these before the attention of the world, so that things misunderstood might be made clear. About the great teachings of Theosophy there is a big, divine, manly ring, a sane helpfulness, a power to encourage, which make them pre-eminently the thing that humanity needs. But humanity would be poisoned by any teaching that has no moral code. Any right-minded person would agree to that. The only wonder is that it should need stating at all. It does so need stating,

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

because a person whom the public have been accustomed to think of as a representative of Theosophy, has recently told the world that Theosophy has no moral code. It is therefore very necessary that it should be understood, that people with no moral code are not Theosophists, that whatever doctrine they may be preaching, it is not Theosophical.

Wonderful it was, how events and persons conspired to publish forth these facts. Katherine Tingley arrived at Euston Station, London, at about midday on August 17th, drove up from there to 91 Avenue Road, the European Headquarters, and declined to be interviewed by certain pressmen. What magic was involved in these simple acts and abstinences! They set the London Press agog. Some of the evening papers proclaimed these and a few other facts, and fancies innumerable to the world, with shriek headlines and sensational posters and all the paraphernalia of the marvel-mongers. In truth, the Headquarters were besieged by pressmen for the next few days, pressmen reputable and pressmen saffron-hued. The former got the information they wanted, and used it well. The latter had scented the marvelous, and came with weird expectations. They saw nothing that they expected to see, but that mattered very little to them. To what end is a man endowed with imagination? Weird indeed were the tales which appeared in certain papers for a day or two. Weird also was the change that came over them after that time. In one paper there had been two days of diatribes and insinuations, then, heigh presto! a column of honest news about Point Loma and the Teacher's humanitarian work in Cuba and elsewhere. All the reputable Press was just friendly from the start, and nothing could have been more appreciative than the accounts of the work given by the best London and provincial papers.

But one thing was emphasized by one and all. All remarked on the fact that the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY had no connexion with the "no-moral-code" people. Hostile papers deemed this a good enough means of attack, as showing intolerance and so on; better class papers stated it without prejudice, as a plain fact, an item of news that ought to be known.

So it went over the world, and Press cuttings poured in from far and near. South African papers proclaimed that Katherine Tingley was in Europe; Indian papers told of her new schools in England and Sweden; Japanese papers printed the same news,

and all, from Sweden to the Cape, from Ireland to Japan, repeated in varying tones and terms the fact that the UNIVERSAL BROTHERHOOD and THEOSOPHICAL SOCIETY has no connexion with any other society or body calling itself Theosophical, and not recognizing Katherine Tingley as the Leader of the Theosophical Movement throughout the world.

Another aspect of the work of those first few days was the meeting

with the Teacher of members from all parts of England, Ireland, and Wales. Little can be said of the meetings which were held, but a touch was given to each individual member that will not be forgotten, and the results will be seen in new vigor put into the work.

Then came the journey to the New Forest, with all it means for England in the future. Surely there is no more beautiful place in England than Berry Wood in the New Forest. Much has been written of the place, since Katherine Tingley made it suddenly famous, but its beauties are more than can ever be told. One would say that those ancient, immense beeches have had some secret or other whispered to them, some arcane and beautiful knowledge, for lack of which mankind has lost its dignity. They are like great, spraying fountains of flame, those trees; or they are like ancient warriors, every one of them *sans peur et sans reproche*, enchanted there and waiting. You are in fairyland when you come into the forest. The dullest imagination will find illumination there. How is it that whenever a piece of land falls into the possession of Katherine Tingley, it is sure to be rich in beauty and historical interest? Students of Theosophy have come to look forward to a time when all the most beautiful places in all the countries of the world will be dedicated to the most sacred purpose we can conceive of—the education of the children on such lines as shall enable them to go through life without any stain or weakness on them. This is Rāja Yoga, the "Royal Union" of the faculties, the science of doing the right thing in the right way "every time."

In that beautiful place, between the beeches and the heather, lies the land on which Katherine Tingley is to establish her International Theosophical School. What stores were there collected together, and what confusion reigned over all! Those who saw the Teacher at work there have reason to remember it. Chaos became a little more like Cosmos with every order she gave. There were lofts and barns and cottages full of things to be gone through, to be sorted out, things valuable and things worthless—and again, cottages, barns and lofts. "Things" one must call them, for no other word is comprehensive enough. Bedsteads and beehives, pianos and teapots, school books, tin boxes, "all kinds of music"—all confused and stored away with the broken and worn-out furniture of years.

Students'

Path

Within a week the Teacher had brought things so near to the beginnings of order as to enable her to leave that work to be continued for the time by some of her helpers, that she might go on herself with her crusade into the northern lands.

Then Sweden, with its huge public meetings, its widespread enthusiasm, its dedication of beautiful, legend-haunted Visingsö in Lake Vettern. This is perhaps the most beautiful place in all that pure, old land. It was too, for centuries, the moon governing the tides of Swedish history, and before history began, legend was busy with it. For it was there that Kettill the Runer enchained the malignant Gilbertil, robbing him of his power to harm the sacred island. There too, was, perhaps is, the palace of Vise, the Swedish prototype of wisdom; under the lake the passionate Vatte is still held spellbound for his rebellion. Strange that this idea of the Bright power setting spells on the evil and subjugating it, should be thus associated with the island where Rāja Yoga was to be established.

There also lived Birgitta, the Swedish Saint of the Middle Ages, who was a terror to them that loved darkness, from Stockholm to Rome, a great nun and countess, feared of Popes. Then it was there that the great Earl Brahe established his school; forerunner of the school Katherine Tingley is to establish, because Per Brahe strove to make it a place of something more than the mere mind and memory training which passes for education.

What a welcome Sweden gave to Katherine Tingley! In Helsingborg, Jönköping, Gefle, Stockholm, Upsala, Falun, Malmö, crowds were unable to gain admission to the already overcrowded theaters where she lectured; crowds again were waiting at the doors to thank her as she passed out. For the true Theosophy does spell encouragement, and new hope, does suggest the way by which difficulties may be made smooth and failings overcome. Perhaps the keynote of the Teacher's message to Sweden was the great uplifting moral power of Theosophy. Away with hypnotism, astralism, non-moralism, spook-craft! H. P. Blavatsky came to warn humanity of the danger of these things, to show human brotherhood as the goal of our evolution, as a thing practicable, attainable; also the means of attaining it. William Q. Judge's mission was the same, and Katherine Tingley's mission is the same. In a very wonderful way Sweden responded to it. Sweden, and also Finland, when the Teacher lectured afterwards at Helsingfors.

Then, too, there was the establishment in Sweden of the International Brotherhood League, of which Mr. Torsten Hedlund was made Director. Through this League Katherine Tingley was able to reach and influence the best artistic circles in Stockholm, and many of the foremost poets, artists, actors and musicians in Sweden became interested in Theosophy and anxious to read the Theosophical literature. Nor, in considering the value of the Crusade, must one forget the long interview at Drottningholm between Katherine Tingley and the late King Oscar.

Supposing the true inwardness of all these events could be uncovered, and ordinary people and cynics and critics and all of us could see the results and hear the last vibrations in time of the things going on about us now. We see the fingers strike the notes, but are deaf to the music for the time being. For this reason is it difficult to estimate the value especially of certain episodes in the Crusade. What shall we say of the visit to Russia, for instance?

One thing we may say, and that is, that it enabled Katherine Tingley to understand in a wonderful way the conditions out of which H. P. Blavatsky fought her way. Numberless gorgeous churches with millions of dollars' worth of gold and jewels within and appalling misery, poverty, starvation and hopelessness begging at their doors. Russia chained, bowed down, filthy, ground between an upper and a nether millstone—it was yet out of Russia that came the heroic woman who set herself to bring light to humanity, and in so daring, brought on herself the opposition of all the evil in the world. Assuredly it was not for nothing that Katherine Tingley went to Russia.

From Russia the Crusade returned to Sweden, where yet another public meeting was held; from Sweden it proceeded to Paris, and from Paris to Geneva. At the latter city Mrs. Tingley remained for about a fortnight, and was able to lay down plans for an extensive propaganda work throughout Europe. From Geneva she returned to England, where further work was done in the New Forest.

Then came the Crusade to Holland, with its great public meetings at Amsterdam, Groningen, and Arnhem, with its display of public enthusiasm, its many far-reaching results. In Arnhem particularly the success was magnificent. Here the efforts of the Dutch members in getting up the meeting were augmented by the volunteered assistance of a large and influential body not in any way connected with the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY.

There is a singular freedom and fearlessness about the Dutch people which bring them very near to the Light in many ways. The best magazines in Holland have been very friendly to Theosophy for some time and have been glad to accept long contributions on Point Loma and the work, pictures of the three Leaders, of Headquarters etc. Magnificent results, these, of the enthusiasm of the members in Holland and of splendid augury for the future of the brave, sea-defying little land. We have heard many dolorous prophecies from time to time about the national future of the Netherlands; they are to be swallowed up by some of their powerful neighbors, we have been told. But there are bends and crooks in history—human affairs do not run on straight lines. Great nations rise among peoples to whom the would-be prophets have given no good destiny, and tiny States have given peace and learning, or set the standard in art, romance or spirituality to the world. There is, perhaps, a grand future before Holland. The light of Theosophy is very bright there, and the Dutch Theosophists are of the kind that do not allow obstacles to stand in their way.

From Holland the Teacher went on to Germany, where another great public meeting, the last to be held on the Crusade, took place at Nuremberg, which the devotion of one of the comrades there has made, Theosophically speaking, the capital of the country. Then the Channel was crossed for the last time into England and the Crusade was very near its close.

Very near to it, but not quite there. One other country was to be contacted by this wonderful Light-bringer, Katherine Tingley, before she started on her return to America. The Crusade left Liverpool on Saturday, the 7th of December, on the *Lucania*, for New York. Friday, the 6th was devoted to a flying visit to Wales.

The Crusade of 1907 has been in reality many Crusades. We may speak of a Crusade to London and the New Forest, of a second to Sweden and the North, of a third to Geneva, a fourth to Holland and Germany, and now of this last one-day Crusade to Wales. Mrs. Tingley arrived in Cardiff in the middle of the morning, and left again for London in the evening. We cannot tell what possibilities she may have foreseen of the future growth of the work in Wales. There was a motor ride out over the hills to Caerphilly, with its immense ruined castle, which recalled to her mind Per Brahe's castle at Visingsö. The sun was shining over Wales that day,

and the familiar hills had a new beauty in the December sunshine. The fairy-haunted Garth mountain, as she saw it from Nantgarw, was all shimmering in dim silver and purple, and the air seemed to be full of some new quality of electricity and awakening. Those who know Wales, know that in the last few years there has been there a wonderful stir towards national reawakening. Celtic greatness has been lost and forgotten in the night of time, yet we would say that the race has always kept in its heart, in an almost unique way, reminiscences of an as yet unproven past grandeur, and longings for its return. The oldest Welsh literature is full of Theosophical allusions, full of strange, suddenly-appearing, magnificent beauties which hint of an ancient wisdom and spirituality, forgotten by the minds, perhaps, but whose light and glamor are still in the hearts and imaginations of the people, and in the almost passionate clinging to national ideals so characteristic of the Celtic races. It was maybe, something of this sort that the Teacher sensed on her visit to Cardiff; she sensed too, and spoke of, the great hope that is for Wales in the coming time. The Welsh have, not only in the immediate past, but almost throughout the ages, displayed a great longing after education, struggling for it in the old times even against the stern legislation of English kings and the vigilance of English garrisons. Now Katherine Tingley has promised to Wales a Rāja Yoga School. It is not generally known, even in Wales, how some of the old national heroes, such as Owen Glyndwr, strained after an ideal of this kind. This, its last day, was probably not the least important of the days of the Crusade. Mrs. Tingley met the Welsh members in the afternoon in the bright little rooms of the Cardiff Center in Working Street, and gave them such encouragement and advice as shall make a big mark on all the future work there. It was her first visit to Wales, and will not soon be forgotten by those whom she met.

All real students of history must feel that the present is a time of unexampled importance. Mankind is at a parting of ways, and great changes crowd on us almost unheeded. One of the marks of a great Leader of men is, that he or she will know when to strike and when to refrain from striking; when and how to act in such a way that the action will be carried forward by the "tide in the affairs of men," to the highest measure of results. The present is the spring-tide of the ages; old landmarks are being washed away by the flow, and older landmarks are being revealed at the ebb. In the ideals proclaimed by Katherine Tingley are to be found a new star, a new beacon, to which the eyes and efforts of mankind are gradually turning. Let us go forward!

KENNETH MORRIS

(From the *International Theosophical Chronicle*, London, Vol. III, No. 12.)

"HAVE we not been blessed with the gift of gathering together in clusters like yon birches, and wandering together along the high road of life in harmony and friendship? And is this not a gift more precious than any which the worldly hold so great? Oh why, then, do we doubt? Spring, after the Grave of Winter, shall not be denied us, for it is immortal and eternal, holier and more glorious than all earthly springs; the sun is God and we are the angels thereinto."—OSCAR FREDERIK (*King Oscar II of Sweden*)

THE value of the Point Loma Institution lies in the fact that it has proved the truth of its theories by its success. It has accomplished the mission which brought it into being. It has rescued Theosophy from the domain of an intellectualism which might easily have become more selfish, because more subtle, than the current thought of the world. It has demonstrated that the Theosophic life is the life of practical common sense, and that in the light of its philosophy the shadows pass away and man can enter into his birthright of joy.—Katherine Tingley

## SELF-DEPENDENCE

By Matthew Arnold

WEARY of myself, and sick of asking  
 What I am, and what I ought to be,  
 At this vessel's prow I stand, which bears me  
 Forwards, forwards, o'er the starlit sea  
 And a look of passionate desire  
 O'er the sea and to the stars I send:  
 "Ye who from my childhood up have calm'd me,  
 Calm me, ah, compose me to the end!"  
 "Ah, once more," I cried, "ye stars, ye waters,  
 On my heart your mighty charm renew;  
 Still, still let me, as I gaze upon you,  
 Feel my soul becoming vast like you!"  
 From the intense, clear, star-sown vault of heaven,  
 Over the lit sea's unquiet way,  
 In the rustling night-air came the answer:  
 "Wouldst thou be as these are? Live as they."  
 "Unaffrighted by the silence round them,  
 Undistracted by the sights they see,  
 These demand not that the things without them  
 Yield them love, amusement, sympathy."  
 "And with joy the stars perform their shining,  
 And the sea its long moon-silver'd roll;  
 For self-poised they live, nor pine with noting  
 All the fever of some differing soul."  
 "Bounded by themselves, and unregardful  
 In what state God's other works may be,  
 In their own tasks all their powers pouring,  
 These attain the mighty life you see."  
 O air-born voice! long since, severely clear,  
 A cry like thine in mine own heart I hear:  
 "Resolve to be thyself; and know that he,  
 Who finds himself, loses his misery!"—*Selected*

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** How do Theosophists define Divinity?

**Answer** This question may be said to be typical of the times. These seem to be days of definition and diagnosis.

We have lately tried by means of mechanical appliances to find the weight of what we did not hesitate to define as the soul, and now we may see people who are ready to believe and confidently affirm that it weighs from a pound to a pound and a half avoirdupois. When we can reduce the soul to such measurement as this, what more natural than that we should consider ourselves competent to define Divinity?

The majority of men admit the universality of what we might call the religious instinct. We find it existing always. It is that perception by which man is conscious of an unseen and mighty power in the universe, and in connexion with this it is most valuable and interesting to note what H. P. Blavatsky says regarding the religion of the early races of humanity. The following is quoted from her great work *The Secret Doctrine*:

What was the religion of the Third and Fourth Races? In the common acceptance of the term, neither the Lemurians, nor yet their progeny, the Lemuro-Atlanteans, had any, as they knew no dogma, nor had they to believe *on faith*. No sooner had the mental eye of man been opened to understanding, than the Third Race felt itself one with the ever-present as the ever to be unknown and invisible ALL, the One Universal Deity. Endowed with divine powers, and feeling in himself his inner God, each felt he was a Man-God in his nature, though an animal in his physical Self. The

struggle between the two began from the very day they tasted of the fruit of the Tree of Wisdom; a struggle for life between the spiritual and the psychic, the psychic and the physical. Those who conquered the lower principles by obtaining mastery over the body, joined the "Sons of Light." Those who fell victims to their lower natures, became the slaves of Matter. From "Sons of Light and Wisdom" they ended by becoming the "Sons of Darkness."

... At the dawn of his consciousness, the man of the Third Root Race had thus no beliefs that could be called *religion*. That is to say, he was equally as ignorant of "gay religions, full of pomp and gold" as of any system of faith or outward worship. But if the term is to be defined as the binding together of the masses in one form of reverence paid to those we feel higher than ourselves, of piety—as a feeling expressed by a child toward a loved parent—then even the earliest Lemurians had a religion—and a most beautiful one—from the very beginning of their intellectual life.

As man became more material he lost the perception of his inner divine nature, and religion gradually came to be a matter of form and ceremony, and as he sank more and more into materiality, so did he lose even the real meaning of these.

The lower his capacity, the more elaborate his ceremonial and the more material his conception of himself and Nature. But whatever the formality of service he was always inclined to make of his Divinity a glorification of his own image, and as something outside of and apart from himself.

As the universal Law permitted, the great Teachers incarnated in the different races, to purify their faiths, teaching by many methods that humanity's God dwelt within, and could only be truly worshiped in the temple and at the shrine of the heart.

As time rolled on, these teachings were gradually forgotten, and the great majority of the people through a disinclination for unselfish effort on the one hand, and the selfish dominance of a few of their number on the other, allowed the truth of this Doctrine of the Heart to become overlaid by certain formulas and conceptions as to the nature of Divinity.

These gradually crystalized into fixed rules of belief. As the people grew more and more engrossed with material life, and consequently more and more indifferent to the requirements of the soul, it became convenient and easy to believe that if these rules were accepted and adhered to, the full benefits of the religion would be obtained without further effort on the part of its followers.

Thus was dogma born. Its existence depends upon mental inertia and the presumption on the part of men to define the Indefinable and limit the Illimitable to his own limitations. This desire of his seems to be evident in his relations with his fellows as well as with his God. He knows he has faults of course, everybody has, but still they are as nothing compared with his manifest virtues. His friends and associates, he often feels, might do much worse than to model themselves by him.

Often reformers, inspired by fervent zeal for the betterment of humanity achieve only indifferent results because they are unable to co-operate with others. Although we have made great progress in this regard in recent years, still the hindrances so often fatal to the most effectual help are raised by the dom-

inance of this feeling of egotism. Humanity may be said to *seek* differences, and to *stumble upon* correspondences.

In order to approach such a question as this and arrive at any conclusion, the Theosophist knows he must rid himself, as far as in him lies, of his feeling of personality and egotism. The more he does so, the clearer will his perceptions become. He will see that this Divinity can only be known to man, as he now is, through its manifestations. He *comes* to know, that he must find and recognize it *in himself*.

In *The Key to Theosophy*, H. P. Blavatsky says:

... In our sense, the inner man is the only God of whom we can have cognizance. ... God is a universally diffused infinite principle. ... Our Deity is the eternal, incessantly *evolving*, not *creating*, builder of the universe; that *universe itself unfolding* out of its own essence, not being *made*. It is a sphere, without circumference in its symbolism, which has but one ever-acting attribute embracing all other existing or thinkable attributes—ITSELF. It is the one law, giving the impulse to manifested, eternal and immutable laws, within that never-manifesting, *because* absolute, LAW which in its manifested periods is *The ever-Becoming*.

This may seem very metaphysical to minds trained to think by the orthodox method, and who cling to the Biblical God of Moses. But it will have a strong appeal to others, whose reason cannot accept the idea of a personal God, and revolts at the narrowness and bigotry of many of the conceptions of Divinity as found in the religions of the modern world.

To such a mind the conception of this Theosophical Divinity will grow constantly clearer as he tries by self-purification, unselfishness, and compassion toward all that lives, to make himself a better vehicle for this law of "ever-Becoming."

As he earnestly strives to find this Inner God and learns to live by its guidance, he will gradually become himself a higher and more perfect manifestation of this eternal immutable Law; his every act and thought toward compassion and love for others will have a far-reaching effect that will increase in power with every effort he makes to express this Divinity within him.

Katherine Tingley, the Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, has given to her students the following invocation to the Divinity Within:

Oh my Divinity! Thou dost blend with the earth and fashion for thyself temples of mighty power.

Oh my Divinity! Thou livest in the heart-life of all things and dost radiate a Golden Light that shineth for ever and doth illumine even the darkest corner of the earth.

Oh my Divinity! Blend thou with me that from the corruptible I may become Incorruptible; that from imperfection I may become Perfection; that from darkness I may go forth in Light. M. G.

I AM the origin of all; all things proceed from me; believing me to be thus, the wise gifted with spiritual wisdom worship me; ... To them thus always devoted to me, who worship me with love, I give that mental devotion by which they come to me. For them do I out of my compassion, standing within their hearts, destroy the darkness which springs from ignorance by the brilliant lamp of spiritual discernment.—*Bhagavad Gita*

**The 'Bennington' Memorial**

The memorial which has been erected at the military cemetery on Point Ledge, is a monument to the officers and men who perished two years ago in the disaster which befell the U. S. S. Bennington, was unveiled yesterday by Admiral Goodrich, who was accompanied by the Pacific squadron at the time.

The memorial is a simple obelisk of granite after the style of ancient Egypt, simple in its design, but in its symbolism it stands foursquare to the future and will serve as a reminder to generations. The military cemetery is located on the eastern side of the reservation on a hill overlooking the bay. There was no present on that day, but the occasion is likely soon to be a scene. In the distance on range of purple hills stand out sharply the peaks of a violet and azure sky.

NEAR VIEW OF THE "BENNINGTON" MEMORIAL

### The "Bennington" Memorial

THE memorial which has been erected in the military cemetery on Point Loma, to the officers and men who perished two years and a half ago in the disaster which overtook the U. S. S. *Bennington*, was unveiled on Tuesday, January 7, by Admiral Goodrich, who was in command of the Pacific squadron at the time of the disaster.

A stone obelisk of granite after the design of the monoliths of ancient Egypt, simple in design, without florid ornament, it stands foursquare upon a solid foundation, and will serve as a landmark for many generations. The military cemetery on Point Loma stands on the eastern side of the government reservation on a great height overlooking the bay.

No one who was present on that memorable occasion is likely soon to forget the scene. In the distance, range on range of purple mountains stood out sharply defined against a violet and azure sky. Below them the green foothills and the windows of the city glittered in the distance by the reflected light of a westering sun, whilst far below the beautiful and placid bay reflected the iridescence of the sky in myriads of tidal eddies. To the west, the heights were crowded by a silent and sympathetic crowd of spectators. For hours before the ceremony began, every approach to the cemetery was crowded with vehicles.

As the hour approached, large bodies of troops from Fort Rosecrans, and blue-jackets from the warships *California*, *Nebraska*, *Chicago*, and *Charleston* filed at slow step into the enclosure and were formed up in a hollow square around the plot of ground on which the serried ranks of headstones represented their comrades resting below. The graves were covered with flowers, which were sent by residents in the city, and many beautiful wreaths were laid at the foot of the monument.

The ceremony of dedication was simple and in excellent taste from beginning to end. Its chief feature was the admirable and eloquent address of Admiral Goodrich. He began by a vivid description of the unexpected accident and the causes which led up to it. He described many deeds of heroism and devotion to duty. He told how men wounded to death preferred others to themselves, and how many risked their lives to give assistance to the suffering. He related how sympathy and unpaid help had come from all quarters, from physicians, nurses, railway companies and private citizens. He spoke of the ladies who had helped the sick and convalescent by sending fruit and flowers and carriages for fresh

air drives. His concluding words were as follows:

"The finished obelisk stands here today. It makes no pretense to elaboration of design or of ornamentation, for it merely commemorates the heroism of simple men whose sole guiding motive was devotion to duty. To all it announces that he who enters the naval service of the United States does so unreservedly, in fact as well as in word. At any moment and in any manner he may be called upon to fulfil that obligation to the letter. His life is one of perils and privations. Long years are devoted by him to preparation for one brief hour, upon whose issue may hang the very existence of the nation. The annals of our navy but too dolorously proclaim that this preparation has exacted and continues to exact, its heartrending toll of human life. Yet some must perish that the nation may survive.

"The end of those who repose here was not less exalted in its patriotism than is the end of those who fall in battle. In some respects it seems to be on a still higher plane—for to them were denied the laurels of the victor and the shouts of an applauding populace. Yet as they look down upon this scene today from the heights of their beatitude, they must rejoice in the consciousness that they failed not to give to their country, when she asked it, the utmost they had to give, dying as brave men and true would wish to die, in the performance of duty.

"Nothing we can do will add to their fame. Yet, knowing this full well, we, their comrades, here declare that, so far as our poor efforts can accomplish it, the lesson of their great sacrifice shall not be lost to their native land. In this spirit we dedicate this monument to their memory in token of our own affection and of the reverence in which the navy holds its illustrious dead."

An important feature of the dedication ceremony was the presence of a squad of the Râja Yoga cadets from the Academy on Point Loma. They were drawn up in face of an open space amongst the troops. On their arrival at the ground they deposited at the foot of the obelisk 66 beautiful wreaths as an *International* tribute to the memory of those who had perished in the performance of duty. ## Man's Place in Nature

JUDGING from some remarks in a brief review of a book on man's place in nature, there are some rather confused ideas abroad, both as to man and as to nature. For instance, the writer says that man is the only animal whose development has not been a purely physical adaptation to environment. This is a sweeping statement to make about the other kingdoms of nature. The writer views man from within, but he views the other kingdoms from the outside only. Consequently, in the case of man, he sees the intelligent working of the mind behind the phenomena; while, in the case of the animals, he sees only the phenomena and not the mind working behind them. So he calls the processes of adaptation in the lower kingdoms "purely physical," and those in the human kingdom intelligent. But a being looking at man's doings from the outside and seeing only the effects, might conclude that his doings also were a merely physical adaptation to environment; whereas a being who could contact the mind of nature might discern there a purposeful intelligence at work producing the adaptation. There is no ground for any distinction except one of degree. Adaptation is the result, but the cause must be intelligence somewhere; unless we postulate something to take the place of intelligence. And this is probably what the writer has done, filling that place with "blind forces," such as affinity, which mean nothing. Then again, what is "environment"? Something to which the whole of nature adapts itself? In that case, environment is a kind of extra thing, of the nature of a god. Instead of making a distinction between nature and environment, it would seem better to regard all as nature, the different parts of which adapt themselves to each other.

## No Evolution without Intelligence

The idea of "automatism," or unconscious action and reaction, is meaningless, a "blind force" being something impossible to conceive. The reasons why the writer excludes man from this category are that his power of adaptation is so much greater, and also (as said above) that we are conscious of an intelligent effort in man's case. He says we have begun "to abandon the Kosmic process and adopt the ethical one"; and that the ethical process, since man is conscious of it, ought to dominate his conduct and self-development. Yet, he continues, morality as such is still untaught in our schools, and it is left to arithmetic

## Why not Intelligent Kosmic Processes?

and book-learning to continue our evolution. Teaching, the noblest of professions, is held in light esteem. We know our past and can strive to shape our future. When shall we strive aright?

The sub-title of the book is *An Animal Run to Brain*, which gives an idea of what the author means when he says we know our past. Somehow, according to the theory, from out of the automatic machinery of lower nature, intelligence and conscience have been evolved, and now we have to learn how to use them. It is evident that before we can strive aright and teach morality effectually, we shall need to know more than this about our past and

## Whence Comes Man's Intelligence?

future and about the nature of man and the other kingdoms in the universe. It is well to recognize that man is not a mere bundle of cosmic forces, nor an animal amenable only to the "red in tooth and claw" theory of life; but that he has also a higher law in him, which impels him to higher ideals of conduct. But if this higher motive force has been evolved from nature, it must underlie nature somewhere, and must be the guiding power of the universe. Hence we must study nature from that point of view—as a manifestation of the Universal Spirit, of which man is another and higher manifestation; for it is impossible to build a teachable system of morality on such a basis as the biological theories of science. We must have a better notion of man's constitution: how he is linked with nature by his physical body, and with other worlds by his other principles: how the laws of matter and those of Spirit find their meeting ground within him, and how he has to learn to adjust himself so that the lower law may become subject to the higher; and so on. With such teachings in place of the dogmas of religion and of science, we shall have a proper basis on which to build a teachable system of morality.

## A Reason for Evolution

A few more words may be said about man, nature, and the relation between the two. As this is an age in which we pride ourselves upon comprehensiveness and lucidity of thought, it is as well that we should try to make good our boast and not indulge in perfunctory and hasty speculations worthy only of immature minds and desultory habits of thought. The question of man's constitution must obviously be a complex and profound one, for man is a very complex being; nor can it be settled by any hard and fast theory. Its elucidation demands the co-operation of many different

## KATHERINE TINGLEY AT ISIS THEATER

First Public Lecture since Her Return from Europe

Sunday, January the Fifth, Nineteen Hundred & Eight

I MUST express my delight at meeting familiar faces again at Isis Theater. It was here I began my first work in California. My effort then was to make clear to all with whom I came in contact the great life, the spiritual life that could be found in the teachings of Theosophy. This beautiful California was a new country. It afforded very many possibilities, very many facilities for true progress; for nature here is most bountiful. But in the beginning there were many minds in this state and particularly in this city of San Diego who seemed to be quite indifferent to anything out of the circumscribed line of thought. Only a few gathered here in the early days. Some had the courage to stay half the evening and others stayed the full time, and after a while more came, and more and more. And so it was that I received encouragement in that heartfelt brotherly spirit which was manifest at a time when the shadows of persecution were heavy in this locality, yes — when persecution was pushed in a most unbrotherly fashion; when all sorts of things were done in the name of Christ against Truth right here in this city. Part of it proceeded from the atmosphere of dogmatism that was here, some came from the fanatics, but the stronger part came from a neighboring town. Then after that heart-sickening experience victory came, and then another and another, and the great work of Theosophy with its superb teachings spread throughout the world.

And so under the pressure of the needs of human kind, and in response to the invitations that I had from many places in Europe, I started some months ago, first visiting the Eastern part of this country and then going to England. The last time I was there was about eight years ago, and I could see and feel that a very remarkable change had taken place in the very atmosphere of the country. It was as though years and years had intervened; there was a new order of things in a sense; possibly more confusion of thought in some centers and systems, more pride and self-love, more vice, more worldliness. Yet I felt there was an undercurrent, something of a broadening touch as though many were very, very tired of the world's ways and were determinedly seeking the light. And though I did no public work in England, I had the most remarkable evidences of how Theosophy has spread, and then this experience — I was delighted to find that the work that had begun here at Point Loma had not only introduced San Diego but also the whole coast of California to many splendid people in England. The interest in California particularly was very delightful and also in the city of San Diego and its future. It is certain that this

city is well known in England and that there is a very marked interest in its progress. There is much that could be said of the work that is being done in England, Theosophically and otherwise, which I have not time to dwell upon now — it would interest some but would fatigue others. But it pointed very clearly that all one has to do who has an interest in Theosophy and who can show that it is a living power in his life, is only to go there and begin honest work.

A marvelous growth has taken place in the Theosophical Movement in England. The interest was so very great that I felt that if I had merely gone there and returned without doing anything else I had done very much for California and San Diego and possibly for our beautiful Theosophical teachings and for poor humanity. I presume most of you know of the Theosophical work at Point Loma — unsectarian and non-political as it is — and many of you are interested in the fact that we have an estate in England, about two hours ride from London, which may ultimately be a second Point Loma. I can remember in the early days when I first became identified with the Theosophical Society I talked then about San Diego, that it would some day be a great seat of learning and that some day on those barren hills of Point Loma there would be an International Theosophical Institution. Many doubted, many in our own Society questioned and wondered when it would happen. But it was begun and now it is a growing institution recognized by the whole world as something unique at least, something promising, *something that cannot be undone*. And this new center of Theosophical work in that grand, that superb New Forest, will shine out and send forth its light not only for itself and for England but for other countries. The buildings are there, the grounds are improved, and all around is that splendid forest, so large, so beautiful, all ready and open for the children to sing their songs in the heart of nature, and to grow and to become useful factors in human life. And the interest in this work that was begun in this way has stirred my heart very much.

All through my travels, coming in contact with all classes of people from the poorest to the richest, from the most uncultured to the most educated, those in the low places and the high places, artists and poets and musicians, I have had a most unusual opportunity to study the general condition of the human family. I visited many countries and I saw much that the ordinary traveler does not. I felt and realized the unrest of the age pushing hundreds and hundreds of people out of the beaten walks of life to new lines of endeavor, lines of research for the Truth. They are seeking the

light, they are searching voluntarily for the Truth. And besides this body of people pushing onward towards the Light, of course there are others moving in other directions as well, many alas! on the downward path. But in their midst is confusion and so much that tends to destroy the best in human life.

One thing I realized was that America excels in fads and 'isms; where in other countries there is one foolish and erroneous system of thought springing up, there are dozens here in America. The Europeans are slower in some things, and I was delighted to find that they had not followed the trend of the fanatics and the credulous of America. It was a hopeful sign, though there is much to be found in the thought-life of all countries that shows how the shadows of dogma and orthodoxy have fallen upon the people; how the ritualism, intellectualism and the selfishness of the age have obscured the human mind.

In this way it was that there came home to me in all my experiences, public and otherwise, the meaning of human life. I felt that if it were possible to bring home to the minds of the people, to those searching and those not searching, even to those who are satisfied, the need of grasping the real meaning of human life, then my mission would not be in vain. To those large audiences which I met I dwelt much upon this subject. I called the attention of the people to the doubt, to the despair that was in the human family, to the fact that *the great truths of Christ had been obscured and that the light they were following was not the shining light of the Higher Law*; that those dogmatic systems, those old forms of thought had blinded the people; that they had lost their way and that Theosophy had come — old as the ages, the Wisdom-Religion — to the people of the twentieth century, to awaken the spiritual life of man, to proclaim his divinity, his responsibility, his godlike qualities, his superb possibilities — had come to make known again the esoteric teachings of Christ and of all the great Sages that had preceded him.

Sometimes my audiences looked sleepy at the beginning; some were curious of course, some interested, some only half interested and many doubting everything along life's way. But behind whatever was presented by me there was this touch, this coloring of the life at Point Loma, of the beauty, the glory, the sublimity of nature; how that Institution rested in the arms of nature, in the sunshine, in the glow of all that was grand and beautiful. I always had the Lomaland background to my word-pictures, and so I gave to these people the picture of California and San Diego and the beautiful harbor and Point Loma with its magic coloring — so wonderful, the most beautiful spot in the world.

Then I introduced to my hearers that superb woman Madame Blavatsky, the Foundress of the Theosophical Society; it was my joy to do that — she, the misunderstood woman, who left her home years ago in Russia, and for what! I have been there and I know what her life was — one of ease, comfort, prominence, with means sufficient to choose any path in life; yet this woman came to the Western world and took up a life of sacrifice to bring this unpopular doctrine for the benefit of mankind. Many of my hearers had read of Madame Blavatsky as she really was, but some had heard adverse things about her through the efforts of the enemies of progress. She was not the only great Teacher who has come before the world to be decried, but Madame Blavatsky stands out like one among them. After a while the hearts of my hearers were touched, and then I went on and told them of another — a man who in after years will stand out as one of the great lights of the ages — a simple but remarkable man — William Q. Judge, the pupil and colleague of Madame Blavatsky and afterwards her successor; the man who in New York City, shortly after Madame Blavatsky had left for Europe, there opened a little hall that he might bring out the teachings of Theosophy. He had a light, he had his few seats, he had his books — more, he had his principles, but there was no audience. The next night the same, and the next night the same, and the next night the same, yet the seed was sown. And now we have the results of that work of Madame Blavatsky and the trust of that wonderful, splendid, royal character, William Q. Judge, touching a whole world. There is in his life a lesson for the people; a new kind of trust was born in the world, something that we rarely meet, something that can not be depicted by any external picture. Yet here was the secret — William Q. Judge was a man who had the conviction of his own divinity; his heart was full of love for humanity and the desire to make possible all the helpful teachings that he knew were waiting for mankind. So in New York City in his simple little obscure corner he manifested to the modern world a new demonstration absolutely, of a sublime trust, the Christos trust, that quality of trust which Christ taught and which he had.

This simple picture which I then made, in better words perhaps than now, touched the people. Two new characters, true workers for humanity, were introduced to the world; they realized that these two people came not with a contribution box, seeking no honors, asking no salaries. They came to the Western world unheralded, but ready to lay down their lives if need be that humanity might be blessed. The hearts of my audiences were melted. It was the same in Sweden as it was in Holland, and in Germany and in Finland and in Russia and in other places — wherever I went. There was a common touch of appreciation; something had been awakened and then I knew that all these things had been prepared; that the unrest of the world and the despair and the doubt and the questioning of the age had blended into a voice and had been heard. And the people — the people were waiting for something to come home to them that had the touch of truth, that had the stamp of honesty, that had no form, no ritual, no creed,

and no fear. It was a splendid thing to go before those audiences; it was an inspiration in itself; those hearts talked to me appealingly; their minds evoked the best in me; I seemed to be more than I had ever been before; I felt the strength of the universe in my heart, and I grieved that my voice could not do more.

The meaning of human life, by simple study is to be found interpreted in these glorious teachings of Theosophy. Oh, that superb doctrine that I love to dwell upon in thought and words when opportunity offers — the Doctrine of Reincarnation. Oh, if you could have seen those splendid minds responding to this teaching! Seven years ago I am very certain that the speaker would have been hooted from the platform, but the teaching of Reincarnation has come to the world to stay, brought by Madame Blavatsky at this modern time, though old as the ages; introduced through the Theosophical literature, accentuated at Point Loma and by the representative lodges throughout the world, it has touched the hearts of the people.

I found that some of the most advanced thinkers on the Continent of Europe were playing with this subject rather timidly. Occasionally one would hear of a clergyman who began to touch upon the truth of Reincarnation in his sermons, probably to attract an audience, but would afterwards come back to his orthodox creed. Insincerity and truth do not belong together, they cannot assimilate. Some of these "divine" teachers so called, all representatives of the "Gospel" as they declare themselves to be, could be seen just stepping out a little, feeling that in order to keep up with the times they must move on, but still holding in part to their old rituals. But such as these, I pointed out, were not prepared even to understand the needs of the human family, much less prepared to meet them, for they were unacquainted with the teachings! And so in this way, by first speaking of the false, and the weak, and the deceptive, it was my pleasure to point out these golden, royal teachings of Theosophy, and particularly that of Reincarnation. The optimistic touch of all I said gave new life to my audiences. Applause came unexpectedly. It was not for me, I knew, but it was for the new ideas, the new hopes, that Reincarnation gives to the world — the new picture of spiritual life that it gives in place of that hard, cruel picture of death. There were in my audiences those who had parted from their loved ones, those who had studied this great mystery, those who had hoped and hoped and had hugged their faith but yet were despairing, in tears, doubting — but Reincarnation swept away the sorrow, and in place planted joy, eliminating the despair, and giving new life and hope. It was something to see, something to remember, the joy that came into the faces of the people; and then what followed after at the hotels, and the letters and letters that came to me wherever I went; some questioning, some praising, some crying out their gratitude for my simple message of Reincarnation.

When Madame Blavatsky brought these teachings to the world, she, in her wisdom, knew the needs of humanity; and pushing on with the aid of William Q. Judge and those who have been faithful, she has filled the

thought-world, even the very air, with new life. It is permeating this system and that system; it has touched the hearts of the people in spite of their prejudices and misconceptions. While the minds of thousands are not yet ready to digest it, not yet ready to give up the flesh-pots of Egypt, not yet ready to have that love for their brothers that they have for themselves, not yet ready to make their lives shining examples in contrast to their present lives of profession and hypocrisy, not yet ready — yet believe me, in the hearts, even of these, this new life is stirring, this promise of the twentieth century.

*Study the needs of human life.* This is the message I would send out to the teachers of the world, to the clergymen, and the educators, to the scientists — to all. Study the meaning of human life and then you will know the needs of human life, and when you have gained knowledge from these two efforts, then will come the power, the inspiration to serve. It is this which is needed; it is a new life, it is a new explanation of life. The spiritual life that is surging in the hearts of the people must be made manifest upon common-sense lines. There is too much confusion, and too much doubt. Faith alone will not do; we must have knowledge, knowledge absolute; knowledge, knowledge, and it is near at hand, oh, so very near, very, very, close; and all that it requires is possibly a little more suffering, more heart-ache, just a few more experiences in human life, in losing faith in humanity, in losing faith in themselves — these doubters; more suffering, more heart-ache, more confusion; but out of the chaos will come this superb life, this superb meaning which is yet obscured to the majority because of the selfishness of man.

So Theosophy, and the message of Theosophy, will not have been in vain; it has already touched the undercurrents of human life and the hearts of the human family. It is to be found in the literature everywhere, even in the pulpit, obscured as the references to it may be among the clergy — yet here and there a touch, here and there a touch. But when it is brought out in its simplicity and its purity, when the masses understand that there is proof of the spiritual life being manifested in the twentieth century; that there is a body of people who, beyond question, are making Theosophy a living power in their lives, then they will see the way opening for better things, for themselves, their families, and their nations. Already the results of this effort, up to the time that I have spoken of, have brought an enormous interest in the work and a larger love for humanity. The touch of Theosophy, when it goes deeply into the heart and illuminates the mind, brings about a superb unity, an indescribable something which begins to overcome the selfishness and the weaknesses in human nature; it is a binding force, superb in all its qualities. May it bless all nations.

In Sweden my experience was a revelation: it is a great country, as I had always known. I loved it in my early days when I read of its great historical characters in my school-books. Then I learned to love it more when I found that some twenty years ago three Swedish women went to London — women belonging to time-honored families of the nation, women who had everything in the world to make them

forget the needs of their fellows. But their hearts led them to see Madame Blavatsky, and the result was that they carried Theosophy back to Sweden, and they established it there, and now all Sweden is touched by the Theosophical branches in many towns. And some of the most prominent people there—I mean the most useful, and I use the word in that sense—are connected with our Theosophical work. It was the result of the work begun by those three splendid women, one of whom was the noted literary woman Madame Scholander, who with the help of another, one of the enthusiastic and devoted Theosophical workers in Sweden, Dr. Kellberg, in the early days translated Madame Blavatsky's wonderful book, *The Secret Doctrine*, into Swedish. She and the two others, one a relative of the King, carried Theosophy in their lives to such a degree that it touched hundreds and hundreds of their fellows. Later it was brought to the attention of King Oscar. The poet Rydberg became much interested. He was a man of much ability, but not until after he came into contact with Theosophy did he find his true poetical life, his mystical life, his symbolism; and he wrote so grandly, and at the close of his life in his writings he taught Reincarnation. And this poet, Rydberg, who gave his exquisite poems, his poetical life, and his new thought and splendid logic in defence of Reincarnation also helped to increase the King's interest—for they were friends—and so from the poet on one side and from the Theosophical work of the three women I have mentioned on the other, the King was touched by Theosophy. So it is that all these years while you have been hearing of King Oscar with his splendid statesmanship and his love of his fellows; while you have been hearing of his scholarship, of his wonderful ability on so many lines, you have had a touch of that Theosophical influence that was thus brought into his life.

It was seven years ago that I first met the King—he attended one of my receptions and I had the pleasure of talking to him. I knew then that he was struggling for the truth and I saw that something splendid was touching his life, and then I thought: Oh, if all the kings, if all the kings and leaders of the nations were open-minded as he was, broad and liberal, peace-loving! Oh, I thought, what a wonderful, wonderful body of nations we should have! It is true that this light came late in the King's life and that by his oath he was pledged to the Church and the State. His work for Norway was a wonderful brotherly work—for he had learned to love his fellows, and when I last saw him this time at his Castle at Drottningholm, in speaking of Norway—and when I told him how well I remembered that time when he declared himself opposed to war with Norway and how my heart was touched, how I loved him as a patriot and a brother, and how I knew that I was echoing the admiration and respect of the American nation, of those who love splendid, manly, grand things in human life—he said: "It is true that according to the common idea they should have been slaughtered, madame, but I loved the children of Norway; they were my children as were the children of Sweden, and I could not." Here was a touch of this brotherly spirit, here was the

best in the heart of the King evoked by that love, and I hold that while he was broad-minded, while he was a peace-lover, he was yet more grand in all those potentialities because Theosophy had touched his life. He told me plainly without any effort on my part that he realized so fully those words of Christ, that as ye sow so shall ye reap, and that he so admired the Theosophical interpretation that had been given by me to those words a few nights previously in Stockholm. And I am certain—and I speak of the King not only because he was a King but because he was a great man, and I knew that as he moved along in his experience he was beginning to learn the meaning of human life—I am certain that he went out from this life with a strong faith in Reincarnation, conscious that he would live again, and with a determined will to return some day, somewhere, and work out the splendid aspirations of his grand nature free from the limitations that had held him in the life just past. I know that there are hundreds like him in lower walks of life—some in high places—everywhere, hampered and held down by the limitations and the general conditions that surround the human family, and I recognize them as workers, and in a very large sense as Theosophists, though they do not belong to this Society. And a very large sympathy is always extended to them by the members of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY because their environment will not permit them to work freely.

It is much the same with journalism in Europe as it is in America; I saw not so much difference—though I think I found more dignity, more respectability and conservatism in Europe than in America, and I say this recognizing that journalism is held in, in a way, that it is not in this country, for it must bend the knee for the present to certain conditions and powers in many countries—I speak of respectable journalism. But there is another kind in this country that is bending the knee to the dollar God—a slavery far greater than that in Europe. It is a pitiful thing to find how the beautiful and the true and the noble is shut in by these forms and these conditions; it is very, very pitiful, and I am certain that there are many, many editors today sitting at their desks who would like to sing out their knowledge to the world, and give new light and hope; but they cannot, hemmed in as they are by false teaching and false conditions both in Europe and America. Freedom of speech in its truer sense is not yet before the world. When it comes it is an exception, and so the meaning of life is obscured all along the way.

And now we turn to the educational institutions. I went to that splendid city, that City of Universities in Sweden, Upsala. I have been to other cities, to Oxford and other places, but I was told that if I went to Upsala I should be embarrassed and discouraged. Yet I had to go to Sweden, to Upsala, to find that there are hundreds and hundreds of young men and women crying out, seeking for the truth, ready to fill the seats of that university hall—the largest in Upsala—willing to be silent and quiet and attentive—sometimes you know it is not so with young college boys and girls, but it was so that evening I spoke at

Upsala. But that audience, that crowded hall and the faces of those splendid Swedes, of those young men and young women feeling their way into the new life, and many of the professors and older folk—all in the atmosphere of Theosophy; their faces were beaming, though not familiar yet with the teachings, and the larger number not ready of course to accept—though some did. In spite of much that yet holds back the progress of the nation there was evidenced the beginning of a new life; there was that earnest inquiry that always comes home to one in a way, so honest and so true; there was a readiness to understand; there was a desire to learn more of Theosophy with its philosophy of life; more than that, there was a disposition to set aside misconception and prejudice and also a willingness to know more tomorrow than today. It matters little if not one of them in this century steps out to proclaim the truths of Theosophy, for I know that many of them will be working understandingly for the betterment of humanity, and then new life will come for all in Sweden. And all this because of the work begun by those three unselfish women and by the poet Rydberg; then touched by the King and supported by hundreds and hundreds of the Swedes.

I met others too; I met the great dramatic artist de Wahl, who is to Sweden and Germany as was Irving to England. After one of my lectures in the Royal Opera House in Stockholm, I saw him in tears, he was so touched with the splendor of these new teachings, with the royal life that was opening to the world.

Then I was entertained at the house of Ferdinand Boberg, the great Swedish architect. He also is helping to give to Sweden a new life, broadening out in his work, stepping beyond the limitations of modern architecture. In part his work shows a touch of our Point Loma architecture. In originality of conception and creative power he stands as it were between the classic and the modern schools. His wife, Mrs. Anna Boberg, a brilliant woman, is famous for her Norwegian paintings, and like her husband is original and daring in her work. Studying her paintings one senses the soul touch in the realistic nature-life depicted on her canvas. Here again was evidence of the Theosophical spiritual life, handed down from mother to daughter, for her mother was Madame Scholander, of whom I have spoken, one of the three noble women who first brought Theosophy to Sweden.

Another whom I had the pleasure of meeting was the King's artist, Julius Kronberg. What wonderful pictures those are of his in the palace. They do one good to see them; there is new life in his conceptions, in the forms, the color, the symbolism. King Oscar was a Freemason, and Freemasonry in its purity is very close to Theosophy, and with the touch of Theosophy added to Freemasonry and through the support he gave to Kronberg's splendid efforts, the King anticipated and gave a great impetus to the broader life of his people. It was such a beautiful thing to see: how this artist thus met the King's demands—how his work received a touch of a new creative and harmonizing power of spiritual life through the Theosophical family of Madame Scholander. For Theosophy is cre-

ative, it evokes the soul-life, it ennoble the whole nature, it frees the mind, it inspires. And so it is working indirectly and directly in art, also in music. We also have great musicians there; one of our greatest Swedish workers is a musician, a gold medallist and teacher in the Royal Conservatory in Stockholm. She, Miss Ellen Bergman, was another of those three seekers after Truth who visited Madame Blavatsky in London and introduced Theosophy into Sweden. The third was Mrs. Cederschiöld, who by her own social position and influence and through the influence of her husband, Major Cederschiöld, one of the officials of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY in Sweden has accentuated the teachings of Theosophy. All these departments of life in Sweden were thus touched by the fire of Theosophy, and I found, — I do not mean to say that the whole of Sweden is yet touched, for I think it will be yet some years before it awakens to its fullest possibilities — but I found it in some ways more progressive than other nations. There is much in its national life that would be a blessing to us, something that seems to have come down through the centuries in the hearts of the people in spite of all the limitations and hindrances found everywhere — something is there and will be there in the future. And in another way Sweden stands most promisingly for the broader life because the young folk are reaching out for more light. In my work all through Sweden, from Malmö to Stockholm, to Visingsö — that wonderful place where we are to have another Point Loma — to the palace of the King, then to the Royal Theater, then to the little provincial towns carrying the same message, everywhere I found those who have the courage and the strength and are showing this new life. But although there was this new hope there was much unrest, much to be overcome.

Then in Holland, — I remembered when I first visited that country some years ago I had not been much charmed by its geographical aspect, but had always had great admiration and sympathy for the people, and I felt that a splendid life was there in aspiration. This time when I went to the Netherlands I found something more — there was no change in the geographical aspect, but in the atmosphere. I felt something fascinating, a new energy in effort on the part of many for more knowledge. When I went to Amsterdam — only a day there — I spoke at the Concert Hall, one of the largest in Europe. That large audience sat and listened to Theosophy; they listened — and after the English was spoken one hour and a quarter they remained still longer to have it translated, and then they had to be reminded by the lights going out. Their interest was wonderful. I found too that the same undercurrent, the same undertone, that was working in the hearts of the people in England and Sweden and in other countries had touched Holland also. At Amsterdam I was welcomed by strangers as though I had been one of them and had just come home. My heart was full of tears, sometimes I was silenced by my feelings. It was a most glorious and inspiring thing to realize how the spiritual life is surging in the hearts of the people, and all that one has to do is to appeal to their minds, to show the limitations that hem them in, and point out

the impossibility of spiritual progress until man knows his divinity, until he finds the keys and uses them in self-control and in understanding of all that goes to the upbuilding of character. And in Amsterdam I felt so strongly this wonderful, wonderful evidence of the saving power of aspiration. In this city there was an American touch of liberal thought and feeling, a charming atmosphere altogether. And then that evening before I left the Hall I was invited to go to the Hague by prominent people who had come from there to hear me; and there was a great desire that I should go also to Rotterdam, but I had to fulfil other urgent duties and to go to many other places and I could not accept the invitations, promising, however, that I would visit these places when I next went to Europe.

I then went to Groningen. It is unique and very fascinating, and many of the people wear the old national costume. There is something sweet about them; they have a simple trust as though the hard things of life had not touched them. They have a splendid theater, a very large one, and it was there I met the representative people of Groningen. It was a beautiful picture to see those people; the nobility, the students and professors, and here and there the touch of the national costume with its beautiful coloring. I had the same message to give as in the other places I visited, the same principles to advocate, the same things to say. There too I found the same that I found at Upsala, Malmö, and Helsingborg, and at Helsingfors in Finland. It was a revelation. I would not have missed this experience; it was an inspiration, a new hope for better things for poor humanity. I longed to tell the people of free America of the splendid people I had found in the Netherlands — to remind America of its own royal heritage, of its splendid territory, of its wonderful Constitution with its god-like principles.

Tom Paine and all those who helped to create that Constitution, with its message of freedom to the World, through the spirit of their hearts and their aspirations, have left a spiritual legacy such that the very air of America is teeming with spiritual life, but the majority see it not; they know it not. Have the majority of the American people learned to love one another? Have they learned to serve one another? Have they learned how to suffer for one another? Do they understand themselves? Do they know anything about their divinity? — their responsibility? I say *no*. And I love America and its people, and I love them so much that I dare speak from my heart and tell them the truth. And so I say that with the restraint that is upon foreign countries of Church and State, and from the fact that America does not have this, there should be in this country an accentuation on higher lines of the god-like quality of man — his real freedom; there should be a marked demonstration of brotherhood; there should be less sin, less selfishness, less vice, less sickness, less insanity, less unbrotherliness. America needs this message, and may the gods touch the hearts of the people and awaken them to their possibilities before it is too late! Limitations of the human mind kill spiritual life and shut out the intuition — the eye of the soul and its discriminating power. And the majority of the American people, in spite of all their love

of progress; in spite of all their culture and their professions of love of liberty, are so blinded to their danger that it is time that Theosophy sounded a warning note and called men to their higher duty and to the danger menacing America, for it is nearer, nearer at hand than is dreamed. Oh, the density and the incredulity of the human mind when it understands not the meaning of human life and sees not the need of its fellows!

I love America and its people, I love this country so truly that I think of its dangers; so much so that I wish the divine light that was in the heart and soul of the pioneers of America could touch all peoples. There must be an awakening of the people, something to create a new and real patriotism; not to leave it to the army and the navy, and to the few patriots here and there in America, but a patriotism that shall touch the whole of the American people. The hearts of the people must be so aroused as to feel their power of discrimination, their strength, their possibilities, so that all these things can be evoked. Poor America, in spite of all its marvelous material advancement, yet needs new spiritual life, higher ideals of freedom. It needs something so all-powerful that no man or body of men can raise hand or voice to place a man in political position unless he be absolutely worthy, unless he be so wise that he can help to fashion the laws of his country in such a way that protection shall be given to all, that a broader field of thought may be opened to the world, and that Church and State shall never, never, gain in this fair country entrance or power in our lives.

I discern much more than I say; I know much more than I say; and I feel so deeply this need that I wish it were possible that I might reach all the people and set them thinking on new lines, that they might do something to avoid some of the awful dangers that have befallen this country in former times, and arouse the people to measures more protective of true liberty. Yes, not until our statesmen, our politicians, our educators, have the Theosophical interpretation of life, can America have absolute freedom. This cannot be until the light shines so brightly that the erratic systems of thought so prevalent in America shall disappear as the mist before the sun. Can you not see that then the men in political organizations who are to the front for the sake of the dollar and the prominence would be in back seats, and that instead, in the front would be those who had studied the needs of the people, working for the needs of the people?

The men who stand in the pulpit today for salary, position, and fame, would not be there, but we should have instead courageous, unselfish broadminded teachers of humanity. In the churches there are some, in political organizations there are some, among the great body of educators there are some; but they are few. The majority — we know where the majority is, and consequently it is to the great majority that Theosophy brings its message of Truth Light and Liberation, and says: Ye men and women of the Twentieth Century, study the meaning of life; understand yourselves; evoke the Divinity of your Higher Natures; work; serve; die if need be for the freedom of thought and for the purity of human life.

lines of thought, which in our day are usually dissociated. We find metaphysicians analysing the operations of the mind, and classifying them into will, ideas, emotions, etc.; and biologists proceeding as if the metaphysicians did not exist, and trying to construct a physico-mechanical theory of the mind and emotions. Anthropologists are occupied with trying to trace the derivation of the present civilized type from the type presented by the lowest savages. Religion, again, gives us the old medieval conceptions of man, God, and nature. Finally we have a number of ingenious theorists who are rushing into print with the results of their own primitive attempts to evolve a philosophy of life *de novo* and without reference to the vast mass of literature now accessible, which, had they read any of it, would surely have shown them that they ought to have studied a little more before beginning to speculate along lines that have occupied so many minds in all ages, and to publish theories that have been published over and over again since the world "began."

**Piecemeal,  
Contradictory  
Theories**

H. P. Blavatsky in *The Secret Doctrine* says:

The Secret Doctrine teaches the fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every Soul—a spark of the former—through the Cycle of Incarnation (or "Necessity") in accordance with Cyclic and Karmic law, during the whole term. In other words, no purely spiritual Buddhi (divine Soul) can have an independent (conscious) existence before the spark which issued from the pure Essence of the Universal Sixth principle,—or the OVER-SOUL,—has (a) passed through every elemental form of the phenomenal world of that Manvantara, and (b) acquired individuality, first by natural impulse, and then by self-induced and self-devised efforts (checked by its Karma), thus ascending through all the degrees of intelligence, from the lowest to the highest Manas, from mineral and plant, up to the holiest archangel (Dhyāni-Buddha).

**The  
Endowment  
of Thought**

The teaching is that the Divine Spark (Ātmā-Buddhi) is present in every atom of the universe, endeavoring to express its potentialities in physical forms. Thus it is the cause of evolution. This evolution of forms proceeds through the various stages of the lower kingdoms, evolving successively minerals, plants, and animals. In the case of man, however, there is an important point to be noticed. The evolution is unable to proceed beyond a certain stage without the addition of another principle, the *Manas*, without which the Divine Spark cannot attain to full self-consciousness. Therefore, when the natural forms had been developed up to the point of producing a perfect animal mechanism ready for the future man, it was necessary that this *Manas* should be given from another source. It was so given by Beings called the *Mānasaputras*, or "Sons of Mind," who were men who had become perfected during a previous *Manvantara*. They communicated to the animal man the principle of *Manas* or the reflecting mind; and, thus endowed, man became able to manifest the full potentialities of the Divine Spark, and ac-

quired that self-induced and unlimited power of progression which makes man what he is and renders him a prospective God.

One might, without being far wrong, compare the writer's "Kosmic process and ethical process" with the "natural impulse and self-induced and self-devised efforts" above spoken of in *The Secret Doctrine*. Such a distinction between the Divine and the natural in man has, however, always been recognized. The doctrine of the coming of the "Sons of Mind" is found preserved in allegorical form in most religions. It is in *Genesis*, though obscured by translators. For in *Genesis* there are two actual accounts of the "creation" of man.

It would be easy to supply many instances of the same teaching in other scriptures, and in the teachings of great Initiates, such as Plato; but space forbids at present. However, the zealous student will find, if he will study the world's religions and philosophies in the light afforded by Theosophy, that these doctrines about man and nature are not fanciful or arbitrary, but merely an epitome of a universally recognized truth. We find in the symbology of the ancient Brāhmans and Egyptians the same seven principles of man and the same teachings about his animal and Divine natures. We can follow these doctrines through the mythologies of nations which derived their knowledge from Egypt; we can trace them through Chaldaea to our own Bible; crossing the Atlantic, we find them again among the Americans of pre-Columbian times.

In view of all this wealth of lore, so illuminating, so exhaustless, how futile it seems to spin idle theories on no better basis than the discoveries of modern biology, the habits of modern thought, and the surviving shades of medieval theology!

STUDENT

**Probing the Origins of China**

IN *The Secret Doctrine* (Vol. II, p. 280, note) we find H. P. Blavatsky, quoting in 1888 from the words of a Teacher published at a still earlier date, the following:

"What would you say to our affirmation that the Chinese—I speak of the inland, the true Chinaman, not of the hybrid mixture between the Fourth and Fifth Races now occupying the throne, the aborigines who belong in their unallied nationality wholly to the highest and last branch of the Fourth Race—reached their highest civilization when the Fifth had hardly appeared in Asia?" And this handful of the inland Chinese are all of a very high stature. Could the most ancient MSS. in the Lolo language (that of the aborigines of China) be got at and translated correctly, many a priceless piece of evidence would be found. . . . So far, one or two European archaeologists only have been able to procure such priceless works.

And we find in an article in the *New York Evening Post*, Dec. 21, 1907, that Dr. Berthold Laufer, who is interviewed, says:

In the part of China to which I hope to penetrate there are several highly interesting and practically unknown aboriginal tribes—tribes that antedate the Chinese. Nobody knows how long they have been there. When the Chinese came, they found them in possession. In many respects they differ radically from the Chinese. They have an alphabet instead of a system of ideographs, and in the place of Buddhism they have a species of nature-worship. They are not completely civilized. One tribe, the

Loo-loos, live in a reservation and do not permit the Chinese or other foreigners to intrench upon them. Much interesting information can be gained, I am sure, from a study of the folk-lore of these people.

The same authority quoted above by H. P. Blavatsky also says:

The region now locked in the fetters of eternal winter, uninhabited by man, that most fragile of animals, will very soon be proved to have had not only a tropical climate, something your science knows and does not dispute, but having been likewise the seat of one of the most ancient civilizations of the fourth race, whose highest relics we now find in the degenerate Chinaman, and whose lowest are hopelessly (for the profane scientist) intermixed with the remnants of the third. . . . The majority of mankind belongs to the seventh sub-race of the fourth root race,—the above mentioned Chinamen and their offshoots and branchlets (Malayans, Mongolians, Tibetans, Javanese, etc., etc.)—with remnants of other sub-races of the fourth and the seventh sub-race of the third race. All these fallen degraded semblances of humanity are the direct lineal descendants of highly civilized nations, neither the names or memory of which have survived, except in such books as "Popol Vuh," the sacred book of the Guatemalans, and a few others unknown to science.

Gould, in his *Mythical Monsters*, trying to account for the community of legends in the remote antiquity—held by Chinese, Chaldeans, Egyptians, Indians, and Greeks—and for the absence of any certain vestige of civilization more ancient than 5000 years, says:

We must, therefore, not be surprised if we do not immediately discover the vestiges of the people of ten, fifteen, or twenty thousand years ago. With an ephemeral architecture (as in China), the sites of vast cities may have become entirely lost to recollection in a few thousands of years from natural decay, and how much more. . . if. . . minor cataclysms have intervened, such as local inundations, earthquakes, deposition of volcanic ashes. . . the spread of the sandy deserts, destruction of life by exceptionally deadly pestilence, by miasma, or by the outpour of sulphurous fumes. (p. 134-5)

Thus in China we may expect to find a great mixture. The Chinese proper are spoken of by H. P. Blavatsky as one of the oldest nations of our Fifth Race. Then there are the aforesaid inland Chinamen, descendants of the highly civilized seventh sub-race of the Fourth Race. Again there are degenerated descendants of other sub-races of the Fourth and Third Races; some of them savages like those of some parts of Africa and Polynesia. It will be idle to attempt the usual kind of scheme of historical and ethnological evolution, and try to trace an order of derivation among these races. Asia is so old that it is a veritable scrap-heap of human remains.

There are abundant evidences of the existence of gigantic civilizations in the remote past, whose ruins are now sand-buried; and Scythian hordes have from time to time devastated the country. But the records and sacred texts have been hidden in places of security; for there are ever those whose duty it is to see that the links of the Wisdom-Religion are preserved unbroken from age to age. These records, withdrawn from vandal hands and religious bigots who would destroy them, and from those who would misuse the knowledge they contained, can be brought forth again whenever the cyclic wave brings reverence for what is sacred.

# Some Views on XXth Century Problems

## Church and State

THE lines of cleavage now in so many quarters widening between political institutions and ecclesiastical institutions, are apparent even in England, where there has been and yet is great agitation in some sections of society because both Houses of Parliament have at last succeeded in passing a measure which the Church has successfully opposed for fifty-six years. It matters little what this measure is; it is not of much importance; the real reason why the Church attaches such importance to it is that it should have been carried and made the law of the land in defiance of the Church's ordinances on the subject. An inevitable issue has at last been declared despite all the diplomacy on both sides with which points of possible difference have hitherto been steered clear of. The result is that the people are face to face with a situation which may be called medieval; a definite issue between Church and State as to a point concerning the domestic relations of the community. It is certainly time the position of Churches in countries where they are in connexion with the State should be more clearly defined.

After all what is a Church? It is either a body with a divine mission, in which case it needs only to prove this by works, for the people are only too ready to recognize a body with a divine mission; or else it is an organization created by man for the purpose of representing his religion and conserving it and performing an executive function with regard to the propagation of the religion. The former case need not be argued, for everything depends on whether the Church can make good its claim to divine authority — not by asseverations but by works. In the latter case man is entitled to reconstruct or abolish his Church whenever he deems fit.

The people will have to consider whether they still continue to need such an organization, and whether it shall be modified or altogether done away with. If it should become apparent that the Church desires to keep a controlling hand in secular affairs, in despite of the general will as expressed in the legislative assemblies, then the issue will be forced as to whether a theocracy shall be submitted to. But a body which can rule the hearts of men does not need to meddle in legislation, for by its spiritual dominion it can do so much more indirectly; and the attempt to meddle politically is a confession of weakness spiritually.

All logical minds must recognize that Church rituals and rubrics have been altered from time to time to suit the needs of the times, and that there is no sense in clinging so tenaciously to ordinances which in the day of their foundation were revolutions. Some pin their faith to the Reformation, though even among them there is controversy as to which particular one out of several formularies should be adopted as the standard; others want to go back beyond the Reformation and establish an Anglican Church with the unreformed Romish doctrines, but severed from Rome. Others again

hark back to primitive Apostolism, or their peculiar conception of it. Why not go back still further and revive some of the teachings that have been removed from the canon at early Councils, such as Reincarnation?

Religion is an affair of all nations and all times; and in times when this fact is so strongly realized, a state Church of a particular form of Christianity is an anachronism. In the past, however, the mistake has been made of regarding all religion as superstition; but we should try to find out what is true and permanent in religion, while rejecting only the husks.

If we want to know where to look for religion, let us look at the great wave of morality that has lately spread abroad among nations, leading to higher motives — motives of humanity, broader conceptions of duty, increased toleration of other races, a universal urge to reform. Has this come from the Churches? Nay, on the contrary the Churches have had to gather up their ancient robes and bustle in the attempt to keep pace with it. Whence then has it come? From the source of true religion — the heart and awakening understanding of man himself, whence reforms have always come. Man is a divine being and his spiritual nature makes its presence felt. He feels that human nature, in its truest sense, is a thing beyond and above formulated religion, and that the essential virtues, which are the true laws of life, will remain unimpaired in his breast long after they have ceased to glow from the sanctuary. Let him therefore reform his Churches and assign them their true place, checking them whenever they get out of hand and arrogate to themselves an authority which is only delegated to them by those on whom they seek to impose it. Let man find Religion in his own Heart and make that his guide.

## The Meaning of Old Age

MANY men, it would seem, are materialists in feeling who are not so in belief; and some are materialists in belief who are not so in feeling. An English canon, once commenting on the fact that Gladstone's brain continued to grow in size till he was over seventy years of age — vouched for by his hatter — remarked that he supposed this contributed to the statesman's perennial youthfulness and power of absorption of new subjects. The canon's deep-rooted and unself-suspected materialism of feeling had made him state the case exactly upside down. The brain, according to the canon, had created the mental elasticity. The fact was that the unconquerable will, sustaining the mental elasticity, had compelled the brain to grow to suit the demand upon it.

Another cleric, materialistic at the very roots of feeling, once expressed his conviction that at the death of every believer Christ wrought a miracle — enabled consciousness to exist apart from a physical basis! He felt that such a thing was impossible without a miracle.

It would be good for the majority if they

could live, say one life, backwards: beginning with old age and gradually passing to youth. Beginning with a body that responded with great difficulty to mental and physical demands upon it, yet being compelled by the exigencies of life to make these demands, they would learn the power of will; and by the time that youth came there would be nothing that they could not do. As it is, life is lived with little or no draft upon the inexhaustible powers of will and imagination — for these are twin powers, correlatives. Archbishop Benson, discussing the marks of old age, once said: "I do not find myself less rapid than in the old days. But I do find a very increasing unwillingness to come to the point — a decided preference for doing any other duty than the one which it would be prudent to take in hand at any given moment."

Not to yield to this would be to keep the will alive and to stave off old age.

In his recent Maunday Thursday Address, Illustrious John Lloyd Thomas, 33°, Commander-in-Chief of New York Consistory, said some things which are here exactly to the point:

Knowledge of physical self is elemental, instinctive; it begins with birth; it exists measurably in brute as in man. This knowledge proceeds with the instinctive physical struggle for sustenance; a struggle which knows no reason, no bounds of conscience, no law of mine or thine — knows nothing save the right to be.

Through this struggle man arrives at a knowledge of the mental self. Physical struggle leads to mental endeavor, the plan, the scheme, the strategy, the survival of the shrewdest. And through meditation dawns knowledge of spiritual self — a self that has been from the beginning, will live through all eternity; a self that exists best without force or craft; a self that grows not through strength, not through wisdom, but through beauty or love.

We might set against these some remarks by Katherine Tingley on "Self-discipline":

When a man, becoming conscious of his own divine nature, in the silence, begins to think himself different from what he seems, begins to think he is a god — as Theosophy says he is — begins to let the imagination pulse through his heart telling him of mighty things beyond ordinary comprehension, begins to feel something that reminds him of his duty to humanity — that is discipline. Discipline comes many ways, but Theosophy shows how by this discipline a man may place himself in such a position that without help of book or creature he may find his own power, be no longer a mere potentiality. He will dig into the depths of his own being that he may find it.

Whoever will do that, accounting it one of the daily or nightly duties, will find that he is beginning to drink of the spring of real life. And as the years of life go by, as old age approaches, as the physical and some of the mental powers decline, consciousness itself will be growing, deepening, and becoming richer and wiser, fuller of spiritual knowledge. Physical failure will then yield its meaning, its very purpose and *raison d'être* — the unveiling of that higher mental and spiritual nature which death does not break but rather frees. STUDENT

## Greco-Roman Ruins, Amasia

**A**MASIA (of which illustrations appear in the CENTURY PATH, issues of Sept. 6, Oct. 28, Dec. 16, 1906; and Jan. 6, 1907) is in Anatolia, Asia Minor, now a Turkish province. This homely modern town is the site of the capital of the ancient Pontus under Mithradates VI, whose ancestors of the same name lie buried in its tombs. Asia Minor is the seat of civilizations which antedate our historical records; and during the times we have so far had access to, it has been under the domination of Macedonians, Romans, Byzantines and Turks. The coast was of course a part of Greece in the early times. Hence there are to be found many Greco-Roman ruins such as that illustrated here.      T.

## The Mound-Builders of Florida

**I**N an article on the Mound-Builders of Florida, in the *Ohio Archaeological and Historical Quarterly*, the writer gives it as his opinion that most of the mounds of Florida were built many hundreds of years before Columbus was born, by a quiet sedentary agricultural people, less nomadic and warlike than are the Indians of our modern times. The mounds were the work of a very ancient people, as all signs indicate. Settling through long periods, many of them are now but a few feet above the surrounding surface, their angles having been smoothed by the storms of centuries, great forest trees grow on the top, and the bones inside are in the last stages of decomposition.

The mounds of Florida are constructed of earth, there being no stone available. A cavity of from two to six feet deep was often excavated before the mound was begun. The large amounts of sherds and midden material found in the lower strata of many, seems to indicate that they constructed from the surface soil of inhabited places. In excavating the mounds, broken pottery is found in abundance, some beautifully decorated and evidently for mural uses; large ornamental vases, table pieces, drinking cups made of conch shells; chisels and gouges made from shells, bone or stone; axes of enormous size, one thirteen inches in length of blade. There was also abundance of personal ornaments, such as breastplates made of sheet copper or of mica, pendants of slate or soapstone, and beads. There are stone hatchets, arrow-heads and spear-points, and many smoking-pipes.

The human bones are in great confusion,

whole skeletons being seldom found; which may indicate that the people followed the customs attributed to some Indians, of disintering the bones periodically for ceremonial funerals, or of digging up the remains and carrying them with them when they migrated.

The author does not believe in the theory of a special creation of man for America, corresponding to the Old World creation described in Genesis. Nor does he believe in a migration from Asia before the Noachian Deluge. He thinks the migrations may have taken place more recently by any of three routes: Behring Strait, the Aleutian Isles, and the Japan current. The fact that there is no gold found in these mounds, though this metal was so common in Mexico and Peru, and no bronze as with the Aztecs, leads him to conclude that these people were distinct from the Aztecs and the Toltecs, and also that they were older. They seem to have antedated the times when there was an extensive commerce by which these metals could be obtained.

As to the Noachian Deluge, that is now pretty generally understood to be apart from chronological questions. The story is largely symbolical, being a universal mythos; so far

Lomaland Photo. and Engraving Dept.

GRECO-ROMAN RUINS, NEAR AMASIA, ASIA MINOR

as it is historical it refers to several different cataclysms which have been confused together. There are Flood stories in abundance in America, each with its sacred mountain, its Noah, and so on. They refer to periodic changes occurring in the land and water, in the history of races, and in the drama of the human Soul.

But the subject of mounds has to be treated as a whole; for *tumuli*, barrows, pyramids, etc., are found in all countries, and are all of great antiquity. They have been used as places of interment, as fortifications, as dwellings, and for other purposes; but these were not the purposes for which they were originally built. The building of pyramids was a work undertaken by one of the great races from which the present races have sprung, and had a direct connexion with the ancient Mysteries. Other races made more or less rude imitations of these pyramids, for the purpose of their more or less rude imitations of the ancient ceremonial uses. Hence too the universal prevalence of such structures. The idea that all antiquity adopted this as a mode of sepulture is too far-fetched. The history of mankind cannot be traced out in this piecemeal fashion and archaeologists should collaborate more.      STUDENT

## Ancient Egyptian Craftsmanship

**R**ECENT discoveries of a large number of beautiful works of art in the Egyptian tombs are described in the *Bulletin* of the Metropolitan Museum of Art. The expedition explored the cemetery near the pyramid of Amenemhat I, and about one hundred tombs were uncovered, but most of them had been plundered in ancient times. One tomb, however, was discovered which had almost entirely escaped interference; that of a woman named Senbtes. The outer chamber of the tomb contained pottery, of which 108 pieces have been collected, mostly small vases and saucers. The coffin was threefold. The outer case was crumbling, but the inner was of hardwood, and was found to be filled, almost to the top with fringed shawls, folded and laid over the innermost coffin. This last was of human form, of wood covered with gold-leaf. The face-mask, of plaster, was carefully modeled, with inlaid eyes of alabaster and obsidian set in silver frames, and other ornamentations in carnelian and colored glaze. The body was encased in pitch in which were found many ornaments, and other things in precious materials and delicate fabrics.      H.

# ✻ The Trend of Twentieth Century Science ✻

## Hypnotism and Crime

A PROFESSOR, writing as a man of science, though in part very unscientifically, contributes to a contemporary article which might be used as a complete indictment of hypnotism. But it will hardly be read in that light, for its chief text is that the hypnotized subject can only be made to commit crime with great difficulty. He will kill with paper daggers, poison with white flour, and shoot with empty revolvers; but underneath the illusion that his weapons are real is a deeper knowledge that they are not. He will not — so runs the contention — commit an actual crime that is repugnant to his moral nature.

But the contention contains its own answers. Some men have but a feeble germ of crime in their deeper nature; in others the seed is so close to flower that it needs but a touch to complete the ripening. The Professor's contention may be passable enough for the first group; to the second it does not apply.

But is it really valid for the first? The mind, reduced to the hypnotic state, has been thoroughly stamped with the picture of a crime — so thoroughly that the crime is actually enacted, though with false weapons. Is anyone so poor in knowledge of human nature as to suppose that after waking *nothing* remains of the stamp? Are we invited to believe that a mind which has been so vividly introduced to an idea and its performance, can ever be exactly as before?

Then follow a series of admissions which should surely suffice to place hypnotism, done for whatever purpose, among the felonies. The principle of them is that the subject may be readily made to perform, after awakening, any acts which do not violate his conscience. He may go to a lawyer and will away all his property to the operator. He may give any kind of false evidence suggested to him during the séance. Anything may be wiped from his memory, including the fact of the séance itself. His mind may be clouded or deluded in almost any direction. Not a criminal, he has become the tool or victim of criminality. As a final precaution, if it be feared that he might possibly remember too much, or if, after he has willed away his property, his immediate death should be convenient, suicide may be suggested to him and will be carried out.

The medical profession seem inclined to try to stay the (too slowly) rising tide of feeling against hypnotism by insisting upon its remedial value in their hands. Its effects are predominantly evil, by overwhelming majority, in any case. But those who read the professional contentions forget that every induction of the hypnotic state, and every suggestion, make the next easier. Whoever has submitted to a few sittings with a view to the cure of some disease, has had his lines of resistance broken down. His consent is often easily obtained to a reproduction of the state at the hands of some plausible outsider, and he may then be made the instrument of a crime whose real doer can remain safely hidden.

At its opening the article contains a statement which in a few years the Professor would be sorry to see quoted:

All the stories of a secret influence by which one man's will gets hold of another man's mind are remains of the mesmeric theories of the past. Today we know that everything depends upon the attention and imagination of the hypnotized, and that no mysterious fluid can flow over from the mind of the hypnotist to the mind of the subject.

"We know" — surely a man of science should be more careful of those words. "We know," it seems, not only that no "mysterious fluid" *does* flow over from one to the other, but that none *can*! It was also an old "mesmeric theory" that everything in nature was surrounded by an emanation, a light. Then for a while "we knew" that that was a superstition; there was no light. But now, a few years later, we do really know that there *is*, that everything in nature, man included, is radio-active. Science has, however, learned no lesson of modesty from this and a thousand like cases; nor has the public learned caution in reading the confident denials of her exponents.

STUDENT

## Man the Magician

AS science has been gradually, if unwillingly, vindicating the alchemists, so she seems about to be driven to a vindication of — the magicians!

A French physicist, at any rate, has not hesitated. Mixing philosophy and science, he suggests that man, in some of his thinking, sports with ultimate cosmic force.

An electron, we have lately learned, is only a point of stress in the ether. Perhaps it, instead of the atom, is the etheric vortex ring of Maxwell. Our physicist calls it a point of cosmic ideation, a focussing point of cosmic will. The hidden ideation and will constitute the subjective side of it, its real life. Groups of such, constituting atoms, are further grouped into molecules; these are further grouped into crystals, colloid particles, etc.; still further grouping gives us the living cells. All these are increasingly complex ideations.

But their activities, potential or actual, are the forces of science; and our contact with them appears in our consciousness as sensation. In other words, cosmic thought first becomes known to us as sensation. We think, in part, by the re-presentation to ourselves of sensation, by comparing and combining sensations and abstracting from them.

This kind of thought, grouping sensations in increasingly complex masses and then making an abstract concept from them, is parallel with the cosmic process of grouping ideations — on their objective side, "electrons," — into higher and higher groups, — objectively atoms, molecules, etc., each group as much a compound *unit* as is an abstract concept of our own.

But our mental activities are not perceptive only; we are not merely passive to the world; in several ways we are positively active.

We do not wait, for example, for past sensation to float up to the top of memory. We

actively call it up at will. In every kind of active thought, and especially in all the work of creative imagination, this work, which is the employment of force, certainly plays upon and alters the brain cells and molecules. And as it is attended by electric and magnetic phenomena, in which we know that the electrons are concerned, it follows that our will goes deep enough to disturb them. Is it not possible that some of our active mental work may make and unmake points of etheric stress, electrons, in fact, perhaps even still finer units? Theosophy calls the brain "an exhaustless generator of force" (H. P. Blavatsky), a generator as unlocking the force stored in the material units it disintegrates whilst the mind is a more real generator because in causing the stresses it passes the necessary force from its subjective to the objective side of nature. If those two processes do not answer to the definition of a magical operation, what would? And we may suppose that evolution will perfect these powers as it will all others.

The writer does not quote H. P. Blavatsky, but we may take leave to do so:

Magic, *Magia*, means, in its spiritual, secret sense, the "Great Life," or divine life in *spirit*. The root is *magh*, as seen in the Sanskrit *mahat*, Zend *maz*, Greek *megas*, and Latin *magnus*, all signifying "great."

Every man, in the depth of his being, touches the "Great Life," and must therefore to some extent have its power active and to much greater latent in him. To the extent of its activity he must therefore be "magician."

STUDENT

## The Sun's Contribution to Us

IT is not generally recognized that we receive a considerable annual contribution of matter from the sun, forming part of our annual accretion of about 20,000 tons, the rest coming from meteors. This contribution left the sun between forty and fifty hours previously and is now regarded as the cause of aurorae. On striking the earth's atmosphere the stream is attracted towards the two magnetic poles, and the negative electricity it carries is discharged. The auroral glow is therefore comparable to that which is visible in the dark about the poles of frictional electric machines. During the sun-spot period, which has a cycle of eleven years, the solar discharges are greatly augmented. Their velocity is then so great that they are much less affected by the earth's polar attraction. The glow due to their impact on our atmosphere may then extend and be visible a good deal further from the poles.

There are other cycles in the brilliancy of the aurorae and in the solar radiation, of which one at least — that of the tropical month, 27.3 days — is not very easy to understand. There is an annual one, a daily one, and one of 26 days. This last is the cycle of the sun's rotation, or rather of that belt of latitude from whence come most of the radiations — for the rotation period varies with the latitude and is quickest at his equator.

## Development of Horse Type

IN America the history of the development of the horse type is very complete, the fossil records presenting an unbroken chain of horse-like animals extending from the Lower Eocene to the present day. In this succession there are eight stages, and about 35 or 40 species. *Eohippus* comes from the Lower Eocene of Wyoming and New Mexico; it had three toes on the hind foot, and four perfect toes on the fore foot, and also on the fore foot a rudimentary fifth toe. The two bones of the leg and of the fore arm were separate from each other. It is about as large as a fox.

*Orohippus* is similar, but without the rudimentary fifth toe. In the Oligocene is found *Mesohippus*, in which the fourth toe is rudimentary. In the Miocene comes *Miohippus*, in which the fourth toe is almost gone and the middle one has become larger; also the two leg-bones are united. This animal was as large as a sheep. And so it goes on until we reach the modern horse, with but one useful toe and the second bone of the leg more rudimentary.

Attention is called to the fact that the old-time horse had five toes, and that it had two leg bones, as this has an important bearing on certain teachings of *The Secret Doctrine* as to the origin of animals in this Round. STUDENT

## The Newspaper and the Forest

MERELY to divert thoughtless men and women for a brief Sunday morning hour with impossible and extravagant pictures printed in loud colors, thousands of stately spruce and hemlock trees upon the northern hills, which have raised their graceful branches to the sunshine and rain of many changing seasons, have lived, — in vain.

With these words ends an article on "The Newspaper and the Forest" in the *American Review of Reviews*. The Forestry Bureau has estimated that the total annual cut of timber for all purposes in the United States at the present time is approximately 100 billion feet, while the annual growth is from 30 to 40 billion. Thus the consumption is about three times the growth. Paper from wood fiber began to be a commercial product in 1867, but did not assume great importance until 1890. Since then wood-pulp paper has grown until it overshadows all other papers. So far soft woods only have been used, spruce furnishing three-fifths, hemlock one-fifth, and the rest being chiefly poplar and balsam.

The demand for paper has grown enor-

mously in very recent years owing to the increased circulation and increased size of the periodicals, especially the newspapers. The increased size is due chiefly to cheapened composition through type-setting machines, and also to increased advertising space. In 1905 there were 456 daily newspapers issuing Sunday editions, the aggregate circulation of which was 11,539,021. If each of these Sunday newspapers averaged thirty-two pages, the paper required for each issue would have been sufficient to form a library of 5,907,978 volumes of 500 octavo pages each. Of these, reading matter would make about 39 per cent, advertising matter 38 per cent, and "art" 23 per

of business does not necessarily indicate the amount of useful achievement, because much of it may represent mere friction and efforts that neutralize each other. Nobody needs a paper of 64 pages, but it has to be padded out to that extent because there are other papers competing with it. It is the same as what happens when people vie with each other as to who can give the most expensive dinner or wear the most expensive clothes.

It must not be thought, however, that we are advocating any political or social doctrine intended to regulate by legislation and force the evils which can only be cured by individual effort. These things are the outcome of selfishness in the individual, and will always reappear in some form or other, so long as the cause remains, no matter what the form of government.

When one considers the enormous amount of energy, enterprise, talent, expended on producing a Sunday edition, it must appear that the result is altogether unworthy of the means. And all this strenuous activity of brains and muscles is what we call science and art and work and business. What might not happen if all this terrific energy were directed wisely and profitably? We are endowed with enormous energies, but they are turned against each other in mutual destruction. This expenditure of brains and

muscles, courage and patience, all this prodigal waste of Nature's bounty, goes largely to producing things which are not merely useless but even deleterious to the welfare and progress of the race. How vain will be our boastings over our marvelous energy and enterprise, if these qualities should serve only to bring ruinous disaster to our civilization! Yet forces uncontrolled, whether fire and electricity, or brains and muscles, can become perverted from upbuilding to destructive agencies. Much in our civilization is like the abnormal pulse and temperature of fever. T.

TWO VIEWS OF THE PARK, MANCHESTER, NEW HAMPSHIRE

cent. Thus there are about a million and a third volumes of comic supplement pictures, made out of forest trees.

As a result the price of paper is going up and remedies are suggested. That of altering the import tariff and drawing upon other countries is not likely to be practicable, as other countries may wish to conserve their forests. Great efforts are being made to find out how to make good white paper profitably from corn-stalks and other such refuse, but so far without success. The last remedy suggested is — to lessen the size of the papers! This,

It is the mind, properly guided by imagination,  
that will uplift us all.—Katherine Tingley

#### The Passing Woman Question

**T**IME, waxing old, doth all things purify — and out of that unlovely and undesirable type that in past years was caricatured as the “strong-minded woman,” “the woman’s rights woman,” etc. — is growing a type much nearer the heart’s ideal.

This woman who wished and worked for more rights and freedom had been for centuries the plaything and the slave of man. We do not forget the shining examples, the heroic figures, that here and there have helped and inspired humanity — but, somewhere back in the night of time, woman must have bartered her birthright. Only through patient toil and effort may she hope to win it back. The woman who is strong, beautiful and *also* wise, could not be evolved in an instant. So some fought for the ballot, some aggressively pushed and jostled their brothers in public places, some donned a semi-masculine attire, making of “progress” a scarecrow, and some screamed with harsh voices for “privileges” and “rights.”

But behind all and at the root of things, the woman-soul, the “eternal feminine,” undaunted, was calling out its message and sending its urge through the wilderness of limitation. The new day for humanity was dawning and the heart was coming to its own again. The way has been prepared. The “woman question” is fading into the background where it belongs, for “all parts away for the progress of souls.” Woman is now abreast of the times. No longer are the doors to higher education and freedom of thought closed to her. Each day, women, especially American women, find new doors open, new gateways ajar. They are demonstrating practical ability in many departments of human affairs. Their artistic and imaginative talents are finding broad fields and in this freedom they are evolving new powers. The mother is not less the mother than of yore — other things being equal — but more so. She is using her intelligence and education

the better to rear her children. She is sounding greater depths and scaling greater heights of experience and thought and feeling. In ceasing to be a slave the modern wife is becoming a helpmate and inspiration to her husband — *is becoming*, for the true ideal is yet to be attained. The protective arms that encircle the children are stronger and the voice that urges them on in the battle of life is clearer, for the mother’s courage grows as her insight deepens.

And beside these mothers, in the advancing lists, is an army of noble souls, childless wo-

**I**t is a startling fact, but a fact, nevertheless, that the majority of human kind is living under a psychological influence of inertia and of slow moral and spiritual decay. This could not be so if the divine nature of man were active and the intuition were the directing power in human life. Intuition discerns evil, anticipates its influence and wards it off. Intuition is the lost chord, yes, the lost word in human life. It is the ear, the eye, and the voice of the Christos in man.—Katherine Tingley in a recent address.

men, working steadfastly to make the earth a better place for the children who are coming into it. For this is a crucial time in the world’s history, as we are reminded by daily events. The forces of life are running high. It is a time of doubts and indecisions, and the woman who is not centered on the true is in danger of losing her way. The message of Theosophy must touch every just and tender heart at the present time with a strange forcefulness, so different is it from the divers errant “philosophies” which lead so many unwise women away from the path of duty. The modern woman too often, like Naaman of old, turns away from the very Light she seeks, saying “It is too simple, too near at hand.” And she passes on in darkness, knowing it not. **STUDENT**

#### The Sculptress, Elizabet Ney

**T**HIS remarkable woman, one of the most interesting even though by no means among the greatest of modern sculptors, died at a ripe old age in the summer of last year at her home in Austin, Texas, her adopted land.

A native of Westphalia, her father having been a nephew of Napoleon’s great Marshal of that name, Elizabet Ney studied in the art schools of Munich and Berlin, facing the ridicule and opposition that were inevitable in those days for a young girl who would attempt to follow seriously the training necessary for a sculptor.

Everywhere, however, her professors were quick to recognize her genius and protected and encouraged her — in particular, Professor Christian Rauch, who took her under his especial supervision until his death. After that event Elizabet, though little more than twenty years of age, came to fill his place as one of the most successful portrait sculptors of the day. She made portrait statues of Schopenhauer, Garibaldi, Bismarck, George V of Hanover, Ludwig II of Bavaria, and others.

Hers was no trick of clever imitation, cultivated along one line, for she showed herself equally at home with all subjects, children or warriors, delicate ladies or dignified monarchs. She had no mannerisms nor affectations, for her work, even though limited, was in many ways masterly and direct.

Her statues were forceful conceptions, and she had the power to discern character and reveal the simple truth.

Many wondered not a little why Elizabet Ney at the height of her popularity should leave the fascinating society of the artists and celebrities of Europe to come to the wild and almost desert land of Texas. It was her faithfulness to a high ideal. She had longed for the day when aspiring youth could enter upon the study of art along the highest and purest lines without

such hindrance as had almost discouraged her; and finding her sympathies linked with a little band of enthusiasts who were about to found a colony in Georgia, she left England with them. Here, in the New World, she thought that students, freed from the harassing cares of poverty and the temptations of worldly society, might develop to the full extent of their powers, for the ultimate good of humanity. Like many another who has landed on America's friendly shore, she sought an asylum in the new land of liberty at the sacrifice of much that pleased her own aesthetic taste.

True to her principles, when the experiment in Georgia came to an end, which anyone who knew human nature might have foreseen, instead of returning to Europe, as did many of her companions, Elizabet Ney pushed further west to Texas.

Here she lived quietly for some time, making a study of the people in her new surroundings, and here she produced the famous portrait of Stephen Austin, at once a splendid realization of the man and also a type of the American pioneer. She endeavored to interest the people of Texas in the idea of founding an Academy of Fine Arts. They, and indeed America generally, felt that Europe's loss was their gain when she came amongst them. Though she never allied herself closely with any one country, yet in her later years she wrote of her great joy in the feeling of expansion she had in the New World. Americans may be proud to number such broad and aspiring souls among their people, ever faithful to the vision of the untrammelled development of character. Although she had not found the light of a true philosophy of life, yet she sought for it honestly and unselfishly and is one of those who have contributed some of the finest elements in the building of the new race.

While a galaxy of young women sculptors has shone out since her time, doing better work than she because opportunities for serious study are today numerous and easily grasped, yet not one, so far as the writer knows, has been more heroic in pursuing her determined line of work, not one has done more, circumstances considered; and all owe her the gratitude that followers in the rear guard must ever owe to the brave true-hearted pioneer. She may have failed to realize her dream of a community of artists dedicated to a high ideal. Such dreams have passed unrealized before. But who shall say that stamped indelibly as it is upon the eternal screen of time, just the vision itself has not hastened the day of its fulfilling?

### Jönköping and Environs, Sweden

THE highlands of Lake Vättern extend for some miles south of the lake before they meet, leaving a low sandy stretch of land between them on which the city of Jönköping is situated. The whole forms a beautiful fertile valley. The city is one of the oldest in Sweden, and here the kings of the Northern countries many times met in council to settle their differences in peace, and to this place the Swedish kings often called their councillors from the neighboring provinces. It still continues to be a place of meetings of all kinds; every summer hundreds of people gather together in peaceful conference, always de-

most exquisite way. Vättern is seen lying there like a long gleam of condensed blue light fading away in the distance and Visingsö seems to float in this heavenly blue between the sky and the earth. It is a grand vision of purity, and one seldom witnessed below the region of the everlasting snow.

The east side of the mainland is glimmering with numberless smiling lakes, bordered by beautiful forests and cultivated tracts with their red-painted farmhouses. The land is broken and the scenery full of variety. The high land on the west side of the lake is renowned for its fertile soil and has from olden times borne the name of "The Golden Tract,"

Lomaland Photo. and Engraving Dept.

BIRD'S-EYE VIEW OF JÖNKÖPING, SWEDEN

voting a day, however, to a trip on the lake and to visiting the fairy island floating on the horizon.

Jönköping is the natural gateway to the island, and the new activities just inaugurated at Visingsö, which through the revival of the ancient Rāja Yoga system of education will make this spot the real heart-center of Sweden, will give a new impetus to the city and arouse among the people a deeper interest in its future.

The unique charm of the scenery around the southern part of Vättern is perhaps best understood when standing on the top of Taberg, the solitary mountain-peak a few miles south of the city. The other sections of the province are also beautiful, though wild and with only few parts under cultivation, mountain ranges, small lakes and vast mosslands extending as far as the eye can reach. Then, turning to the north, what a sudden change! Here nature seems to show each of her moods in the

bestowed on account of the abundant harvests.

The poet Viktor Rydberg, who was born at Jönköping and whose poems and writings are so full of Theosophy, seems ever to have kept this scenery before his inner eye. It stands as an idyllic background in many of his poems and it was the scene of the events in his latest book, containing pictures from the time of Gustaf Vasa. A SWEDISH STUDENT

PROMINENT among European women who have achieved success in sculpture is Fräulein Helene Lindner, a young German woman not more than twenty-five years of age. She was a pupil of the eminent sculptor Fritz Heinemann, and also of Jean Dampt in Paris. Both in Germany and France her work has received the highest commendation. Not long ago, when over a hundred sculptors were competing for the honor of making a portrait statue of a well-known German divine, this young artist received the commission. II.

# OUR YOUNG FOLK

## Mer de Glace

ON the road to Chamonix, knowing that very soon now I should at last see the wonderful scenes I had pictured to myself for so many years, and actually cross the Mer de Glace, the sea of ice which the picture shows!

Crowded into the diligence we rode along over the well-built roads winding upward towards the mountains, crossing the gracefully arched bridges which span the noisy little rivers tumbling down over the rocks in many a foaming cataract. Here and there we got a glimpse up or down the deep valleys and the narrow gorges. The recent rains had drenched the ferns and feathery mosses that covered the rocks on the shady sides of the mountains until they were that fresh moist green which belongs to naught but mosses and ferns.

All afternoon we drove along until about sunset when the valley of Chamonix opened out to our view, and there in all its majesty, Mont Blanc, with the glow of the setting sun just leaving its snowy peak. We watched the color fade away and the mountain grow white and then faintly rosy again with the afterglow, and then the cold blue shadows of evening crept up from the snowy crevasses, growing darker and darker as we neared the village, and night was upon us before we arrived.

The next day we were up bright and early. The crisp fresh air of an October morning made us feel ready for a good day's tramp; so about nine o'clock we hired our guide and mules for a trip across the Mer de Glace. We provided ourselves with Alpenstocks, poles with spikes in the end of them, and woollen socks to pull over our shoes to keep us from slipping while we were walking upon the glacier.

The Mer de Glace is one of the three monstrous glaciers which descend into the valley of Chamonix, but in order to cross it, it is necessary to follow the trail up the mountain side to a place called Montanvert, a climb of about three hours. At Montanvert we left our mules and after rest and refreshments started along the footpath which led to the glacier. Before we reached the ice we were obliged to scramble over the moraine, a mass of rock and gravel which is slowly being scraped off the mountain side by the ice as the glacier moves slowly downward. This mass of debris extended from the mountain side into the glacier itself for the length of two street blocks.

The first thing we encountered after reaching the ice was a crevasse which had to be crossed. It was about 150 feet deep and just a little too wide for us to leap across; so we had to step down on to a little ridge of slippery ice, and then with the help of the guide, leap over on to an equally slippery slant-

MER DE GLACE

ONE day at a time! That's all it can be;  
No faster than that is the hardest fate;  
And days have their limits, however we  
Begin them too early and stretch them too late.  
One day at a time! It's a wholesome rhyme---  
A good one to live by; a day at a time.

---Helen Hunt Jackson

ing edge on the opposite side and trust to the guide to help us to get our balance and keep from sliding back into the abyss. Perhaps it was as well that we did not realize the danger of slipping until we had crossed safely.

The rest of the journey across this "sea of ice" took about an hour to accomplish and was not particularly dangerous though there were many large holes and cracks filled with melting ice into which it would have been fatal to step. The socks over our shoes kept us from slipping much, and as we gradually overcame our fear of the crevasses we began to enjoy the great masses of snow and ice about us. There were grand palaces and cathedrals in those ice heaps and one could easily imagine the stained glass windows of all the colors of the rainbow where the sun shone through the clear ice making prisms of it. One could picture many a fairy scene, or even glimpses of the North Pole, but for the balmy air and warm sunshine all about us.

After crossing the opposite moraine, we had

BRIDGE BETWEEN ST. MARTIN AND SALLANCHES

a stiff climb along the rocks downward: many times having to fit our feet into the rough steps cut in the almost perpendicular rock, and hold tightly to the iron rods riveted into the rock for that purpose. This "Mauvais Pas," as the rocky trail is named, was the last spice of danger in our day's trip. The rest of the way was along a well beaten mountain trail, shaded with pine trees and very beautiful. Although we enjoyed this our interest was centered in the marvelous frozen river which followed us down the mountain side and, melting slowly, sent its waters dashing down to meet the green foaming waters below and tear madly along in its course.

The lower cut shows the bridge between St. Martin and Sallanches. It is just here that the great Mont Blanc breaks upon the view of travelers who drive to Chamonix. A great American writer, Thomas Bailey Aldrich, once wrote that "if there is in all the world as lovely a day's ride as that from Geneva to Chamonix, it must be the ride from Chamonix to Geneva"; and those who have stored their memory with the beautiful pictures of this region will heartily endorse this statement.

EUGENIA

## Silkworms

IN certain parts of China where the mulberry trees grow luxuriantly, the silkworm is easiest raised and the finest and most silk is made. In many sections of the southern United States mulberries grow well, and silk culture has been started in North Carolina and in Southern California at San Diego. Already American manufactured silk has been sold in Europe. The governments of southern Europe are stimulating silk culture among their people and it is carried on in France, Italy, Spain, Austria, Turkey, the Balkan States, Greece, Syria and the Mediterranean countries, the Caucasus and Trans-Caucasus region, Persia and Turkestan. China and Japan raise the most, however, exporting 26,800,000 lbs. in 1904 besides the large quantity consumed at home. All the rest of the world combined produced 17,800,000 lbs. Silk worms have to be handled very carefully, and they dislike strangers and loud talking. They live only forty-five days; five spent in spinning, ten a chrysalis in the cocoon and the remainder as a caterpillar. They are tiny little black things when hatched and have to be kept in a dry warm place and fed on leaves picked in the morning when the dew has been evaporated by the sun, and watched carefully to see if they are healthy. Covered with leaves on a tray they eat for some days and then take the first sleep. Then they eat again for four or five days and sleep again, all the time growing and consuming more. After the fourth or final sleep the worms are placed upon straws for spinning. B.

# THE CHILDREN'S HOUR

## Urashima

NATURE has many wonderful secrets that have never been unfolded to us; and Fairyland is full of magic that we have yet to learn the use of; and all about us, all the time, lie the secrets and the magic; but it is only once in a while that some loving deed or some conquest over the evil somebody in us, opens up a glimpse of these secrets and the magic that we might know about and might be able to use to help with, if only we could — keep faith.

What does it mean to keep faith? It means to keep a promise, and to obey — even for a thousand years — if the promise has been rightly given and if we owe obedience to one great and wise. In so many stories we read of the misfortune and disappointment that came because people could not keep their promises or could not obey wise commands given by the great. Sometimes people actually see into Fairyland, actually go there because of some jewel that is in their hearts, and then cannot stay there long enough to learn the magic, and cannot find out how to go again, because they have not been able to keep faith.

Urashima, a Japanese boy, was one of these. He was out fishing one day, and, strange to say, instead of a fish he drew up a large tortoise. It looked very old; but Urashima, who knew that tortoises live a thousand years, thought it would be a pity to kill it, in case it might be a young one, with all the years of a long life before it. So he let it go. He thought, you see, that if anything could live such a long time, he would not be the one to prevent it from doing what so many people would like to do, if only they could.

Then he stretched himself out in the boat and went to sleep. He seemed to dream that a beautiful maiden leaped from the sea into the boat, and told him that she was the daughter of the Dragon-King who lived far away. She told him that the Dragon-King had sent her up in the form of the old tortoise to see what kind of a youth he was, and when Urashima let the tortoise go they knew he had a kind heart. They decided that he deserved to know something of the Dragon's kingdom beneath the waves. The Princess then told Urashima that the Dragon-King wished just such a youth to marry her; and Urashima was very glad to go with the Princess away over the sea where the Dragon-King lived, and where he and the Princess could live for a thousand years, like the tortoises.

Urashima was not disappointed when he reached the Dragon's Palace. It was the most beautiful place, and he and the Princess were as happy as could be for some years. Then, suddenly, Urashima remembered his old home and he began to be restless and to wish to know what had happened there. He said to the Princess, "I must go back there to see my

Lomaland Photo. and Engraving Dept.

THE TRAIN THAT BROUGHT PRESIDENT MCKINLEY TO CALIFORNIA

father and mother and my brothers and sisters. I will not stay long, but I must go."

The Princess saw that he had made up his mind to go, so she did not try to dissuade him. She gave him a box to take with him, telling him that he must take great care of it, and on no account *ever* open it, because if he did, he never would be able to return to the Dragon Palace.

Urashima was glad to promise that he would never open the box, and then off he went in a boat.

He found his way easily to his native village — or at least to the place where it had been when he went away. But it was so changed that he could hardly recognize it, and, worst of all, he could recognize no one and no one seemed to know who he was.

He asked the people where his father was, and they could not answer until he said that it was the father of Urashima whom he meant. Then they shook their heads and told him they had heard the story of Urashima the fisher lad who went out in a boat and never returned; but that all that had happened four hundred years before.

Poor Urashima was stunned at first; but suddenly it flashed upon him that here was magic! Of course, he had been to Fairyland, and the short time he had passed with the Dragon-Princess had really been centuries and centuries. Suddenly he felt very sad and friendless and was filled with the idea of getting back to his wife at once.

Easier said than done! How was he to get back? Of course one would think that Urashima would have known enough to start out in his boat. If he had, do you not believe that the Princess would have leaped from the waves to welcome her dear husband and guide him home? But foolish Urashima, forgetting how he had first gotten to Fairyland, forgetting that he had promised *never* to open the box his wife had given him, actually thought of nothing wiser to do than to look into the box for a letter to tell him how to return to Fairyland. The charm was broken! He had

not kept his word! Naught but a fleecy cloud came from the box, and as it floated away poor Urashima remembered, too late, the promise he had given and the consequences that now would follow upon the breaking of it.

In a twinkling he was changed from the husband of the Dragon-Princess into a feeble old man, so feeble that in a few minutes he fell dead to the ground. He had been to Fairyland. He might have lived a thousand years, but he did not keep faith, and no magic could help him. I believe the gods sometimes send fairies like the Dragon-Princess to see if human beings have yet learned to keep faith. When they have learned it there will be more magic than there is now and everyone will

know how to use it.

PHILLIPA

## President McKinley in California

IT was in May 1901 that President McKinley and his party, including Mrs. McKinley and several members of the Cabinet with their wives, steamed into California on the train you see in the picture. Boys and girls all over the world will learn, as they come to study our history, to honor the memory of the third Martyr-President of the United States. They will learn that while President McKinley was at the head of the American nation, the nation really reached its manhood, and proved this by being able to extend a helping hand to nations needing brotherly aid. Never forget that it was at this time that the United States acted as an elder brother to Cuba in her troubles, and that China also received the help that kept her kingdom from being divided up among other nations.

President McKinley's firmness and courage, and his gentle kindly spirit, and his deep love of justice can be traced in all the events of his administration.

AMERICAN

A MAN in Des Moines sold his collie dog recently, and the new owner took the dog home with him to a town five hundred miles away. Five weeks later the dog's old master heard a scratching at the front door and when he opened it, saw the collie, very thin and very dirty — but he had found his way home! And he was welcomed. His old master says he will not part with the collie again for twice the money paid before.

NOBODY can be a real princess until she is a princess over herself; that is, until when she finds herself unwilling to do the thing that is right, she makes herself do it. So long as any mood she is in makes her do the thing she will be sorry for when that mood is over, she is a slave and no princess. A princess is able to do what is right even should she unhappily be in a mood that would make another unable to do it.—George Macdonald

## LAST SUNDAY AT ISIS THEATER

Prof. H. T. Edge Continues his Address on  
Theosophy and the Bible

THE continuation of the address by Mr. H. T. Edge at Isis Theater, San Diego, last Sunday evening fulfilled its promise of interest and careful research given the preceding Sunday. The remarks were followed with sustained attention by the usual large audience, who were promised a third address on the same subject for the Sunday following.

The following gives an idea of the lecture:

Last Sunday I made some general introductory remarks about the Bible as viewed in the light of Theosophy, and concluded with the promise to go this Sunday into more detail. That promise I now propose to fulfil. And first I would ask your attention to the following quotations, which give the key to what follows. The first is from another ancient Hebrew book, the *Zohar*, and runs as follows:

"The narratives of the Doctrine are its cloak. The simple look only at the garment—that is, upon the narrative of the Doctrine; more they know not. The instructed, however, see not merely the cloak, but what the cloak covers."

The next quotation is from an early writer on the Christian Church:

"The Mysteries of the Faith are not to be divulged to all. . . . It is requisite to hide in a mystery the wisdom spoken."

The Old Testament as previously stated, is derived from the Wisdom-Religion; and the teachings of the Wisdom-Religion are always given in allegorical language, partly because of the necessity for a language that should be universal and be able to express more than ordinary words and partly to give it a form which would at once reveal it to the fit and conceal it from the unfit; for there are always people who would abuse the sacred knowledge if they had it.

The Old Testament is a very imperfect form of the ancient teachings, derived from the Chaldaean; and the Chaldaeans themselves got it from India. It is also connected with Egypt, Scandinavia, and even prehistoric America. A few brief quotations will illustrate its universality and show that the Bible has no monopoly of creation stories.

"In the Egyptian mythology, Kneph, the Eternal Unrevealed God, is represented by a snake, emblem of eternity, encircling a water urn, with its head hovering over the waters, which it incubates with its breath. . . . In the Scandinavian Eddas, the honey dew, the fruit of the Gods and of the creative busy bees, falls during the hours of night, when the atmosphere is impregnated with humidity; and in the Northern mythologies, as the passive principle of Creation, it typifies the creation of the universe out of water. . . . In the Chaldaean legend of Berosus, Oannes or Dagon, the man-fish, instructing the people shows the infant world made out of water, and all beings originating from this prima materia. . . . In the Mexican *Popol Vuh*, man is created out of clay or mud, taken from under the water. Brahmā creates the . . . first man, seated on his lotus, only after having called into being spirits . . . and he creates him out of water air and earth.

"In the primordial state of creation, the rudimental universe, submerged in water, reposed in the bosom of Vishnu. Sprung from this chaos and darkness, Brahmā, the architect of the world, poised on a lotus leaf, moved upon the waters, unable to

discern anything but water and darkness. Then Brahmā diffuses the light and the divine spirit and disperses the darkness, calling forth productivity.

" . . . In the Egyptian Cosmogony Athtor or Mother Night, is the primeval element which covered the infinite abyss, animated by water and the universal spirit of the Eternal, dwelling alone in Chaos."—(*The Secret Doctrine* Vol. I, p. 345)

"Before the creation, said the Muscokis, a great body of water was alone visible. Two pigeons flew to and from over its waves, and at last spied a blade of grass rising above the surface. Dry land gradually followed, and the islands and continents took their present shapes." (Brinton)

Myth of the Quiches: "This is the first word and the first speech. There were neither men nor brutes; neither birds, fish, nor crabs, stick nor stone, valley nor mountain, stubble nor forest, nothing but the sky. There was naught but the salient sea and the sky. . . . Nothing was but stillness and rest and darkness and the night; nothing but the Maker and Moulder, the Hurler, the Bird-Serpent. In the waters, in a limpid twilight, covered with green feathers, slept the mothers and the fathers. Over this passed Hurakan, the mighty wind, and called out Earth! and straightway the solid land was there." (*Ibid.*)

Zuñi Creation Myth: "Before the beginning of the new-making, Awoniwilona (the Maker and Container of All, the All-father Father) solely had being. There was nothing else whatsoever throughout the great space of the ages save everywhere black darkness in it, and everywhere void desolation. In the beginning of the new-made, Awoniwilona conceived within himself and thought outward in space, whereby mists of increase, steams potent of growth, were evolved and uplifted. Thus by means of his innate knowledge the All-container made himself in person and form of the Sun whom we hold to be our father and who thus came to exist and appear. With his appearance came the brightening of the spaces with light, and with the brightening of the spaces, the great mist-clouds were thickened and fell, whereby was evolved water in water; yea and the world-holding sea. With his substance of flesh outdrawn from the surface of his person, the Sun-father formed the seed-stuff of twain worlds, impregnating therewith the great waters, and lo! in the heat of his light these waters of the sea grew green and scums rose upon them, waxing wide and weighty, until, behold! they became the fourfold containing Mother-Earth and the All-covering Father-sky." (Cushing)

The picture writing of the Mixtecs: "In the year and in the day of clouds, before ever were either years or days, the world lay in darkness; all things were orderless, and a water covered the slime, and the ooze that the earth then was." (Brinton)

Nobody now believes that the world was created in the year 4004. That date was affixed to the Bible margin by some unknown person who copied the conjectures of Ussher an Irish Archbishop of the 17th century. Geological investigations record the deposition of miles thick of sedimentary rocks, for which the most cautious authorities demand from twenty to one hundred million years; and astronomy deals not merely in a globe, but in globes, which have cooled throughout long ages from fire-mists. It is absurd to make our religious chronology so insignificant in face of these facts. Nor were the "days" of Creation ordinary days; on our own earth we have days of twelve months long at the poles, and in the ancient Brāhman chronology a "Day of Brahmā" is over four billion years long. The ancient Hindū system of chronology was more in

conformity with scientific requirements. A "Great Age" was 4,320,000 years; 1000 of these made a "Day of Brahmā"; 360 days and nights of Brahmā made his year.

Evolution is another subject which we shall have to consider, as it is concerned with the story of man's origin. The Bible says (chiefly through mis-translation) that man was *created*; evolution tells us he *evolved*. Theosophy recognizes the fact of evolution, for it is one of the eternal laws of the universe; but it by no means endorses all the wild and erroneous theories that have been put forward under the name of evolution. Man is the product of several different lines of evolution, but the Darwinists have studied the physical alone.

The teaching is that the Divine Spark (Ātmā-Buddhi) is present in every atom of the universe, endeavoring to express its potentialities in physical forms. Thus it is the cause of evolution. This evolution of forms proceeds through the various stages of the lower kingdoms, evolving successively minerals, plants, and animals. In the case of man, however, there is an important point to be noticed. The evolution is unable to proceed beyond a certain stage without the addition of another principle, the *Manas*, without which the Divine Spark cannot attain to full self-consciousness. Therefore, when the natural forms had been developed up to the point of producing a perfect animal mechanism ready for the future man, it was necessary that this *Manas* should be given from another source. It was so given by Beings called the *Mānasaputras*, or "Sons of Mind," who were men who had become perfected during a previous *Manvantara*. They communicated to the animal man the principle of *Manas*, or the reflecting mind; and, thus endowed, man became able to manifest the full potentialities of the Divine Spark, and acquired that self-induced and unlimited power of progression which makes man what he is and renders him a prospective God.

The Flood story is found all over the world, and nowhere can we go without finding it, even among the most isolated and savage races. To some extent it is the tradition of one or more of those periodic cataclysms of land and sea which geology shows us have taken place. But, while one can understand a universal tradition of such a natural event, it is not so easy to account for the fact that in all the accounts there are the same episodes of the Ark, the destruction of wicked races, the saving of a few men (generally a man with seven children), the sending forth of birds, and so on. This shows that the story, besides having a ground-work of historical fact as the material for the story, is also an allegory, conveying a teaching to those who understand the symbolism.

The deluge myth is common all over America. A sacred mountain is generally indicated as the place where the few survivors were preserved.

The Cerro Naztarny on the Rio Grande, the peak of old Zuñi in New Mexico, that of Colhuacan on the Pacific Coast, Mount Apoala in Upper Mixteca and Mount Neba in the province of Guaymi, are among the number. One of the Mexican traditions related by Torquemada mentions Mount Tlaloc which was in the terrestrial paradise, and one of the seven demigods who escaped commenced the pyramid of Cholula, intending that its summit should reach to the clouds, but the gods, angry at his presumption, drove away the builders with lightning.

The next lecture will deal principally with the Christ, a subject that is interesting the Christian world very much just now.

## *The Last Supper*—by Leonardo da Vinci

LEONARDO'S *Last Supper*, one of the world's most famous masterpieces, has become little more than a memory and is now best known to us by the cartoons Leonardo made for it. The finest of the drawings, which are done in black chalk and slightly colored, is the head of the Christ—the very embodiment of dignity, tenderness, calmness and beauty. It is in the Brera Gallery in Milan.

There are also drawings of the other figures and one of the whole scheme preserved in

more and more become for the world, paler and paler as it recedes into the distance.

The masonry of the wall on which the picture was painted was defective; it was done in oils instead of fresco, which proved to be unfortunate; and altogether it has passed through many vicissitudes, suffering inundation, and having a door cut through its center, taking away part of the figure of Jesus. It was further spoiled by the room being used as a stable by the French under Napoleon, and subsequent retouching and varnishing have not helped it. Even what is left of it, though it

will soon entirely fade away, lingers in the memory of those who have seen it as Leonardo himself lingers in the world's memory.

About all we have left to us that is indisputably the work of this genius, besides some writings and drawings, is the *Mona Lisa* (*La Gioconda*) of the Louvre, whose authenticity has never been questioned by art critics. The few other pictures which have formerly been accredited to Leonardo are now generally consigned to his pupils and imitators; still we can see the mind and the influence of the master through them all. The cartoon made for

other collections in European cities. We have many reproductions of the picture made from these cartoons but it is almost like trying to imagine the Venus of Knidos or the Olympian Zeus from the images of them which are preserved to us on coins.

The visitor to Milan is always most eager to see the dim and faded picture around which so many stories of the life of Leonardo, that most interesting and unique of Renaissance characters, cling, and about which a whole literature has sprung up.

On reaching the old Dominican monastery of Saint Mary of the Graces, we are conducted into the refectory, where, on the wall between this room and the kitchen, is the ghost of Leonardo's great work—almost obliterated and ruined, a shadow only of its former loveliness. Walter Pater has said of the Christ:

This central head does but consummate the sentiment of the whole company—ghosts through which you see the wall, faint as the shadows of the leaves upon the wall on autumn afternoons: this figure is but the faintest, most spectral of them all. It is the image of what the history it symbolizes has

### THE TORCH

THE God of the Great Endeavor gave me a torch to bear.  
I lifted it high above me in the dark and murky air  
And straightway, with loud hosannas, the crowd acclaimed  
its light  
And followed me as I carried my torch through the star-  
less night;  
Till mad with the people's praises and drunken with vanity  
I forgot 'twas the torch that drew them and fancied they  
followed me.

But slowly my arm grew weary upholding the shining load  
And my tired feet went stumbling over the hilly road  
And I fell with the torch beneath me. In a moment the  
torch was out!

Then, lo! from the throng a stripling sprang forth with a  
mighty shout,

Caught up the torch as it smoldered and lifted it high again  
Till, fanned by the winds of heaven, it fired the souls  
of men!

And as I lay in darkness, the feet of the trampling crowd  
Passed over and far beyond me, its pæans proclaimed  
aloud,

While I learned, in the deepening shadows, this glorious  
verity:

'Tis the torch that the people follow whoever the  
bearer be!

—Elizabeth R. Finley in the *New England Magazine*

his *Battle of the Standard* has perished and all we know of it is from descriptions and a group of horsemen copied from it by Rubens. The model for his famous equestrian statue of Francesco Sforza was said to have been used as a target for the arrows of the French bowmen and so was destroyed before it could be cast in bronze. Though little of his work remains, yet the name of Leonardo will ever remain nobly pre-eminent in the history of Renaissance Art. STUDENT TRAVELER

### Jottings and Doings

ADMIRERS of Chopin have placed a medallion on the house in Carlsbad in which the master lived in 1834.

THE Mikado of Japan has recommended the foundation of a national theater at a cost of \$50,000.

A MONUMENT to Joachim is to be erected in Berlin. The Royal School for Music will put up a bronze bust of the master, and the municipality of Charlottenburg will place a commemorative tablet on the house which he occupied.—*The Musician*

# THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS  
REORGANIZED IN 1898 BY KATHERINE TINGLEY

*The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West*

## Attitude of Theosophy Towards Science

**C**RITICISM should be constructive as well as destructive. Theosophists should not only point out where possible the fallacies of modern science, but also replace them by truths; not only show science where it is wrong, but show it what is right; not only show up its failures and limitations, but give actual facts to supply the place of what science has failed to discover. There have been many criticisms of the fallacies of scientific theorists, due to their habit of looking at everything from the matter-and-space point of view and to their "reification of concepts" (as Stallo, an American thinker quoted by H. P. Blavatsky, calls it); but where is the corresponding constructive work that will put science on the right track? Thus scientific critics of Theosophy might argue. And they might allege that perhaps Theosophists do not know enough to be able to do this, but can only be destructive critics.

In the present state of human society there is no way of preventing the abuse of scientific discoveries; for, even if the majority of people can be trusted to make good use of them, there is always a minority which cannot be controlled and which does great harm by the abuse of them. Therefore Theosophists, assuming that they are able to give out new facts in science, would do so with the greatest prudence, believing that progress might be set back thereby and grave dangers to humanity and to the cause of Theosophy be incurred by careless tearing away of veils. This is reason enough, but some will be inclined to represent it as an excuse for holding back what Theosophists do not really possess. The question therefore arises, Do any Theosophists possess any fuller knowledge of nature's secrets, which they could give out if they considered it advisable to do so?

The answer is that many Theosophical writers could say a great deal more than they deem it prudent to say. This is scarcely to be wondered at, since they have studied Theosophy for many years, and perhaps been pupils of all three Leaders of the Theosophical Movement. But — it must be remembered that such glimpses of knowledge as they may have been fortunate enough to obtain were conceded to them by their Teachers on condition that they

## MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

would serve the cause of Theosophy as their prime object, and use all their faculties in the endeavor to perfect themselves as workers in the cause of true progress. It has been the aim of the Theosophical Leaders to give out knowledge in such a way that it would lend itself to these high purposes rather than to the satisfaction of personal desire. Hence Theosophical students have always found themselves diverted from possible paths of purely private research by the urgent call of a higher line of duty, and have willingly postponed the acquisition of knowledge concerning nature's secrets until such time as they might succeed in winning it as the meed of service and until they should be fitted to use it solely in the service of humanity.

Another important point about natural science is that beyond a certain point its study becomes intimately involved in the study of the human organism and faculties; so that the student finds himself brought to a halt by the discovery that he has many imperfections, physical and otherwise, which must first be removed. For, though the merely physical forces of nature may be used by all alike with comparative immunity, this is not the case with nature's finer forces. As so frequently stated in Theosophical literature, these finer forces are capable of overmastering the will unless the will is sustained by purity and wisdom; so that the pursuit of these branches of science, unless undertaken from pure and unselfish motives, will lead into paths dangerous to the individual and to society — that is, into the deleterious forms of "psychism" of which we hear so much.

Therefore Theosophists may be generally described as standing before a veil which they refrain from trying to raise, and if to any extent they may be in a position to satisfy curiosity, they will scarcely presume to arrogate to themselves the right of deciding whether or not it is wise to do so. As the interests of all men are their care, they will naturally wish

to shield people from dangers against which they themselves have been shielded. "Give as thou hast received," is a motto which constrains the pupil to endeavor to reflect the wisdom of his Teachers.

In so far as science may become the handmaid of true progress, Theosophists take a great interest in it. Their attitude to-

wards it is the same as their attitude towards all human institutions and pursuits — that of a wish to rescue it from the abuses with which it may be associated and render it more worthy of its great name — *Scientia*, Wisdom. It is the conviction of all Theosophists that Knowledge and Rectitude of Life are one and inseparable, and that Wisdom — that is, Science — includes the knowledge of right living and duty. In olden times Science, Art, Religion, all forms of culture, were branches of the Mysteries; and, as such, their pursuit was governed and conditioned by pledges and guarantees insuring that they would be pursued in the general interest. Knowledge was not scattered broadcast for the use of the criminal and unworthy, but reserved for those who could prove their trustworthiness. It is anticipated by Theosophists that Science will again become a part of the Mysteries, and that its devotees will consider themselves as members of a great cause and repositories of a sacred trust.

Those who pursue science from worthy motives should surely be the first to desire distinction from those who drag the pursuit in the mire; hence it is their interest to guard the sanctity of the shrine they honor. In the present confusion it is impossible always to distinguish, in one's criticisms of science, the worthy from the unworthy. It is the part of the genuine votaries of science to guard their own honor and that of their calling.

No true scientist has any sympathy with attempts to set up a tyranny of thought upon the basis of a knowledge admittedly very insecure; and therefore true scientists will join hands with Theosophists in recognizing that their calling demands a reverent, open-minded, liberal attitude towards life, a willingness to admit limitations and to welcome new ideas. Also the true scientist will feel that his superiority in knowledge entails upon him the duty of being a little better in his mode of life; for a knowledge that does not help a man to live worthily does not deserve the name. Path

**T**HE worlds, Arjuna!—even Brahmā's world—  
Roll back again from Death to Life's unrest;  
But they, O Kuntī's Son! that reach to Me,  
Taste birth no more. If ye know Brahmā's Day  
Which is a thousand Yugas; if ye know  
The thousand Yugas making Brahmā's Night,  
Then know ye Day and Night as He doth know!  
When that vast dawn doth break, th' Invisible  
Is brought anew into the Visible;  
When that deep Night doth darken, all which is  
Fades back again to Him Who sent it forth;  
Yea! this vast company of living things—  
Again and again produced—expires  
At Brahmā's Nightfall; and, at Brahmā's Dawn,  
Riseth, without its will, to life new-born.  
But—higher, deeper, innermost—abides  
Another Life, not like the life of sense,  
Escaping sight, unchanging. This endures  
When all created things have passed away:  
This is that Life named the Unmanifest,  
The Infinite! the All! the Uttermost.

—*Bhagavad Gītā (The Song Celestial)*, Book VIII  
Set to verse by Sir Edwin Arnold

### Character

**C**HARACTER is that combination of qualities by which the Ego, the real man, seeks to express its own nature, and those also which it may have acquired in its contact with the world. It may be said to be the vesture by which the Ego has clothed itself. It is that expression of the inner man which is seen by the world only in its general trend, and by outward acts and expressed sentiments.

Dr. Oliver Wendell Holmes noted a truth which, upon consideration, will be obvious to all of us, namely; that man presents himself under three different aspects in accordance with three different points of view. First: he is the man as viewed by his Creator; second: as he is viewed by his fellow men; and third: as he views himself.

In other words, the real man is the one appraised by Karma, the unerring compassionate agent of divine law, from whom nothing can be concealed. As the man stands thus naked, stripped of all false pretension, in the searchlight of law, he is just what he has made himself by his own thoughts and deeds. He is a focus of the forces he himself has started into action and for the result of which he alone is responsible to Karmic law, which is always working to adjust the disturbances caused by our transgressions.

It is abundantly clear that the real man as a whole can never be seen by his fellow men. They may be able to catch glimpses here and there of his character, but knowing little of the motives of his present efforts, and nothing whatever of the energies he has in the past started into action, how would it be possible to value him at his true worth? The opinion of his fellow men as formed by his outward appearance constitutes his reputation, which may be in part or wholly at variance with his

inner character. Of course with one who is striving to live up to his highest possibilities and not consciously practising concealment, his real character will in greater measure be revealed, for "by their fruits ye shall know them"; still, even in such a case, owing to the biased judgment of his fellow men, he will be likely to be over- or under-rated. But as such limited knowledge of our fellow men is largely all we have to go by, we must in our social relations proceed in accordance with it; always remembering, however, that our condemnation, if it seems called for, should be aimed at acts and not at the offender himself.

If it is difficult for man to view his brother-man rightly, equally difficult is it for us to value ourselves with perfect justice. We are so blinded by our own proclivities that our distorted vision leads us astray. Vanity, egotism, conceit, pride, ambition, and selfishness lead us to over-rate ourselves; while, on the other hand, a false humility, lack of courage, slothfulness and fear, incline us to lose sight of our possibilities and under-rate ourselves. We are great in proportion to our efforts towards overcoming our weaknesses and faults, and until these are overcome and we reach the status of perfected beings, knowing all our past, we shall never be able to judge ourselves aright.

We, the average among us, have no present memory of our past lives, but we may rest assured that if we have no aspirations above self-indulgence we have not started such a force into activity in our past, and the sooner we begin to do so the sooner we shall be upon the upward path which we all must eventually traverse in order to reach our destined goal of perfection. To bend our energies in such direction is to create that true character which is our only valuable asset for time and for eternity.

It has been said by one who knows, that the human brain is an exhaustless generator of force, but how little we understand the use of this function! We generate force but turn it in many wrong directions. The greatest volume of steam in an engine, if wrongly applied, works harm instead of good, and the greater the force the more harm it works.

That we come into this life not only with a physical heredity and certain moral and mental prenatal imprints upon us from our parents—these, to the extent to which we receive the impress, being, as Theosophy teaches, also a part of our heritage—but also bring with us our own individual character made by our own efforts or non-efforts in our past, is a fact that is plainly discernible in any family of children. The great differences in the characters of children of the same parentage and environment are noted with wonder by those who have no philosophy to explain them.

A knowledge of the Theosophical philosophy, which explains these differences, is of no benefit to us if we do not apply it practically under all the circumstances of our present career. It is for us to note the weaknesses and faults of our character in order to correct them, and in all respects in which we seem to have started in the right direction it is for us to add to the force already generated. We do not need to remember from life to life nor even from year to year in this life just the means in detail that we have employed to bring us to our present status. We, none of

us, remember half of the events of this life, but the fruits of our course are now in our possession. For instance: we may far back in childhood have found ourselves sorely tempted again and again to untruthfulness. Our lower nature may have risen up with all its sophistries and told us what an advantage it would be to us in certain cases to deceive or lie outright, but our conscience was awake and by great effort we have resisted. For the most part we have forgotten the events, but all the same, each temptation resisted added to the strength of our character in that direction. It helped us to form a habit of truthfulness; and so it is with all efforts in the right direction, for they are building up good character.

Unfortunately we sometimes make great efforts in the wrong direction and thereby fail to advance ourselves in evolution, or perhaps even undo some good work of the past when a new line of temptation confronts us.

It is not always easy to distinguish our faults from virtues, as when we indulge in contempt or dislike towards a fellow-being who is yielding to a vice to which just now we are not tempted. Such a spirit might, perhaps, indicate that our temptation in that direction was yet to come to us in the future.

A man who for the most part seemed good and upright, once said: "I hate a drunkard. He is not fit to live. The sooner he dies the better." And because of this lack of charity and the spirit of helpfulness, may it not be that in some future life, if not in this one, he himself will be tempted and may, perhaps, yield to that same vice? With a knowledge of Karmic law does it not seem that he would need either a similar or other bitter experience of an overpowering weakness in order to implant in him that compassion for his fellowmen—even though they fail—which we should all feel?

Again, women sometimes draw themselves aloof with what they consider justifiable and virtuous disdain from an erring sister who is leading a life to which by reason of temperament and circumstances they themselves are not now tempted. But should they not rather take heed lest they fall perhaps even lower than the subject of their scorn? We may rest assured that the lessons we need will at some time come to us, for the loving, just, and merciful law, always thus aids us in our spiritual development. But suffering is not the only means of advance. We may by means of sympathy so enter into the experiences of others that they become our own experiences, and when our minds are fully awakened to truth, we shall perhaps not need our lessons through physical experiences and suffering.

We should study our character and try to see just what it lacks. We feel perhaps that our trial is the one we most dislike and find most difficult to endure. Quite likely it is, for the very something in our character which makes the trial difficult also renders it necessary for us, and we will continue to have it until we find it easy to overcome. Perhaps we cannot bear to have anyone think ill of us, or accuse us unjustly, and we flatter ourselves that it is because we are so refined and sensitive. We marvel at our more vigorous neighbor who does not trouble herself about what people say or think so long as her own conscience does not accuse her. We marvel still

more at the fact that she seems to meet the approval of all right-minded people, and to have little of our trial to endure. Precisely. She has so conquered that weakness (for it is a weakness and not a virtue) that she does not need the lessons given to us.

If we would learn to analyse our character and call our peculiar traits by their right names, we should be more likely to overcome our faults; but so long as we cling to them as virtues they will remain. M. J. B.

## THEOSOPHICAL FORUM

Conducted by J. H. Fussell

**Question** What explanation do you as Theosophists give to the teaching of Christ, "Resist not evil," etc.?

**Answer** I. The question of non-resistance has produced much difference of opinion. Here, as elsewhere, the avoidance of the "falsehood of extremes" should be kept in mind. There can be no question that Jesus taught his disciples to exercise charity, to show in practical life a forgiving spirit. No one can be in doubt as to the general tenor of his teaching; the difficulty arises when we seek to give his words a particular force or application. This tendency to follow the letter rather than the spirit existed among the early disciples; for when one asked Jesus *how often* he was to forgive his brother, Jesus replied, "until seventy times seven," words which are meant to convey enduring patience and compassion, and not any mere number.

To grasp the spirit of Christ's teaching in this place — "Resist not evil," etc. — we must try to enter into the conditions of life then. Jesus spoke with reference to at least two phases of Jewish life at that time. One of these was the general spirit of retaliation for personal injuries which permeated the old Jewish life. Another was the politico-religious spirit which was very common then in Palestine. The hope of a Deliverer, and the strong passion for freedom from foreign rule, from the time of the Maccabean princes until the destruction of Jerusalem by Titus, animated the whole people and produced frequent insurrections, some of which even Rome had some difficulty in quelling; and in one instance had to send her best general to Palestine. We see this spirit coming to the surface in the question put to Jesus, was it lawful to pay tribute to Caesar. Now Jesus met both conditions, the old Mosaic spirit of an eye for an eye, and the present politico-religious spirit, by his teaching in the Sermon on the Mount. Do not retaliate; and underneath this lay the principle of universal brotherhood, of universal unity. The old law, "love thy neighbor," had, without any warrant, been supplemented by the Rabbinical gloss, "and hate thine enemy." Jesus came to fill full with a spiritual and divine meaning and scope the ancient law, often misunderstood, and not infrequently perverted. The whole spirit of Jesus here is that as children of the Father in heaven, who sends rain and sunshine on the evil and on the good, we should aim at love or charity to all.

As for the politico-religious spirit, it was useless to rise in insurrection against Rome. Events proved the wisdom of this. On every

ground it was the duty and the wisdom of the early disciples to live in peace, both with each other and with Caesar. As a great brotherhood — one is your master, even Christ, and all ye are brethren — it behooved them to bear with one another as much as possible. We find the same teaching in the Epistles — it is better to endure wrong from a brother Christian than to exhibit before the world a spirit of retaliation by going before a Roman magistrate.

This is the broad general spirit of the New Testament. Are we, in addition to this to transfer our twentieth century, Western modes of thought into the Oriental imagery used by Jesus? Are we to give up our money or our clothing to any tramp that comes along? Are we literally to turn the left cheek as well as the right to the smiter? The best answer to this unsympathetic interpretation of Oriental poetic language is the way Jesus himself acted before the High Priest, when one of the officers smote him with the palm of his hand. He did not turn the other cheek, but reproved the officer: "If I have spoken evil, bear witness of the evil, but if well, why smitest thou me?" (John xviii. 23) Furthermore, we must remember the express teaching, "Resist the devil, and he will flee from you"; and again, "Whom resist steadfast in the faith."

As to the broad general subject of retaliation, we might mention many instances in the history of the Theosophical Movement of compassionate help given by each of our three Teachers, H. P. Blavatsky, William Q. Judge and Katherine Tingley, even to those whom they knew would be ungrateful and would afterwards turn and rend them. In *Light on the Path* it is stated that at a certain stage of discipleship,

All weapons of defense and offense are given up; all weapons of mind and heart and brain and spirit. Never again can another man be regarded as a person who can be criticised or condemned; never again can the neophyte raise his voice in self defense or excuse. From that ceremony he returns into the world as helpless, as unprotected as a new-born child.

And these other words of Jesus will be remembered: "Except ye become as little children ye cannot enter the kingdom of Heaven." Yet a courageous defense of those unjustly attacked as well as of truth and principle at all times has been ever taught as a foremost duty in Theosophy, as it should be among all lovers of the human race. (Rev.) S. J. NEILL

**Answer** II. There are several considerations that come up in regard to this statement alleged to have been made by Jesus. First, did he make it? Is it in harmony with his other teachings and his life? Second, if he made it, did he make it for the general public or for certain of his disciples? And third, if made by him, what meaning did he intend it to convey?

As regards the first view, as to whether it is in harmony with his other teachings and his life, this has been touched upon in the above answer. One or two points may, however, be added. We may refer to Christ's action in the Temple when he made a whip and drove out the money changers. We may also call to mind the description of him said to have been made by an eye witness, in which he is des-

cribed as "terrible in reproof," and which is borne out by his denunciation of the scribes and Pharisees: "Woe unto you, Scribes and Pharisees, hypocrites. . . . Ye fools and blind . . . for ye are like unto whited sepulchers. . . . Ye serpents, ye generation of vipers." This surely is not like the "gentle Jesus, meek and mild," the milk-and-water Christ, as he is so often portrayed to children and in hymnology, instead of the noble manly and heroic character that he must have been; and so from one standpoint it might be doubted whether he did make the statement.

(2) But granting that he did, did he make it for the general public or for certain of his disciples who had reached a certain stage of development? Of what value to say to the wild beasts of the forest, Thou shalt not kill? Or to the birds who feed upon insects, Thou shalt not kill? And of what value to say to men in whom the animal nature is predominant, Resist not evil? Yet as may be seen from the quotation from *Light on the Path* in the above answer to this question, there may come a time in the life of a disciple when "all weapons of defense and offense are given up; all weapons of mind and heart, and brain and spirit," when "he returns into the world as helpless, as unprotected, as a new born child," and it must be clear from a common sense standpoint that if the statement were made, it was made for those who had reached a certain plane of development as disciples, and not for the mass of the people who are not yet ready to take upon themselves the duties of discipleship.

(3) What meaning is to be placed upon these words? What meaning should be placed upon them in the light of Theosophy? Is it not possible that a word may have been missed out and that Jesus may have said, "Resist not evil with evil"? As was said by Paul, "Be not overcome of evil, but overcome evil with good."

The question of retaliation need not be touched upon here, having been dealt with in the above answer; but there is this further point: what should be our attitude in regard to others as to the sacred things of life and to principles? Who will say that it is not right to defend these; that it is not right to resist the inroad of evil into the home and into the nation, and to protect all that is sacred in life? Did not Jesus himself say that "whoso shall offend one of these little ones, it were better that a millstone were hung about his neck and he were cast into the sea."

But as regards defense of the personality through pride or through self-love, it might well be understood that such an injunction as "Resist not evil" should be given, for the personality is too prone to revenge and to resistance for the mere sake of overcoming another, and for self-vindication, i. e., of the lower self.

It would be a great mistake to take any isolated statement of Jesus or indeed of any teacher and expect to get at its meaning apart from the whole of the teachings and the life of the teacher. In other words, "it is the letter that killeth and the spirit that giveth life." And this as with all other statements attributed to Christ can only be truly interpreted in the light of the Christ-life. STUDENT

### The Making of the American

IT is evident that we can make but a faint and colorless picture of the American of 2008. The elements that will go to make up that unique synthesis are still arriving, arriving in greater volume than ever before. Commissioner Sargent, referring to the immigrants of 1907, says:

An army of 1,285,349 souls, they have come, drawn hither by the free institutions and the marvelous prosperity of our country—the chance here afforded every honest toiler to gain a livelihood by the sweat of his brow or the exercise of his intelligence—surpassing in numbers the record of all preceding years.

They come from everywhere, nearly every variety of the human race being represented; and each contingent, except China's, is a larger one than its representative of the preceding year. The Chinese are mainly excluded; Secretary Strauss, by the way, suggesting that we should do it a little more delicately. At present the Exclusion Act is worded so as to bar the whole nation, and then makes certain exceptions. Without practical difference in results, it could be worded so as to admit the whole nation—excepting certain classes.

Austria-Hungary furnishes the largest column of the army, 340,000. Italy is next, 285,000; and Russia (with Finland) next, 260,000. Then there is an immense gap, after which is England with 56,000. Germany follows with 37,000, and then Greece with 36,000. Considering the population of Greece the numbers who come here mean a pretty heavy loss for her. The same remark applies to Italy—and to Ireland, who sends (or is drained of) 34,000. Hardly fewer come from Japan, 30,000—thirty times as many as from China. The Turkish desire to come this way is growing very much, to the tune of 20,000 for 1907 as against less than half that for 1906.

Some of the countries that furnish large contingents of this army are beginning to note their depletion with some anxiety. The significance comes out clearly in dividing the home population by the numbers that leave it. Thus Italy gave us in one year nearly one of every hundred. Russia one out of every four hundred. But emigration is not easy from there and the people are very poor. Japan's 30,000 means hardly more than one out of fourteen hundred. But everybody who is interested must work it out for himself and draw his own conclusions as to the state of the contributing country. We usually, however, read all such facts and figures with our eyes, not our minds; and believing ourselves to be acquiring information, learn nothing. But it is worth thinking of that if tomorrow we met 1000 people in the street, 13 of them arrived at our shores last year. At the end of next year we shall have to write 14—27 for a mere two years. Let the prophets work it out for a century and then prefigure the resulting American. We and he are hardly entitled to the same name, so great must be the differences.

STUDENT

### Is Earth Inhabited?

LEARNED professors on the planet Mars, after careful scrutiny of Earth, have just decided that the Earth cannot contain intelligent creatures. Earth and Mars have been close neighbors recently, being only some 35,000,000 miles apart. The

professors made a report of their conclusions as follows:

"A creature on Earth would weigh two and one-half times as much as on Mars. This would make him of short stature and cause him to move on four feet, or at least on two, and probably make him crawl. We do not believe this to be conducive to high intelligence.

"Dense atmosphere on Earth would crush him. It would cause violent tempests, which would make fixed abode impossible. It would certainly uproot vegetation.

"Spectrum of Earth does not show presence of fluid in one canal. Instead there is water, which with us exists in solid state and is fit only for medicinal uses.

"On Earth many water channels flow towards poles. Our canals all flow toward the equator. Until this queer phenomenon is explained we must deny the existence of vegetation on Earth.

"On Earth are vast waste expanses of what seems melted ice, at least two-thirds of the surface being covered. We cannot conceive sentient life being possible under such conditions. It means a very high degree of temperature to keep the ice melted, and high temperatures would destroy life.

"Besides, the melted ice seems to inundate the land at frequent intervals, caused by atmospheric storms and by tides of a tremendous moon. The moon's diameter is 100 times that of our larger moon, Phobos.

"The black lines across the land areas of Earth and the trails of black and white vapor following those lines, we can explain only as optical illusions. Also the black specks that move over the water areas. The specks cannot contain intelligent creatures, since they occasionally sink below the surface and never come up again.

"Consequently, we are forced to conclude that if life exists on the Earth it is of a very low order. All speculations about the habitability of Earth are premature, to say the least. We revert to our original opinion that we on Mars are alone in the universe as intelligent beings."—From the *Oregonian*, Portland, Oregon.

### Luxurious Inventions Undermine Health

A MEDICAL magazine states that there has been a great increase of tuberculosis among sailors whereas in the old sailing-ships it was practically unknown in spite of the bad ventilation, bad food, and other hardships. The increase is attributed to the heating of the ships throughout, by which means the hardihood and vigorous health arising from breathing cold air is prevented. The same thing, says the magazine, has been observed in farmer families who have become prosperous and built modern steam-heated houses.

It is indeed a novelty that a sea voyage should be actually a cause of consumption; we shall have to think twice before going on a voyage for a cure in these days of traveling hotels. A good rough-and-tumble on a sailing ship, without any steam-heat or booklover's library, etc., would be more to the purpose. The worship of comfort is the pursuit of an ever-receding ideal, if worshiped on such lines; for it results in worse discomfort.

And we look down upon older nations because they do not value these modern "conveniences"! They prefer to have that bodily and constitutional hardihood and adaptability which render the hardest seat comfortable; and we pamper ourselves until no seat, however well padded, will give us ease. And we look down upon them! What is the use of

carrying about in ships and railway cars such a mass of rubbish, when it causes discomfort to everyone concerned? when it not only causes expense and trouble to the railroad people, but creates disease and discomfort among the passengers? What is the use of fitting up our houses with heat that slowly kills and light that blinds and cushions that debilitate?

It will not do to rush to an extreme and decry all invention; but most certainly there is a limit and a balance to be observed. We must not saddle the wrong horse, as we are so fond of doing, and blame invention. It is luxury that must be blamed; luxury that has ruined empires and is the universal solvent for human virility. That so much genius should be bestowed on inventing forms of this dangerous foe—that is the fact to be regretted. If what we call hardship and bad luck did not mercifully step in and shake us up, we should soon kill ourselves off; a draught or a piece of ordinary food would be enough to do it, we should be so delicate.

E.

### The Jonah Story in Court

A PRESS cutting states that the courts have been called on to decide whether the story of Jonah and the whale is true. The case is one in which a Christian college brings suit against a clergyman for fulfilment of a promise to pay a certain sum, which promise was made, says the defendant, on the understanding that the college was strictly orthodox. But the college does not accept the story of the whale swallowing Jonah. Obviously anyone attempting to enforce a claim conditioned on "strict orthodoxy" might be put into a very awkward corner and forced either to abandon his claim or subscribe to some very curious dogmas.

The story of Jonah is a symbolical myth, probably a good deal altered. In the ordinary version of the Old Testament there is no whale; it is a "big fish" that swallows Jonah. The fish is a well known symbol in mystic writings, being also one of the chapters in the Zodiac, the one in which the Sun is "reborn" and which is connected with Messiahs. Most Biblical scholars regard the story as to be taken allegorically. One of them says that it is not nearly so wonderful that Jonah should have that adventure, as that he, a single foreigner, should convert a whole Assyrian city like Nineveh.

STUDENT

### Ignorance of Missionaries

IN a letter which was read at a meeting to celebrate the centenary of Protestant missions in China, Sir Ernest Satow said:

The Chinese are an ancient people, holding firmly certain beliefs and doctrines of their own, handed down to them along twenty centuries and more. We try to make them acquainted with what we believe to be a better rule of life. We ought, as it seems to me, to endeavor to make ourselves acquainted with the teachings of their sages and doctors before we undertake to replace these by what we have to offer. What is this but saying that among our missionaries there should be some at least who are scholars in the language, history, and philosophy of China, as well as others who are Christian theologians, able to give to every man that asketh a reason for the hope that is them.

It might happen that in the mountain fastnesses of China some could be found qualified to help missionaries to understand the true meaning of Christianity.

# THE SECRET DOCTRINE

THE  
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.  
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis  
Vol. II treats of Anthropogenesis

THE SECRET DOCTRINE is the author's second great work, in which her profound spiritual knowledge and great attainments are stamped on every page. To be without this colossal monument of learning is a loss to any one, no matter what his aim in life. In this work, the

SECRET DOCTRINE OF THE AGES

# THE MYSTERIES OF THE HEART DOCTRINE

Prepared by  
**KATHERINE TINGLEY**  
AND HER PUPILS

*The Theosophical  
book of the  
Twentieth century*

Tells the story and the history of the  
Theosophical Movement.

The prices are \$2 in cloth and \$1.25  
in paper, which barely cover the cost, for  
it is printed and bound, not gaudily, but  
with such carefulness and thoroughness of  
art and craft as to make it unique among  
modern edition books.

### What is Christianity? Still Another Definition

ONE of the chief advantages of this Review is that it is a focus where the many and various rays of modern thought converge, often to their mutual inconvenience; and that it therefore enables the reader to consider in juxtaposition theories which if taken separately might lead him astray. The old saying, "How happy could I be with either," has its corollary in the saying, "How could I possibly get along with both?" and that this applies to theories of Christianity, sundry articles in the CENTURY PATH have from time to time aimed to show.

Among the various attitudes adopted by those who desire to uphold the ancient authority of their religion under the destructive light of modern criticism is this,—that while Christianity has affinities with all other religions, it is far and away the best of them all; and that we may therefore securely accept all the revelations of modern scholarship and feel certain that Christianity will prove its pre-eminence by its merits. This view is indeed hard to maintain; yet, even if maintained, it will meet with some opposition from those who base their religion upon authority, or upon the Gospels.

Another point to be noticed is the agility of some advocates of Christianity. They first fight the Biblical critic inch by inch in order to maintain their exclusive ground; and then, forced to yield it, try to identify themselves with the victorious party and claim his conquest as their own.

Professor Bousset's new book, *What is Religion?*, is reviewed in a London contemporary from which the following is quoted or condensed. It is described as "a brilliant historical essay about religion, informed and inspired by a single idea." That idea is:

Not only in Christianity is the highest point reached, but in it all former lines of religious thought appear to converge.

Until lately, we are told, almost all official advocates of Christianity argued its truth from its isolation. In Judaism alone was Christianity allowed to find affinity. Analogous traits in other religions were laboriously explained away. The workings of the Holy Spirit were to be sought for by Christians only in the Hebrew Scriptures until the year of our Lord, and after that only within the precincts of Christendom. But such an evidence to Christianity was bound to be destroyed. Yet out of its ashes has

arisen a far stronger proof, so we are told.

The learned men have wrested one sword at least from the hand of the sceptic, and have put it into the armoury of the Church. From every age and from every country, out of every civilization and every stronghold of thought, Professor Bousset marshals his witnesses to Christ, the safety of whose kingdom can never, he believes, depend upon its circumscription, but is broad based within the heart of man upon a consensus of aspiration, a common hunger, and a common satisfaction.

This is certainly a graceful yielding of the position, but rather ungrateful to those staunch predecessors. The critics will never catch the Church if it continues to perform such evolutions; but so long as it is satisfied merely to "save its face," they may be willing to concede it that harmless privilege. It is action that will count in the future, not mere posing and asseveration.

An evolution of religion is traced, conformable with the ideas of history conceived by the primitive Western scientific imagination—ideas now waning before the light of a brighter dawn of knowledge. At the beginning comes the religion of the savage; and as the savages are supposed to combine their tribes into nations, the several tribal gods unite into a pantheon. The Professor is good enough to say that led by the Old Testament writers, the world has undervalued the spirituality to be found in polytheistic religions, and that there are portions of the *Book of the Dead* not unworthy of a place beside the psalms of Israel. He discerns a great religious wave between the eighth and sixth centuries B. C., and after this great efflorescence he divides his subject into two divisions which he calls the religions of law and the religion of redemption, the one seeking to uphold the faltering steps of man by the galling support of the minutest discipline, and the other to deliver his soul from the unending sorrows of the actual. In this connexion he contrasts Gautama Buddha and Plato.

Finally we come to Christianity, in which the two religions, that of law and that of redemption, combine and meet. And what is Christianity?

Christianity is to be found in the teaching and in the personality of Christ.

Very good; but, as has been shown in the CENTURY PATH, there are earnest advocates of Christianity engaged in asserting that Christianity does *not* rest on the personality of Christ. Each teacher cuts away everything but

his own standing ground, and between them all there is no standing ground left at all.

Then we get the emasculating religion of intercession and vicariousness set forth explicitly; and also the idea of the personal God. To quote from the review:

**The "Personal Universal Being" again**

Christ redeemed men from the terror of the world by assuring them that when man aspires to God the old passes away and a new life is begun, and by bringing them into relation with "a personal Being" whom he calls "Father," for "the Gospel expresses in unsurpassed fashion the idea that the nature of God is not that of a universal impersonal existence." He transformed the idea of judgment which strikes terror into the human consciousness by changing the center of moral gravity from action to motive, thus allowing a place for repentance. "He knew that as soon as the Divine 'Thou shalt' began to stream through the consciousness of man, earth-born man would oppose this voice, and then a mortal combat would arise. *He knew that in this combat we should never reach the goal appointed for us.* And because he knew this Jesus revealed to his people a God of forgiveness, a God who does not look to the performances but is content with the disposition that begets goodwill, and daily forgives sins. Here the Gospel of Jesus reaches its supreme height."

Let it be observed first that this very doctrine of forgiveness is being abandoned by many prominent advocates of Christianity,

**An Unmanly Enfeebling Doctrine**

from some of whom we have quoted, in favor of the idea that man can save himself by virtue of the Christ in him.

Here, however, we have an eloquent preacher, clinging to the old doctrine. And is it not an enfeebling doctrine! Actions are to be excused because man's earth-born nature will oppose his attempts to follow the Divine "Thou shalt." Good intentions only are to be deemed sufficient. Jesus came to assure us that God would not expect us to maintain this conflict with the earth-born self, but would let us off and excuse us, daily forgiving our faults and failures. And this doctrine is praised, both by the author and his reviewer, as the most comforting, joyous doctrine ever revealed. It may be comforting to some souls. But there are others who will absolutely refuse to believe that they cannot overcome the earth-born self, and must forever lose in the conflict, and need the daily excusing of their errors. There are those who will feel humiliated beyond endurance by the idea that salvation is to be bestowed on them

**"Predestined Failure"!**

like a charity by an insulting deity who trusts not the man he has endowed with his own Divine Breath. It is impossible to find terms too strong to

condemn the doctrine expressed in the words, "Christ knew that in this combat (with the earth-born man) we should never reach the goal appointed for us." It strikes at the very root and source of all human hope and strength. For the one thing that makes man what he is, raising him above all the beasts of the field, is his Divine prerogative, the *Divine Spark* breathed into the clay. Man can never be vanquished — *unless this can be taken away from him.* The best way to set about depriving him of it is to begin by destroying his belief in it, his confidence in it. Is not this the very thing that the preacher and his reviewer have

done in the words quoted above? What is to be thought of Christian ministers who preach to the people that they are not Souls but mere earth-born men; that they will never win in the fight with their lower nature? One may be pardoned for wondering if they are not in a conspiracy with the scientists who teach us that we are only a higher kind of ape.

**Another Doctrine of Ignobleness**

It is needless to say that Theosophy is unconditionally opposed to any attempt, under whatever guise, to deny the inner divinity of man, and cannot but recognize in such attempts the working of a power (with which people either consciously or unconsciously identify themselves) that is destructive to the human race. Theosophy proclaims the eternal Truth of man's Divinity — that man *is* a Soul — and that by the power of his own Divinity, he can rise superior to the man of clay and subdue his earth-born nature. And Theosophy maintains that this is the true doctrine of the Christ, in which claim Theosophy finds itself supported by many Christian ministers. Any man in whom the Divine Self has fully mastered the personal self is a Christ, and there have been many such, some known to the world, others unknown. It is the destroyers of Religion who have converted the man Jesus into a unique being and denied to man the very divinity which Jesus in the Gospels is represented as affirming. And so well did these destroyers of Religion succeed, that today people not only accept their falsification but actually glorify it as the original Christianity.

**An Undermined and Divided House**

Another monstrous idea is that the progress of humanity since the Christian era has been due to the influence of these doctrines. Against this Theosophy says positively, with ample support from history, that these doctrines have acted as a continual clog on human progress, and that the human Soul has only won its way by fighting them down.

As to the personal God, it has been shown that the word "personal" implies limitations which cannot be attributed to Deity without denying the power and supreme goodness of Deity; for the word "personality," unless interpreted in such a wide sense that the word ceases to mean what it does and means something entirely different, involves limitations such as pertain to the mortal mind of man. But this circumstance is evidently no obstacle to our preacher; for is not his Deity a capricious, inequitable God, that bestows not according to merit but by favor? The whole thing goes to show how the idea of personality in Deity is bound up with the idea of partiality and caprice.

**Caprice and Personality in the Place of Law**

But there is little need, nowadays, for Theosophists to combat the idea of vicarious salvation, or the idea that intention counts above merit. The modern world no longer stands for such doctrines, which are left to the revivalists and bigots. Advanced Christianity is teaching a manlier doctrine and has no more use for the supposed effeminate Jesus of by-gone days. The different schools of Christian thought may be left to settle their various interpretations with one another. STUDENT

## The Ancient South Coast of Europe

THE northern part of Africa was once an integral part of the continent of Europe, what is now the straits of Gibraltar being dry land; while to the south of this northern part of Africa rolled the ocean. There is a very distinct line of demarcation between the northern part of Africa and the desert south of it; while there has always been an affinity between the northern coast and the south of Europe. It was a part of European civilization. This region is a table-land flanked by mountains north and south, and there are rocky ridges running parallel with these mountain ranges between them. South of this comes an arid but habitable region, and south of that the desert. In the east the transition from fertility to desert is most abrupt, the scarp of the Atlas running right down upon the desert. This scarp is pierced in its most precipitous part by a gorge, through which runs the Wady Biskra, and the passage was used by the Romans as a road and the French built first a road and then a railroad along it. A writer in the *Bristol Observer* describes the sudden change of scene in traveling this way. First there are fields of cotton, temperate trees, and rugged ridges cropping up from the cultivated soil; and but for the camels the traveler might think he was in western America. He comes to an inn of French architecture, surrounded by a cool quiet garden and with the river running by it. He walks on a few hundred yards through the gorge and suddenly, at a corner, comes upon the unrelieved desert in all its glaring barrenness. T.

## The Advance of Meteorology

THE young science of meteorology has at last emerged from the chrysalis stage and taken to itself wings! Instruments are no longer located merely on the surface of the earth, but ascend daily at Mount Weather, Virginia, to altitudes of sometimes more than four miles above the sea. This is accomplished by means of eight kites carried in tandem. Vertical gradients of temperature, etc., are thus recorded; and it seems clear that when this improved system of observation becomes more extended we shall have a better acquaintance with the behavior of the upper air-layers than hitherto. A few mountains have been utilized for years, but such points are usually very far apart; and the local conditions produced by mountain-chains, though fairly known, require to be supplemented by a knowledge of those prevailing above extensive land plateaux. Many unsolved problems of the upper air probably have a considerable influence, if not a controlling one, on the conditions in the lower strata.

As such aerial observations extend, the temperature charts for various altitudes will become more and more instructive; and when connoted with variations of humidity, electric potential, wind directions and velocities for depths of four or five miles, we shall be armed with a mass of facts perhaps enough to revolutionize present methods of forecasting.

There seems little doubt that the prescience possessed by certain plants and animals is related more to the "electrical" — to use this word for various subtle forces — state of the air than to its temperature or relative humidity. More aerial research is needed. STUDENT

## Some Views on XXth Century Problems

### Spiritual and Psychic

THERE is a considerable number of men of science today who are in their own persons very remarkable examples of the power of repeated denial, of auto-suggestion. Over a large area of their minds broods the thick hypnotic fog, quite sun-proof. They are not forces in the world of thought, but the remains of a reaction. For centuries the Inquisition had been saying: Under penalty of fire thou shalt believe the whole of this to its last detail, and not a detail more; thou shalt think exactly along this line and to this point thereon, no other and no farther.

Naturally there was a reaction. On the crest of the Reformation wave men decided *not* to believe the whole of this; on the crests of subsidiary waves some decided not to believe *any* of it nor anything like it and to think along a line running the opposite way. The great wave was a reaction from what was false and from improper restriction; some of the following waves carried some men from what was true and even from the restrictions of fact. If the Church recognized the existence of, permitted and even enjoined belief in the phenomena now called "psychic" and "Borderland," these, because other teachings were going overboard, must go too.

And so it remained until about the last quarter of the Nineteenth century. But facts will not be forever denied, and at last the facts in question (along with a fringe of pseudo facts) compelled their own general re-acceptance. But some of the men of science, seated on the lesser waves and too preoccupied with material investigation, had closed their minds too tight. And to their pupils they taught the fashion of closing *their* minds also. The method was auto-suggestion, denials; and the success might be envied by a modern faith-healer in his denials of the existence of the disease he is trying to cure by them. "There are no psychic phenomena; there are no psychic phenomena," — that is all that it is necessary to say, to write and to print. A certain Professor has just been using print in this way. He says:

The problem's of man's destiny, of a possible future life, of extraordinary powers of foreseeing events, of seeing things at a distance with the spiritual eye, etc., are certainly far more worthy of investigation than any problems now undertaken. But — these problems *have* been undertaken; . . . whole series of volumes have been published. And — the result has been entirely negative, not one single fact bearing upon any of the problems has been established. [!!!] . . . If telepathy or thought-transference had even the most microscopic foundation in fact . . . etc.

But progress and disentanglement may in their turn produce another reaction. When science is fully convinced of the reality of such phenomena as telepathy, clairvoyance and post-mortem persistence, the first exclamation may be that the human soul has been discovered and demonstrated. Then it will be discovered that the finer senses, if not material in our present use of that word, are yet not spiritual and *are* material if we give the word

a wider range; and that so too is that temporarily surviving entity which, of the total man, is or will be accessible to some amount of scientific investigation.

Whereupon, all this being shown as in some sense material and obeying material laws, the soul itself, as a spiritual being, will be again denied. And the more so since it will be perceived that to demonstrate immortality by demonstrating phenomena in time, is impossible.

The soul will not be demonstrated objectively. It is its own witness and proof in each man's deepest consciousness, if he will search. And when he has found he will not require any demonstration of immortality; he will know the real meaning and import of life; he will know his own place in nature as one of her fashioners according to the grand plan; and he will begin to know what are powers and wisdoms really spiritual as distinct from those which are merely psychic.

Those who would intelligently watch the progress of science must begin by trying to understand this distinction. Otherwise they will but land in a new materialism. STUDENT

### "A New Religious Order"

THE Rev. Dr. Newman Smyth, of the First Congregational Church, New Haven, thinks he sees signs of the passing away of the old Protestantism and the old Catholicism. In their separated forms they are to give place to a higher unity, a "New Catholicism." Neither, standing alone, and in its old form, is now acceptable to the spirit of the age.

The Protestant faith is losing mastery over the controlling forces of modern life. . . . For one thing Protestantism has lost the old authority of the church. It has lost it in its own families. . . . Protestantism has lost the voice of authority also in the state; our churches, as churches, are not accounted to be political powers. More than this, Protestantism, as organized, or, rather, as it is disorganized in our churches, has lost control over large areas of religious thought. . . . Protestantism has lost power to give to the people a good religious education. etc., etc.

It is to the Modernist Catholics, those who, whilst maintaining their right to the old name, maintain also their right to think for themselves, that he looks for the nucleus of the new fusion. By them he finds his own "religious thoughts and tendency truly represented." Indeed his words suggest that in his view the fusion may consist in a mergence of actively progressive and thoughtful Protestants into the Modernist Catholic body. This, thus reinforced, will be the church of the future. His conception is thus much narrower than that of the last Bampton lecturer, whom he quotes:

I see the signs of a new religious order, the greatest that the world has known, drawn from all the nations and all classes, and, what seems stranger yet, from all churches.

That is better — "*from all the nations.*" But in that case the new "order" will certainly not be Modernist Catholic, nor even Christian — though its membership will in-

clude Christians who will not or need not have swerved from their Christianity. It will get its inspiration from the source which has inspired the foundation of *every* great religion and inspired the heart of every sincere and humanity-loving adherent of any of them. The religions are partial presentations to suit particular times and peoples, and if all peoples are to be gathered under one religious standard the name thereon must connote no individual country, epoch, teacher, or church. As time goes on, and the mind of humanity ripens and its heart opens, it will be possible for each successive teacher to give more and more of the one Divine Wisdom, Theosophy; but *that* name is neither of time nor place. It was revived by H. P. Blavatsky and preserved and accentuated by her successors W. Q. Judge and Katherine Tingley, precisely to call attention to the unity of all great religions underneath their diverse forms, to their fractional expression of Divine Truth, and to a directer path to that Truth than through any of them.

STUDENT

### Definitions

A WRITER in the London *Quarterly Review*, dealing with "conversion," curiously exemplifies the logical result that comes of personalizing the Divine.

Conversion he defines as the attainment of freedom by the will. Then, immediately, he proceeds to define it further and otherwise as the *surrender* of the personal will to be guided by the Greater Will, "who is God." The word "who" indicates the personalization. Conversion is therefore the upward transfer of the will from one servitude — that of the selfish and sensual nature — to another — God. Directly that God is thus entitiated, "he" is limited, circumscribed, and other-ed from the individual; "his" will acts from a placed center, and man must subject *his* will to that other. Where is the freedom? Or have we only freedom enough to choose our servitude?

For the Theosophist at any rate, no such paradox is in the way of clear thought. God is not furnished with a will nor a Will; a will implies obstacles, delay, even possible complete balking. God is not defined further than as the unthinkable source of all the ideals that arise in man's highest consciousness, and of the impulse to realize them in act. It is the ground-essence of the being of the diviner man within the physical man. More than that can be *known*, but such knowledge is beyond *thought* and therefore words. The real knowledge comes of self-realization, but must perforce be silent. The very nature and movement of thought is to deal with the finite, the separated. It cannot deal with the ground of being of that soul of which it is itself but one of the functions. Only in his moments of silence, the true worship, can man get beyond thought into that true feeling which ripens at last into knowledge. Of that highest knowledge he will not try to teach others; he will try to show them the way to get it for themselves. They too can get it, for the ground of their being also is divine, God. STUDENT

## Buddhist Remains in Assam and Benares

THE *Mahâ-Bodhi and United Buddhist World*, organ of the Mahâ-Bodhi Society, Colombo, Ceylon, gives some accounts of relics of ancient Buddhist power, showing how magnificent was the architecture during Buddhist times and what rich prospects await the labors of the archaeologist in India.

Not far from Tezpur, says the *Times of Assam*, there is a hillock on the bank of the Brahmaputra, known as Bamoni Hill, with architectural ruins of colored granite. They are part of a great Buddhistic monastery which was converted, after the overthrow of Buddhism, into a Hindû shrine. The word Bamoni is said to be a corruption of Bormuni, "great muni," i. e., Buddha. The image of the Bormuni was replaced by Singha-Bahini, the relics of which are still visible in the neighborhood.

At Singri Parbat, on the north bank of the Brahmaputra, about 25 miles west of Tezpur, there are ruins which inspire every visitor with regret for the mighty days of Buddhism. There was formerly in the temple an image of Gopeswor (Gopa Îswara, "Lord of Gopa"); and, though it is no longer there, the spot is visited by Buddhists from Bhutan and Tibet, who come from beyond the snowy peaks of Himâlâya to give their offerings every winter. The Gopeswar is worshiped by the Hindûs as their S'iva, and has long been in their possession.

The Superintendent of the Archaeological Survey in the Frontier Circle records in his report some interesting finds of ancient Buddhist sculpture at Sahribahlal. He was led by a villager to a site where a large number of "buts" had been found; and, on excavating it, he found the ruins of an ancient religious establishment with a monastic quadrangle to the east and religious precincts to the west. Numbers of large Buddha and Bodhisatva figures were discovered, showing great delicacy of execution and still in perfect condition. The establishment was apparently destroyed by fire.

The Director General of Archaeology in India sends to the *Mahâ Bodhi* a note on explorations at (Sarnath) Isipatana, Benares, which shows what is yet in store for archaeology in India. In 1794, it appears, some workmen of the Diwan of Raja Chet Singh of Benares were digging for bricks on the site of Sarnath when they struck on the treasure chamber of a large brick stûpa with a heavy stone box inside, which they rifled of its contents. Most of the treasures were disposed of by the finders, but a green marble casket with a few charred bones, and some pearls, rubies, and gold leaves were preserved. The spot thus became a favorite hunting ground for treasure seekers, and cart-loads of images and terra-cottas are said to have been carried away.

In 1835 were unearthed a monastery and a shrine of a late period, and a large collection of bas-reliefs. Twelve years later another explorer exposed the foundations of numerous stûpas and shrines, and others continued the

work with further discoveries at intervals. The material found was, however, almost all either used for building or allowed to crumble to ruin. But in 1905 the Archaeological Department decided to clear up the site and collect the remains into a local museum. The vestiges of ancient ruins that have been excavated consist of a "Main Shrine," 95 feet by 90, and 18 feet high; around which is a thick concrete pavement extending some 40 feet in every direction, having on it a number of smaller chapels and stûpas ranging from the Kushana epoch till the 11th century.

West of the main shrine was the top of the broken shaft of a sandstone column, which must have been about 50 feet high. Its capital, 7 feet high, is of the Persepolitan bell-shaped type, surmounted by four magnificent lions sitting back to back with a wheel between them. This is a symbol of the "Lion of the Law" and of the law of cycles; the lion is a symbol of the Heart-Doctrine. These lions and the reliefs below them are masterpieces of the plastic art treated with a reserve and simplicity not to be surpassed in India. That the column was set up by the Emperor Asoka is evident, not only from its character, but from the presence of an edict of that Emperor still *in situ* on a portion of it. STUDENT

## The Impenetrable Screen of Antiquity

THE following quotation from the *Christian Register* illustrates the gradually changing ideas of current opinion about antiquity,—changes along the lines which H. P. Blavatsky forecasted in 1888 when she said that though her statements would be rejected in the nineteenth century, in the twentieth, scholars would begin to recognize the truth of her teachings about antiquity. Still earlier (1877 in *Isis Unveiled*) she demanded "for a spoliated past that credit for its achievements which has been too long withheld; and a restitution of borrowed robes and the vindication of calumniated but glorious reputations." It is interesting, however, to observe how old superstitions still live on in close intimacy with the new ideas.

How little we know about the history of the world which lies behind what Lord Bacon described as the impenetrable screen of antiquity is shown now and then when the curtain is lifted and we get glimpses of a high civilization existing in Asia and Egypt more than four thousand years B. C. We have now pottery, statues, and castings in bronze which match the work of artists who wrought in Greece three or four thousand years later. It is difficult to trace a thread of continuity between the civilization of these ancient times through vast periods before the appearance of Greece and Rome and the modern world. We have hardly begun to write the history of the beginnings of civilization or to learn what has happened to man on his upward course.

The writer evidently still thinks that the "beginnings of civilization" are to be sought at some comparatively recent epoch, though he is forced to place that epoch somewhat further back than before. Also he implies the necessity of tracing a thread of continuity between the Asiatic artists whom he mentions and the

Greeks. The whole scheme of human races, as imagined by scholars, is much too modest and insignificant. Theosophists, following the clues given by H. P. Blavatsky, place the beginnings of civilization very much further back, thus conceding sufficient time for the widest divergencies and the most intricate complexity; so that some races now on earth may be closely related to one another, while others may be derived from branches which have diverged from a far remoter root.

Again we find the superstition that the history of man has consisted of a single upward movement. This is contrary to the general plan of the universe as manifested in all movements; for these movements are seen to be cyclic and to consist of alternate ebbs and flows. From the small cycle of a human heartbeat, through the larger cycle of day and night, through the seasons of the year, up to the largest cycles of time, there is this ebb and flow, and throughout it all the one continuous stream of progress. Moreover there are many different races on earth at the same time, all in different stages of their life-history.

As a consequence of these two facts—the multiplicity of cycles and the multiplicity of races—we must expect to find the past history of mankind a record of continual rises and falls, successive waves of civilization overspreading now one region, now another. If we can trace any civilized race back to a stage of ignorance, this does not mean that that was the origin of civilization; for behind that stage of ignorance we shall find the traces of other civilizations that were before. The world is very old; and until we allow to humanity a past history of many millions of years, as we allow them to the other orders of creation, we shall never get a reasonable view of that history. STUDENT

## How "Primitive Man" Invented Pottery

AN illustrated paper describes, with a page of photographs and many approving remarks, the theory of an archaeologist that primitive man got the idea of making pottery by copying the cup-shaped flint nodules found naturally. Seeing these, and at first using them as cups, he afterwards got to copying them in limestone. The archaeologist discovered a number of what he calls "flint factories" in Egypt, where these cup-shaped flints are found; and with some of them were hollow limestone vessels.

One would suppose at first sight that the limestone cups are the natural molds from which the flints came; we are not told what reasons the archaeologist has for thinking them to have been manufactured. However this may be, the idea that pottery was invented in that way will strike most people as both unnecessary and absurd.

Science often complains of the lightness and flippancy with which the public is apt to regard some of its pursuits and pronouncements, but it has only itself to blame for it when it indulges in such trivialities. This comes of being hypnotized by dogmas that seem to disorganize the reasoning faculties. STUDENT

# ❖ The Trend of Twentieth Century Science ❖

## Other Electricities

THE day is not far off when all chemical phenomena will be explained in terms of electricity or magnetism and when our conceptions of the latter will be correspondingly elaborated. Similar magnetisms, or similar charges on spheres, repel each other; but positive and negative in magnetism, or in the charges on spheres, attract. But suppose we had a negative sphere which, placed among a number of positively charged ones, did *not* attract them all, but only those of say a certain shape; nor attracted all even of them, but some small definite number. Suppose we found that other negative spheres of different shapes also exhibited precise preferences as to the number and shape of the positive ones with which they were thrown into relationship.

Something like that is the case with atoms. An atom of say nitrogen will not combine with one or more of *any* other element, but only *some* other elements; and in the case of elements with which it will combine, it has definite ideas as to the number of atoms of them with which it will unite. So with the other elements; each has unchangeable preferences as to its associates and their number. These preferences constitute the leading chemical qualities of the atoms. Their analogy with the much simpler electric and magnetic preference of positive for negative, is obvious. The modern notion is that the two are identical; but that the chemical affinities indicate the existence of very complex forms—or behaviors, the same thing—of electricity and magnetism. It may be that there are seven main forms of this force, corresponding with the seven great families of atoms.

Chemistry is now in search of the reason for these diverse preferences of atoms. It is inclined to look for their cause to the number and grouping of the electrons that compose the atoms. But having found that, it would still have to find the cause of this number and grouping. If it resolved the electrons into still smaller units and found there, in a still subtler grouping, a deeper cause, it would still have to face the cause of that.

But for a century or two it may shirk the final issue. It may propound hypotheses which seem for a while to work. But at last it must come to the wall, the wall it can only pass by admitting that the deepest and first grouping, the cause of all the successive ones, is the work and manifestation of cosmic ideation. There is an idea embodied in the atom, at work in accord with the cosmic purpose. And this purpose is to bring the atom to ever clearer and clearer consciousness, and at last self-consciousness. It works itself out through the interaction of that atom with others; and they have such and the other interactions precisely laid down in their constitutions because the whole of nature is a definite and organized army of workers with precise paths and tasks. The conscious intelligence of living beings is not a set of accidental fermentations in the countless test-tubes, but was the objective from the first of the series of integrations. STUDENT

## Educating the Bacilli

PROFESSOR BOTTOMLEY, of King's College, London, has been making some interesting experiments with the nitrogen-fixing bacteria which grow around and in the roots of the leguminosae plants. He was puzzled to account for the fact that it is only this particular group of the vegetable kingdom that is thus served and is thus enabled to grow in soil containing no nitrogen. The bacilli collect about the roots, penetrate the root cells, stimulate and distend them into masses, feed on the carbon they contain, and in return feed them with the nitrogen which they have taken from the air and worked up into assimilable form. They feed the roots by ultimately dying; and, rich as they are in nitrogen, are then dissolved and eaten by the plant. Some, however, remain alive in the soil, multiply, and are ready for the next crop of beans or other legumes.

The tomato, like most plants, is not served in this way, requiring to have nitrogen ready for it in the soil derived from the decay of vegetable matter. Professor Bottomley took some legume-bacilli, kept them from their proper food and habitat, and gave them only tomato juice for ten generations. They got accustomed to the new diet, adapted themselves thoroughly to it, forgot all about the legumes; and, when planted with tomatoes in the soil, attached themselves to *their* roots as their ancestors had to the legume roots, and served their new hosts in exactly the same friendly way. The tomato crop resulting was correspondingly increased and enriched. The promise to agriculture of this experiment cannot be measured or even imagined. It probably means the superannuation, so to speak, of the costly chemical fertilizers.

But why did not nature do this herself? Why did she leave it to Professor Bottomley? Her answer would probably be that she did very well without it. The death of old vegetation was enough for the new. And in earlier ages she may have employed it very liberally, or the plants may once have had a power of fixing their own nitrogen which, once that vegetation was well started, was no longer needed and has atrophied. She cannot object, however, to man with his ever growing needs, reviving her old trick.

Nevertheless between the nitrogen of decaying vegetation and the roots of plants there is a layer of bacteria. Plants need that this decaying matter shall be reduced to a certain point of decay before they can take it up, and the agents for this are bacteria of many species. And so one naturally suspects that some of these bacteria are descendants of others which in times far past were able to fix the atmospheric nitrogen; but which, since decaying matter is nearly everywhere present, and since that work is easier, lost their old power. Even the legume-bacilli, if supplied with plenty of dead vegetation, often cease to take the trouble to go to the atmosphere and in a few generations lose the power to do so. Bacterial species are probably very fluid. STUDENT

## The Origin of Bacteria

PROFESSOR DUNBAR, Director of the Hygienic Institute of Hamburg, has published some remarkable researches on the origin of bacteria. As they have extended over several years, were conducted with extraordinary precautions, were very numerous, and have been recorded and now published down to the last detail, it would seem that they may be taken as conclusive.

The upshot of them is that bacteria are, and were primarily, degradation products in and of higher organisms.

Bacteria are plants, but destitute of chlorophyll, the green coloring matter in whose presence plants are able to fix the carbon of the aerial carbonic acid and weave it into their structure. They are therefore in the lowest layer of plant life. The next higher layer of plant life, containing the algae, *has* chlorophyll. Algae are found wherever there is water, and they vary in size from minute unicellular organisms up to the largest sea-weeds.

The essence of Professor Dunbar's experiments is that certain algae, subjected to slightly unfavorable conditions—the addition of various chemicals to the water in which they were living—underwent a set of changes culminating in their transformation into bacteria. Says Dr. Lauenstein in the *Scientific American*:

These phenomena included the vanishing of the green color, the appearance and multiplication within the cells of light-colored spherical bodies of high index of refraction, the rupture of the cell walls, the discharge of their contents, and the transformation of the latter into bacteria of various forms including globular cocci, rod-like bacilli, spiral and sarcine or quadruplex forms, and into yeasts and moulds with their characteristic textures and spores.

Presumably the bacteria thus originating, maintain their form henceforth and reproduce their like.

The experiments confirm the teaching of Theosophy—that those almost infinitely minute life-monads which during normal life subserve the processes of the cell in which they live, at a certain point in its history aggregate into destroying instead of serving units. As they helped to build, so, when the life of the cell is nearing the end of its cycle, in new groupings they become destroyers. Finally the groups may become large enough to be visible as spores and bacteria. These, as science suspects but has not yet proved, may with changed environment change their type and add others to the apparently fixed species at any time existing.

We know now that a molecule is an aggregate of separate units, and that an atom is also an aggregate of units. Science has not yet suspected that cells and unicellular organisms may likewise be aggregates of lesser living units. The nucleus behaves as if in some respects independent of the cell. The "chromosomes" within the nucleus, of varying number and often numerous, also have some amount of independent life. And so again do some infinitesimally minute granules within the chromosomes. Is that the end? STUDENT

## Floods and Their Prevention

**F**LOODS cost the United States \$100,000,000 a year, according to a Geological Survey Bulletin. Not only do the floods themselves destroy a great deal of property, but the mere menace of them prevents the development of vast areas and limits the usefulness of still vaster tracts. The greatest item of loss is, however, that of the water itself which runs to waste when it is so urgently needed in times of drought. A very conservative estimate of this loss places it at five times that of the more tangible results of flood damage; and if this water could be stored for future use it would be worth \$500,000,000 annually.

Floods are not inevitable calamities; much can be done to prevent and mitigate them. The chief measure is of course our old friend forestry; for the Forest Service is not concerned with the preservation of lumber alone but also with the preservation of watersheds. A watershed covered with vegetation acts like a sponge, its rooty soil holding the rain-water and letting it out slowly into the drainage channels. But a denuded slope allows the rain-water to rush precipitately down the runlets, causing floods and afterwards droughts. Besides keeping the soil spongy, the forest also prevents it from becoming baked.

Another measure is the construction of reservoirs. The object of these is to keep the rivers at their normal level by catching and storing the surplus water when the rivers tend to rise above that level, and letting it into the stream again when the rivers tend to fall below. This system of control by reservoirs is applied to the head waters of the rivers; it is far better than attempting to confine the flood waters by expensive levees, and its cost is nominal in comparison with its saving. T.

## Africa: Past Homes of Man

**I**F the history of mankind were studied more in connexion with that of the earth's surface as indicated by geological records, we should have a drama of a more reasonable size than the few brief episodes now presented to us as history.

Geology shows that what is now the Sahara Desert was once sea-bottom. It has been a Miocene sea, say the palaeontologists. It is also shown that the region which is now North Africa was once a peninsula of Spain, dry land being where the straits of Gibraltar now are, and a sea washing the southern coast of this Africo-European continent, where now the desert lies. The shores of the former sea of Sahara are still marked by the shells of the same *Gastropoda* as live on the shores of the Mediterranean.

There is a good deal in Herodotus and other ancient historians and geographers bearing on these facts. The Atlas and Teneriffe peaks

## NIGHT

**H**OW beautiful is night!

A dewy freshness fills the silent air:  
No mist obscures, nor cloud, nor speck, nor stain  
Breaks the serene of Heaven:  
In full-orbed glory, yonder moon divine  
Rolls through the dark-blue depths.—*Southey*

**I** HEARD the trailing garments of the Night,  
Sweep through her marble halls!  
I saw her sable skirts all fringed with light  
From the celestial walls!  
I felt her presence by its spell of might,  
Stoop o'er me from above;  
The calm, majestic presence of the Night,  
As of the one I love.—*Longfellow*

are remnants of the two lost continents of Atlantis and Lemuria, whose history is concealed in the classical myths about "Atlas."

Most of Asia emerged from the ocean after the destruction of Atlantis, and Africa came later, Europe coming later still. (This does not apply to Northern Asia, which is as old as the Second Race; nor to Plato's Atlantis, which was but the last surviving island of the continent Atlantis. See *The Secret Doctrine*, vol. ii, pp. 401 and 606, note).

Subsequently there was another temporary submergence of the Saharan part of Africa, and it is to this time that the above accounts allude; then the land emerged again and was a desert as now. Thus the past history of the continent is not very simple, and it is all in-

timately connected with the races of man. In Africa we find the remote descendants of the various Atlantean races that resorted to it after the sinking of Atlantis; and there are traditions, now being confirmed by archaeology, of great and opulent civilizations in the far past.

We know that the climatic zones of the earth are subject to periodic change in accordance with changes in the relative position of the poles of the equator and those of the ecliptic. East Central Africa is now in the heart of the tropics and no longer a center of civilization. But we can discern the wonderful facilities for civilization under a better climate.

There is a vast system of lakes or freshwater seas which do not appear much on the flat surface of a map, but which could be the scene of great populations and industries. Lake Victoria has a coastline of nearly 1000 miles, and the Albert Edward and Albert Lakes have over 200 miles each. There is a long stretch of the Nile River navigable; and to the south Lake Tanganyika, 400 miles long, and south again Lake Nyasa. To the north-east lies the great Lake Rudolf. These have no practicable outlet to the sea now, but in past days, with so many geological

changes, who can say what might not have been the case? Lake Victoria is almost an ocean. It contains islands and island groups, as isolated from the world as if on the planet Mars. Its area, over 27,000 square miles, is about equal to that of Scotland. It is 4000 feet above sea-level; Lake Albert Edward is 800 feet lower, and Lake Albert 800 feet lower again. Lake Tanganyika is 1300 feet lower than Victoria, and Nyasa is 1100 lower than Tanganyika. Then there are the huge mountains, Kilima Njaro, Ruwenzori, etc.

But modern humanity seems at present unable to see in natural beauties and advantages anything more than fields for selfish exploitation. So probably we ought to be thankful that some spots shall be kept secluded. STUDENT

## Dates in the Colorado Desert

**B**ESIDES irrigating deserts and turning them into fertile tracts, we can adapt desert plants to them. For instance the date palm can be cultivated productively on the Colorado Desert, as has been shown at the Government farm at Mecca, California, where date palms from the Sahara have been planted. They have only been cultivated three years, and this season have borne from one to three branches, each bearing over twenty pounds of dates. As it was feared the Salton Sea would overflow this farm, a new farm of ten acres was acquired near Indio and planted with suckers from the one at Mecca; so that there are now two farms. There are ten or more varieties of dates, some of them very rare. E.

WILLIAM Q. JUDGE once said:  
"The nature of the soul is true  
being: its virtue is to be free."

This means not only liberation from active sin but freedom from the limitations which prevent expression of the soul's true greatness. The old conventional idea of virtue as a state of passive goodness is going the way of many another outgrown gospel of negation. Life is so strenuous, the impulse to activity so strong in every line, even in the pursuit of pleasure, that the do-nothing method is no longer the badge of aristocracy or religion. The fainting heroine, the dandified hero, the Puritanical bigot, are outworn standards which give way before a belief in more wisely used bodies, minds, and emotions.

With the increased life-force ever urging to activity, each according to his bent, it is no less important to know what to do than what to avoid doing. Wise educators and sociologists progressively aim to provide avenues of expression for the force which no longer permits the child to simply "sit still and be good," or the reformed sinner to lie back in beatific idleness. The ideal toward which they tend is to provide resources whereby the individual may *work* out his salvation—a redemption by faith in his own divinity, and "faith with works."

Virtue is not an irresponsible, negative ignorance of vice; it is a conscious, positive knowledge of life in all its largeness and beauty. Women, particularly, need to realize that genuine virtue is something more than a condition of cleanliness and respectability. The most actively virtuous woman in a set may easily be one who is freeing herself from limitations by using what would otherwise be an evil force, in generous, helpful large-hearted work for others. One may abstain from all the cardinal sins and yet exert over others a neutral or even a bad influence. Some complacent ladies, with a vocabulary guiltless of

## The Virtue of Freedom

even "slang," would be shocked to know that their dainty selfishness and well-bred bigotry is quite capable of stimulating a reaction of profane protest, no less cordial because smothered. Narrow-minded, fussy, indiscriminating women, even though they may possess many good points, often make their very virtues an

This kind of example is worth no more than its face value: neither respectable nor disreputable women can bring to others the sense of liberation which they have not yet made their own.

Precepts and warnings against wrong-doing are less impressive than the vital example of a life which is too rich in normal interests and activities to leave a sense of lack to be filled elsewhere.

The wife and mother whose devotion narrows her into a confused slavery to the routine details of home duties, needs to learn many lessons. That the appealing light and color, music and good cheer, are used to lend a fictitious air of life and freedom to the pains and perils of license does not affect their real value as means of expressing the genuine beauty and breadth and fellowship upon which the counterfeits are based. And how many homes lack these? How many wives and mothers miss "the greater part" in slavishly serving the lesser?

Back of the conventional and superficial hurry and pretense and even sin is the ever-present urge of the soul, homesick for the reality. The body and mind mistranslate this impetus into desire for sensations of appetite, of vanity, of greed, and of power, which belong to the personal self, and are brief and unsatisfying.

The time grows nearer when, if the woman will, she may claim her heritage of humanity. She who grows out of the narrow personal feeling into the great confident, serene sense of soul-life is magnetized with the power to give to all others with whom she may come in contact a courageous, hopeful impetus toward the larger life.

To free oneself from the limitations which make her happiness depend upon others, and thus to touch that inner source of peace and freedom which is eternal—that is the virtue of "true being." LYDIA ROSS, M. D.

### From SPRING AND WOMEN

By WALTHER VON DER VOGELWEIDE

WHEN the blossoms from the grass are springing,  
As they laughed to meet the sparkling sun,  
Early on some lovely morn of May,  
And all the small birds on the bough are singing  
Best of music, finished and again begun,  
What other equal rapture can we pray?  
It is already half of heaven.  
But should we guess what other might be given,  
So I declare, that, which in my sight,  
Still better seems, and still would seem, had I  
the same delight.

When a noble dame of purest beauty  
Well attired, with even garnished tresses,  
Unto all, in social habit, goes,  
Finely gracious, yet subdued to duty,  
Whose impartial glance her state expresses,  
As on stars the sun his radiance throws!  
Then let May his bliss renew us;  
What is there so blissful to us?  
We gaze upon the noble dame, and let the  
blossoms be.

—Translated by Bayard Taylor

offence. To refrain from physical sin and then to fall into the ways of a stagnant and constrained rectitude makes for the too-prevalent notion that right living means starvation for a large part of one's nature—and all for the sake of that future surfeit of the happiness which is to be *minus* here and now!

### The Earth's Lament (From the Irish)

**J**OSTLING against the externals of life, the meaningless clatter, the jangling of selfish tones, how it wearied me! I longed to commune for a little with the inner world, to find a reality that should lighten and inspire my drooping heart. Distant music fell on my ear and I quickly turned my steps towards it, hoping that it would break the spell under which I suffered. Wistful and sorrowful were the strains of the violin that came floating around me. Ah! I sighed, why this pathetic minor key in the music, this world is surely mournful enough without adding to it thus? Then a thousand fairy voices whispered to me from within the music, "We can tell you, it is because *we* are living in the Golden Age!" and they swung past me in marvelous forms and figures to the cadences of the music. Rapt I sat in perfect stillness to catch every word of their message. "When we sing earth takes up the melody, but she cannot give it the same pure ringing note, she has to play through the instrument you have made in your fallen world, and so you hear a sadness when the wind moans among the rushes and the ocean waves roll on the sea shore. Be grateful that you still hear the wistfulness in earth's music, remember it is the unvoiced harmonies that cannot yet reach you and it is a constant witness to that Golden Age which is buried, yes! like beautiful roses that have been dashed to the ground and covered with mould and soil. For, mortal, do you not know that nothing is perfect now on earth? Your people do not move together in order and harmony, and all things fail the archetype on which they were formed. The clever are not beautiful; the beautiful are not good; old age has its heartache, and youth, with health and strength, has desires unrestrained; the artist sighs in vain for his ideal, for it will be marked with imperfection; the knight cannot wield the sword he wears so bravely; the mothers have love, but lack wisdom to rear their children aright; men of genius cannot serve the world as they might because of ambition." "Alas, alas!" I cried, "it is true," and my heart moaned with the music more wistfully than ever.

There was a pause and then the antiphonal song came in earth's own major key: "Mortal, dig and delve, under the heap of dirt is the Golden Age." I arose and went forth a new being, with a deep, strong resolution to work to clear away the accumulations of misdirected energy. I would no longer be dazzled with earth's blighted beauty. Courage and perseverance! I would labor that others may the sooner discover the forgotten Roses!

VERSION BY A LOMALAND STUDENT

### Jottings and Doings

(GATHERED BY H. H.)

**O**N all sides we have evidence that the great and the noble are seeking to withdraw from the whirl of state ceremony and society to the simpler aims and demands of the simple life. According to a correspondent, Queen Alexandra of England, who spent some time last summer with her sister, the Empress Dowager of Russia, in a small and unpretentious villa near Copenhagen, declared that she could hardly bear to leave the little rest spot and go back to London. In years, she said, she had not been able to enjoy such perfect rest. While there, it is stated, the

It is not uncommon in foreign countries for women to earn their livelihood as professional guides, but the United States, it is said, has but one woman acting in that capacity. Historic Boston is the field of her labors and she has made such a conscientious study of all points in connexion with the places of special interest in and about the city that she is able to furnish her patrons with useful information which, in addition, can be relied upon as authentic. She is particularly successful in superintending parties of women, teachers and school children.

Two young girls, daughters of army captains, recently were winners in the plowing

Lomaland Photo. and Engraving Dept.

A CORNER OF THE SALON OF ANCIENT SCULPTURE, ST. PETERSBURG PALACE OF FINE ARTS

royal sisters lived in the simplest possible manner, doing their own gardening and indulging in long daily walks, while anything like formal entertaining was strictly *tabu*.

A NUMBER of royal authoresses are now shining out above the literary firmament. It is stated that the young Queen Victoria of Spain has completed a play which is to be performed later at Sandringham before the King and Queen of England. The youngest sister of the German Empress, Princess Fedora, has gained wide fame from her novel, *Hahn Berta*, recently published. Carmen Sylva, as the Queen of Roumania is best known, has long been famous as a writer, her books numbering something like thirty volumes. Recently the young Princess Dagmar of Denmark published a little volume on the wild flowers of Scandinavia, and it is said that a number of other royal women are certain, sooner or later, to bring their literary work, at present known only to their intimate friends, into the light of public print.

competition held near London, England. The great test is, of course, that the plowed furrow be straight, and it was admitted that, on account of skirts which dragged in the furrows and would in any case have been a handicap, and hats that would not keep on straight in the high wind, the two competitors covered themselves with glory—their furrows were as straight as a die.

MME. LAURENT KIEDLER, of Paris, has just been requested by the French government to make an exhaustive investigation and report of the social and industrial life of American women. She has been requested to cover the subject thoroughly, time and money to be considered of secondary importance. France is taking many a step towards a freer and a broader life for her people.

ACCORDING to a recent United States census report, in 1880 women formed 8.5 per cent of prisoners in the United States; in 1890, 7.8 per cent, and in 1904, 5.5 per cent. The decrease is general throughout the country.

# OUR YOUNG FOLK

## Right or Wrong

"I'M going fishing on the old lagoon." The speaker, a fine-looking lad, spoke decidedly.

"Don't be so foolish," returned his companion; "you know it's wrong to go contrary to your mother's wishes."

"Right or wrong, I'm going to do it, and there is an end of the matter."

"No, the *beginning* of it," his friend replied.

Maurice gave him a keen look, but said nothing, and they presently parted ways.

Some six weeks later Gerard returned from his vacation trip. "I haven't seen anything of Maurice yet," he remarked to a school friend.

"Haven't you heard?" the latter replied. "Maurice is down with typhoid — caught among those fisher folk on the old lagoon. They say he is very ill."

Gerard felt very sorry. Maurice's words — "Right or wrong, I will do it" — were echoing in his ears; how serious was the result of that action!

Maurice smiled brightly at his first visitor, though his face was white and wan, and but an echo of the full strong tones of his voice was in his cheery greeting. "So glad to see you again, old chap. Tell me about everybody and everything." Then Gerard chatted for a while quietly about their schoolfellows and the vacation. At last Maurice began,

"It has been an awful time. No one knows but mother and you that it was wilful disobedience, and she has never given me a reproachful word; just loving service all the time. I say, old man, these things cut a fellow deeply. She knew all the time about the fever, but being in a hurry trusted to my obedience without explanation. And I thought she was making a molly-coddle fuss. You were right; that false step was only the beginning; how will it end?" he finished despondently, for he was still weak.

"You will soon be strong again, Maurice, and then you can make what you choose of it."

"What do you mean?" said Maurice, inclined to be impatient.

"It is this way," went on Gerard; "each thought or action is a seed planted, from which a plant must grow. It is always in our hands to begin and sow good seed for the future."

Maurice gave a low whistle.

"But we cannot all be saints," he said.

"What keeps you back?"

"Just myself," Maurice replied.

"No, the lower selfish part of you does, of course, but you and I are something more than that. We are the stuff the old Greek heroes were made of, something that can control and conquer the selfish fellow, for we have the power to choose what we shall do, and *in our hearts we know it well*. We need not do wrong unless we choose."

## WHEN THE WOODS TURN BROWN

Lucy Larcom

HOW will it be when the roses fade  
Out of the garden and out of the glade?  
When the fresh pink bloom of the sweet brier wild,  
That leans from the dell like the cheek of a child,  
Is changed for dry hips on a thorny bush?  
Then scarlet and carmine the groves will flush.

How will it be when the autumn flowers  
Wither away from their leafless bowers?  
When sun-flower and star-flower and golden-rod  
Glimmer no more from the frosted sod,  
And the hillside nooks are empty and cold?  
Then the forest-tops will be gay with gold.

How will it be when the woods turn brown,  
Their gold and their crimson all dropped down,  
And crumbled to dust? Oh, then, as we lay  
Our ear to Earth's lips, we shall hear her say,  
"In the dark, I am seeking new gems for my crown:"  
We will dream of green leaves, when the woods  
turn brown.

"No," Maurice assented gravely; "we need not, that's true."

"We have only to make up our minds to do right and to do it, and — *no shirking*." E. W.

## Two Pictures

ON New Year's day, as I walked down the path at Lomaland that leads to the public road, I opened a letter from the East and read:

"It is snowing outside; the snow is now two and a half feet on the level."

The birds were singing so gaily; and raising my eyes I gazed all about me: at the mountains and the blue bay, so beautiful in the bright sunshine; the trees budding anew so green and fresh; and there peeping through the brown earth of the newly sown fields, the little green shoots of grain were making their appearance. Everything seemed so full of life and joy; even the crow of a cock in the distance seemed to have a happier ring in its tone than usual, as if it felt the joy and promise of the new year.

Then as I gazed around me at the beautiful

scene, another picture flashed across my mind's eye — the snow-covered country, with its hills and dales; its sparkling ice-laden trees; and children with sleds, coasting down the hill-sides. And as I looked I saw beneath the snow millions of shoots of wheat and rye, that had been coaxed out of the earth by the fall sunshine, there lying patiently waiting, waiting for the coming of the spring.

And gazing still, right into the earth, I saw living animals — squirrels and groundhogs and others, in the homes they had dug for themselves and stored with nuts for their winter's use — all waiting for the spring.

Then all the flakes of snow seemed to be alive and also waiting for the warm spring sunshine, so they could fulfil their mission of watering the earth and bringing life to the trees and flowers and all that grows.

Then I thought: Oh, wonderful, beautiful Nature! everything so full of joyous life! waiting, ever waiting for the greed and selfishness to die out of men's hearts so that she might fill them with the same life that so permeates her every kingdom. NATURE LOVER

WHETHER it be a good thing or bad not to be afraid depends on what the fearlessness is founded upon. Some have no fear because they have no knowledge of the danger; there is nothing fine in that. Some who are not easily frightened would yet turn their backs and run the moment they are frightened; such never had more courage than fear. But the man who will do his work in spite of his fear is a man of true courage. —George Macdonald

AMONG the Hopi Indians of North America is a poet whose name means Sun-Down-Shining. He is a joyous singer and all the people love him. He makes songs about the happy life of the youths and maidens, and the pictures Nature shows him when he is herding his sheep. He likes to sing about the growing corn; to him it seems like a beautiful maiden with shining hair. M.

A HAWK can spy a lark upon a piece of earth almost exactly the same color at twenty times the distance that it is perceptible to a dog or a man. A kite soaring out of human sight can still distinguish and pounce upon lizards and field mice on the ground, and the distance at which vultures and eagles can spy their prey is almost incredible. Recent discoveries have inclined naturalists to the belief that birds of prey have not the acute sense of smell with which they were once accredited. Their acute sight seems better to account for their actions, and they appear to be guided by sight alone, as they never sniff at anything, but dart straight at the object of their desire. —Havana Daily Telegraph

# THE CHILDREN'S HOUR

## A Fairy Tale of Science

A PIECE of black coal is really a fairy prison! Once upon a time, millions and millions of years ago, all the coal in the world was beautiful waving green vegetation, giant trees, shrubs, and creeping plants!

Now the earth although round nearly like a ball, is not just solid and cold like a hard rubber ball, but it is like a living being. Nearly all of us have felt the earth tremble. This trembling we call an "earthquake." Sometimes the earth does more than tremble. It seems to sigh, to groan, and to heave its breast, just as people do when they suffer. Sometimes there are terrible floods caused by the rain falling "forty days and forty nights," as we learn in the legends and fairy tales of every land. It is as if the very sky were weeping over the troubles of Mother Earth. If the pain is more than she can bear, she uses such tremendous strength to get rid of it that her whole face becomes changed. Where once were vast continents, may be the ocean rolls; or where once there were only boundless waters, islands and then continents begin to appear. The face of Mother Earth has changed many times, sometimes suddenly, again very slowly.

Once there was a great continent in the Atlantic ocean called Atlantis, which gave this ocean its name; and long before that there was even a greater continent in the Pacific ocean called Lemuria. But during all these very, very, very far off times the Sun King was ruling in his great golden palace on high.

All these millions and millions of years the Sun King was sending his fairy messengers the Sunbeams down to earth. The vast forests that once covered the land eagerly welcomed them into their leaves just as they do today. There the Sunbeam fairies joined hands with the Carbon fairies who, then as now, had slipped into the leaves from the air. Together, these two as they danced their magical dance, helped to build up the vegetable kingdom. For all the tiny fairy lives or beings who are continuously weaving Mother Nature's many-colored, many-formed robe, are dancing all the time, although we cannot see them, they are so very tiny and dance so very fast.

Now when continents disappear under the waves of the ocean to rise again after countless centuries, or when there is a terrific earthquake and landslide, as sometimes happens, and great forests are buried, the Sunbeam fairies and the Carbon fairies who still live in the plants, are buried with them. Nothing in Nature dies, but all things change. When the tremendous weight of earth, rocks or water bears down upon the vegetation, it is mashed flat, and the heat caused by the terrific pressure bakes it hard. Little is left of the beautiful forms of plant life, save perhaps the trunks of some giant trees. All the sap is squeezed out, but still the Sunbeam fairies and the Carbon fairies remain. The carbon is no longer of varying colors and different forms as it was in the leaves, the stems, the wood and the bark of plants and trees; it is now *black*, a

black mass, that shuts in the bright light of seven colors of the Sunbeam fairies. This black mass is *coal*, the black fortress dungeon of the happy sunbeams.

Sometimes this black coal shows upon its surface quaint and curious markings, "fairy pencillings" of some delicate feathery fern, showing that before the coal was quite hard, a little plant had drifted against its side, and stamped its own form there, which remained as the mass hardened. Pieces of coal with such tracing are called fossils, and these fossils have revealed many secrets of the ancient forests.

Coal is found in the earth in layers, with layers of sandstone between, which shows that forests have sunken and been buried more than once in the same place, and been covered over with sand, that became sandstone with time.

## LAUGHTERLAND

ALL aboard for Laughterland—  
'Tis a pleasant place,  
Where the sun of happiness  
Shines in every face,  
Where the cares of this old world  
Quickly are forgot,  
And there's never any cloud,  
Any pain or blot!

All aboard for Laughterland,  
Region of delight!  
Can be reached by any who  
Goes about it right,  
First you shake your troubles off,  
Then begin to smile,  
And you'll get to Laughterland  
In a little while.

Children dwell in Laughterland,  
'Cause they do not know  
What makes grown-up people bear  
Burdens as they go.  
Light hearts seek for Laughterland,  
Optimists go there—  
Guess it is the gladdest place  
Mentioned anywhere!—*Selected*

The presence of these layers of coal, or coal beds as they are called, tell us how very old Mother Earth is—millions and millions of years old!

In order to get the coal out of the earth, deep holes must be dug. The sides of these holes are then boarded up to keep them from caving in, and openings are left wherever there is a layer of coal. Then men are let down into these holes, or shafts, as they are called, in baskets that work with pulleys (really they are elevators), and whenever they come to a coal-layer opening, they get out and with pick axes they break off pieces of coal. These are taken to the baskets, which are then pulled up to the surface of the earth. Long galleries have been dug out through the coal beds, so that men can go in and dig out the coal. These men are called miners, and their occupation, mining. It is very dark down in the coal mines and the miners used to wear lamps hung from their caps to give them light, but now the mines are lighted by electricity. Miners do very important, useful work. They are the brave

knights who begin the task of releasing the Sunbeam fairies from their long dark imprisonment.

How do you suppose the Sunbeam fairies are finally released from their black carbon dungeons? Why, by the magic wand of the Sun King. What is this magic wand? The Sunbeam fairies know, for they help to make it. It is *fire*. Fire is the magic wand that sets the Sunbeam fairies free. These fairies are glad to get out of their dark prison-houses and they show their gratitude by giving back to us the heat, light, and strength, that they brought from the Sun so long ago.

Think of this when you sit before a great fire and watch the flames as they leap from the coal and dance up the chimney. The warmth and light that you love comes from the hearts of the Sunbeam fairies that left the golden palace of the Sun millions and millions of years ago.

Sometimes vegetation stays so long in the bosom of Mother Earth, and is buried so deep, that not only does it lose its form and become a hard black mass, but it becomes still harder and forms crystals. This crystal carbon is dull gray in color, and while it is not so useful as coal, since we do not need so much of it, still we use it every day. For the lead in our pencils is not "lead" at all, but this gray crystal carbon whose real name is graphite.

When the carbon that once danced in free air as carbonic-acid gas, then lived in the plants and trees and danced with the Sunbeam fairies, has suffered all the pain possible from awful pressure and terrific heat, then sometimes a wonderful change takes place. Just how it is done, just what happens, no one knows, for the magical transformation is one of Mother Nature's secrets. It is known only to the gnomes, her underground helpers, and to Rübezahl their king. For in some places carbon is found that is neither black like coal, nor of gray crystals like graphite, but is of purest white, dull and soft like moonbeams. Sometimes these white crystals are found fastened to rough dark stone. Then they look like tears on a sad wrinkled brown face and you cannot help thinking that these are the tears of Mother Nature. But after the white carbon crystals have been given to workmen to cut and polish, their true nature shines out. They sparkle and glow with joyous fire. The Sunbeam fairies in their hearts dance with the Sunbeam fairies that skip over their shining sides, and you can see all their seven lovely colors shining out like tiny rainbows.

Through long ages of toil, suffering and change, patient Fairy Carbon won her freedom. One by one her disguises fell from her, until at last she stood revealed, a pure white carbon crystal, with sunbeams dancing in her heart. Such a bit of pure white carbon we call a diamond. OSWALD

## LAST SUNDAY AT ISIS THEATER

Prof. H. T. Edge Continues his Address on  
Theosophy and the Bible

THE remarks made by the lecturer last Sunday evening at Isis Theater, San Diego were followed with close attention by the audience which, considering the wet night, was fairly large.

Mr. Edge said in part:

According to promise last Sunday night I am to speak of the Christ, or the Christos, tonight. I have read a good deal about this subject in the papers from the more advanced of the clergy, and about the Higher Criticism. I have noticed that some of them pin their faith to the man Jesus, alleging his beautiful life and teachings, while others rely on the Christ, or the Christ principle in man. So there are two points of view. As to the first idea, we know there have been many world-saviors, said to be incarnations of deity. These have come from time to time in different lands to rescue humanity from evil and false doctrine, and to teach the eternal truths about life. I might quote almost any number of world-saviors about whom people make the same claims as the Christian makes about Jesus.

One of these was Krishna who lived 6900 years ago. He descends from a royal family, but is brought up by shepherds, and is called the Shepherd God. He is an incarnation of Vishnu, the second "person" in the Hindû Triad. He is persecuted by Kansa, tyrant of Madura, but miraculously escapes; whereupon the king slaughters many innocent children. The mother of Krishna conceives him of the god Vishnu; and he is endowed with beauty, omniscience and omnipotence from birth. He performs many miracles; descends into the infernal regions to liberate the dead, and returns to Paradise.

Then there is Gautama Buddha who lived 2500 years ago; also the son of a king, and his first disciples are shepherds and mendicants. Some say he was an incarnation of Vishnu, others that he was an incarnation of one of the Buddhas. His mother, though married, conceives him immaculately. He performs many wonders, abolishes idolatry, and divulges the mysteries of the spiritual realms and of Nirvâna. He is persecuted and driven out of the country, and ascends to Nirvâna.

Again, in Mexico, we learn from Prescott that the deities of this country suggested astounding analogies to scripture; as Quetzalcoatl, who was described as a white man wearing a long beard, and came from the East. After presiding over the Golden Age in Anahuac he disappeared as mysteriously as he came, but promised to return. Antiquaries of Mexico refer to this god the institutions of ecclesiastical communities, reminding one of the monastic societies of the Old World; also the rites of confession, penance, and the doctrines of the trinity and incarnation.

Again, in the East, there was born in Tibet in the 14th century a savior called Tsong-khapa. Abbé Huc gives the story that he was born of a shepherd's wife who conceived miraculously and brought forth a son who had a white beard and a face of extraordinary majesty. He was wise even as a child, and retired into the wilderness. After a time he returned and reformed Buddhism, driving out the Red-Caps, and introducing the Yellow-Caps and the doctrine of mercy.

Then there was Zoroaster. There were several of this name, the *Dabistan* enumerating 13. But all these were incarnations of the first one. The last Zoroaster was the founder of the Fire Temple
